#### Version History

V16.0	27.05.16	Hedda Lameks	Update of Standards to incorporate the new brand mark, colour way & University name change.
V16.1	22.06.16	Hedda Lameks	Information added regarding non standard room naming. P: 18, 19, 43 Slat restriction removed for wall mounted signage. P:33 Magnetic faces changed to permanent for Top Hat projecting. P:34 Spandex & Info Panel added to Construction. Pages: 22, 26

V17.0	04.10.17	Hedda Lameks	Section 1c: Further detail regarding message grid and layout added. P: 25-36 BW10 changed to Traffolite. Section 1d Statutory added P:476-52 All tactile signs moves to Section 1d. Statutory Additional Statutory signs included ST3-6 inclusive. Pages: 51, 52 Section 1e: ID6-10 inclusive added P:66-70 Section 2c: EW3.2 & EW7 added P:86 & 98 Section 2b: Requirement for pins to shield element removed P:77 ALL references to CW&F changed to Office of Estate and Commercial.
-------	----------	--------------	--

V18.0	17.10.18	Hedda Lameks	Section 1c: BW9 Standard for application on information to door slats clarified. BW1-4, additional detail regarding graphic and information layout, letter heights and measurement added. No change to standards. Section 1d: Changes to tactile signage ST1, ST2, ST3 to align with BCA and Australian Standards. ST4, 5, 6, 7 added.
-------	----------	--------------	--

# OVERVIEW & STRATEGY

The Need for Signage

Wayfinding

Locating Signs

Sign Types

Sign Messages

Sign Heights

Consistency

Sign Sizes

Custom Signage

A sign system is built from a number of elements that contribute to a coordinated and consistent visual language. Graphic standards are important in providing the rules for control of this look and to ensure easy recognition and acceptance as a comprehensive and authoritative system. Graphic standards also define the relationship between signage and the University's corporate identity of which it is an extension.

Graphic standards include the use of the logo, typefaces, letter sizes, graphic layouts, arrows, pictograms, and colours and the way these are combined. Not every detail of a sign can be prescribed as each one is conditioned by its circumstance, however it is imperative that the graphic standards as set out here are faithfully followed without variation.

The designer or manufacturer should be thoroughly familiar with this section of the guide before creating or modifying any Western U signage.

Only artwork in electronic form supplied by Western U is to be used in the reproduction of the logo, typefaces, arrows and pictograms on signs.

The location, design and content of all proposed signage is to be approved by the Office of Estate and Commercial prior to manufacture and installation. Refer to the Information Display Policy for further information.

# Overview and Strategy

## The Need for Signage

The Office of Estate and Commercial at Western Sydney University is responsible for ensuring permanent signage for The University is developed and maintained effectively across all campus sites of Western Sydney University. This signage standard helps ensure that all signs are built to a consistently high level of quality as well as adhering to clear corporate identity and graphic standards.

The purpose of this standard is to provide a set of guidelines for the implementation and installation of building facilities signage. Created in consultation with the Western Sydney University Visual Identity Manual, the overall mission is to build the reputation of the University through clear, effective campus wayfinding and information display

This manual has been developed with a view to progressively upgrade and maintain the quality of signage across the campuses of Western Sydney University and provide the foundation for a managed Signage System using the standards documented in this manual.

These guidelines ensure that all new Western Sydney University signage conforms to set design and manufacturing principles.

The manual has been developed with thought to key stakeholders to provide customers and suppliers with clearly defined instructions for the signage systems, graphic design and implementation of the signage hierarchy across all Western Sydney University campuses.

## Wayfinding

Wayfinding is the process by which people orientate themselves within a space and navigate through it.

People who are not familiar with a space or become lost may become anxious. Signage plays a vital role in guiding and reassuring visitors while enhancing the Western Sydney University brand. Therefore, it is vital that signage is neither ambiguous nor confusing and that information from one sign to the next follows logically and consistently.

This is to be achieved by employing wayfinding principles, a hierarchy of destinations and a hierarchy of signs.

A hierarchy of destinations means that signs are used to direct to the campus, then to major destinations e.g. buildings, then secondary or minor destinations in descending order of importance. This reduces information overload in a complex environment and the number of signs and messages needed while adding clarity and confidence.

A hierarchy of sign types and sizes is used to deliver this hierarchy of destination information ranging from large or important signs to be viewed from a distance to small signs that are viewed at close range which confirm arrival at the final destination.

## Locating Signs

Once the hierarchy of destinations for a particular site have been decided, the planning of signs, selection of appropriate sign types and locating then follows.

Studies of typical journeys for various user groups may need to be undertaken and decision points identified. Planning of signs is best done by walking the site both physically and metaphorically on plans. This should be done as if through the eyes of a first time user who is not familiar with the site. Through the journey questions will arise such as "where am I now" and "which way do I go", particularly when a choice is presented.

It is at these decision points where signs are needed and should be placed.

Other considerations may seem obvious but include locating signs where they are readily noticed and not obscured by buildings, other signs, passing traffic or vegetation. Signs are to be sited to fit the natural patterns of circulation and should be located close to the point where the message is to be conveyed.

## Sign Types

Most of the sign types within this manual come in a range of sizes. Generally the larger signs are used along main circulation routes and to direct to major destinations. The smaller size is for use along minor circulation routes.

Within buildings, ceiling direction signs should be used wherever possible with wall and blade signs supplementing these or where high ceilings would not allow for ceiling signs.

Signs are used to direct to destinations at turn-off points along main circulation routes. Signage may be by exception, i.e. to direct only to turn-off destinations or depending on the number of messages, signs may also confirm straight ahead directions. Along long straight corridors signs should also repeat directions given earlier for reassurance.

## Sign Messages

The number of messages on signs should be limited.

The amount of information can be increased on signs where there is time to stop and look (e.g.. on maps or directories).

Signs at decision points should have messages in each direction grouped and within this grouping arranged by importance and then alphabetically. For instance, Departments or Schools would precede amenities within the same directional group.

Where the number of messages at any point is more than can be fitted on one sign additional sign panels or two signs may be used. On long straight runs it is preferable to separate these over some distance with the first one carrying the more important or more immediate message.

## Sign Heights

Signs are installed at different heights depending on their type and reading distance. Heights are prescribed for each sign type and should be strictly adhered to so that a consistent layering of information is presented.

## Sign Sizes

A limited range of sizes is available for each sign type. This provides for a consistent presentation of signs and the information they carry and assists in maintaining visual order. A range of sizes also contributes to the hierarchy of signs allowing for identification, information or directional messages to be ranked in order of importance.

Signs size selection should always be made with user legibility as a priority.

When selecting signage viewed from a great distance, for example attached to an external awning in an open space, the large signage option may be most appropriate.

Signs to be read from a distance are larger than those for closer viewing. Generally the large option for building wayfinding signs have larger letter heights.

Large options for signs may also be used when the message is of great importance.

Adversely the small option for signage would be most appropriate when being approached down a short hallway or within a smaller office environment.

For both large and small sign options sign various widths allow for wider or narrower hallways in the case of suspended signage and available wall area for wall mounted signs. A wider sign may also allow for longer messages to be applied.

Sign widths and sizes should be selected to be in proportion within the architectural environment in which they are placed. The selected scale should ensure signs never appear undersized or dominating.

## Custom Signage

Although extensive, it is recognised that the Western Sydney University Information Standards are by no means exhaustive. There will be occasions when a sign or environmental graphic, in order to be most effective, does not conform readily to any of the sign types specified within this manual. This is particularly true of exterior signage.

When it is deemed necessary to produce a custom sign, the services of a design consultancy should be utilised. The designer should ultimately create a solution which is consistent with the sign types, design and branding principles outlined in this document.

All custom signage is to be approved in size, design and location by Office of Estate and Commercial.

# BRAND

Brand Mark

The Shield

Clear Space

Typography

## Brand Brand Mark

The Brand Mark is the unique mark which identifies our University and is the most fundamental and important component of our visual identity. It is the preferred logo for all applications and must be reproduced only in the forms shown in these guidelines.

The type and the symbol are symbiotic and must remain in the same relationship at all times. The word mark is always locked up with the Shield and can never be used in isolation. The Shield however can be used as a graphic device in isolation. The following pages will illustrate its usage.

### **Left Aligned Brand Mark**

The left aligned Brand Mark is reserved for website use only and very special circumstances such as on a pen for merchandise. This version of the logo should not be used without permission from Office of Brand Marketing and Communication.

**Note:** Left aligned brand mark should only be used in special circumstances. Its usage for signage and environmental branding should always be approved by Office of Estate and Commercial.

# WESTERN SYDNEY UNIVERSITY

# Brand

## The Shield

The Shield is directly taken from the Brand Mark. We use it when we wish to make a confident statement of who we are, without having to use our full Brand Mark. Primarily it can be seen as a feature on the front covers of collateral and in the built environment as part of place-making on campus.

The Shield is a powerful symbol of academia and signals to our students and alumni the high value we place on academic excellence the future of Western Sydney.

The simple 'W' becomes an abbreviation of our full name and heroes the University's geographical position within Sydney. The form of the 'W' is suggestive of two forces at play – pushing out from the west and pulling in from the east.

The Shield is to be applied only on selective and limited brand touch points and collateral, for example merchandise and brochure covers. The Shield should always be experienced and seen in the vicinity of the primary Brand Mark.

## Brand Clear Space

Clear space ensures the impact of the Brand Mark is not diminished by being crowded by other design elements or logos.

In special circumstances it may be necessary to use less clear space. Please consult the Brand Custodian for approval.

This includes looking for the ideal placement when layering the Brand Mark on an image so the Brand Mark is clearly visible and the brand is easily identified.

**Note:** The Shield can sit over an image, in this instance the clear space is not applicable.

# Brand Typography

There are two typefaces used in the Western Sydney University brand. The combination of these typefaces have been chosen for their balance of bold confidence with academic gravitas.

## Primary

Gotham Narrow is a distinct and modern sans serif typeface which reflects the modern and confident nature of our brand.

# I AM GOTHAM

Gotham Narrow Light

abcdefghijklmnopqrstuvwxyz

ABCDEFGHIJKLMNOPQRSTUVWXYZ

1234567890!@#\$%^&\*()\_+<>?

**Gotham Narrow Medium**

abcdefghijklmnopqrstuvwxyz

ABCDEFGHIJKLMNOPQRSTUVWXYZ

*Gotham Narrow Light Italic*

*abcdefghijklmnopqrstuvwxyz*

*ABCDEFGHIJKLMNOPQRSTUVWXYZ*

*1234567890!@#\$%^&\*()\_+<>?*

**Gotham Narrow Bold**

**abcdefghijklmnopqrstuvwxyz**

**ABCDEFGHIJKLMNOPQRSTUVWXYZ**

**1234567890!@#\$%^&\*()\_+<>?**

# Brand Typography

## Secondary

Chronicle Text complements our primary typeface, creating a classic academic balance to the bold Gotham Narrow. It is a time-honoured form with a contemporary design.

Chronicle Text is primarily used as a supporting typeface in headlines and body copy, set in sentence case.

# I am Chronicle

## Chronicle Text (G1) Roman

# Building Visual Architecture

## Pictograms

For the user, pictograms increase message legibility and increase the speed at which messages are interpreted - for both English and non-English speaking viewers.

Unless specified, pictograms should appear in the same colour as the text with which they are associated.

Pictograms should only be generated from digital files and must not be distorted.

## Building Numbering

All buildings on the Western U campuses have numbers, however some buildings also have names, for example: Building AA on Penrith Campus - Werrington North is also known as Frogmore House, Building C on Penrith Campus - Kingswood is also known as Hingston Building.

This makes it difficult to use one numeric system across the entirety of the University. In an effort not to confuse users, 'local' numbering conventions for each campus are to be used on the corresponding internal building signage. Listed above is the numbering conventions for each of the Western U campuses.

CAMPUS	CONVENTION	BUILDING NUMBER
Kingswood	Alphabetical sequence – starting at A	A, B, C
Werrington North	Alphabetical sequence – starting at A, with an 'A' prefix.	AD, AF, AG
Werrington South	Alphabetical sequence – starting at A, with an 'B' prefix.	BA, BB, BC
Parramatta South	Alphabetical sequence – starting at A, with an 'E' prefix.	EB, EA, EE
Parramatta North	Alphabetical sequence – starting at N, with an 'L' prefix.	LY, LZ
Parramatta City		1, X6
Westmead	Alphabetical sequence – starting at J	J, K, L
Bankstown	Numerical sequence – Starting at 1	1, 2, 3, 4
Campbelltown	Numerical sequence – Starting at 1 (Note: While numbering was originally sequential, subsequent infill buildings are now out of numeric sequence.)	1, 2, 3, 4
Blacktown	Clusters with sequence – U and C prefix Building prefix meanings: U = University T = Tafe C = Consortium (Joint Facility - Tafe, University, and occasionally School);	U1, U2, U3, C1
Hawkesbury	Precinct Clusters with sequence – A- S prefix	A1, A2, M20

# Building Visual Architecture

## Room Numbering

When listing room numbers and ranges of room numbers on signage the guidelines shown on the following two pages should be followed.

Due to the large number of buildings which comprise Western U and the timetabling system utilised, the building number (or alpha character) should always be listed. This is then followed by the level number and finally room number. Each piece of information is separated with a period (".").

For each signage message, when specifying ranges of numbers, the level and building number only appear with the first room in the set, all additional rooms are listed as the room number only.

Ranges of room/workstation numbers should always be listed in numerical order

### Note:

Rooms should only be referred to by their number and name as per the nomenclature specified within this standard.

Double or secondary numbers e.g. "B.1.14 Science Lab 2" should never be used  
See example below.

### ROOM NUMBERING RANGES EXAMPLES

Single room/workstation number

**Room B.G.17**

Range of consecutive room/workstation numbers. Numbers are separated by a hyphen. Two consecutive numbers are not a range.

**Rooms 3.1.12 - 14**

Non-consecutive range of room/workstation numbers.

**Rooms AE.1.21, 23, 31, 32**

Mixed series of room/workstation numbers.

**Rooms B.G.03, 06 - 22, 31, 36**

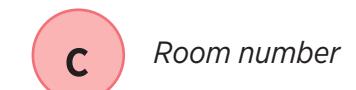

### SINGLE ROOM NUMBER EXAMPLES

*Building number/alpha*

*Level number*

*Room number*

**2.3.02**

**B.2.17**

**AC.G.26**

# Building Visual Architecture

## Room Naming

This reference guide is designed to assist to determine the correct name to be shown on door slats for some of the most common room types.

Little case should be used for all wayfinding and door signs.  
ie all words are capitalised with the exception of conjunctions, prepositions and determiners ie. and, of, for or the.

All room naming of signs to be approved by Office of Estate and Commercial.

**Note:**

Rooms should only be referred to by their number and name as per the nomenclature specified within this standard.  
Double or secondary numbers ie.  
"AC.G.26 Lecture Theatre 2" should never be used.

Correct signage room naming	Room name in Archibus	DO NOT USE
TEACHING	Teaching Space	GTA - Flat Floor Teaching Room
		Flat Floor Teaching Lecture Room Tutorial Room Seminar Room
	Collaborative Learning Space	GTA - Collaborative Learning Space
	Social Learning Space	GTA - Social Learning Space

### Grandeur Frame

#### Directory or Wall Mounted (DB 530)

**Wall mounted signs consisting of 3 slats to be Grandeur frame mechanically screw fixed behind magnetic face (no split baton).**

**Wall mounted signs consisting of 4 slats or greater to be Grandeur frame split baton fixed.**

The Grandeur wall mounted signage system is manufactured in Australia. It is sourced and installed through an approved Signage Contractor, who is responsible for final artwork, assembly, vinyl application and installation.

This system consists of a robust outer frame 16mm deep with composite aluminium face-plates. Finish is satin natural silver anodised.

Vinyl is applied to the face-plates with cut letters, icons, lines and the silver anodised finish creating the colour palette.

See building wayfinding section for size options.

Contractor to ensure fixing method is suitable for wall substrate. Sign contractor to determine requirements on site and to provide structurally secure attachment.

Fixings and suspensions to be of corrosion resistant materials (stainless steel, galvanised steel or anodised aluminium).

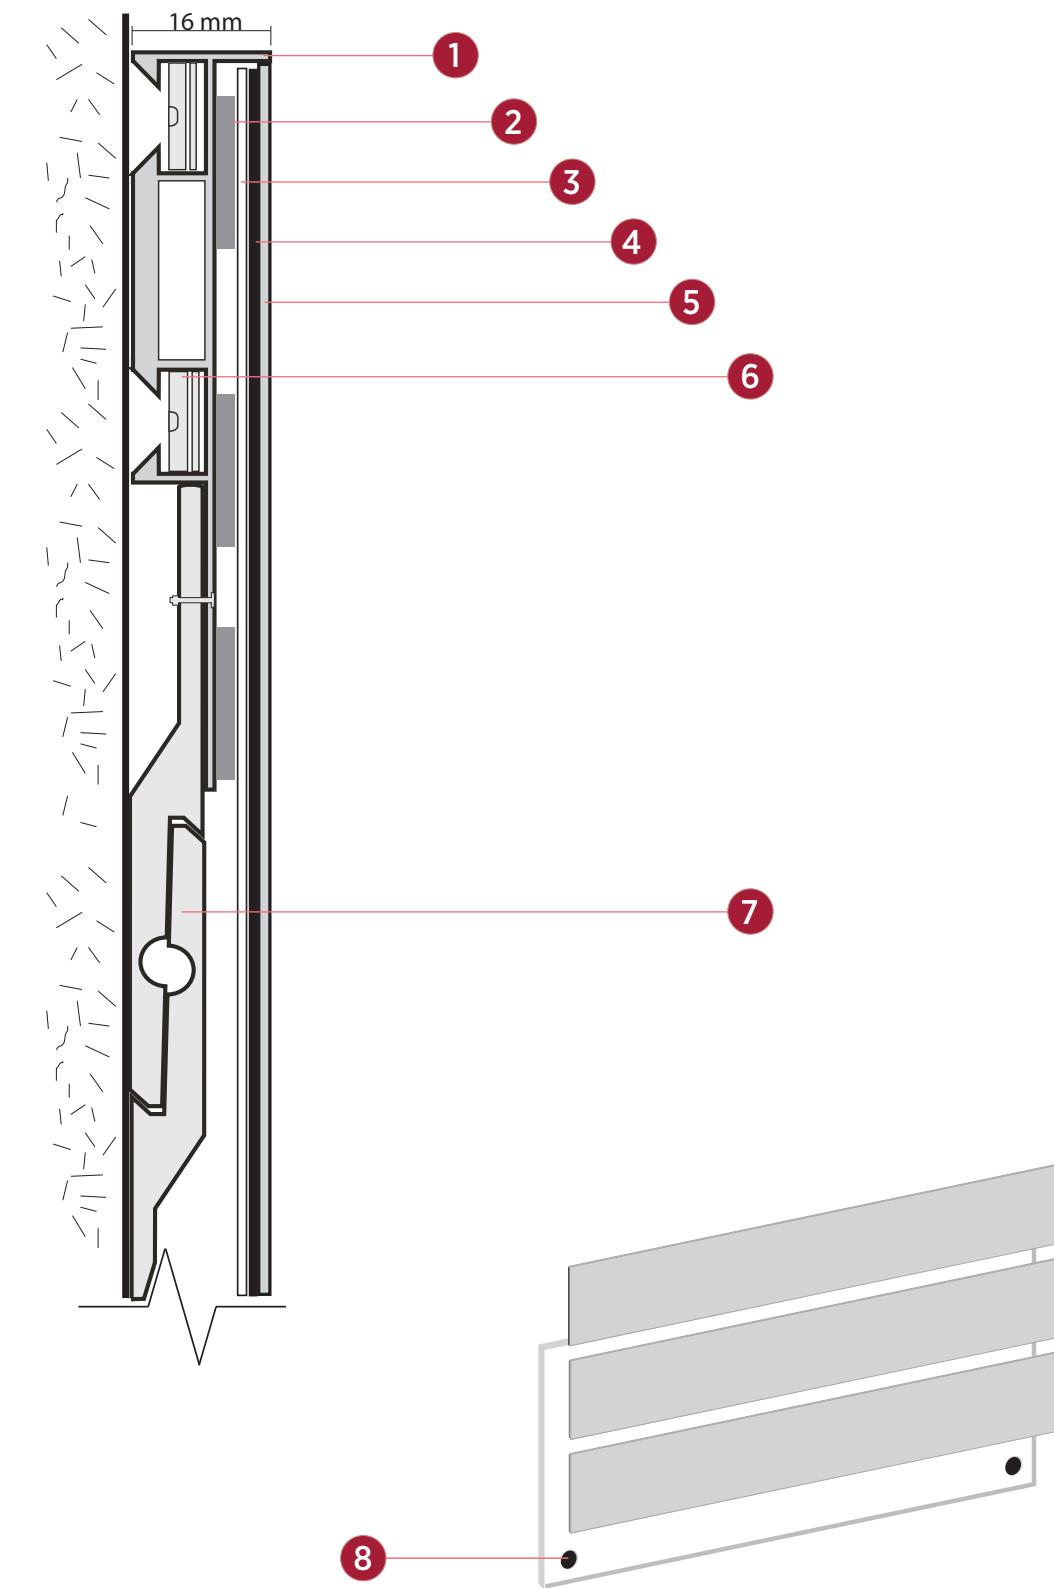

**Note:** When removing and replacing vinyl graphics care should be taken to ensure the satin finish of the sign face is not

damaged, for example at no time should a metal scraper be used on signage.

**Note:** Directory Small (BW1.1) required to use a minimum of 9 slats; Directory Large (BW1.2) required to use a minimum of 13 slats.

- 1 Signlink Grandeur frame. Satin natural anodised with a front elevation visual edge of 1.2mm.
- 2 VHB double sided tape to attach the colourbond backplate to the frame.
- 3 White colourbond steel back plate at 0.55mm thick.
- 4 Self adhesive magnetic sheet applied to the reverse side of the face material. Magnetic coverage is approximately 90%
- 5 Satin natural anodised, custom cut aluminium panels at 1.2mm thick.
- 6 Corner connectors to reinforce the Signlink Grandeur frame eight (8) per sign.
- 7 Heavy duty aluminium Split Batten.
- 8 Sign supplied with two (2) pre-drilled fixing holes in sign body. (Once fixings have been inserted, they prevent the sign from being removed off split batten. Fixings sit below colourbond back.

**BW1** **BW2**

# Building Construction

## Signlink

### Info Panel frame

#### Wall Mounted (DB 525)

##### Wall mounted signs consisting of 1-2 slats to be Info Panel frame.

The Info Panel frame wall mounted signage system is manufactured in Australia. It is sourced and installed through an approved Signage Contractor, who is responsible for final artwork, assembly, vinyl application and installation.

This system consists of a robust outer frame 11mm deep with composite aluminium face-plates. Finish is satin natural silver anodised.

Vinyl is applied to the face-plates with cut letters, icons, lines and the silver anodised finish creating the colour palette.

**BW2**

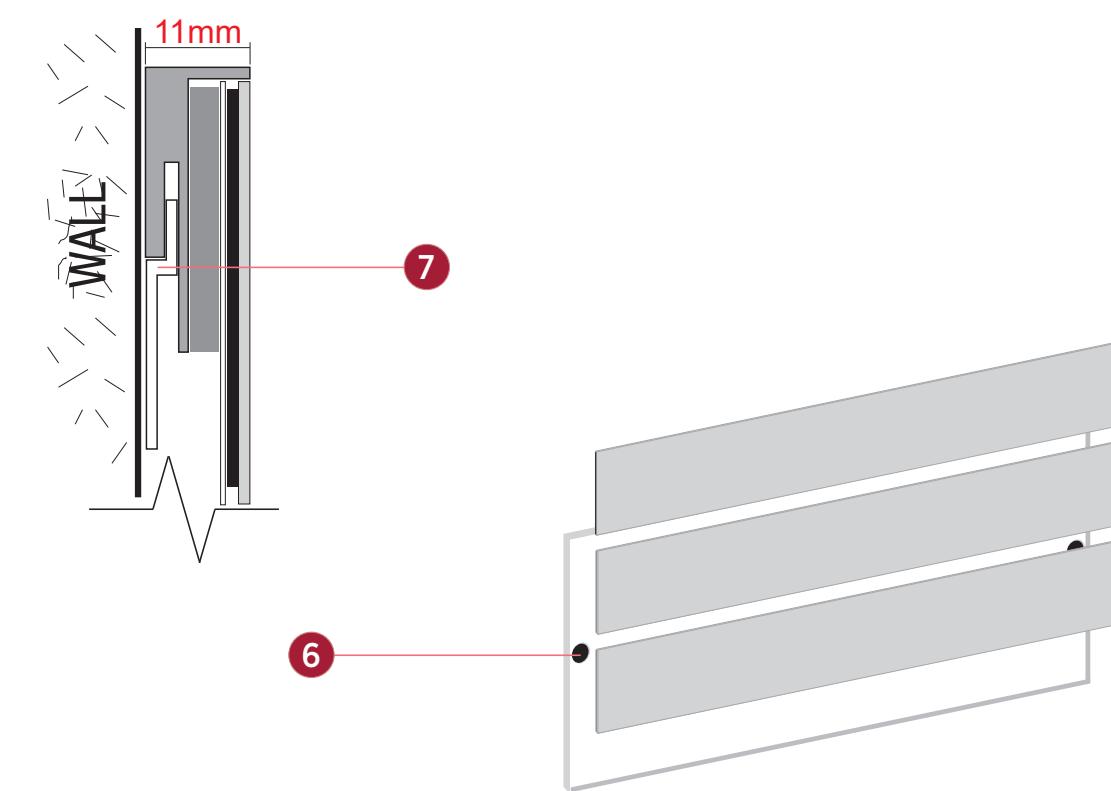

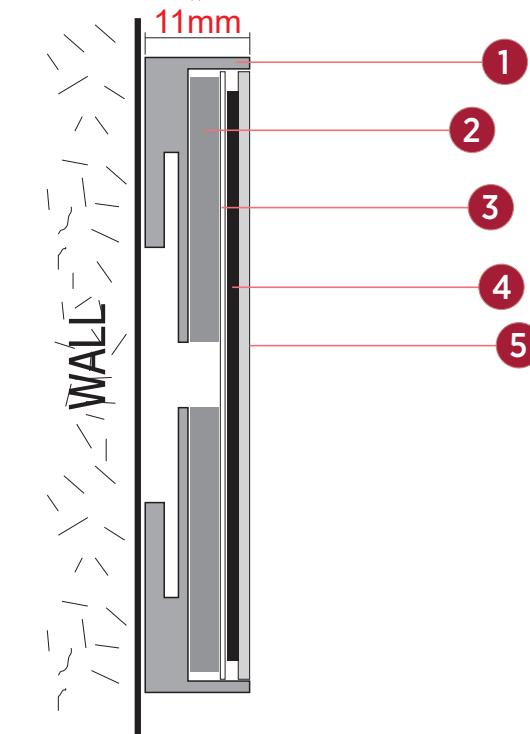

See building wayfinding section for size options.

Contractor to ensure fixing method is suitable for wall substrate. Sign contractor to determine requirements on site and to provide structurally secure attachment.

Fixings and suspensions to be of corrosion resistant materials (stainless steel, galvanised steel or anodised aluminium).

**Note:** When removing and replacing vinyl graphics care should be taken to ensure the satin finish of the sign face is not damaged, for example at no time should a metal scraper be used on signage.

- 1 Signlink Info Panel frame. Satin natural anodised with a front elevation visual edge of 1.2mm.
- 2 VHB double sided tape to attach the colourbond backplate to the frame.
- 3 White colourbond steel back plate at 0.55mm thick.
- 4 Self adhesive magnetic sheet applied to the reverse side of the face material. Magnetic to coverage is approximately 90%
- 5 Satin natural anodised, custom cut aluminium panels at 1.2mm thick.
- 6 Sign supplied with two (2) pre-drilled fixing holes in sign which are concealed behind the face panels.

# Building Construction

## Signlink

### Hallmark Frame

#### Ceiling Suspended Sign (CS 400)

The Hallmark ceiling suspended signage system is manufactured in Australia. It is sourced and installed through an approved Signage Contractor, who is responsible for final artwork, assembly, vinyl application and installation.

This system consists of a robust outer frame 25mm deep with composite aluminium face-plates. Finish is satin natural silver anodised.

Vinyl is applied to the face-plates with cut letters, icons, lines and the silver anodised finish creating the colour palette.

See building wayfinding section for size options.

Hallmark signs are suspended via stainless steel suspension cables for internal signs; satin natural anodised tubes over threaded concealed fixing rods for external signs.

Contractor to ensure fixing method is suitable for ceiling substrate. Suspended signs are fixed to long aluminium angle placed above suspended ceilings to spread load or to concrete slab above. Sign contractor to determine requirements on site and to provide structurally secure attachment.

Fixings and suspensions to be of corrosion resistant materials (stainless steel, galvanised steel or anodised aluminium).

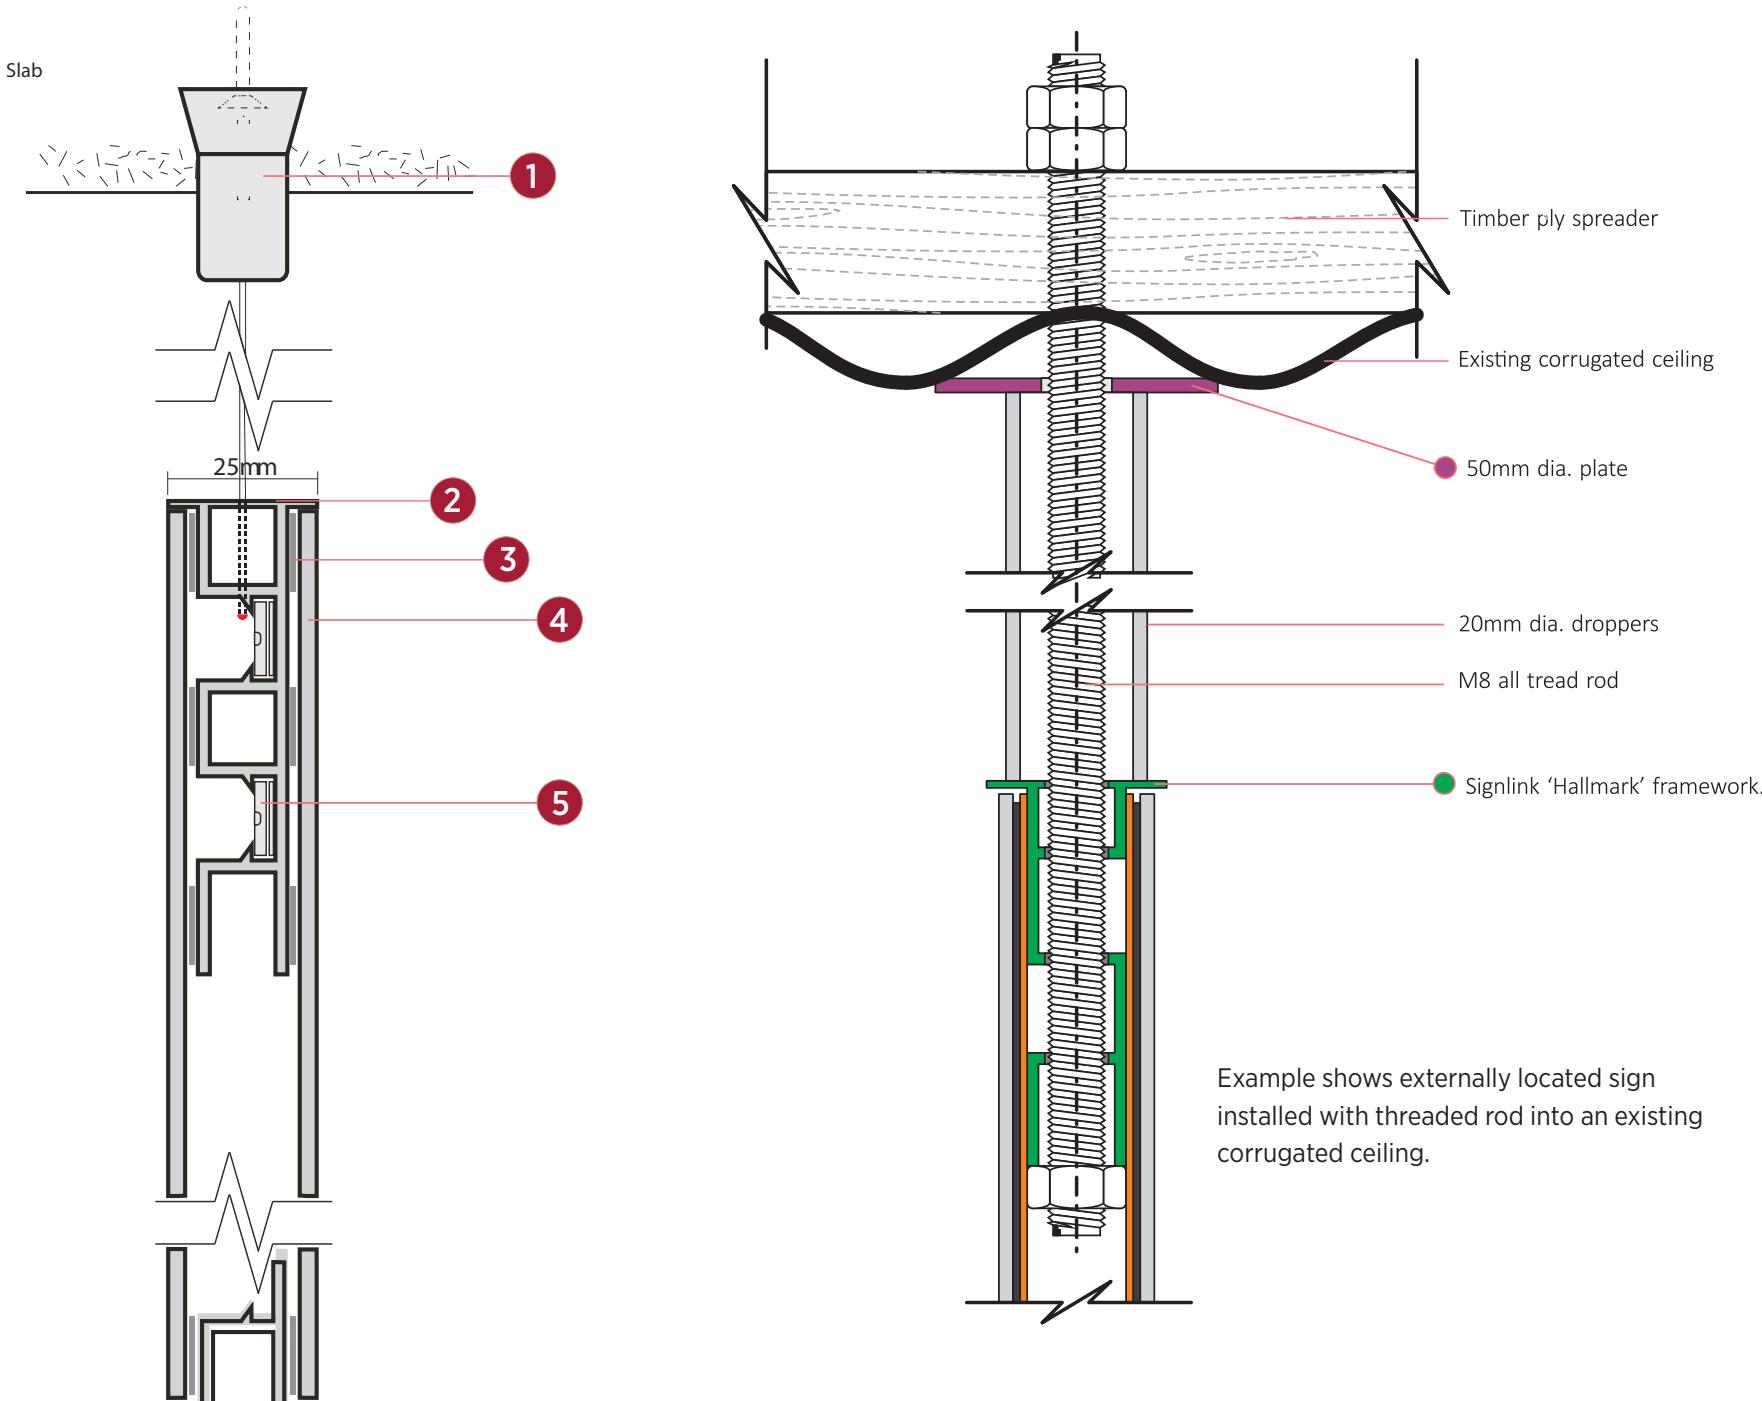

**Note:** at time of ordering sign the contractor shall take into account the ceiling height and confirm that the stainless steel wire length ordered is sufficient to allow the sign to hang at the height from floor specified in this standard.

**Note:** When removing and replacing vinyl graphics care should be taken to ensure the satin finish of the sign face is not damaged, for example at no time should a metal scraper be used on signage.

**Note:** Suspended signs are required to be a minimum of 2 slats high.

- 1 Ceiling suspension kits including stainless steel wire and CAD fittings
- 2 Signlink Hallmark frame. Satin natural anodized with a front elevation visual edge of 1.2mm
- 3 Self adhesive magnetic sheet applied to the reverse side of the face material. Magnetic coverage is approximately 90%
- 4 Satin natural anodized, custom cut aluminium panels at 1.2mm thick.
- 5 Corner connectors to reinforce the Signlink Hallmark frame (eight (8) per sign)

**BW4**

Example shows externally located sign installed with threaded rod into an existing corrugated ceiling.

# Building Construction

## Signlink

### Top Hat Frame

#### Projecting (PS 450)

The Top Hat wall mounted projecting signage system is manufactured in Australia. It is sourced and installed through an approved Signage Contractor, who is responsible for final artwork, assembly, vinyl application and installation.

This system consists of a robust outer frame with single piece aluminium panel. Finish is satin natural silver anodised.

Vinyl is applied to the face-plates with cut letters, icons, lines and the silver anodised finish creating the colour palette.

See building wayfinding section for size options.

Top Hat signs are concealed screw fix, through a wall bracket.

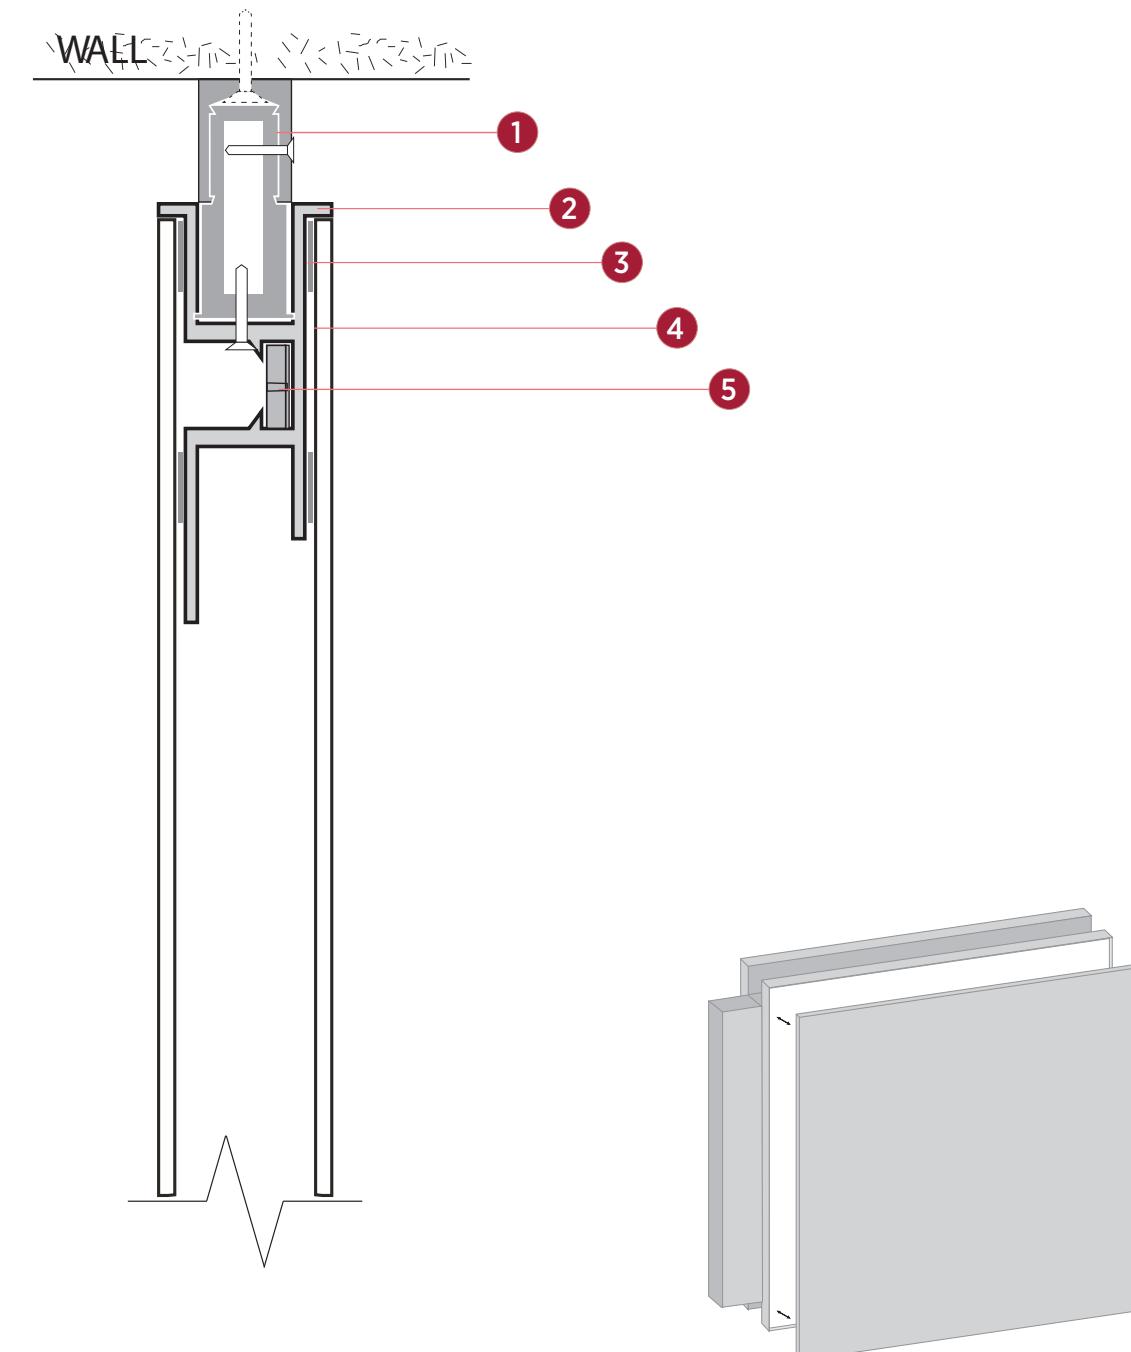

Contractor to ensure fixing method is suitable for wall substrate. Sign contractor to determine requirements on site and to provide structurally secure attachment.

Fixings and suspensions to be of corrosion resistant materials (stainless steel, galvanised steel or anodised aluminium).

**Note:** When removing and replacing vinyl graphics care should be taken to ensure the satin finish of the sign face is not damaged, for example at no time should a metal scraper be used on signage.

- 1 Projecting wall bracket to allow sign slide down track for resolvability.
- 2 Signlink Top Hat Frame. Satin natural anodized with a front elevation visual edge of 1.2mm.
- 3 VHB double sided tape to attach the face material to the frame.
- 4 Satin natural anodized, custom cut aluminium panels at 1.2mm thick.
- 5 Corner connectors to reinforce the Signlink Top Hat Frame , eight (8) per sign.

**BW3**

# Building Construction

## Signlink

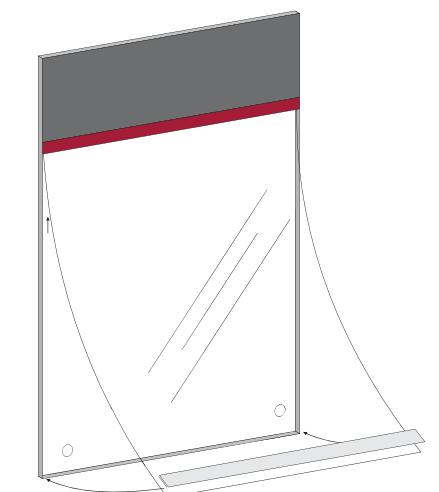

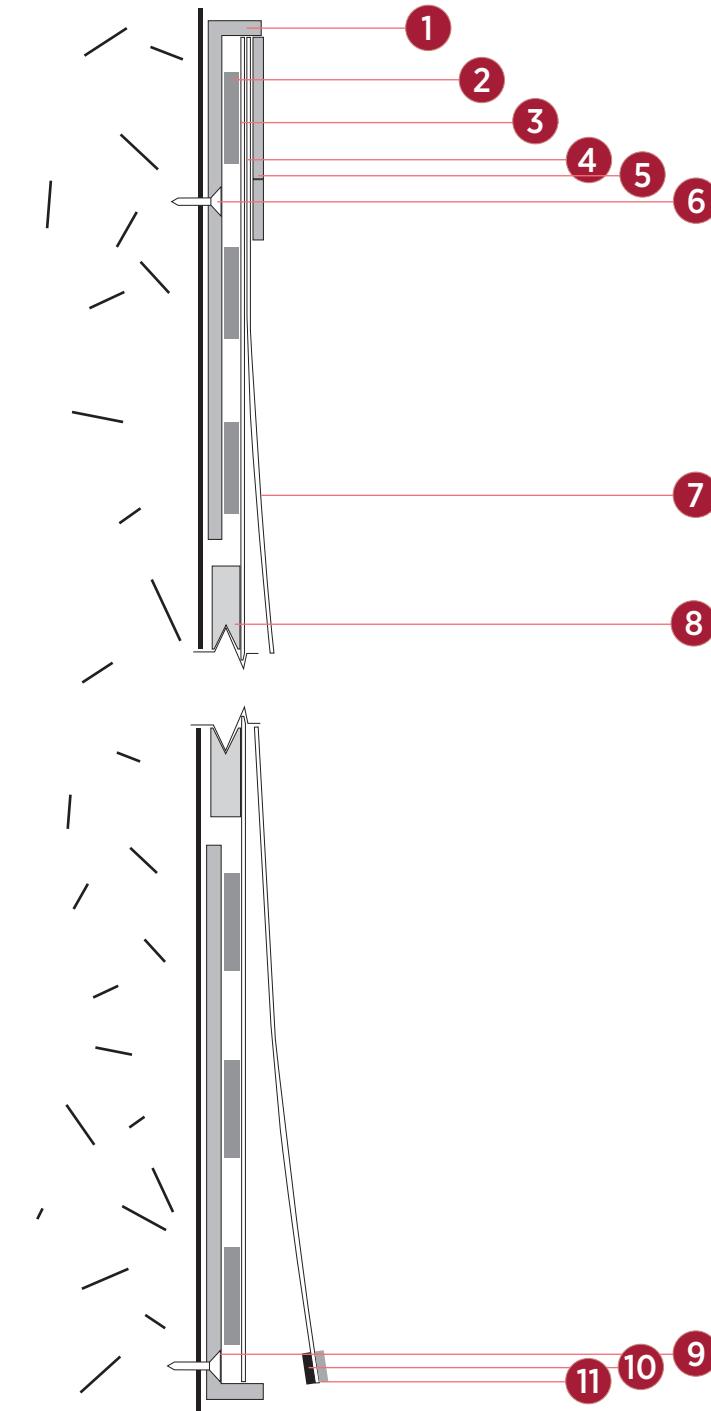

### Benchmark Pivot Poster (PD917)

The Signlink Hallmark signage system is manufactured in Australia. It is sourced and installed through an approved Signage Contractor, who is responsible for final artwork, assembly, vinyl application and installation.

Fixings and suspensions to be of corrosion resistant materials (stainless steel, galvanised steel or anodised aluminium).

- 1 Signlink Benchmark frame. Satin natural anodised with a front elevation visual edge of 1.2mm
- 2 VNH double sided tape to attach the colourbond backplate to the frame.
- 3 White colourbond steel back plate at 0.55mm thick.
- 4 Self adhesive magnetic sheet applied to the reverse side of the face material. Magnetic to coverage is approximately 90%.
- 5 Satin natural anodised, custom cut aluminium panels at 1.2mm thick.
- 6 Mechanical fixings to secure the sign frame to the wall.
- 7 Clear polycarbonate cover to display standard paper sizes
- 8 Internal aluminium supports at 3mm thick. Only used on larger signs when necessary.
- 9 Mechanical fixings (2 each side) to secure the bottom of the sign. These fixings are concealed by the aluminium footer.
- 10 Magnetic tape
- 11 Aluminium trim

BW5

# Building Construction

## Spandex

### Slatz system IDP 550

This system is sourced through a local distributor, who supplies the sign trade. The Spandex system used in this Manual is Slatz.

The system comprises a series of Face-plates and matching end caps for individual name plate.

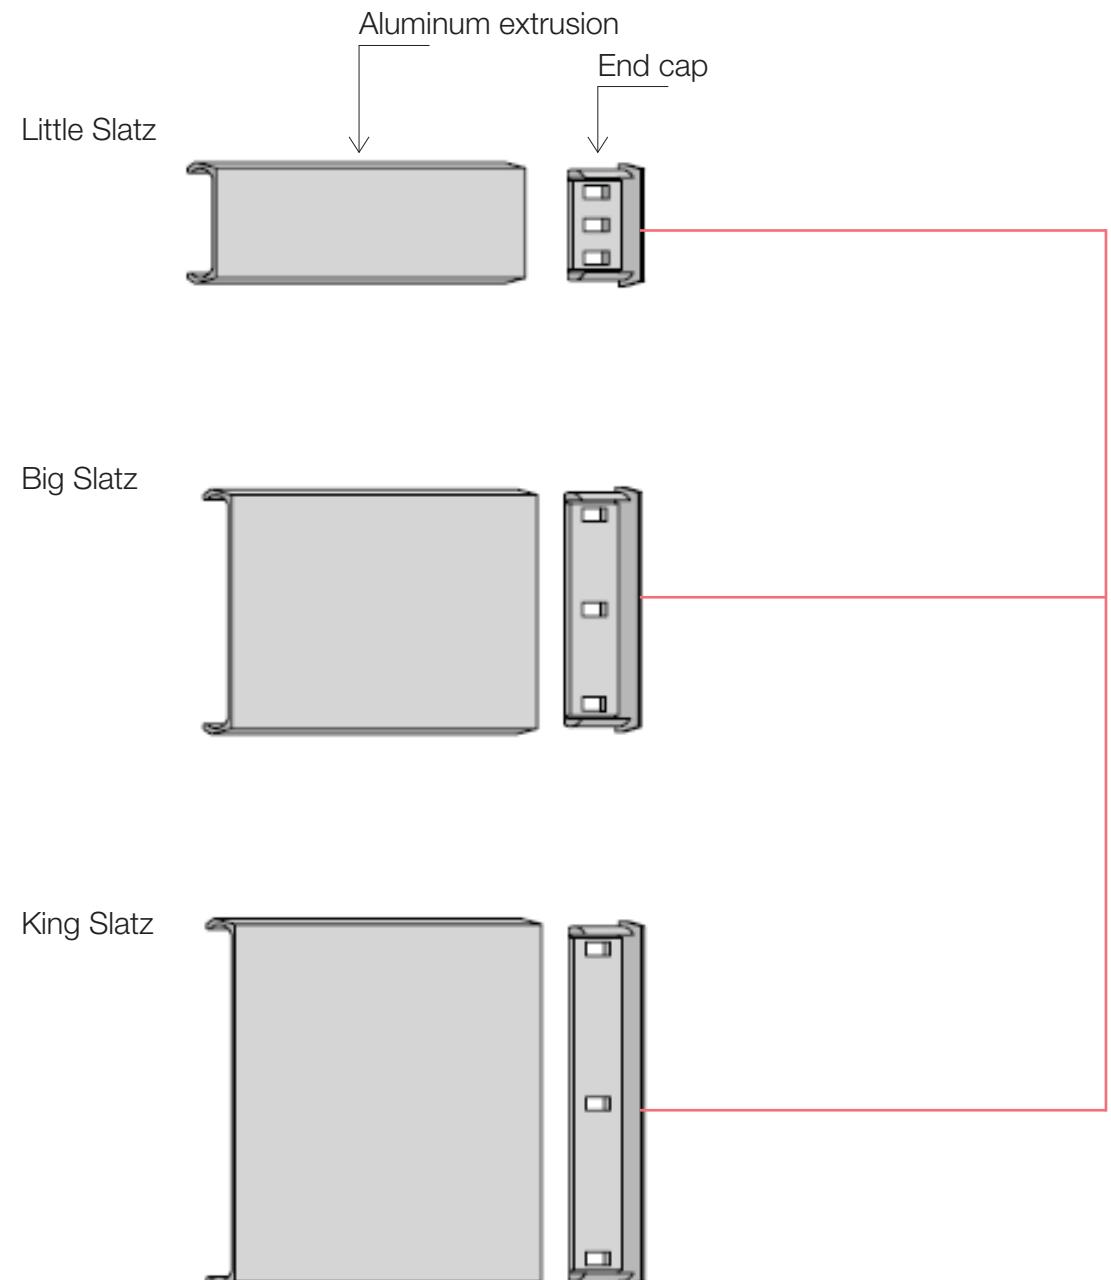

Texting is achieved through the use of cut, cast vinyl applied to the face.

The selected local contractor is responsible for assembly, painting, texting and installation.

This system is used for door signs only.

1 2 screws to be used each end.  
Do not glue end cap to the slat.

# Building Visual Architecture

## Message Arrangement

### Text & Symbol Order

For wayfinding signs, the order of arrows, text and pictograms is different depending on the alignment of the message text.

For left aligned text (i.e. arrow directions up, left or down), information is set to a left margin. From the left margin the arrow comes first, then the text and finally any associated pictograms.

For right aligned text (i.e. arrow directions to the right) information is set to a right margin. From this right margin the arrow comes first, then the text and then any associated pictograms.

### Long Messages

Long messages may be split over multiple 'slat' heights when they do not comfortably fit on a single 'slat' area.

Note that this does not affect the order of arrows and pictograms.

The ampersand symbol “&” should always be used on sign messages to help reduce message length, except where otherwise indicated in this document.

 Forward Aligned Text 

 Left Aligned Text 

 Right Aligned Text 

 Long Message Split Over a Two Slat-sized Height 

# Building Visual Architecture

## Arrow & Message Hierarchy

### Arrow Hierarchy

Directional wayfinding signs constitute the bulk of all signage specified throughout Western U. It is important that the messages on each sign are grouped by arrow direction as shown.

Obviously, for each sign, only arrow directions which have messages are included. Any messages which are straight ahead should be grouped at the top of the sign wherever possible. Any messages relating to the 'Left 45° up' direction are then added. Next are 'Left' messages and so forth down the list.

The use of a down arrow should only be used to point down stairs or a lift.

Down arrows should never be used to direction backwards.

**Up**

**Left 45° up**

**Left**

**Left 45° down**

**Right 45° up**

**Right**

**Right 45° down**

**Down**

### Message Hierarchy

For each arrow direction messages should be ordered according to this list. Consistently ordering information increases the speed at which people can find the information they need.

## 1) Directions to other buildings

E.g. Through to Building C when the sign is in Building B.

## 2) Faculties, departments, specific areas

Specific areas include: lecture theatres, teaching spaces, labs, workshops, meeting rooms, Student Services, School of... etc.

## 3) General room numbers

General, non-specific rooms e.g. Rooms K.1.12 - K.1.21.

## 4) Utilities, toilets/change rooms

E.g. Lifts, toilets, stairs, food outlets. These destination types are always positioned together in the charcoal utilities bar at the bottom of the sign. A double utilities bar may be used if 3 directional groups are required or if there is insufficient room is available one.

MESSAGE HIERARCHY EXAMPLE (on wall mounted internal wayfinding sign):

1	Level 1
Through to Building 9	
↳ Lecture Theatre 1.1.106	
↳ Teaching Spaces 1.1.80 - 104	
Rooms 1.1.109 - 224	
↳ Toilets	Level 2
↳ Lifts	Level 2

# Building Wayfinding

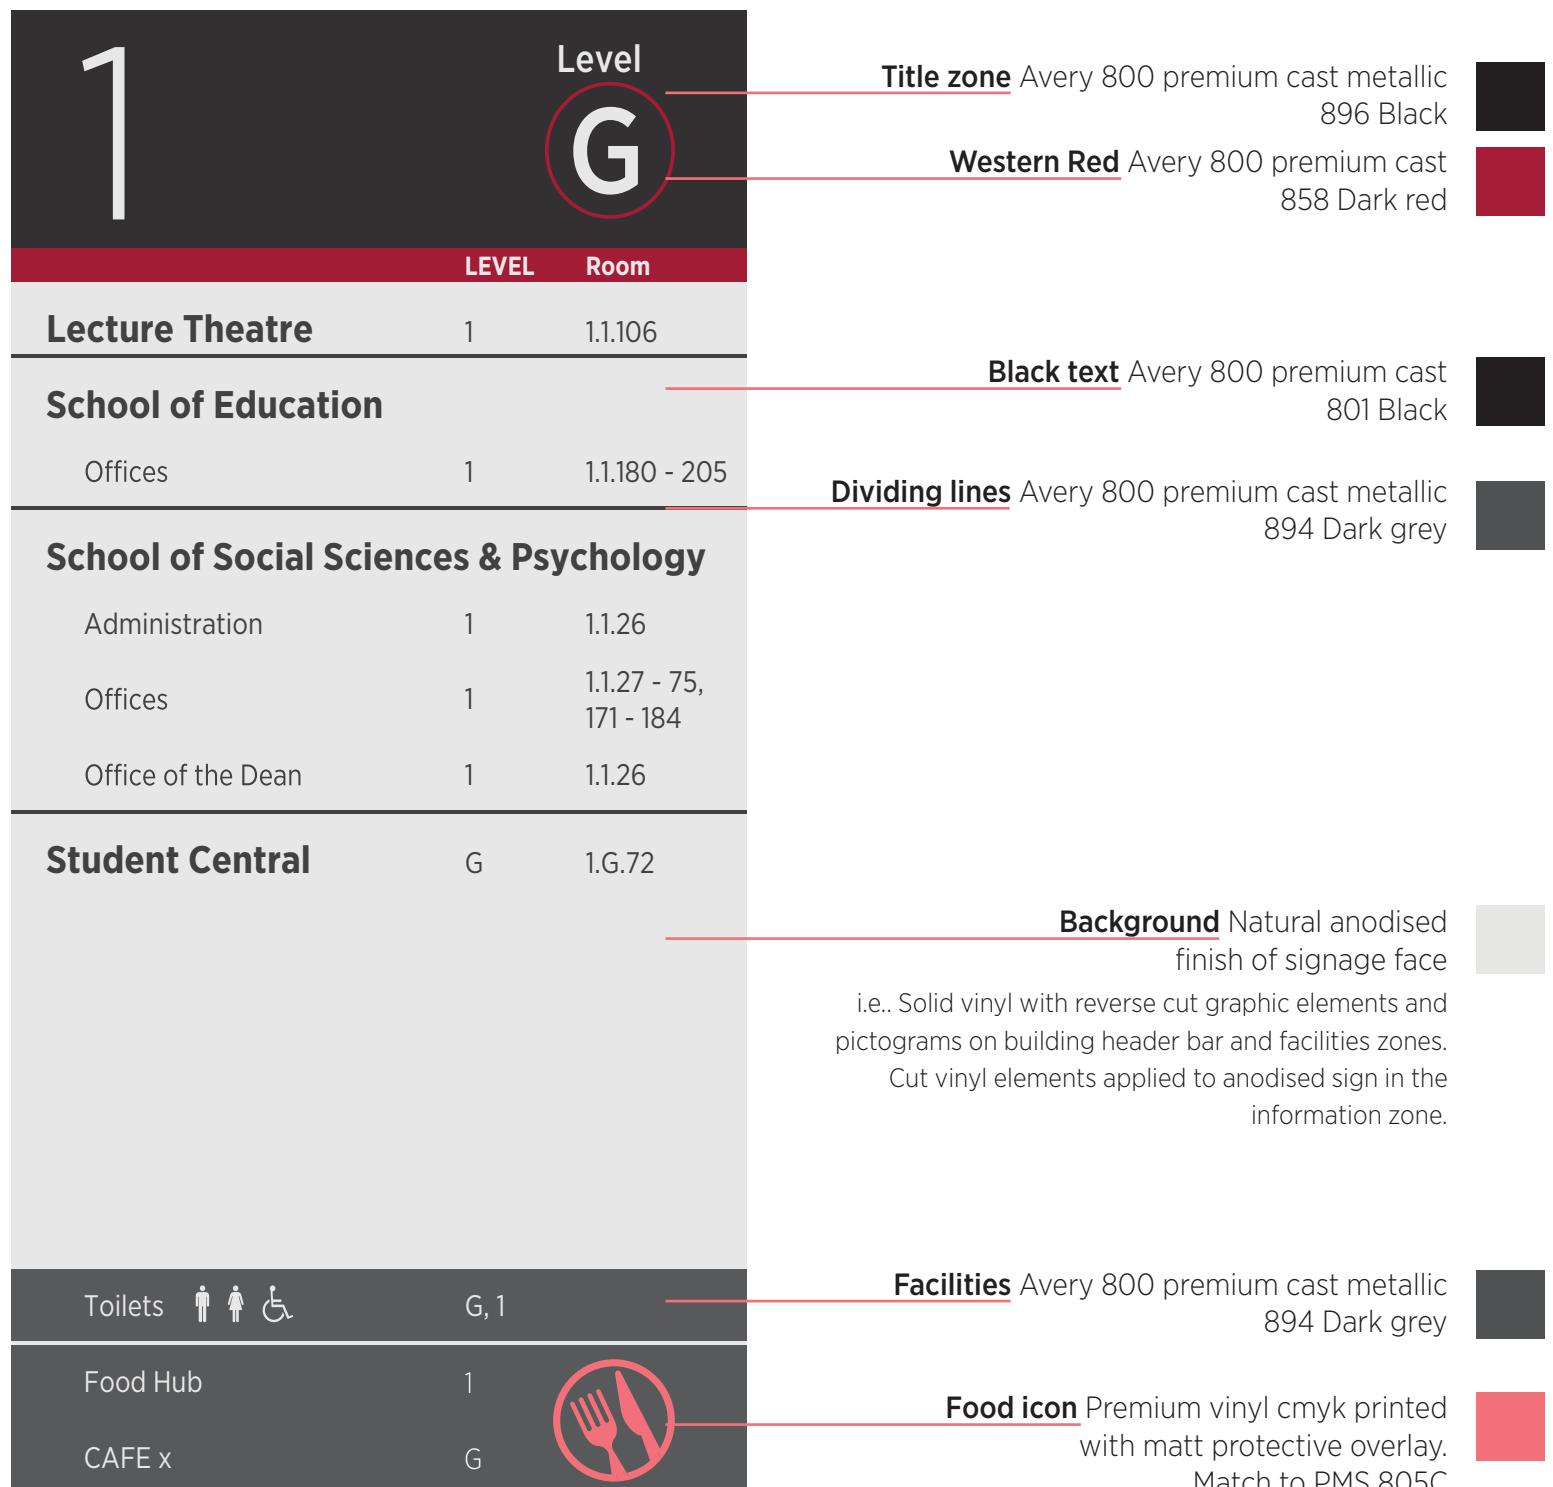

## Colour overview

The colour palette for building wayfinding has been developed to ensure a consistent colour palette and quality across all University sites.

Accurate representation of these colours is critical to building brand awareness and reinforcing Western Sydney University ownership of its colour palette.

To ensure this materials specification and colour choices within this document shall always be adhered to without exception across the standard building wayfinding signage suite.

**Note:** refer to the following pages in this section for more detail for each signage type.

# Building Wayfinding

BW1

## Directory Board - Small BW1.1

### System

Signlink 'Grandeur' frame.

BW1.1 to be used in smaller scale buildings and where width of suitable wall will not allow for a BW1.2.

### Finish

Satin natural anodised.

### Front Panel

Multiple piece aluminium panel over concealed magnetic sheets (as shown).

### Fixing

Concealed screw fix, behind magnetic front panel.

### Graphics

Avery Premium, cut-out solid vinyl, colours as shown.

- **SPACING AND LAYOUT**  
Directional Group with multi line single destination.
- **SPACING AND LAYOUT**  
Directional Group with multiple destinations.
- **OPTIONAL SECOND UTILITIES BAR**  
to be used if Food hub information is required.

BW4.2

# Building Wayfinding

BW5

## Staff Directory - Small BW5.1, Large BW5.2

### System

Small BW5.1

Signlink Benchmark pivot poster A4

Large BW5.2

Signlink Benchmark pivot poster A3

To be installed to available space next to the entry door.

Alternative locations to be approved by OEC.

Sign size determined by wall space and amount of information required on insert.

### Finish

Satin natural anodised.

### Front Panels

Fixed top panel with lift-able clear plastic window allowing for paper to be displayed in a landscape A4 or A3 format.

### Graphics

Avery Premium, cut-out solid vinyl, colours as shown

Avery 800 premium cast metallic 896 Black

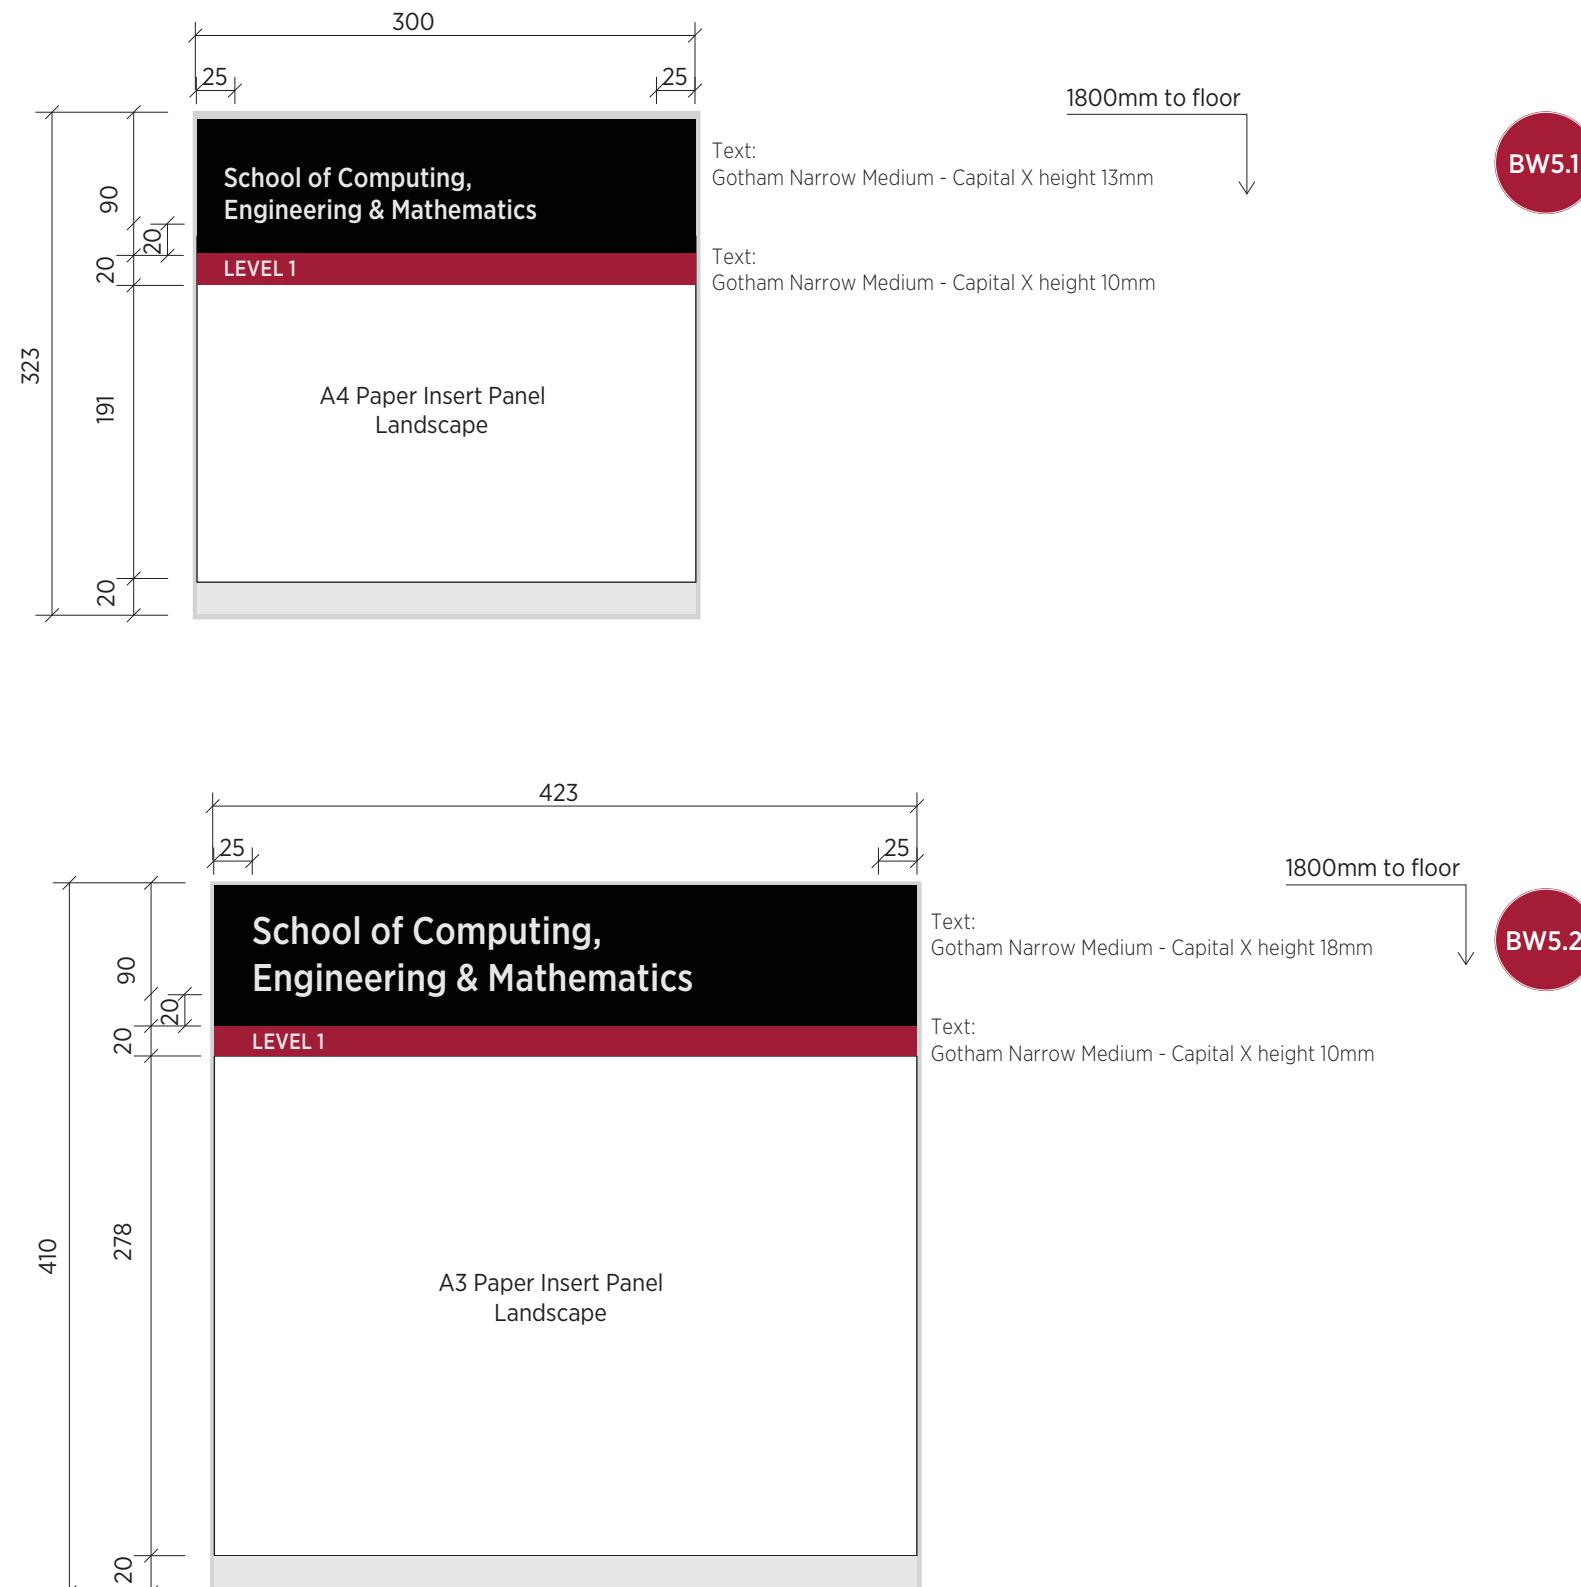

Avery 800 premium cast 858 Dark red

**Note:** this colour indicates anodised sign face finish.

**Note:** Staff directories shall always have a name (ie school/unit/entity) in the top black bar.

# Building Wayfinding

BW6

## Internal Destination ID

Used to identify main internal destinations, and help users navigate to key areas for example “Reception” or “IT support”.

This type of signage shall not be used to apply a units or school name within or to the external wall of spaces. See BW7 or BW8 for brand lock-ups to be applied at the entry points of spaces.

### Location

At thresholds of location points or at reception desk area fixed directly to wall or bulkhead. Sign should be located in a way and at a height that allows it to be best seen along main paths of travel.

### Graphics

Names are to be in Gotham Narrow Bold upper and lower-case. Vinyl colour to be selected to provide contrast with the colour of the facade/wall behind the letters.

Vinyl face applied to acrylic either:

Avery 800 premium cast metallic  
894 Dark grey

Avery 800 premium cast metallic  
891 Silver Grey

The size of signs will depend on the architectural detail of reception wall and the distance from which it is to be read.

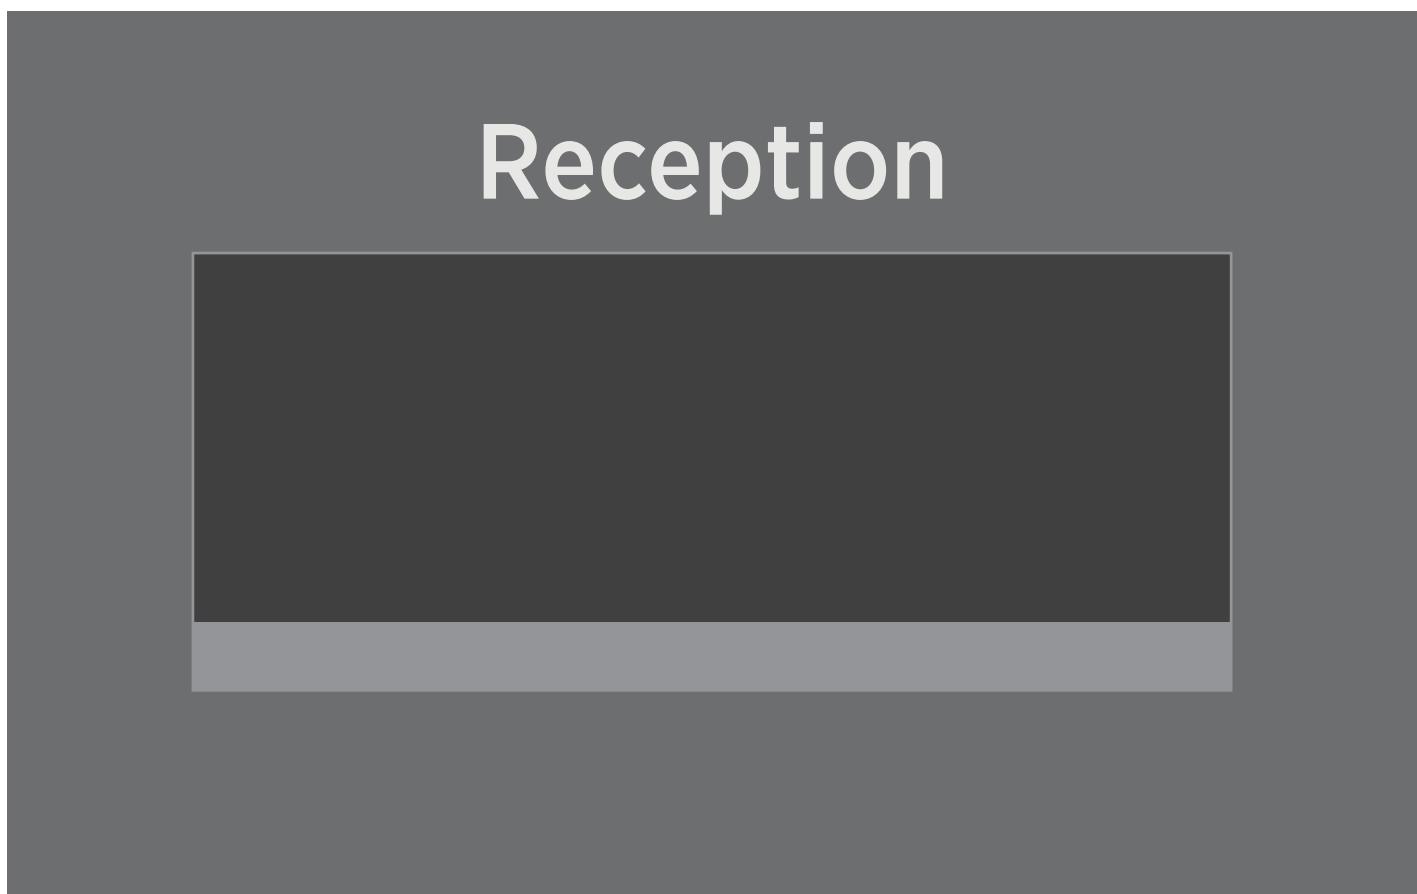

### Construction

Letters are to be 6mm thickness acrylic with cut applied vinyl face, flush mount securely fixed to wall (no visible fixings on face).

### EXAMPLE OF CUT-OUT LETTERS

# Reception

### EXAMPLE OF DESTINATION ID ON DARK WALL

# Building Wayfinding

## BW7 Main Door ID - Western Red

**Where the Western U - School/Research Centre/Institution lock-up is to be applied to external glass entrances (refer to typical image and locations) this standard is to be applied.**

**Note:** This standard is only to be applied where there is a side glazing panel available, graphics should not be applied to the door glazing itself.

Where no side glazing is available white only school & unit name with brand lock-up to be used (see BW8).

This is a custom solution to be used when an entrance is predominantly glazing. As such the design and layout of this signage should always be approved by Office of Estate and Commercial prior to manufacture.

### Approach

When using Western U School/Research Centre/Institution lock-up 'and' should be used rather than an ampersand.

All School/Research Centre/Institution lock-ups use the same rules. The word 'School' is to be removed for a more streamlined approach to naming.

Apply Avery 5500 translucent cast Garnet Red 5526 as shown to inside of glass. Large shield element to be reverse cut out of translucent vinyl panel.

Apply White Avery 800 solid cut vinyl logo to outside of glass to allow for updating of school name without removal of Western Red film.

To be applied to the fixed left glass panel next to the door i.e. not on the door itself.

Glazing mullions and transoms to be considered when placing shield mark so it remains as clear as possible. See typical usage and locations.

Refer to brand guidelines guide for University shield and brand-mark usage.

### Graphics

Avery Premium, cut-out solid vinyl, colours as shown

Avery 800 premium cast  
800 white 858

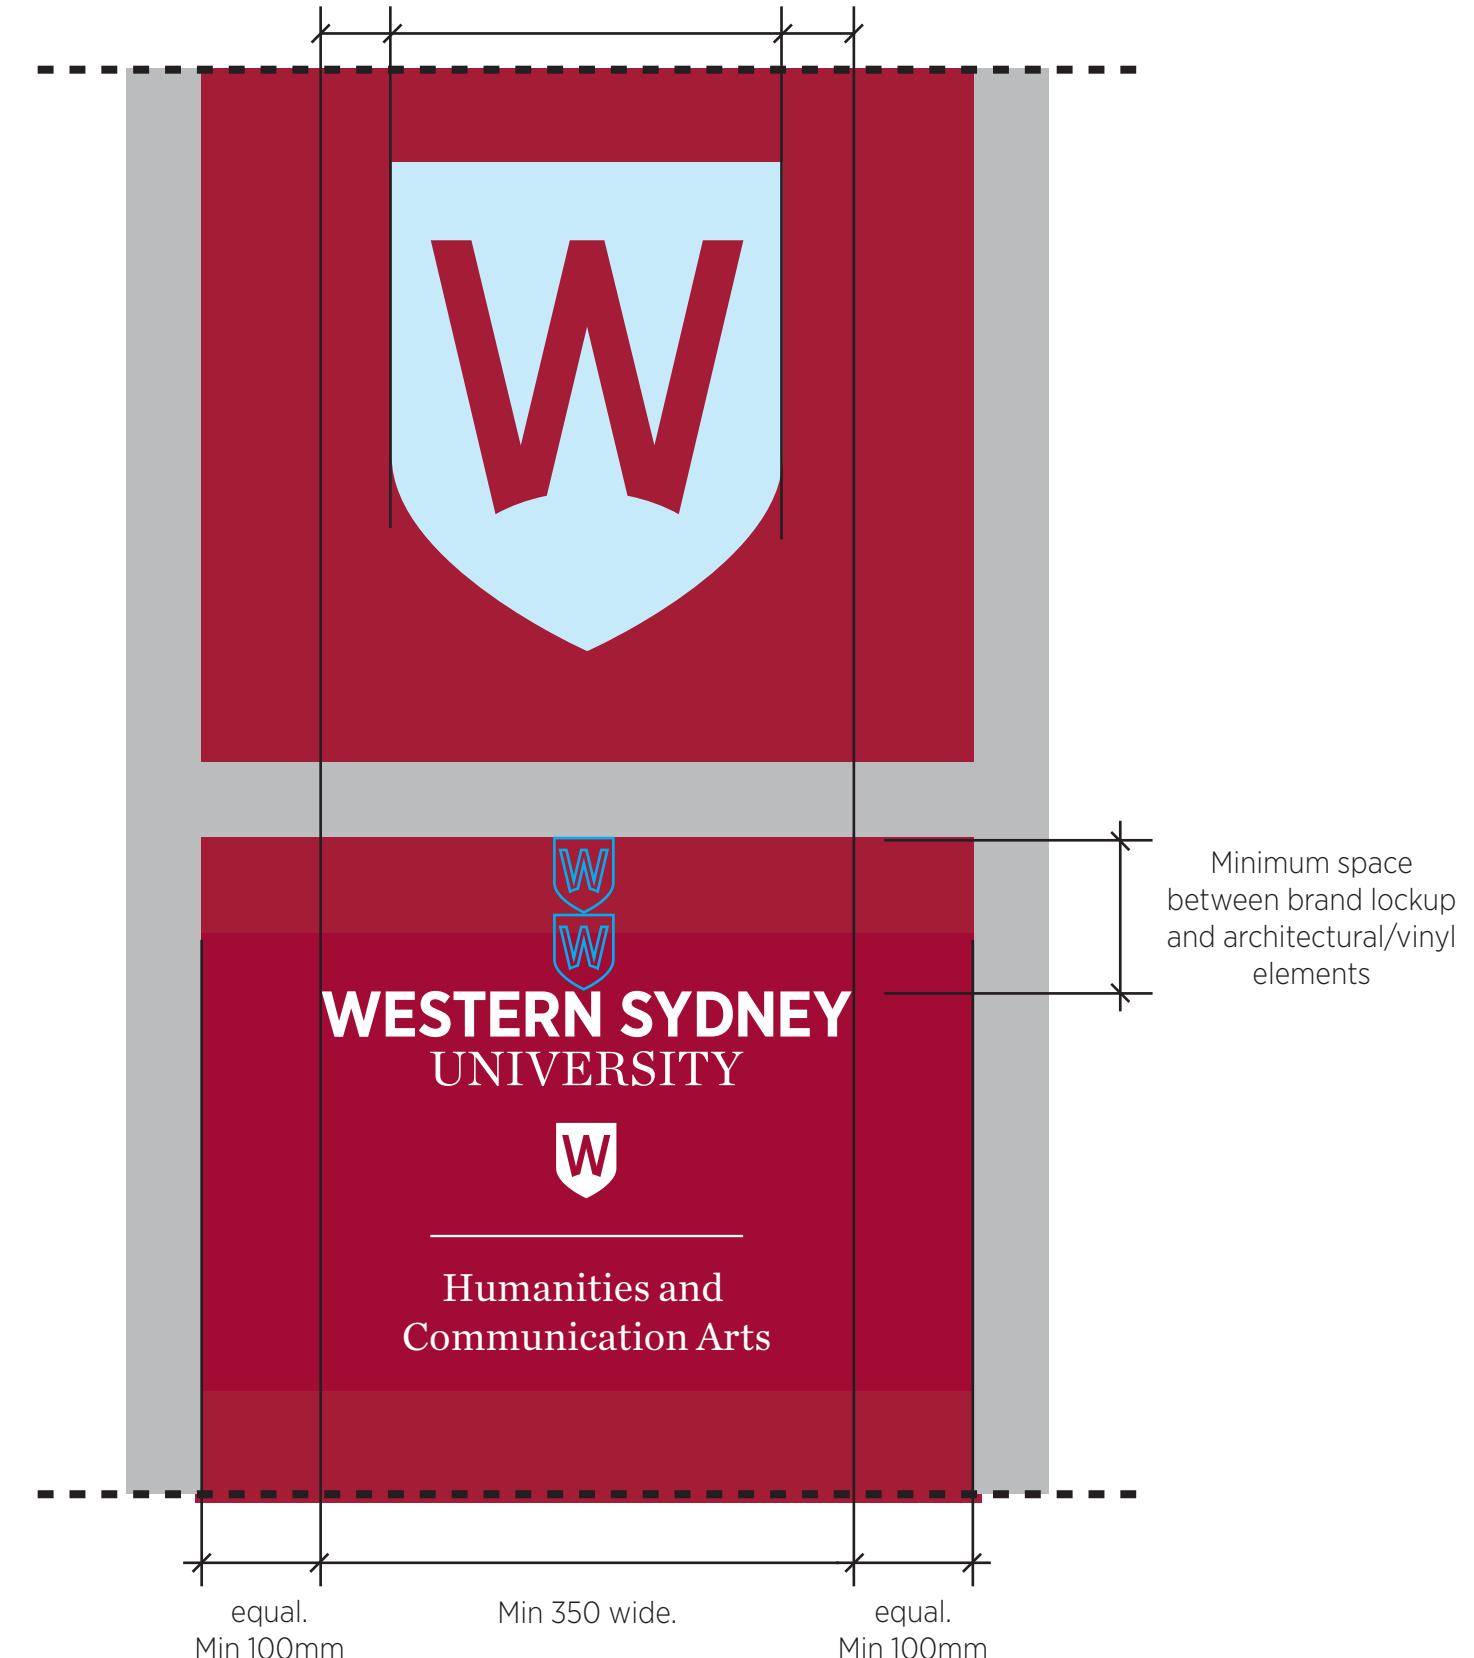

Avery 5500 Translucent cast  
5526 Garnet red

**X** Minimum lower case x height

Reverse cut shield scaled to 75% width of nominated brand mark width

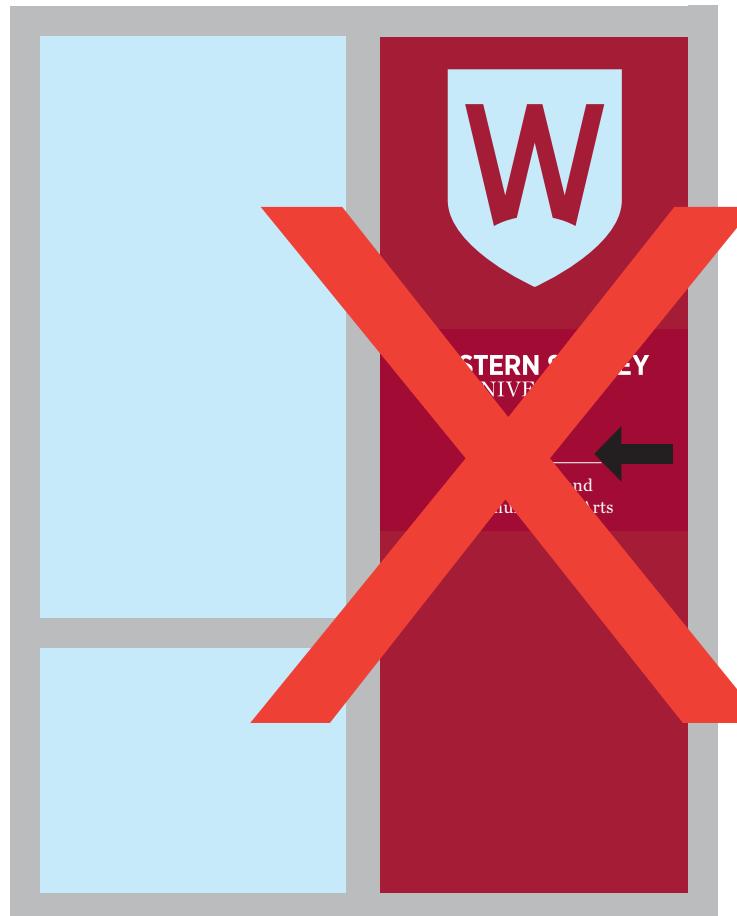

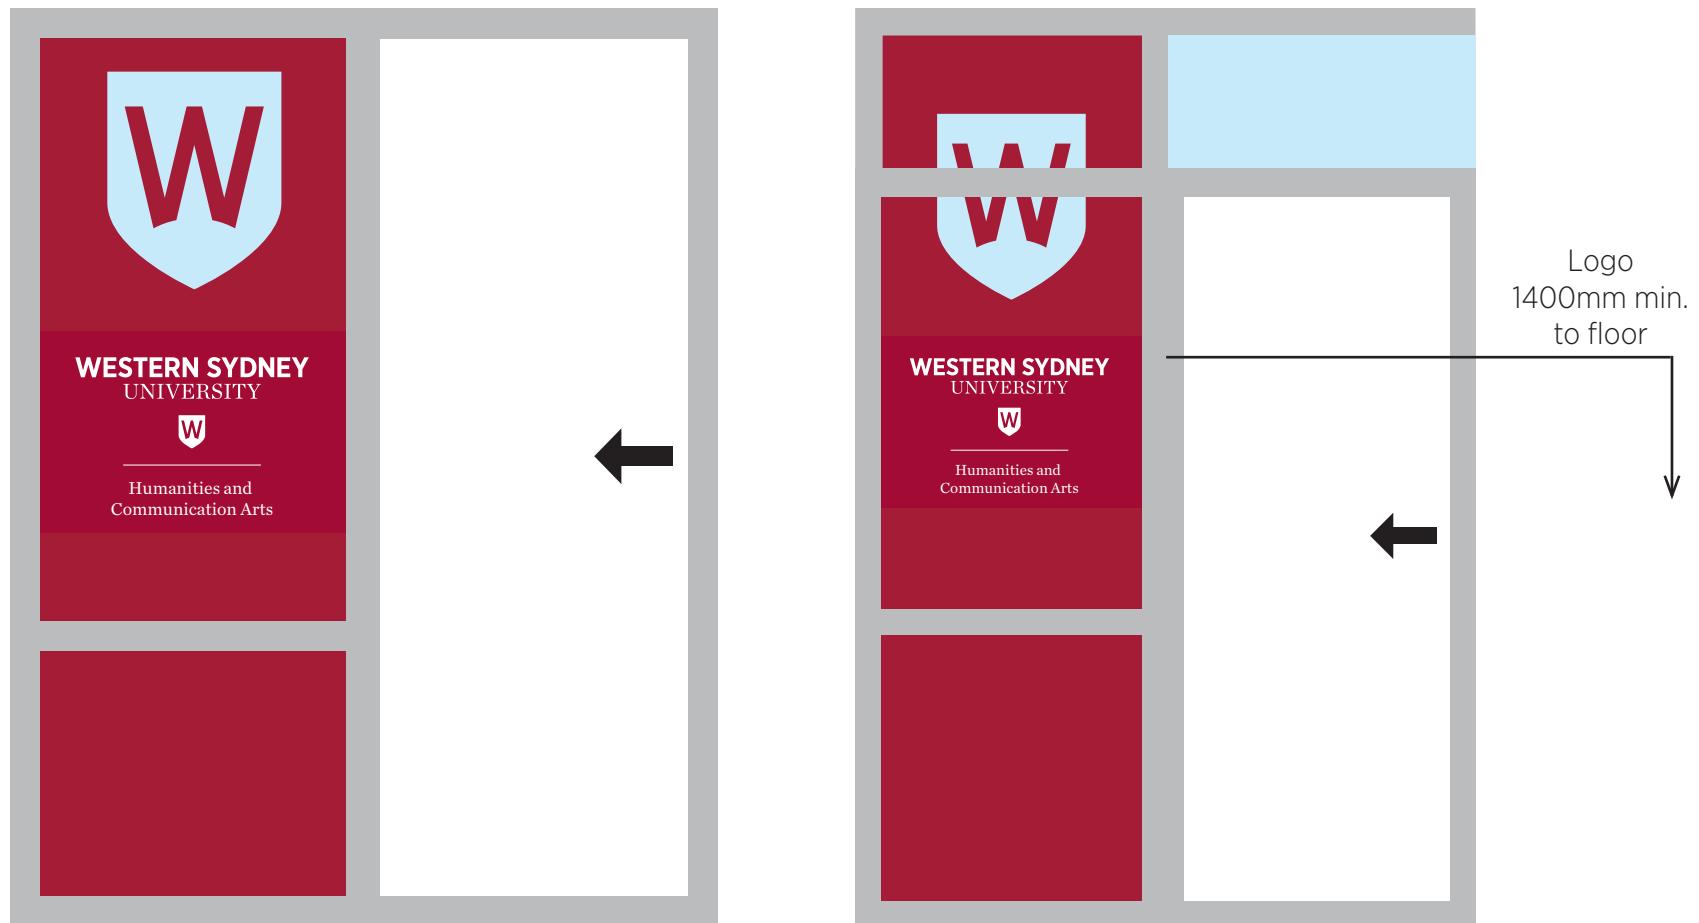

Indicative school brand lock up as per brand guidelines.

# Building Wayfinding

BW7

## Typical Usage & Locations

Never apply to opening glass door.  
Application only appropriate on static side  
glass panel as illustrated above.

If no side panel is available refer to BW8  
Main door ID - white.

# Building Wayfinding

## BW8 Main Door ID - White

**Where the Western U - School/Research Centre/Institution lock-up is to be applied to main entry glass doors (internal) and/or glass entrances where side glazing panel is not present (external) the white vinyl brand-mark/lock-up is to be applied.**

**Note:** This is a custom solution to be used when an entrance is predominantly glazing. As such the design and layout of this signage should always be approved by Office of Estate and Commercial prior to manufacture.

### Approach

White Avery 800 solid cut vinyl logo applied to the inside of glass door. When door is colour/UV tinted vinyl is to be applied to external face of glass to allow for legibility.

All School/Research Centre/Institution lock-ups use the same rules. The word 'School' is to be removed for a more streamlined approach to naming.

In some cases a background strip of cast Avery etchmark can be used behind brand lock-up to provide visual contrast. Etchmark strip should sit with additional space above and below the brand mark in line with brand space requirements.

Refer to brand guidelines guide for University shield and brand-mark usage.

Glazing mullions and transoms to be considered when placing brand.

Refer to brand guidelines guide for University shield and brand-mark usage.

## Custom Vinyl Lettering

Where additional permanent information about the space does not fit on the door slat sign or requires more prominence this option may be considered. Permanent information may include messages such as 'Staff Only', 'No Entry' & "Assignments"

For temporary information display see [BW5](#) or [ID3](#)

**Note:** This is a custom solution. As such the design and layout of this signage should always be approved by Office of Estate and Commercial prior to manufacture.

### Approach

White Avery 800 solid cut vinyl logo applied to the inside of glass door. When door is colour/UV tinted vinyl is to be applied to external face of glass to allow for legibility.

In some cases a background strip of cast Avery etchmark can be used behind brand lettering to provide visual contrast. Etchmark strip should sit with additional space above and below the lettering.

Glazing mullions and transoms to be considered as well as other existing signage applied to the door when deciding on location. Ideal location shown 60mm below the door slat sign.

### Graphics

# Building Information Display

ID8 CCTV

For use in buildings located on campuses without Statutory Entrance Signs. Sign to be applied at the main threshold door/s into areas where CCTV is in operation. May also be used inside areas where CCTV is in operation, on University request only.

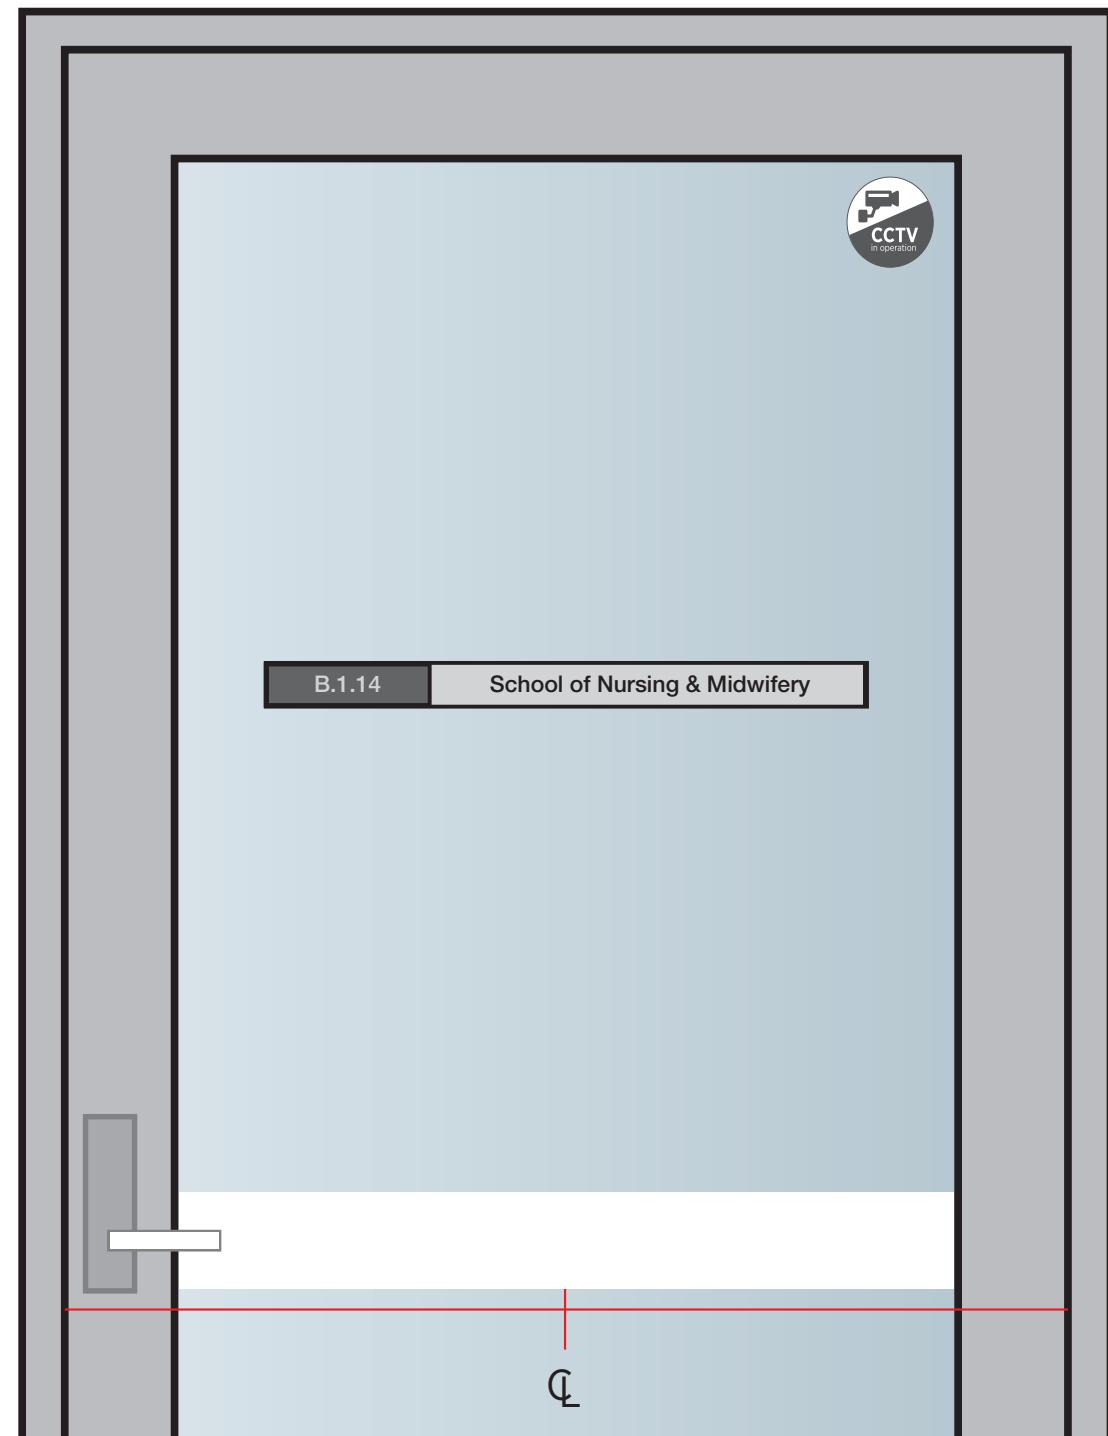

## Approach

80mm radius, die cut printed SAV matte laminated.

CCTV sign securely fixed to door as shown or to the top right of opening if there is no door to apply to.

Location to be approved by Office of Estate and Commercial.

Artwork to be provided by Office of Estate and Commercial.

# Building Information Display

## ID9 Commemorative Plaques

Plaque type to be selected from the following approved options based on the content required and funding partners involved.

### TEMPORARY Plaque (to be used in curtain ceremony display)

**Size**  
550mm x 550mm x 3mm (nominal side profile).  
**Finishing & fixing**  
3mm ACM panel, stainless steel finish. Direct digital print. Double sided tape fixed to the back.

### PERMANENT Plaque

**Size**  
550mm x 550mm x 3mm (nominal side profile).

### Finishing & fixing

Horizontal unidirectional brushed stainless steel.

Engrave & fill graphics to colours nominated by Western U and Partners.

4 off stainless steel spun button head fixings at corners.  
Fix flush and securely to wall substrate.

**Artwork to be provided and approved by Office of Estate and Commercial.**

**Exact location to be confirmed on site.**

# ENVIRONMENT

## 2a. VISUAL ARCHITECTURE

Arrow Hierarchy & Alignment

Directional Information Hierarchy

# Environment

## Visual Architecture

### Arrow Hierarchy & Alignment

#### Arrow Alignment & Spacing

Directional wayfinding signs constitute the bulk of all signage specified throughout Western U. It is important that the messages on each sign are grouped by arrow direction as shown.

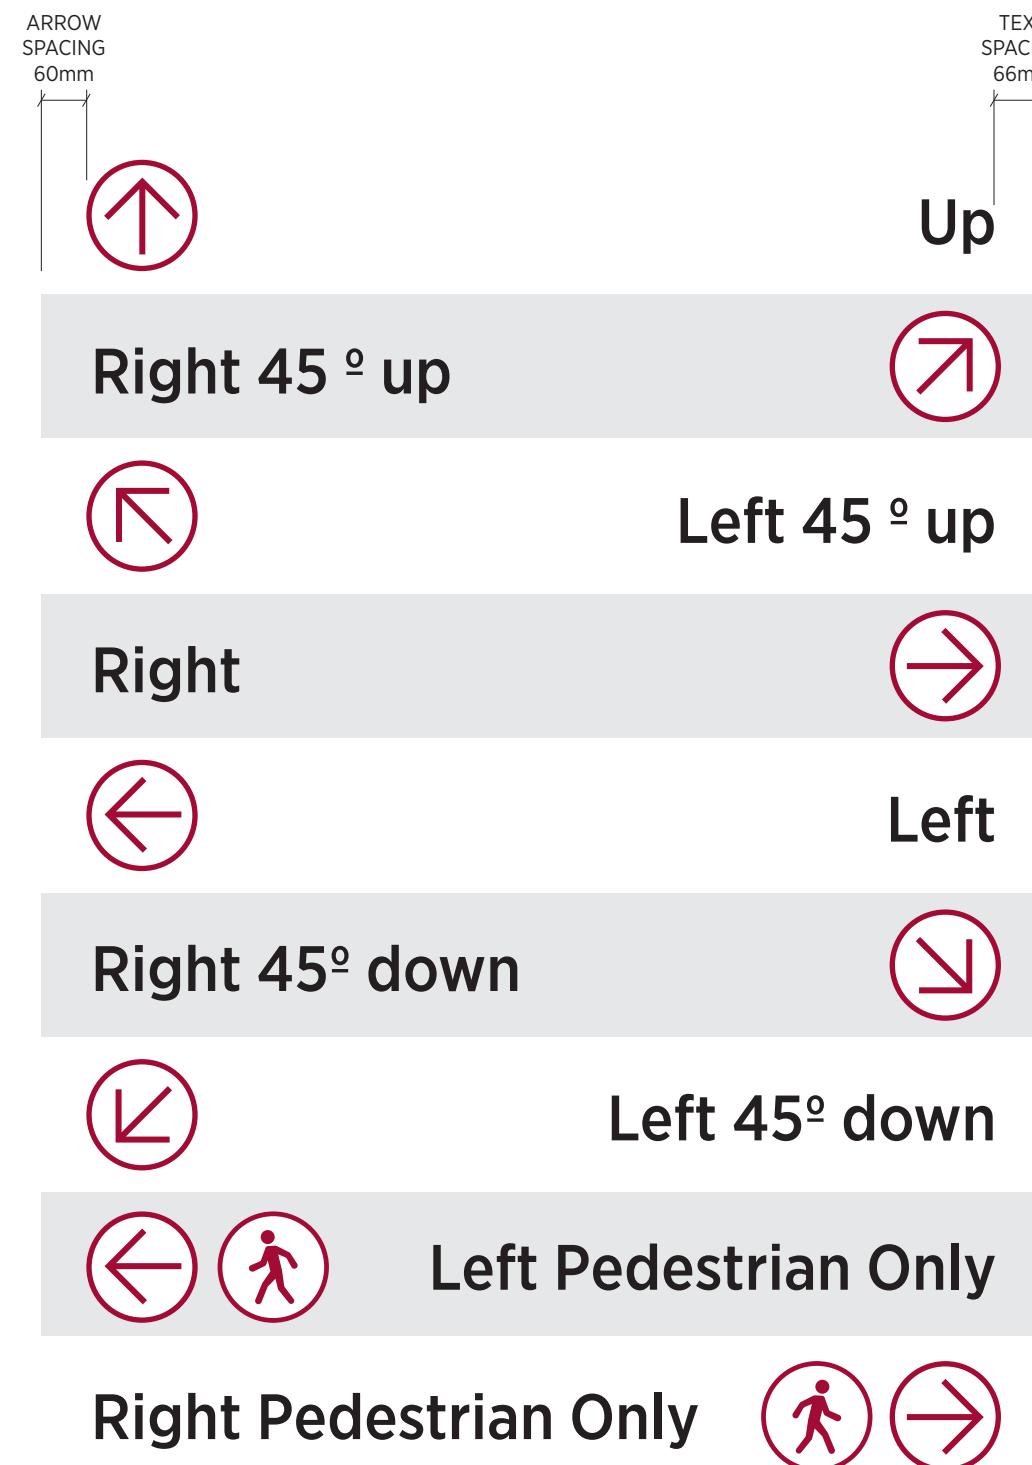

Obviously, for each sign, only arrow directions which have messages are included.

Unlike the standard arrow hierarchy, the environment wayfinding suite alternates between right and left alignment, with the message and the arrow aligned to opposite sides.

#### Pedestrian Access Only

When a direction shown on a vehicle directional sign is for pedestrian access only, the addition of a pedestrian pictogram is necessary.

This pictogram must always be placed next to the arrow with the person facing either left or right, corresponding to the direction of the arrow.

# Environment Visual Architecture

## Directional Information Hierarchy

### Building Numbers & Faculties/Services

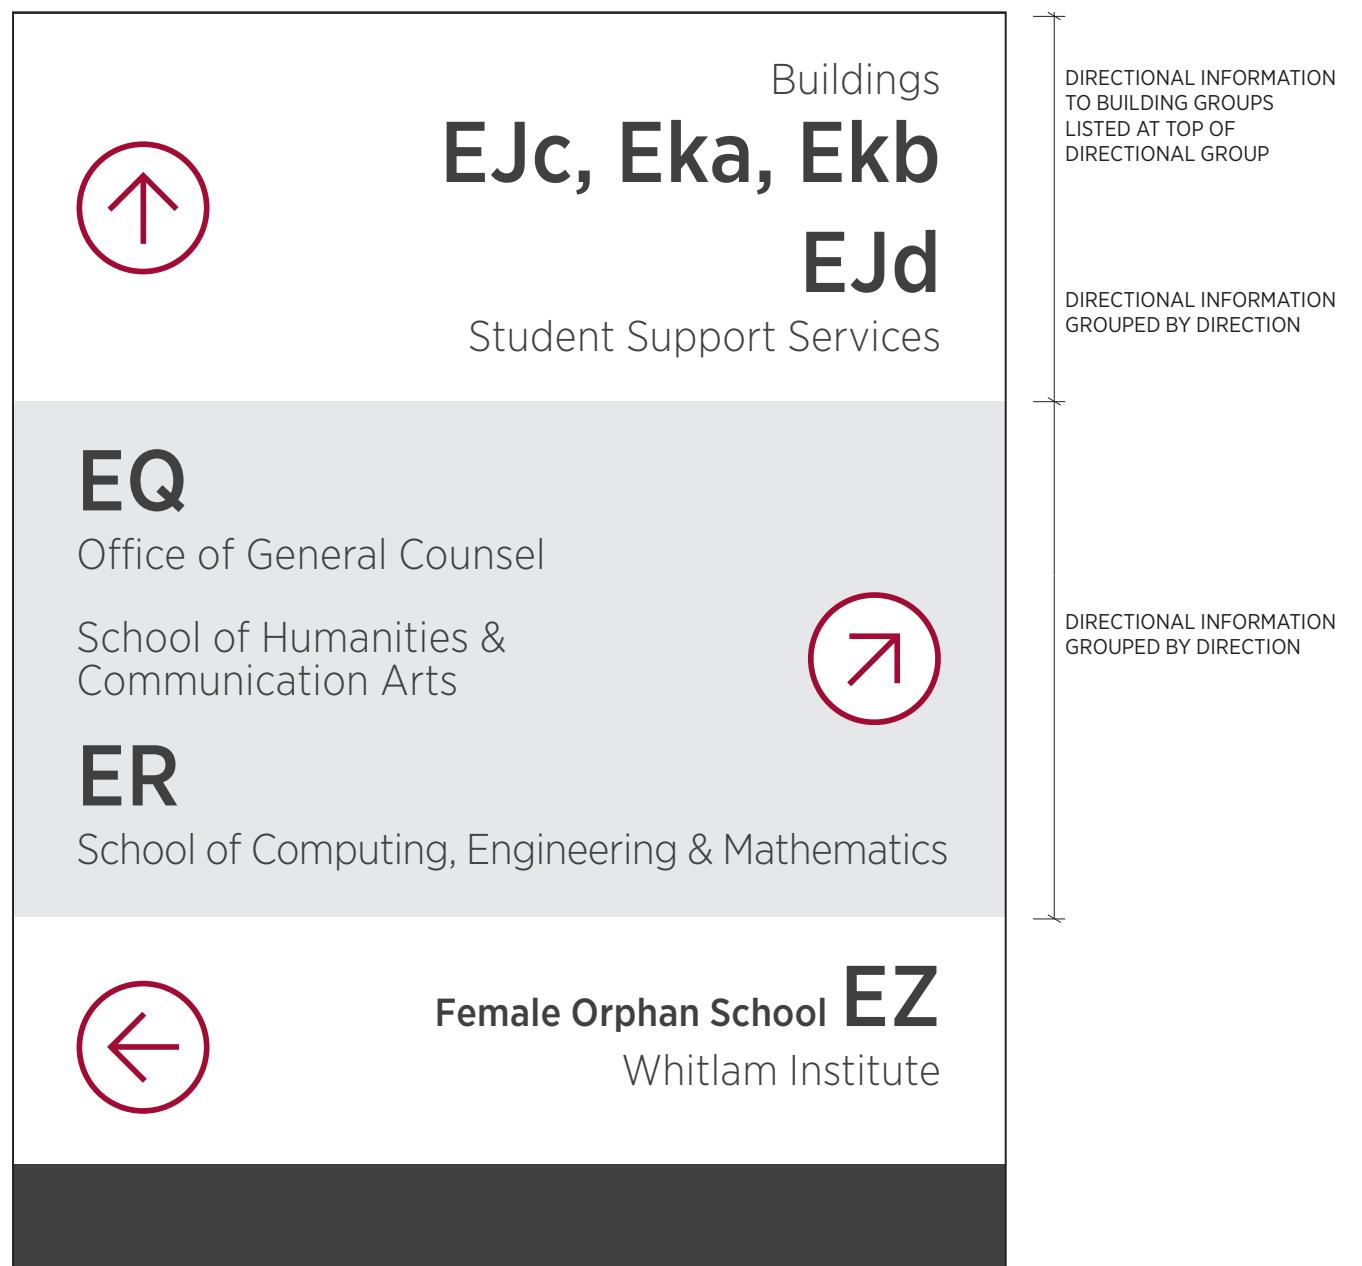

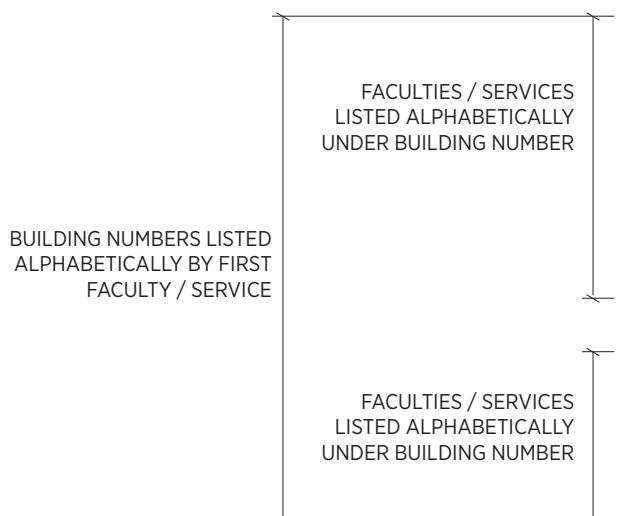

Within the arrow hierarchy above, there is a sub hierarchy that dictates the order in which the directional information is displayed.

As stated, directional information is grouped by direction, per the arrow hierarchy.

Within each direction the faculty and service information is grouped by building number.

The building numbers are arranged alphabetically by the first listed faculty or service within that building.

This list of faculties and services is arranged under each building number alphabetically.

DIRECTIONAL INFORMATION GROUPED BY DIRECTION

# ENVIRONMENT

## 2b. CONSTRUCTION

Navigator System

3D Shield Element

# Environment Construction

## Navigator System

### Navigator Signpost

The Navigator Signpost signage system is manufactured in Australia. It is sourced and installed through an approved Signage Contractor, who is responsible for final artwork, assembly, vinyl application and installation.

The free-standing system consists of two 90mm D-shaped posts in a Black Powder-coat finish with a panel between. Vinyl is applied to the panel in sections, either computer cut or digital print to SAV for information sections. The panel width and post height varies between sign types, see environment wayfinding section for sizes.

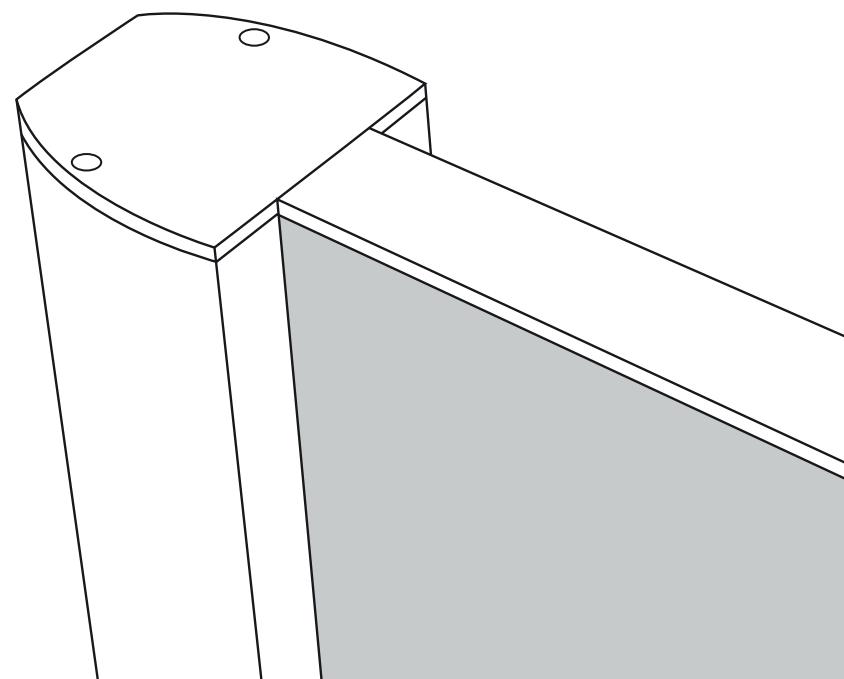

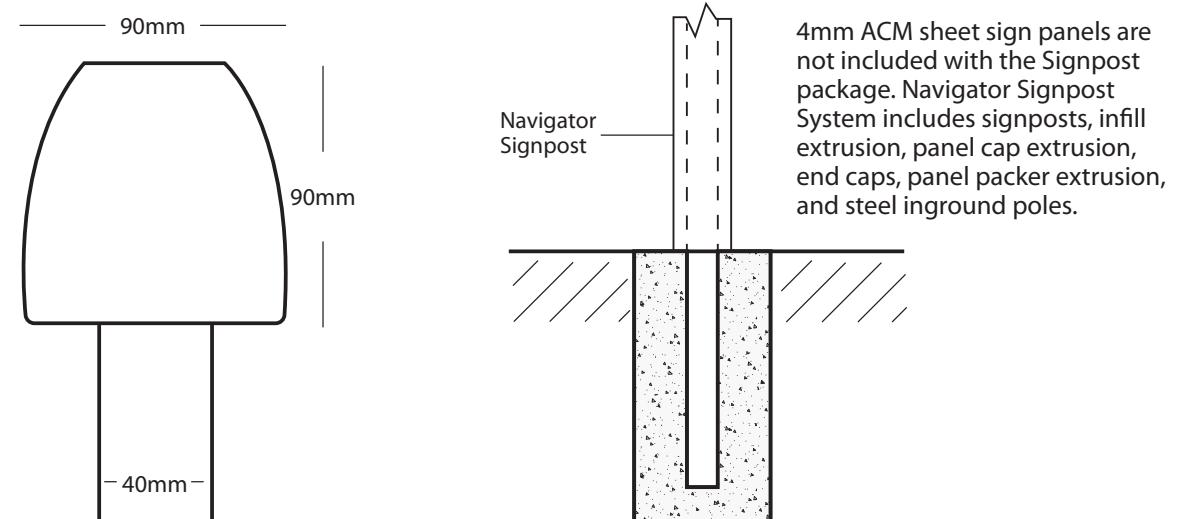

The Navigator Signposts are installed via galvanised steel posts set in concrete footing.

Contractor to ensure substrate is suitable for installation of concrete footing. Sign contractor to determine requirements on site and to provide structurally secure footing.

Fixings to be of corrosion resistant materials (stainless steel, galvanised steel or anodised aluminium).

Accessibility standards should be considered when deciding concrete pad size and sign location.

**EW2** **EW3** **EW4** **EW5**

# Environment Construction

## 3D Shield Element

### Shield Element

The 3D shield element is a custom designed fabricated shield that is installed centred to the top of the Vehicle Directional and Pedestrian Directional signs in the Environment Wayfinding Suite.

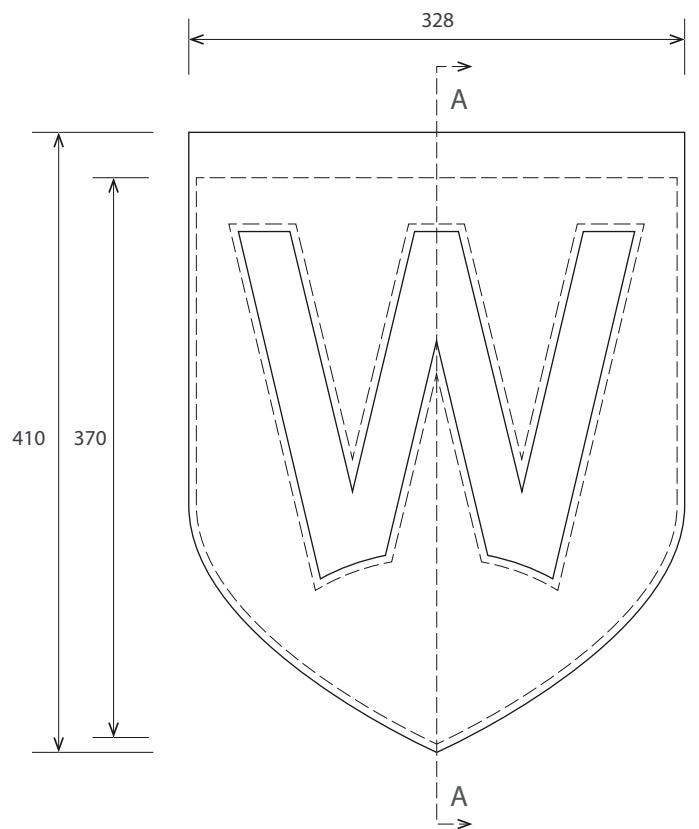

The shield is a combination of 2 pac spray painted aluminium and acrylic that is securely adhesive fixed to the Navigator sign panel.

The signage contractor is responsible for manufacturing the shield and installing it securely on the sign panel.

### IMPORTANT

EW1 sign type requires a custom design solution. As such all entry signs must be designed and approved by Office of Estate and Commercial.

### IMPORTANT

Hawkesbury campus custom totem signs do not align with the Standard Navigator system outlined in this document. Sign types affected include EW2, EW3.1 & EW4.

Before undertaking any external wayfinding works on this campus all artwork layouts and dimensions should be sought from Office of Estate and Commercial. All new signage installed should align with the standards outlined in this document.

# Building Wayfinding

## EW7 Building ID

Used to identify a buildings ID number.

### Location

These IDs should be used to help users identify buildings when approaching from a distance. They can also assist users to locate the entry door to buildings. Building ID to be applied externally to building façades.

Locate ID adjacent to building entrances or placed on building façades visible from outdoor circulation routes.

### Graphics

Letters are to be in Helvetica Neue Bold upper-case. Size of lettering should be either 200 or 300mm high.

Size of building facade and distance that ID will be viewed from should be considered when selecting lettering size.

### Colours

White is to be used on dark façades, while black letters are to be used on light façades.

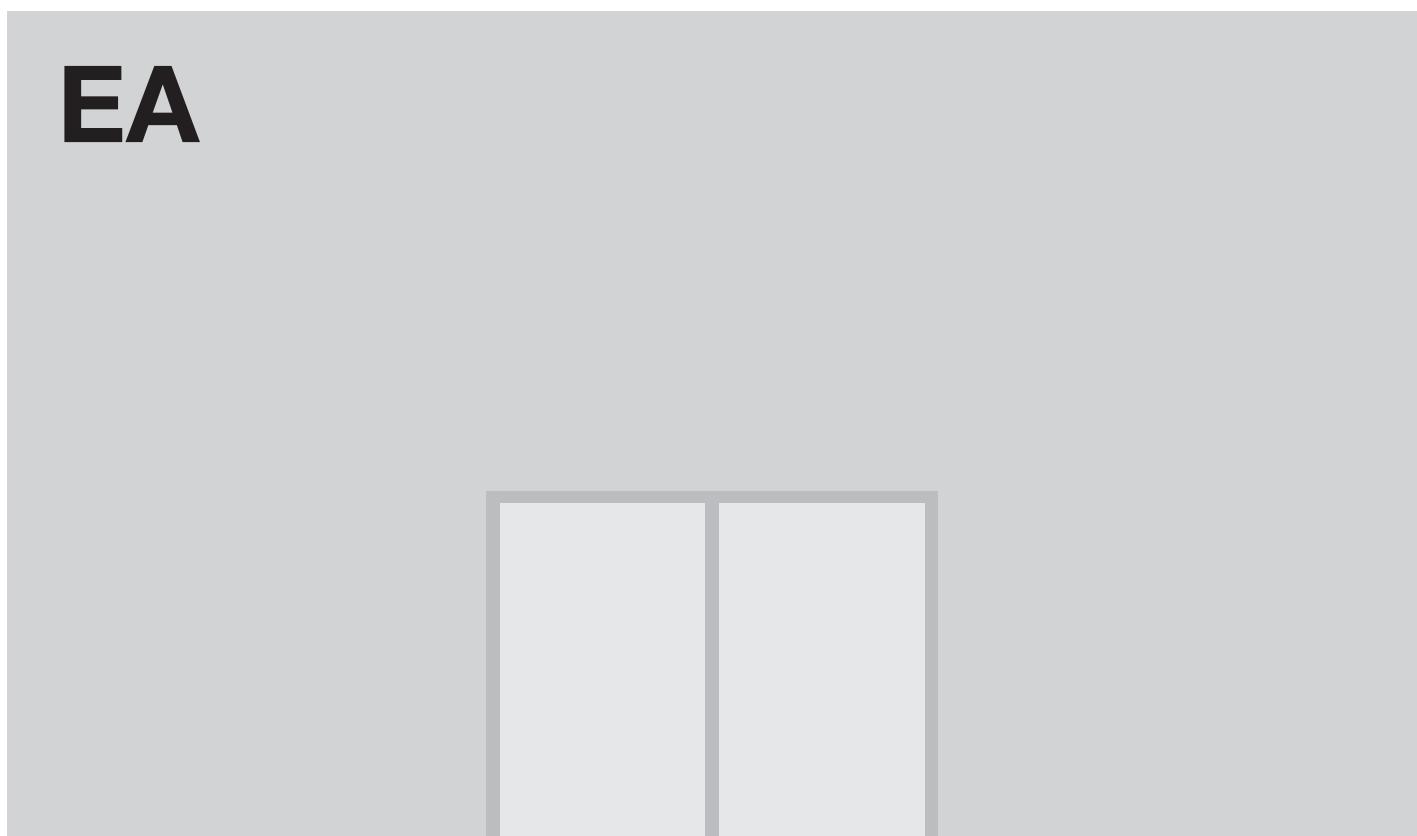

### Construction

Letters are to be 10mm thick acrylic, flush mount concealed steel pinned to wall (no fixings to be seen at front). Mounting height will depend on the architectural detail of the building façades.

### EXAMPLE OF BUILDING ID CUT-OUT LETTERS

## 2d. INFORMATION DISPLAY

Signage Zones

Temporary Ground Markings

# Environment Information Display

## Signage Zones

Every campus of the University has designated signage zones. These zones are set aside for branding, university information and advertising purposes. Details of the different zones, permissions and permitted users are listed below.

Campus Primary Branding Points

University branding and entry area. Signage clear zone within a 25 metre radius of major campus entry points, public intersections and branded pylons.

## Campus Secondary Entry Points

University branding area. Signage clear zone within a 10 metre radius of secondary campus vehicle entry points and pedestrian only campus entry points.

## Digital Display Boards

**Digital display boards**

Digital display boards provide an opportunity for displaying university information to staff visitors and students

Visitors and Students.  
Digital board locations -  
Office of Estate and Commercial

## Office of Estate and Cultural Digital board content - Office of Marketing and

## Poster/Notice Pillars

**Poster/Notice Pillars**  
Poster/Notice Pillars are located in key locations on campuses and open to use by students. Information will be removed periodically - refer to the University Information Display Policy.

information Display Policy.  
Any material posted on Pillars that  
is offensive will be removed.

*Map of Parramatta Campus is showing indicative signage zones at time of document creation and to be used as a guide only. Zone locations such as digital signs and poster pillars differ on each university campus. Locations can be confirmed by Office of Estate and Commercial*

# Environment Information Display

## Temporary Ground Markings

The use of temporary ground marking paint is permitted for short term or event university messages with the permission of Office of Estate and Commercial.

This method is reserved for university and student event messages only.

Rocol temporary line marking paint has been tested for use on areas of concrete and bitumen. In white colour only.

Paint is applied over a professionally designed and manufactured stencil. Paint to be applied by approved signage contractor.

Paint only suitable for short term or event university messages that are required for a 2 month period or less.

All artwork and locations to be submitted for approval by Office of Estate and Commercial prior to manufacture.

At the end of the agreed period graphic must be removed and area left clear and clean by use of high pressure cleaner.
