

ALVEO

A Virtual Laboratory for
Human Communication Science

<http://alveo.edu.au>

Alveo is a platform for collaborative e-research. It is:

- a repository for diverse data collections of speech, text, music, images and video
- a web interface for browsing data and creating item lists for further study
- a web API that supports scripted access to data for tools and new interfaces

The Alveo Galaxy Workflow Engine wraps complex tools into an easy to use web interface. You can:

- build workflows that chain tools together
- save, share and publish workflows
- add new tools to support your workflows
- run them on the NeCTAR Research Cloud

- Alveo provides National Infrastructure for Australian researchers to store data
- New data submissions are encouraged, we will help you prepare your data for ingest
- Share your data with as few or as many researchers as you wish under terms that you decide

Alveo Partners

<http://www.nectar.org.au>

Alveo acknowledges funding from the National eResearch Collaboration Tools and Resources (NeCTAR), an Australian Government project conducted as part of the Super Science initiative and financed by the Education Investment Fund and National Collaborative Research Infrastructure Strategy.
