

# MASTER OF CREATIVE MUSIC THERAPY

**The Master of Creative Music Therapy program at Western Sydney University takes an intentionally creative approach to training students to become career-ready music therapists.**

Students develop the knowledge and ability to creatively apply their existing music skills therapeutically for individuals and groups, through improvisational (creating improvised music), re-creative (creatively using repertoire/songs), compositional (creating songs/music) and receptive (creative listening) methods.

The Australian Music Therapy Association (AMTA) competencies are taught, and learning across a range of music therapy approaches is included. Applicants from diverse backgrounds and experiences are warmly encouraged to apply. Graduates of this program are eligible to apply to register with the AMTA, which qualifies them to practice professionally in Australia as a Registered Music Therapist (RMT).

The learning activities for this program take place as on-campus lectorials, one day per week during semester time, with additional online synchronous and asynchronous learning activities delivered on other days. In addition, students are required to complete music therapy placements, which are offered flexibly as weekly, block or mixed modes.

**MUSIC THERAPY HIGHER DEGREE RESEARCH PROGRAMS ALSO AVAILABLE.**
