Place, Identity and Learning in Medical Education

Professor Wendy Hu: [w.hu@westernsydney.edu.au](mailto:w.hu@westernsydney.edu.au)

Research area: Place, Identity, Learning, Medical education

Are you passionate about researching the education and training of medical students and doctors?

This established multi-institutional research program is open to Masters and PhD candidates to conduct interdisciplinary education research on the theme of Place, Identity and Learning. The theme investigates relationships between sense of place and medical education, and how they lead to place-based professional identities, competence and careers in medicine.

Aligned with the social justice mission towards widening access to medical careers for students from under-represented backgrounds, and to growing medical workforce and services in under-served areas, your research will connect with national and international medical school networks to achieve real impacts for students and communities. With support and supervision through these networks, you will be enabled to identify and develop your own project, gain training in relevant research skills in a range of disciplines and join the global community of scholars in health professions education.
