COMP 2028 Cryptography, Cryptocurrencies and Blockchain

Credit Points 10

Coordinator Rhys Tague (https://directory.westernsydney.edu.au/search/name/Rhys Tague/)

Description Blockchain and cryptocurrency form the backbone of emerging technology systems to secure transactions. The design of blockchain involves cryptographic technology to secure data and ensure confidentiality, authenticity and integrity. Students are introduced to the concepts of blockchain, cryptography and cryptocurrency, and learn how these technologies are transforming online transactions, and solving some of the most important issues in trust, resilience, reputation and transparency. Students also learn about the risks and challenges involving cryptocurrencies, exchanges and wallets as well as money-laundering and criminal enterprises. Students develop practical experience in building blockchain systems and develop smart contract solutions.

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) COMP 2027

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Analyse the different types of cryptography and their use in blockchain
2. Examine how blockchain is used in cryptocurrencies and other emerging applications
3. Apply programming skills to build a blockchain
4. Analyse different types of cryptocurrencies and how they function within the online transaction ecosystem
5. Visualise cases and flow of cryptocurrency for transaction identification and tracing
6. Analyse the threats and legal aspects related to cryptocurrency management and operations
7. Communicate the technologies to a non-expert audience in a range of formats

Subject Content

- Essential aspects of blockchain including distributed ledger technology
- Immutable records and consensus algorithm
- Smart contracts
- Asymmetric, Symmetric and Hybrid key algorithms
- Hash Functions
- Public and Private Keys
- Encryption and Decryption
- Centralised and decentralised cryptocurrencies
- Sovereign cryptocurrency
- Cryptocurrency mining
- Cryptocurrency exchanges, wallets, and mixers/blenders

- Traceback
- How blockchain and crypto make transactions transparent, trusted and resilient allowing for wider adoption in the business community
- How the structure of cryptocurrency exchanges, wallets and other also make them the most readily hacked along with used as major mechanisms for money-laundering and crime

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	Programming code	40	N	Individual
Applied Project	1500 words/5-7 min presentation	20	N	Individual
Final Exam	2 hours	40	N	Individual

COMP 2029 DevOps

Credit Points 10

Coordinator Tomas Trescak (https://directory.westernsydney.edu.au/search/name/Tomas Trescak/)

Description DevOps engineers build tools and pipelines for companies delivering software solutions, assuring the quality of their products. By utilising DevOps, companies limit the risk of introducing errors when updating their applications and experiences which allows them to better serve their customers and dynamically react to their needs. In this subject, students learn the principles and philosophy of DevOps and how to build DevOps tools. Students apply their knowledge in practical activities to create and maintain pipelines for continuous delivery. This involves calculating delivery metrics, estimating and evaluating measures of success. Based on the performance in the subject, a selected number of students will have the opportunity to undergo a week-long placement with a target industry partner. Students doing the placement will work on industry projects assessed by professional staff at their placement venue.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) INFO1003

Co-requisite(s) INFO 3019

Learning Outcomes

1. Explain DevOps principles, methods, practices in terms of Industry application
2. Assess the complexity of business operation and facilitate it using DevOps strategies
3. Collaborate with a diverse team to deliver projects on time to customers in a complex environment
4. Manage the process of DevOps utilising a range of project management tools
5. Create and manage the software implementation and distribution models, software release processes (source, build, test, production)
6. Implement continuous delivery, continuous (automated) deployment, and continuous monitoring pipelines

Subject Content

- History
- Principles
- DevOps in digital transformation
- Silos and how to remove them
- Roles and responsibilities
- Autonomous teams
- DevOps way of working
- Culture
- DevOps at scale
- Continuous delivery pipelines
- Minimum viable products (MVP) for continnous delivery
- Automation of delivery
- Service management
- Metrics and success measurement
- Emerging trends

Assessment

COMP 2030 Data Structures and Algorithms (Advanced)

Credit Points 10

Coordinator Dongmo Zhang (https://directory.westernsydney.edu.au/search/name/Dongmo Zhang/)

Description This subject introduces students to fundamental data structures and algorithms used in computing related courses. The material covered forms the basis for further studies in programming and software engineering in later subjects and for further training in programming skills. The subject focuses on the ideas of data abstraction and algorithm efficiency. The issues of computational complexity of algorithms are addressed throughout the semester. The topics covered include the fundamental abstract data types (lists, stacks, queues, trees, hash tables, graphs), recursion, complexity of algorithms, sorting and searching algorithms, binary search trees and graphs. As a subject designed for advanced computer science students, the students will conduct an advanced project on top of the assignment tasks for further training of their programming skills.

School Computer, Data & Math Sciences

Discipline Data Structures

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) COMP2014

Assumed Knowledge

A good understanding of the concepts in Object-Oriented Programming, such as data abstraction, encapsulation, inheritance, and polymorphism.
Knowledge of operator overloading and class template.
Solid programming skills in one of the general-purpose programming languages, such as C, C++, Java and Python.

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Select appropriate data structures to solve moderately complex programming problems.
2. Discuss time and space tradeoffs among different data structures that could be used to represent specific information.
3. Perform time-complexity analysis against multiple implementations of various abstract data types.
4. Write programs using the fundamental data structures, including linked list, stack, queue, hash table, binary search tree, heap and graph.
5. Apply or design efficient and effective algorithms to solve moderately complex programming problems.

Subject Content

1. Basic concepts: abstract data types, big-O concept and complexity analysis.
2. Stacks and queues: ADT specification, implementation strategies and applications.
3. Variations of linked lists: Doubly linked lists and circular lists.
4. Recursion: recursive functions and divide-and-conquer approach.
5. Trees: Binary trees, binary search trees, AVL trees, and heaps.
6. Graphs: Adjacency matrix and adjacency list implementations, depth-first search, breadth-first search, and minimum spanning tree algorithms.
7. Searching: Sequential search, binary search and hashing.
8. Elementary sorting algorithms: insertion sort, selection sort, and bubble sort.
9. Advanced sorting algorithms: quick sort, heap sort, and shell sort.
10. Typical AI algorithms: backtracking, heuristic search, Monte-Carlo tree search and so on

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 hours (each practical)	14	N	Individual
Quiz	Approximately 30 minutes each x 10	6	N	Individual

Short Answer	Around 600-800 lines of code and up to 4 A4 pages of algorithm description and analysis for each assignment	20	N	Individual
Applied Project	Around 300 to 1000 lines of code in the same or different programming language of the base assignment code	10	N	Individual
Final Exam	Two-hour	50	N	Individual

COMP 3001 Advanced Computer Science Activities 3

Credit Points 0

Legacy Code 300588

Coordinator Yun Bai (https://directory.westernsydney.edu.au/search/name/Yun Bai/)

Description This subject is only for Bachelor of Computer Science (Advanced) students in year three of their studies. Students will participate in industry and research based extension activities (non-assessable). These activities will be identified with the goal of exposing students early in their degree and integrating them into a culture of academic enquiry, problem solving, knowledge generation and scholarship and an awareness of the challenges and current issues confronting the computing/IT industry. The subject will be used to record student activities and a satisfactory/ unsatisfactory grade will be applied at the end of each semester.

COMP 3002 Applications of Big Data

Credit Points 10

Legacy Code 301110

Coordinator Yi Guo (https://directory.westernsydney.edu.au/search/name/Yi Guo/)

Description Many techniques and tools have been developed over the past decade to cope with the ever-growing needs for the processing and analysis of big data. This subject will cover the key techniques that have been widely used in big data applications, such as relational and Not Only Structured Query Language (NoSQL) databases, Web Services, parallel and cloud computing, MapReduce, Hadoop and its eco-system. It aims to introduce the emerging technologies and applications in big data to students, and keep up with the latest trends in the industry.

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 1013 OR COMP 1005

Assumed Knowledge

Knowledge of computer software, databases, and entry-level statistics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the major trends and latest development in big data technology
2. Describe a selection of major techniques in use today for big data storage and processing, including NoSQL, MapReduce, cloud computing, web services
3. Build tools to obtain data from various sources and in different formats
4. Evaluate the relative strengths and limitations of relational and NoSQL database systems and recommend the most appropriate solution to data storage and access for different application scenarios
5. Employ HDFS and Hadoop for data storage and manipulation on parallel platforms
6. Select and apply appropriate tools from the Hadoop eco-system for big data management tasks

Subject Content

Sources and formats of big data
Relational Databases and SQL
NoSQL Databases
Web Scraping
Cloud computing platforms for big data
Data parallelism and the MapReduce framework
Data storage and processing with Hadoop Distributed File Systems (HDFS) and Hadoop
The Hadoop eco-system, including Pig, Hive, Spark, etc.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	5 x 30 mins; 6% each quiz	30	N	Individual
Report	Report: 2,000 words (or a 500-1,000 line program)	30	N	Individual
Final Exam	2 hours	40	N	Individual

COMP 3003 Cloud Computing Architecture

Credit Points 10

Legacy Code 301204

Coordinator Rodrigo Neves Calheiros (https://directory.westernsydney.edu.au/search/name/Rodrigo Neves Calheiros/)

Description This subject, the second part of the Amazon Web Services (AWS) Academy Cloud Computing Architecture curriculum, provides deeper understanding about advanced cloud computing services and how to architect cloud applications that are scalable, reliable, and efficient in terms of cost and performance. Students will learn advanced cloud computing concepts including notification and messaging, serverless computing, API gateways, NoSQL databases, content delivery networks, stream processing, and long-term storage. The subject also covers advanced cloud security and infrastructure automation. All these aspects are explored in practice with AWS services. Upon completion of this subject, students will be prepared for the AWS Certified Solutions Architect - Associate exam.

School Computer, Data & Math Sciences

Discipline Computer Science, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 3012 AND
COMP 1005

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess different design patterns for web-scale storage and recommend the most appropriate pattern for a specific problem
2. Analyze common design patterns and architectures for loosely coupled cloud computing systems and recommend the most appropriate pattern for a specific problem
3. Evaluate strategies to enable high scalability, reliability, cost-efficiency, and performance in a cloud-based system
4. Apply principles and applications of advanced cloud services such as notification and messaging, API gateways, stream processing, and serverless computing
5. Apply concepts of security and infrastructure automation in a cloud-based system
6. Design and deploy scalable, reliable, and efficient systems that utilise advanced cloud services

Subject Content

Design patterns for architecting loosely coupled cloud computing systems: microservices and serverless architectures
Design patterns for web-scale storage: content delivery networks, object storage, and relational and no-relational databases
Advanced cloud services: API gateways, stream processing, and serverless computing
Queueing and notification systems
Advanced cloud security
Reliability in clouds
Cost and performance efficiency in cloud computing
Infrastructure automation
Common cloud design patterns and cloud architectures

COMP 3006 Computer Graphics

Credit Points 10

Legacy Code 300093

Coordinator Hanh Nguyen Vo (https://directory.westernsydney.edu.au/search/name/Hanh Nguyen Vo/)

Description Computer Graphics will examine elementary graphics concepts, algorithms and programming skills for producing graphical applications, in both two-dimension (2D) and three-dimension (3D) using Open GL. Techniques and algorithms will be programmed in Processing, which is a very easy-to-learn programming language yet powerful and comprehensive.

School Computer, Data & Math Sciences

Discipline Computer Graphics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2014 OR
COMP 2015 OR
COMP 2016 OR
COMP 2020

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the main concepts employed in two-dimension (2D) and three-dimension (3D) computer graphics

2. Apply colour, geometry, transformation interaction, animation techniques in 2D graphics
3. Evaluate image processing techniques in 2D graphics
4. Apply primitives, geometric objects, transformation and interaction in 3D graphics
5. Apply viewing, materials, lights, modelling, hierarchy, curves and surfaces in 3D graphics

Subject Content

Processing in context
Colours and shapes including coordinates, primitives and vertices
Variables, data types, arrays, arithmetic, control and functions
Curves, trigonometry, random and transformation
Interaction handling, motion and animation
Image processing techniques
Primitives in 3D
Geometric objects, transformations and interaction in 3D
Viewing, materials, lights and modelling and 3D

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 hours for each session	15	N	Individual
Applied Project	A 2D Computer Graphics Program. The program may require a few hundred lines of code	20	N	Group
Applied Project	A 3D Computer Graphics Program. The program may require a few hundred lines of code	15	N	Group
Final Exam	2 hours	50	N	Individual

COMP 3007 Computer Networks and Internets

Credit Points 10

Legacy Code 300095

Coordinator Nabil Giweli (https://directory.westernsydney.edu.au/search/name/Nabil Giweli/)

Description This subject extends on the work undertaken in the prerequisite unit, Computer Networking, and provides students with an in-depth understanding of the role of switching technologies and router operations that support small to medium business networks. It includes wireless local area networks (WLANs) and security concepts. Students will also learn key switching and routing concepts allowing them to perform basic network configuration and troubleshooting, identify and mitigate LAN security threats, and configure and secure a basic WLAN. This is the second of three subjects that prepares the student for industry-based networking certification (CCNA).

School Computer, Data & Math Sciences

Discipline Networks and Communications

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2004 OR
COMP 2005

Assumed Knowledge

Fundamentals of data communications and computer networking, such as that covered in the prerequisite subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Configure and manage switches, routers and wireless access points with various connectivity and security requirements
2. Use the network configuration skills to build networks from routers and switches to meet specified features and services.
3. Identify the requirements of implementing LAN and WLAN networks with various protocols for supporting security, availability, and redundancy.
4. Design and troubleshoot IPv4/IPv6 dynamic addressing and static routing on routers for small to medium networks.
5. Describe the operations of routers, switches and WLC.

Subject Content

- Switching, Routing and Wireless Essentials
- Switching Concepts & VLANs & Inter-VLAN Routing
- Redundant Networks
- Available and Reliable Networks
- Layer 2 Security and WLANs
- Routing Concepts & Configuration

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

COMP 3009 Distributed Systems and Programming

Credit Points 10

Legacy Code 300115

Coordinator Evan Crawford (https://directory.westernsydney.edu.au/search/name/Evan Crawford/)

Description This subject covers the concepts, design, and programming of distributed systems. It builds on basic network communication protocols (specifically IP) to cover client server programming using both the system level socket interface and remote procedure calls. It also examines large scale distributed system architectures particularly those based on distributed objects and considers the complexities inherent in distributed transactions. Key concepts covered include data and algorithmic distribution, idempotent protocols, stateless and statefull servers, and distributed system transparency. Illustrative case studies are included.

Level Undergraduate Level 3 subject

Pre-requisite(s) Successful completion of COMP 2004 Computer Networking and either COMP 2014 Object Oriented Programming or COMP 2015 Programming Techniques

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain distributed system models, client server in particular.
2. Write programs for client side applications (UDP and TCP sockets).
3. Write programs for iterative and concurrent servers (UDP and TCP sockets).
4. Describe and explain how RPC based systems work.
5. Explain the purpose and method of operation of system generated RPC based program code.
6. Write simple RPC based programs (client and server ends) and install/register such services.
7. Identify and describe the major distributed architectures in wide spread use, in particular those based on distributed object technologies.
8. Describe and explain the principal architectural components and working of one major distributed architecture implementation.
9. Explain how distributed transactions run in both partitioned and replicated data environments in terms of recovery, concurrency control, and commitment.
10. Deliver tested and documented programs and systems of significant complexity within specified project deadlines and in a form that meets IT professional standards

Subject Content

- Basic concepts of data and algorithmic distribution.

- client/Server Models: connection and connectionless orientations, stateless versus statefull servers, Server concurrency, socket interface programming.
- Distributed Name/Directory services.
- Remote procedure Calls (RPC): data exchange representations, port location services, RPC programming.
- Large scale architectures and Distributed Objects.
- Distributed data and databases: data replication/partitioning, Distributed transaction and their concurrency, recovery and commitment

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Task	Up to 5. Approx 400 words each or equivalent code	50	N	Individual
Quiz	1.5 hour each	50	N	Individual

COMP 3011 Internet Programming

Credit Points 10

Legacy Code 300130

Coordinator Chun Ruan (https://directory.westernsydney.edu.au/search/name/Chun Ruan/)

Description This subject offers students basic concepts and latest technologies of internet programming and web-based application development. Utilising one of the popular internet programming languages, such as Java, it aims to develop the programming skills and methodologies required for both client-side and server-side programming as well as general purpose programming. The range of topics covered by the subject includes HTML, XML, Java applets, desktop application in Java, servlets, JavaServer Pages and JDBC.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2014 OR
COMP 2015 OR
ELEC 1006 OR
COMP 2016

Equivalent Subjects LGYA 5876 - Internet Computing

Assumed Knowledge

Basic knowledge on internet browsing and any object-oriented programming language.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the basic principles and concepts in programming design and implementation for the Internet;
2. Write programs that efficiently utilize basic data structures and algorithms, applets, threads, and basic GUI components;
3. Design web pages by using web forms, applets and CGI scripts;
4. Apply the Java features for Internet application development, including Servlets, JSP, and JDBC;
5. Explain the concepts of encapsulation, inheritance and polymorphism in terms of the design and implementation of Java classes and applications;
6. Use Java API packages.

Subject Content

- brief introduction to web forms, CGI programming, and their Roles in website development
- concepts of encapsulation, inheritance and polymorphism in terms of Java programming language
- GUI, multi-threads
- events, exceptions and I/O
- Servlets and Java Server pages
- simple use of Java database connectivity
- TCP/IP, client and Server networking with The use of sockets
- internet security enforced via Java
- Java API packages

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Individual assignment	10-15 hours of work	15	N	Individual
Group assignment	900-1800 words	25	N	Group
Three practical exercises	1-2 hours of work each	15	N	Individual
Final examination	2 hours	45	N	Individual

COMP 3012 Introduction to Cloud Computing

Credit Points 10

Legacy Code 301203

Coordinator Rodrigo Neves Calheiros (https://directory.westernsydney.edu.au/search/name/Rodrigo Neves Calheiros/)

Description This subject provides deep understanding of fundamental cloud computing concepts and how they can be applied to build cost-effective, highly available and fault tolerant systems. Students will learn concepts including system virtualisation, virtual machines, cloud networks, basic cloud storage and cloud databases, security in clouds, and auto-scaling, load balancing and monitoring. The main content of this subject is formed around the industry-based curriculum from Amazon Web Services (AWS) Academy which can prepare students for the AWS Certified Cloud Practitioner exam. Based on the performance in the subject, a selected number of students will have the opportunity to undergo a week-long placement with a target industry partner. Students doing the placement will work on industry projects assessed by professional staff at their placement venue.

School Computer, Data & Math Sciences

Discipline Computer Science, Not Elsewhere Classified.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2004 OR
COMP 2005

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the concept of system virtualisation
2. Explain and apply basic cloud services
3. Describe the main factors that affect the cost of cloud services and how they can be applied to minimise total cost of ownership
4. Explain and apply basic concepts of security, high availability, and fault tolerance in clouds
5. Analyse systems that utilise basic cloud services

Subject Content

1. System virtualization
2. Fundamentals of cloud computing and cloud networking
3. Basic cloud services: virtual machines, cloud storage, availability zones, auto-scaling, load balancing, and monitoring
4. Cost optimization in cloud services
5. Introduction to cloud security
6. Introduction to cloud databases
7. High availability and fault-tolerance in clouds

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	15 minutes (per practical)	50	N	Individual
Quiz	10 minutes (per Quiz)	S/U	Y	Individual
Final Exam	2 hours	50	N	Individual

Level Undergraduate Level 3 subject

Pre-requisite(s) For students enrolled in 3687 Bachelor of Information Systems 3688 Bachelor of Information Systems Advanced 3744 Bachelor of Information SystemsBachelor of Business 3745 Bachelor of Information Systems AdvancedBachelor of Busines 6036 Diploma in Information and Communications TechnologyBachelor of Information Systemss or 6040 Diploma in Information and Communications TechnologyBachelor of Information Systems - COMP 2020 Technologies for Web Applications
For students enrolled in 3639 Bachelor of Information and Communications Technology - COMP 2015 Programming Techniques
For students enrolled in 3684 Bachelor of Information and Communications Technology (Advanced)- COMP 2016 Programming Techniques (Advanced)
For students enrolled in 3506 Bachelor of Computer Science - COMP 2014 Object Oriented Programming OR COMP 2020 Technologies for Web Applications

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the theoretical fundamental of mobile technologies
2. Identify strengths, opportunity and limitation of platforms, development tools and programming languages for mobile applications
3. Apply common user interface elements into applications
4. Install mobile development tools, such as Android and iOS
5. Develop programs for mobile platforms
6. Implement input and interaction
7. Manipulate files and databases
8. Employ advanced user interface methods to produce graphical applications
9. Apply data management and security in mobile applications

Subject Content

Data management and security
Advanced topics for mobile platforms, including file, database and advanced user interface
Input and Interaction for mobile platforms
Introduction to mobile technologies, including strengths, opportunity and limitation of development for mobile devices
Basic programming for mobile platforms, including variables, data types, arithmetic, control, function, arrays and objects
Overview, architecture and installation of programming languages for mobile platforms
Software development frameworks, tools and mobile applications
Mobile platform overview and common User Interface Elements

COMP 3014 Networked Systems Design

Credit Points 10

Legacy Code 300575

Coordinator Sharon Griffith (https://directory.westernsydney.edu.au/search/name/Sharon Griffith/)

Description This subject builds on and consolidates the skills and knowledge gained in Computer Networking and Computer Networks and Internets. Students successfully completing this subject will acquire the necessary design skills and knowledge required to build and configure enterprise scale networks. The subject provides students with an opportunity to develop problem-solving techniques and decision-making skills to resolve networking issues. Students completing this subject and its prerequisites should also now be prepared to attempt world recognized network industry certification (CCNA).

School Computer, Data & Math Sciences

Discipline Networks and Communications

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 3007

Equivalent Subjects LGYA 5741 - Broadband Networking

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design the physical layout of the network and produce a specification diagram
2. Provide detailed network documentation in the appropriate format
3. Design an Internet Protocol (IP) subnetting scheme using Variable Length Subnet Mask (VLSM) & Classless Inter-Domain Routing (CIDR)
4. Design and propose appropriate router and switch configurations
5. Verify and troubleshoot various types of network connections
6. Provide a written final report/network design proposal to a professional standard
7. Correctly configure a Wireless Local Area Network (WLAN)
8. Correctly configure single-area Open Shortest Path First (OSPF) protocol
9. Correctly configure Virtual Local Area Networks (VLANs) and 802.1q trunking
10. Correctly configure Frame Relay
11. Correctly configure Dynamic Host Configuration Protocol (DHCP)
12. Correctly configure Network Address Translation (NAT)
13. Create and apply Access Control Lists (ACLs)
14. Create a Hierarchical Network Design

Subject Content

Sound Network Design Practices
Hierarchical Network Design Principles
Classless Routing
Single-Area Open Shortest Path First (OSPF) Protocol
Enhanced Interior Gateway Routing Protocol (EIGRP)
Switch Configuration
Spanning-Tree Protocol (STP)
Virtual Local Area Networks (VLANs)
Virtual Trunking Protocol (VTP)
Local Area Network (LAN) Aggregation & Redundancy
Wireless Local Area Networks (WLANs)
Scaling Internet Protocol (IP) Addresses
Wide Aare Network (WAN) Technologies
Point-to-Point Protocol (PPP)
Integrated Services Digital Network (ISDN) and Dial-on-Demand Routing (DDR)
Frame Relay

Assessment

COMP 3015 Operating Systems Programming

Credit Points 10

Legacy Code 300698

Coordinator Evan Crawford (https://directory.westernsydney.edu.au/search/name/Evan Crawford/)

Description This subject provides the knowledge of the internal structure and functionality of Operating Systems. An operating system defines an abstraction of hardware behavior and provides a range of services more suitable for ICT application development than what raw hardware could deliver, in terms of convenience, efficiency and security. It is important that ICT Professionals have some understanding of how these services are realized. For ICT Professionals whose role includes supporting the operating system this subject provides the introduction to the relevant theory and practice.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2015 OR
COMP 2016 OR
COMP 2014

Equivalent Subjects INFS 3014 - Operating Systems

Incompatible Subjects COMP 3016 - Operating Systems Programming (Advanced)

Assumed Knowledge

Students are expected to have a general understanding on computer systems; computer fundamentals, and programming techniques.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. identify the functions, services and basic structure of operating systems, and describe their role in a computer system;
2. discuss operating systems fundamental concepts: process, process synchronisation, process scheduling and dispatch, memory management, virtual memory, I/O system management, file systems, hierarchical directory systems;
3. identify some of the performance issues involved, and carry out elementary calculations in this regard;
4. identify the central role of concurrency in operating systems programming; and solve relatively simple problems requiring concurrency
5. write programs illustrating the application of the theoretical concepts, and explore these concepts in a simulated environment;
6. analyze and evaluate an operating systems suitability for a task based on requirement.

Subject Content

- Interface with the operating system: general properties and style of system calls; operating system structures, and how they can be accessed;
- process and thread concept, management, synchronisation, scheduling and The realisation of these in modern Operating systems.
- Inter-process communication; vis. Synchronous and asynchronous message passing, shared memory, mutual exclusion, interrupts and signals
- functions, services, Basic structure and The role of An Operating system in A computer system.
- Memory management
- File systems, directories
- security and protection at The Operating system level, protection matrix.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

COMP 3018 Professional Experience

Credit Points 10

Legacy Code 300579

Coordinator Rhys Tague (https://directory.westernsydney.edu.au/search/name/Rhys Tague/)

Description Professional Experience is a final year 'capstone' project subject. This subject provides opportunities for students to gain hands-on experience in software systems requirements definition, analysis, design and implementation, in a real-world setting. Students work in groups, guided by an academic supervisor or an industry mentor, in achieving the goals set by the client that provides the project. Suitable projects are sourced from external organisations or within Western Sydney University by way of giving the students professional experience in independent learning and reflective practice.

3687 Bachelor of Information Systems

3711 Bachelor of Information and Communications Technology (Health Information Management)

3737 Bachelor of Information and Communications Technology/ Bachelor of Business

3738 Bachelor of Information and Communications Technology/ Bachelor of Business (Accounting)

3744 Bachelor of Information Systems/Bachelor of Business

6038 Diploma/Bachelor of Information and Communications Technology (Health Information Management)

6039 Diploma/Bachelor of Information and Communications Technology

6040 Diploma in Information and Communications Technology / Bachelor of Information Systems

Assumed Knowledge

Software development methodologies; Software analysis and design modelling tools and techniques; Programming languages; Implementing databases management systems; Software construction and testing.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Complete all tasks in the SDLC to produce a software product or a component of one, working independently and under constraints, in a group setting.
2. Produce a full set of professional level documents covering all phases of the SDLC.
3. Integrate skills and knowledge gained from previous units as required by your project.
4. Apply newly learned technologies to the completion of project activities.
5. Mitigate probable risks when planning, organising and controlling project activities.
6. Reflect back on your learning experience and the issues involved when managing software development projects.
7. Demonstrate verbal communication skills when presenting a developed system to a diverse audience.

Subject Content

1. Software system lifecycle including requirements for a software system, software solutions that satisfy requirements, and tools and techniques for the assurance of quality and compliance of the software system throughout its development life cycle
2. Project planning and management
3. Stakeholder management
4. Negotiation, collaboration
5. Reflection for improved performance, professional development and lifelong learning
6. Documentation requirements for communicating software systems requirements and design (technical documentation & document version control)
7. Communication of designs, solutions, ideas to stakeholders

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1.1 Project Plan - Approximately 3,500 words (7-10 pages) (5%) Group submission ** 1.2 Project Proposal - Approximately 3,500 words (7-10 Pages) (5%) Group submission ** 1.3 Systems Analysis & Design Report - Approximately 7,500 words (15-20 Pages) (15%) Group submission ** 1.4 Handover & Completion Report - Approximately 2,500 words (5-7 Pages) (5%) Group submission ** 1.5 Diary and Reflections Report Diary (at least 2 entries per week with each entry of 100-250 words of length). Reflections Report (600 words) 1-2 pages (5%). Individual submission. ** Used as part of the 'groupmark-component' in calculation of Individual Marks in the individual marks calculation tool.	35	N	Group/ Individual
Applied Project	2.1 Working Prototype - Demonstrable working prototype that gives the client an idea how the end product would look like (Full functionality is not required) (10%) Group submission **; 2.2 Completed Final System - Fully functional system, with appropriate base data (where required), that meets all system requirements identified. (40%) Group submission **; ** Used as part of the 'group-mark-component' in calculation of Individual Marks in the individual marks calculation tool.	50	N	Group/ Individual
Applied Project	3.1 Final Presentation - (25 minutes) (10%) Group Presentation **; 3.2 Abstract & Video - Project Abstract 400 words (1 page) AND Video- (5-8 minutes) (5%) Group submission *	15	N	Group

COMP 3019 Professional Experience (Advanced)

Credit Points 10

Legacy Code 300900

Coordinator Rhys Tague (https://directory.westernsydney.edu.au/search/name/Rhys Tague/)

Description Professional Experience (Advanced) is a final year 'capstone' work-placement subject. This advanced subject provides the opportunity for students to gain hands-on experience in software systems requirements definition, analysis, design, implementation and project management, in an external organisation under the supervision of industry experts. During the work placement students work in a real-life project applying the theories and technical skills learned in previous subjects in an industry setting. Students are allowed to propose a work-placement of their choice within an external organisation. School will assess the suggested work-placement for its suitability in meeting the set subject outcomes, prior to approval.

Level Undergraduate Level 3 subject

Pre-requisite(s) INFS 2001 OR
INFS 2002 AND
COMP 2020 AND
INFO 3008

Incompatible Subjects LGYA 5744 Computing Project 2 INFO 3005 IT Support Practicum

Restrictions

This subject is not an open elective. Permission is required to enrol in this subject for students not in programs 3684 Bachelor of Information and Communications Technology (Advanced); 3688 Bachelor of Information Systems Advanced or 2801 Bachelor of Information Systems Advanced/Bachelor of Laws. Students must be enrolled in any of the SCEM undergraduate computing degrees and must have a program GPA of 5.0 or more and be chosen as a suitable candidate for work placement by the pre-enrolment selection process.

Assumed Knowledge

Software development methodologies; Software analysis and design modelling tools and techniques; Programming languages;

Implementing databases management systems; Software construction and testing; System documentation; Project Management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Contribute to software development/implementation projects in the industry covering all phases of SDLC.
2. Participate in creating professional level documentation as needed in a project.
3. Relate and apply academic theory to project activities and the general work environment.
4. Discover, investigate and self-learn technologies needed for the completion of project activities
5. Follow work practices and explain aspects related to professional code of conduct in the ICT profession.
6. Identify additional work-related skills acquired through work placement.
7. Reflect upon and critically evaluate their learning from the work placement.
8. Communicate orally and in writing with team members, supervisors, and mentors; also present outcomes to a professional panel and stakeholders.

Subject Content

1. Participate in planning and monitoring in project activities.
2. Contribute to preparing system documentation.
3. Work collaboratively with a group of professionals in achieving defined project goals.
4. Manage issues that may arise when working in a team environment.
5. Follow guidance and suggestions given by industry supervisors and fellow team members of the work placement organisation and academic supervisors within university.
6. Be self-directed and work independently managing one's self and time, to complete the activities assigned on time, under pressure and various other constraints present in a work environment.
7. Effectively communicate orally and in writing with team members, supervisors, mentors and present outcomes to a professional panel and stakeholders.
8. Learn from the experts and adapt to the needs of the work environment.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Interview	approximately 2,000 words total	20	N	Individual
Portfolio	approximately 2,500 words	50	N	Individual
Presentation	Presentation 1= 15 minutes, Presentation 2= 20 minutes	30	N	Individual

COMP 3020 Social Web Analytics

Credit Points 10

Legacy Code 300958

Coordinator Weicong Li (https://directory.westernsydney.edu.au/search/name/Weicong Li/)

Description The Social Web provides everyone with a voice; information from Facebook, Twitter and other social networks allows us to identify trends and relationships in society. Whilst this has interest on a personal level, the killer-apps will be in analysing social Web data for business, such as tracking the buzz around a new product, and understanding the relationships between customers and products. This subject will introduce its students to the Social Web data that is available, and blend data science and machine learning concepts to allow extraction and analysis of such data.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) Students NOT enrolled in the 3770 must have successfully completed one of the following groupings
(MATH 1028 Statistical Decision Making OR
MATH 1003 Biometry OR
COMP 1014 Thinking about Data)
OR
(MATH 1030 Statistics for Business AND
COMP 1013 MATH 1002 Analytics Programming)
OR
(MATH 1012 Management Analytics AND
COMP 1013 MATH 1002 Analytics Programming)
OR
(MATH 2006 Experimental Design and Analysis AND
COMP 1013 MATH 1002 Analytics Programming)

Co-requisite(s) For students enrolled in courses 3769 Bachelor of Data Science or 3770 Bachelor of Applied Data Science
COMP 1014 Thinking About Data

Assumed Knowledge

Students are expected to be familiar with fundamental computer programming concepts and required to have a prior statistics knowledge.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. extract and process formatted data from social Web sources.
2. use computer algorithms to visualise complex social Web interactions.
3. use mathematical and statistical methods to identify significant trends in the social Web.
4. use mathematical and statistical techniques to identify critical regions of a social network.
5. partition a social network into clusters.
6. choose an appropriate metric to measure the interaction between social network nodes.
7. compute the popularity, authority and hub scores for network nodes.

Subject Content

Data extraction and formatting.
Visualisation of social networks.
Identifying trends in social networks.
Measuring similarity in multiple networks.
Clustering social network information
Finding authorities and hubs in a social network.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	45 minutes	15	N	Individual
Report	10 to 30 pages	25	N	Group
Quiz	15 minutes	15	N	Individual
Final Exam	2 hours	45	Y	Individual

COMP 3021 Special Effects Programming

Credit Points 10

Legacy Code 301173

Coordinator Anton Bogdanovych (https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/)

Description This subject will focus on develop programming code to write shaders to create special effects, such as fog, shadows, fire, water, clouds, lightning, motion blur and reflections. These type of shaders are often seen in games and movies. Students will also learn about generic programming algorithms involved in building special effects.

School Computer, Data & Math Sciences

Discipline Computer Graphics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Create special effects with ﷿eShaders﷿f and test under controlled scenarios
2. Demonstrate the ability to program a custom ﷿eShader﷿f
3. Implement common special effects and test under controlled scenarios
4. Develop transferrable practical skills in programming special effects for games

Subject Content

Shader Programming Basics
Creating Fog
Simulating Fire
Writing Water shaders
Generating Clouds
Motion Blur
Reflections

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1000 lines of code	50	N	Individual
Final Exam	2 Hours	50	N	Individual

COMP 3022 Systems Administration Programming

Credit Points 10

Legacy Code 300165

Coordinator Golenur Huq (https://directory.westernsydney.edu.au/search/name/Golenur Huq/)

Description This subject covers programming techniques and tools used to administer standalone and networked computer systems. The subject focuses on the use of high level interpretive scripting languages to automate everyday administrative tasks, and to monitor and control running systems. Techniques to extend scripting language capabilities by dynamic linking to compiled code are examined, particularly in terms of access to operating system level functions. The subject also examines the use of administrative programs and tools to monitor and adjust system performance and capacity.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2019

Incompatible Subjects LGYA 6160 - Script programming

Assumed Knowledge

Students should have a thorough grounding in systems programming and operating systems basics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. List and define the key types of system administration tasks that are suitable for full or partial automation programmatically.
2. Select the most appropriate programming implementation method for a required system administration task from the range: shell scripts, scripting languages, and low level compiled languages; and explain the reasons for the selection.
3. Write, test and document system administration programs in a scripting language for various administration tasks that are synchronised or asynchronised (serial, parallel, or event driven) in nature.
4. Write programs to automate tasks like user management, software management, backup & recovery, and system security for both local (centralised) and distributed systems.
5. Extend the capabilities of a high level scripting language.
6. Explain the fundamental principles of performance and capacity planning in regards to systems administration.
7. Write programs to collect performance and capacity data for performance and capacity planning purposes. Explain the meaning and significance of the data collected, recommend system

administration actions based on this interpretation, and write programs to implement the recommended actions.
8. Deliver tested and documented programs with significant complexity within specified project deadlines and in a form that meets IT professional standards.

Subject Content

- The strengths and weaknesses of different programming levels of abstraction, from low level compiled Code to High level interpretative scripts.
- Capabilities and limitations of High level dynamic interpretative languages.
- common systems administration tasks and their potential for automation through scripts, particularly The management of users, system software, security, and backup and recovery.
- using programs to control other programs: under serial, parallel, and event driven models.
- Extending scripting languages through dynamic Linking of compiled code.
- using scripting languages to Monitor and control system performance and capacity.
- CGI scripts for simple Server-side programming.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Laboratory work	Practical tasks along with associated project work	40	N	Individual
Quizzes	Ten quizzes, each quiz contains ten multiple choice questions	10	N	Individual
Final examination	Two hours, open book	50	N	Individual

COMP 3023 Systems and Network Management

Credit Points 10

Legacy Code 300166

Coordinator Antoinette Cevenini (https://directory.westernsydney.edu.au/search/name/Antoinette Cevenini/)

Description With the advent of the era of Internet of Things, the Internet has become a huge infrastructure in which various kinds of systems are running to deliver a plethora of network services. To ensure the efficient utilization of network resources (e.g., bandwidth) and the convenient access to network services, systems and networks must be managed in a proper way. Facing this demand, this subject covers the standards, protocols and skills pertinent to the management of systems and networks. Moreover, this subject introduces Software Defined Networking (SDN), a new paradigm for conducting network management with programmability, flexibility and scalability.

School Computer, Data & Math Sciences

Discipline Networks and Communications

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 3007 OR
COMP 3025

Assumed Knowledge

Students should be familiar with the fundamentals of computer networking and data communications. In particular, they should have a good understanding of the TCP/IP protocol suite, the OSI model, and current networking and internetworking technologies.

Learning Outcomes

On successful completion of this subject, students should be able to:
1. Describe the basic components involved in network and system management.
2. Apply the network management architecture to an existing network.
3. Interpret data represented by the languages of ASN.1 or SMI.
4. Describe how an MIB is organised.
5. Explain how SNMPv1, SNMPv2 and SNMPv3 work, and apply them to manage a network.
6. Explain how RMON1 and RMON2 work, apply them to manage a network.
7. Configure Web servers, Email servers, DNS servers and DHCP servers.
8. Apply Software Defined Networking in campus networks and data centre networks.

Subject Content

Reviewing networking basics related to Network Management.
Ingredients of network management: agents, managers and management protocols.
Network Management Reference Models and Functionalities.
Abstract Syntax Notation One (ASN.1) and Structure of Management Information (SMI).
Management Information Base (MIB).
Simple Network Management Protocol: SNMPv1, SNMPv2 and SNMPv3.
Remote Monitoring: RMON1 and RMON2.
System configurations including web servers, email servers, DNS servers and DHCP servers.
Software Defined Networking (SDN): architecture, protocol and practice.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	0.5 hour per week	20	N	Individual

Report	1.5 hours per week	20	N	Individual
Report	5-10 pages	20	N	Individual
Final Exam	1 hour	40	N	Individual

COMP 3024 Video Games Development

Credit Points 10

Legacy Code 300862

Coordinator Anton Bogdanovych (https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/)

Description This subject provides students with an in-depth understanding of the development and structure of game engines. It provides the student with a unifying overview of the many modules that are incorporated in a game engine as well as a detailed examination of game-play and engine programming.

School Computer, Data & Math Sciences

Discipline Artificial Intelligence

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 1005

Equivalent Subjects LGYA 6086 - Games Theory and Design

Assumed Knowledge

Understanding of programming concepts and details of programming. Good programming skills in C#, Java or C++. Knowledge of systems analysis methods including object orientated analysis and design. Basic knowledge of vector algebra, matrixes and fundamentals of mathematics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the fundamental concepts behind computer game engines
2. Understand the technological details behind various modules that comprise a game engine
3. Write basic modules to interface with a game engine
4. Design modules to meet a given set of requirements
5. Develop their own game using the selected game engine

Subject Content

game architecture, data structures and design patterns
designing your own game from scratch
handling interaction from the player
fundamental and games artificial intelligence techniques
network programming with multiplayer games
2D programming
3D pipeline
animation
texture mapping and shading
particle systems
geometrical algorithms for collision detection, geometry simplification

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	7 weeks	10	N	Individual
Case Study	5 weeks to complete	10	N	Both (Individual & Group)
Applied Project	Requires a number of weeks to complete	40	N	Both (Individual & Group)
Final Exam	2 hours	40	N	Individual

COMP 3025 Wireless and Mobile Networks

Credit Points 10

Legacy Code 300952

Coordinator Nabil Giweli (https://directory.westernsydney.edu.au/search/name/Nabil Giweli/)

Description This subject helps the students gain in depth knowledge in the core concepts and principles in the areas of wireless and cellular networks. It provides them with the technical skills needed to do requirement analysis and evaluate a range of wireless networked systems to plan their institution or expansion. The subject covers the communication characteristics and architecture of wireless systems along with various types of wireless networks, including wireless LANs, personal area networks, sensor networks, mesh networks, and broadband wireless networks. Given the widespread use of mobile phones and devices, a substantial part of the subject is devoted to the study of cellular networks. The subject also covers mobility management and wireless security issues and solutions. Upon completion of this subject, the students will have the capabilities needed for long term and independent learning in the rapidly evolving area of wireless and mobile networking.

School Computer, Data & Math Sciences

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2004 OR
COMP 2005

Equivalent Subjects LGYA 5741 - Broadband Networking

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an in-depth knowledge of characteristics and architecture of wireless and mobile networks
2. Describe, analyse, and manage the principle applications of wireless and mobile networks
3. Demonstrate a broad understanding of concepts and technologies relevant to wireless and mobile networks
4. Explain relevant industry standards
5. Demonstrate technical skills needed for managing mobility
6. Demonstrate creative skills to plan institution or expansion of wireless and mobile networks
7. Describe security issues in wireless and mobile networks and identify their remedies
8. Demonstrate capabilities for independent learning of evolving concepts in wireless and mobile networking and for communicating those concepts clearly

Subject Content

Overview of Enabling Technologies
Wireless and Mobile Communications and Networking Characteristics and Architecture
IEEE 802.11: Wireless LANs
Cellular Networks and Their Evolutions
IEEE 802.16: Wireless Broadband Access (WiMAX)
Mobility Management
Wireless Mesh Networks
Personal Area Networks
Wireless Sensor Networks

COMP 3027 Robotic Programming

Credit Points 10

Legacy Code 301205

Coordinator Vernon Asuncion (https://directory.westernsydney.edu.au/search/name/Vernon Asuncion/)

Description Robot Operating System (ROS) is a software integration system that is now widely used for robotics software deployment. The philosophy behind ROS is to modularise software that can work for other robots through small changes in the code. This subject focuses on the main concepts of software development under ROS by looking at the file hierarchical systems (e.g. Packages, Stacks, Messages, Services and others), module communication types through Nodes, Topics, Services, Messages, Bags, Master and how they integrate to operate robot sensors and actuators. This subject also looks at actual AI software examples using C++/Python and Answer Set Programming (ASP).

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 2014 Object Oriented Programming and COMP 2019 Systems Programming 1

OR

COMP 2014 Object Oriented Programming and COMP 3015 Operating Systems Programming

OR

MECH 4003 Mobile Robotics

Assumed Knowledge

Basic knowledge of Linux, C++/Python and Object Oriented Programming (OOP).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the software systems for robotics.
2. Illustrate how drivers written for various robot parts are viewed as nodes and services under the ROS system framework.
3. Explain how different ﬀeprocesses ﬀf made for other applications can be incorporated onto their own software projects under ROS through the use of standard/predefined topics.
4. Describe how various state-of-the-art AI software can be embedded into a ROS system by having them as a backend for certain ROS processing tasks (nodes).
5. Develop software for interacting with sensor and controlling actuators using ROS tools.
6. Develop software using current state-of-the-art AI systems as backend for processes as ROS Nodes.

Subject Content

1. Overview and background of the Robot Operating System (ROS)
2. ROS file structures: Packages, Stacks, Messages, Services
3. ROS system components: Nodes, Topics, Services, Messages, Bags, Master and Parameter Server
4. System development under ROS: Navigation of ROS filesystem, creating workspaces (ROS workspace format or catkin), creating ROS packages, building ROS packages, creating nodes, creating msg and srv files, debugging and ROS computation graph visualisations
5. System deployment under ROS: calling ROS nodes, communication between nodes through messages and topics, using services and messages through the srv and msg files, using the Parameter Server
6. Basics of C++/Python building/runtime procedures for integration under ROS through the ROS libraries
7. Using Sensors and Actuators under ROS
8. Examples through 3D modelling and Simulation under ROS via TurtleSim, modelling robots through URDF and Xacro file formats
9. Answer Set Programming (ASP): syntax and semantics, minimal models, default negation and stable models
10. Planning domain using ASP
11. Using ASP solver systems GRINGO, CLASP and iCLINGO, and piping results (answer sets) to ROS nodes using the messages and topics object formats
12. Generating robot movement sequences from answer set outputs of ASP solvers

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

COMP 3028 Software Construction

Credit Points 10

Legacy Code 301348

Coordinator Rhys Tague (https://directory.westernsydney.edu.au/search/name/Rhys Tague/)

Description Students learn backend software design and secure API development, while also mastering testing and debugging processes. Students also examine development methodologies and build upon existing knowledge of version control and database queries. Throughout this subject, students have the opportunity to apply theoretical knowledge to practical software construction tasks and projects. This holistic approach ensures that they are not only prepared for subsequent software development subjects but are also conversant with current industry-relevant technologies for career pathways in Back-End Development such as Software Tester/Reviewer or DevOps Engineer.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP2021

Assumed Knowledge

- Basic understanding of version control, such as Git, and group work to develop a software solution.

- Systems Analysis and Design
- Python and Javascript

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Apply programming skills to develop and deploy an event-driven software architecture in a web server environment.
2. Apply secure API practices to control access to online resources.
3. Demonstrate agile software development practices and processes in a group setting.
4. Plan, develop, and implement unit and integration tests.
5. Create a Software Design Document to propose, justify and plan software development.
6. Implement web server and service management techniques for the purpose of achieving service-level agreements.

Subject Content

1. Version Control using Git
2. JavaScript
3. Node.js Framework
4. Secure API Development – JWS and OAUTH
5. Unit and Integration Testing
6. Advanced SQL
7. Server Programming (Python and Javascript)
8. Agile Methodology SCRUM

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	1000 words	10	N	Individual
Peer Review	2000 words, or 2 hours per week for 8 weeks	20	N	Individual
Applied Project	3 hours per week for 8 Weeks	30	N	Individual
Final Exam	2 hours	40	Y	Individual

COMP 3029 Software Engineering Industry Project

Credit Points 10

Legacy Code 301349

Coordinator Yun Bai (https://directory.westernsydney.edu.au/search/name/Yun Bai/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject enables students to experience real-life involvement in designing and implementing a quality software system that conforms to stakeholder requirements in the domain of data analytics. It builds on the skills developed in previous project subjects in specifying requirements, managing projects, communicating, working in teams to achieve a completed system, and reinforces skills in software design, coding, testing, reporting and the use of support tools. Students integrate these skills while learning about the domain and professional ways to liaise with the stakeholder to develop appropriate requirements, documentation and a final product.

COMP 3032 Machine Learning

Credit Points 10

Legacy Code 301435

Coordinator Yi Guo (https://directory.westernsydney.edu.au/search/name/Yi Guo/)

Description Machine Learning is one of the most important technologies in the fields of Artificial Intelligence and Data Science used to explain large datasets, inform decisions and highlight risks. Machine Learning is relevant for solving a range of problems in many

industries dealing with significant amounts of information and the structure of that information. In this unit, students put Machine Learning theory into action through widely used algorithms and practical applications for designing, training, and evaluating common learning models and systems. Students use Python programming and, as a result, learn about its important machine learning libraries and packages, such as Scikit-Learn, Keras and TensorFlow for solving practical problems and tasks.

AND
COMP 1005 OR MATH 1002 OR COMP 3002

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply machine learning tasks such as clustering, dimensionality reduction, regression and classification.
2. Apply machine learning workflow when evaluating learning systems for given tasks.
3. Determine appropriate machine learning models and algorithms in various scenarios.
4. Apply Python programming skills and tools for solving common machine learning application problems.

Subject Content

1.Introduction to Machine Learning
2.Supervised Learning: Regression and Classification
3.Model Selection
4.Unsupervised Learning: Clustering, Dimensionality Reduction and Manifold Learning
5.Non-parametric methods, Tree based Methods, and Support Vector Machines
6.Deep Learning: Foundations of Neural Networks, Autoencoder, CNNs, GANs
7.Reinforcement Learning
8.Python based machine learning libraries, packages and applications

COMP 3033 Quantum Computing and Communication

Credit Points 10

Legacy Code 301437

Coordinator Weisheng Si (https://directory.westernsydney.edu.au/search/name/Weisheng Si/)

Description This subject discusses how computing and communication can be performed by utilising subatomic particles in quantum world, a way very different from classical computing. From a computer science perspective, this subject skips the details of quantum physics and directly explains the concepts of qubits and quantum circuits for the purpose of computing. Necessary mathematical preliminaries are

included. Then, this subject discusses major quantum algorithms and communication protocols. Quantum programming will be practised throughout this subject with quantum simulators and real quantum computers in clouds. Students completing this subject will develop skills for designing quantum algorithms/protocols and conducting quantum programming and can pursue careers such as quantum software engineers, quantum security engineers or quantum researchers.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP2014 OR
COMP2015 OR
COMP2016 OR
COMP2023
AND
MATH1028 OR
MATH1030 OR
COMP1014

Assumed Knowledge

Students should have gained knowledge and skills in basic probability theory and intermediate-level computer programming. The basics of probability are essential for understanding quantum states. Computer programming skills of using objects and simple algorithms are needed to compose quantum programs.
Linear Algebra, which is the foundation for the mathematical models in quantum computing, will be covered within the subject. Therefore, a prior knowledge on it is recommended, but not required.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the mathematical models enabled by Quantum Mechanics.
2. Compose quantum circuits to implement programming logics.
3. Design quantum algorithms that are faster than classical algorithms.
4. Design secure quantum communication protocols.
5. Apply techniques for correcting quantum errors.
6. Conduct quantum programming on a quantum simulator and some real quantum computers in clouds.

Subject Content

1. Introduction to qubit, superposition, entanglement, and measurement.
2. Quantum programming on quantum simulators and real quantum computers.
3. Introduction to Complex Numbers for quantum computing.
4. Introduction to Linear Algebra for quantum computing.
5. Quantum gates and quantum circuits.
6. Basic quantum algorithms such as Deutsch's Algorithm and Deutsch-Jozsa's Algrothm
7. Quantum algorithms with applications: Grover's algorithm and Shor's algorithm
8. Quantum communication protocols such as BB84 Protocol and Ekert Protocol
9. Quantum Error Correction
10. Using Quantum Algorithms and Protocols to help achieve UN's SDGs (Sustainable Development Goals)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 hours (per lab)	20	N	Individual
Applied Project	30 hours	20	N	Individual
Quiz	30 minutes per quiz; 12 quizzes in total	20	N	Individual
Final Exam	2 hours	40	N	Individual

COMP 3034 Multimodal Interaction

Credit Points 10

Legacy Code 301468

Coordinator Belal Alsinglawi (https://directory.westernsydney.edu.au/search/name/Belal Alsinglawi/)

Description A key aspect within the field of Human Computer Interaction is capturing user input to a system or device. Called Multimodal Interaction, students learn about the variations of such inputs including how speech, vision, gesture and touch are used to interact with computing devices. Through a mixture of theoretical, research-oriented and practical concepts students will be introduced to novel techniques of interacting with computing devices and interfaces and discuss applications of them, across industrial and research applications, including digital assistants such as Siri, Alexa, facial recognition and surveillance systems.

COMP 3035 Discovery Project

Credit Points 10

Legacy Code 301490

Coordinator Rosalind Wang (https://directory.westernsydney.edu.au/search/name/Rosalind Wang/)

Description In this subject students will gain experience in applying data science skills and using knowledge gained during their bachelor's course of their primary discipline. Students will carry out a real life project transforming data to knowledge under the supervision of an academic mentor. Students will develop a knowledge discovery project proposal and carry out a literature review highlighting the current status of the problem. Assisted by a mentor they will apply the data science skills learned through-out the degree and produce a final discovery project report and/or interactive project tool and give an oral presentation.

School Computer, Data & Math Sciences

Discipline Computer Science, Not Elsewhere Classified.

Level Undergraduate Level 3 subject

Restrictions

Students in following programs must have completed 160 credit points before enrolling into the subject:
3754 Bachelor of Science
3756 Bachelor of Science (Pathway to Teaching Primary/Secondary)
3769 Bachelor of Data Science

Students in following programs must have completed 200 credit points before enrolling into the subject:
2743 Bachelor of Science/Bachelor of Laws
3757 Bachelor of Advanced Science
3763 Bachelor of Science/Bachelor of Arts
3764 Bachelor of Science/Bachelor of International Studies
3770 Bachelor of Applied Data Science
3778 Bachelor of Mathematics
4748 Bachelor of Science/Bachelor of Business
6043 Diploma in Science/Bachelor of Science

Assumed Knowledge

Completed the bachelor's degree subjects in the students primary discipline.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design a data driven knowledge discovery project plan and develop an investigative project proposal.
2. Collect, integrate, clean and prepare the data source relevant to the problem being studied.
3. Undertake self-directed study and literature search relevant to the problem being investigated.
4. Undertake a computational and/or analytical approach in problem solving and predictive modelling.
5. Undertake a multidisciplinary project.
6. Write and produce a comprehensive research report in a logical, concise and professional manner.
7. Present a project and its results to an audience in an oral presentation.

Subject Content

This subject will cover and include, research methodology, reference management software, literature search, theses writing skills, theses writing software and power point and presentation skills. The projects offered will vary according to the expertise and the research interests of students and the academic supervisors. Students will choose individual project topics and the relevant data from their concurrent degree in consultation with the unit coordinator and the supervising staff member (mentor). Students will gain a hands-on experience in solving a real life problem by applying both statistical and computational skills gained by data science component to data in data storage, processing and analysis. Hence these projects will have a common flavour of being data driven and multidisciplinary and will highlight the capabilities of data science approach.

Assessment

COMP 3036 Full Stack Development

Credit Points 10

Description Full Stack Development delivers in-depth knowledge of systems development. Students learn how to develop, test and integrate client (front-end) and server (back-end) parts of the software system. The subject will explore various options for the client-server data communication, using either REST APIs, sockets for live subscriptions or graph-based solutions. The subject focuses also on various testing approaches (i.e. unit, integration and end to end), continuous delivery, containerisation with Docker, integration and deployment procedures. Students use versioning control and engage with the Github platform for project management and quality control; developing authentic, real-world projects. Based on the performance in the subject, a selected number of students will have the opportunity to undergo a week-long placement with a target business partner. Students doing the placement will work on industry projects assessed by professional staff at their placement venue.

COMP 3037 Cloud Security

Credit Points 10

Coordinator Bassam Khoreich (https://directory.westernsydney.edu.au/search/name/Bassam Khoreich/)

Description The field of cloud security is rapidly growing providing benefits and challenges in comparison to traditional computing environments. The aim of this subject is to provide students with a foundational knowledge of cloud security theory as well as the concepts of cybersecurity principles and services. This subject incorporates the AWS Academy Cloud Security curriculum to support learning in the areas of security design principles, authentication and access management in the cloud and protecting data and applications for the cloud. In addition, students learn about security threats and best practices for securing the cloud through practical activities.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMP 3012 - Introduction to Cloud Computing

Learning Outcomes

After successful completion of this Subject, students will be able to:

1.Explain the fundamentals of cloud computing service models and frameworks
2.List relevant factors for securing the core infrastructure for cloud computing
3.Identify key factors for managing security for cloud computing and the role of lifecycle management in this
4.Select appropriate security controls in the cloud environment
5.Outline key considerations when evaluating, selecting, and managing cloud computing providers
6.Explain the role of security as a service provider and the impact of cloud on incident response
7.Demonstrate ethical and professional application of knowledge and skills in cloud security

Subject Content

- Cloud Architecture
- Infrastructure Security for Cloud
- Managing Cloud Security and Risk
- Data Security for Cloud Computing
- Application Security and Identity Management for Cloud Computing

- Logging and monitoring best practices for Cloud Computing
- Cloud Security Operations and managing an incident response

Assessment

COMP 3038 Professional ICT Internship

Credit Points 30

Description Students will undertake a six month placement in a large IT infrastructure organisation where they actively engage with large-scale capital works projects. Students develop skills in the practical development of enterprise solutions and architectures, such as the infrastructure development for the Western Sydney airport. During their placement students will be mentored by the professional staff and incorporated into the client team at their placement venue. This integration into the client team will allow students to utilise and further develop skills in cloud computing, software development, DevOps and business operations in addition to providing them with valuable career contacts and contexts.

COMP 6001 Neuromorphic Algorithms and Computation

Credit Points 10

Legacy Code 800232

Coordinator Saeed Afshar (https://directory.westernsydney.edu.au/search/name/Saeed Afshar/)

Description Designing and implementing processing pipelines for event-based sensory data is a crucial skill for neuromorphic engineers to test novel hardware platforms or to develop new algorithms and learning mechanisms. This project-based subject focuses

on principles of neuromorphic algorithm design and hardware-friendly neural architecture design for neuromorphic information processors. This subject consists of two streams of research: applied event-based algorithms and bio-inspired spiking networks. Through solving increasingly challenging tasks using distributed, event-based competitive processing elements, students will learn the differences between conventional and neuromorphic algorithm design, critically assessing real-world problems in a structured manner.

School Graduate Research School

Discipline Algorithms

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Restrictions

Must be enrolled in 8124 Master of Applied Neuromorphic Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate the advantages and disadvantages of event-based data processing in comparison to Conventional Frame-based data
2. Assess the fundamental building blocks of neural computation in biology and Neuromorphic Systems
3. Design and evaluate event-based algorithms on standard von Neumann architectures
4. Propose novel neuromorphic processing methods relevant to distributed neuromorphic processors
5. Develop a solution-oriented way of critically assessing real-world problems using Neuromorphic algorithms
6. Effectively communicate the significance and impact of a specific Neuromorphic system to an audience consisting of both specialist and non-specialists

Subject Content

- Encoding and Processing Conventional and Event-based data
- Architectures of Neural Computation
- Spiking Neural Networks in Biology, Software Simulation and Neuromorphic Hardware
- Event-based Classification
- Event-based Tracking
- Event-based Feature Extraction
- Designing a Novel Event-based Algorithm

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Coordinator Alexandre Marcireau (https://directory.westernsydney.edu.au/search/name/Alexandre Marcireau/)

Description Neuromorphic sensors offer a new way to electronically sense and process data that have a unique structure based on principles found in biology. Understanding how they operate is integral to their effective use in practical situations, to the development of algorithms, process their data, and to the optimisation of their electronic designs. This subject focuses primarily on neuromorphic vision sensors, which are rapidly being adopted by multiple industries, including exciting applications in automotive and space. Students will develop an in-depth understanding of neuromorphic sensors and the skills to operate a neuromorphic sensor for acquiring data and solving real-world problems. This practical experience is in high demand from both research labs and the industry.

School Graduate Research School

Discipline Algorithms

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Restrictions Students must be enrolled in 8124 Master of Applied Neuromorphic Engineering

Assumed Knowledge

Basic knowledge of:

- the physical nature of light
- analogue and digital electrical circuits (filtering, transistor logic)
- computer architectures (Van Neuman architectures, microcontrollers, buses, peripherals (USB, DAC, GPIO), communication protocols)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Synthesize the characteristics of a scene using data captured by an event-based vision sensor
2. Evaluate the differences between frame and event-based sensors

3. Design an experimental setup to gather valuable data from a neuromorphic sensor with a deep appreciation of different neuromorphic sensor characteristics
4. Assess the suitability of visio-tactile neuromorphic sensing for a real-world application
5. Critically appraise legal, ethical and cultural issues and considerations in the context of the emerging field of Neuromorphic research
6. Report data and analysis in accordance with professional standards

Subject Content

1. Physics of vision sensors
2. The different architectures of vision sensors
3. Biological sensors
- Retina: organization, key experiments, optic nerve, 6 control muscle
- Retina: organization, key experiments, optic nerve, 6 control muscle
- Tactile
- Olfactory
4. Neuromorphic vision sensors
- The event-based pixel: architecture, characteristics
- Sensors?f evolutions: ATIS, DAVIS, Celex.
5. Neuromorphic auditory sensors
- Artificial cochlea: filters, analogue vs digital implementation
- Auditory nerve: spike generation
- Brainstem: Auditory feature extraction and analysis
6. Research methods
7. Sensing technology and emerging legal, ethical and cultural considerations
8. Data collection and analysis
9. Guidelines for journal paper writing

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Viva Voce	3000 words or equivalent	20	N	Group
Report	1000 words or equivalent	30	N	Individual
Practical	4000 words or equivalent	50	N	Individual

COMP 6003 Computer Vision

Coordinator Manas Patra (https://directory.westernsydney.edu.au/search/name/Manas Patra/)

Description Computer vision uses artificial intelligence to train computers to interpret and understand visual images. Through the information that is derived, computer systems can make decisions and take actions. The amount of visual information today from digital devices and cameras along with improved technology has enabled considerable advances in automated image interpretation. In this subject students learn the state-of-the-art technologies of image processing and computer vision through practical activities. Computer vision is used, and has the potential to be used, in a range of industries, in novel ways. This presents a unique opportunity to students completing this subject.

School Computer, Data & Math Sciences

Discipline Computer Science, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Assumed Knowledge

Students should have general background in programming, computing, and/or statistics.

Learning Outcomes

1. Apply knowledge, theories and methods in image processing and computer vision.
2. Articulate the kinds of problems found in image processing and computer vision.
3. Evaluate existing computer vision systems.
4. Demonstrate effective communication and collaboration skills to develop a functional computer vision system.
5. Implement designs to develop practical and innovative image processing and computer vision applications or systems using various deep learning based technologies.
6. Work professionally and responsibly in solving problems in image processing and computer vision.

Subject Content

- Image formation
- Image processing
- Model fitting and optimization
- Recognition
- 3D reconstruction
- Deep learning for vision systems (1): foundations
- Deep learning for vision systems (2): image classification and detection
- Deep learning for vision systems (3): transfer learning
- Deep learning for vision systems (4): generative models and visual embeddings

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

COMP 7001 Advanced Routing

Legacy Code 301065

Coordinator Ante Prodan (https://directory.westernsydney.edu.au/search/name/Ante Prodan/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Restrictions

Students must be enrolled in the online program Master of Advanced Networking or any other postgraduate Western Sydney University program where this subject can be taken as an unspecified elective and where there are sufficient credit points available in the study program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain how different layers co-exist in the campus design model and what routing/switching equipment operates at each level.
2. Outline the technological and theoretical constraints of the OSPF routing protocol and its interaction with other routing technologies.
3. Identify the proprietary nature of EIGRP and its operational constraints.
4. Estimate the commercial impact of ISIS, its relationship to OSPF and its technological and theoretical differences with other routing protocols.
5. Assess the redistribution between routing protocols and static routing entries, the technological and operational limitations imposed on a network infrastructure.
6. Review route management and the implementation of efficiency into a network infrastructure.
7. Identify address management, contrasting IPv4 with IPv6 implementation.
8. Explain an understanding of BGP as an interior and exterior routing protocol and its relationship and synchronisation with ISIS, OSPF and EIGRP.
9. Illustrate IP multicast and its utilisation in a network infrastructure.
10. Evaluate research, investigate and troubleshoot by means of appropriate practical and exploration-based activities throughout your learning materials.
11. Use direct feedback after Cisco and Packet Tracer assessments to evaluate your own learning.
12. Integrate knowledge from other sources to provide context to the Cisco view.
13. Communicate accurately and reliably, in a structured and coherent fashion, recognising purpose and audience.
14. Work effectively with others in a distance setting where the collaboration is undertaken via computer-mediated communication.
15. Formulate appropriate numerical and mathematical skills to analyse data.
16. Find and select information for a specific purpose, including via the web or a router/switch CLI.
17. Organise time, study methods and resources to suit the circumstances.
18. Demonstrate how to configure routers, implementing complex routed scenarios through online lab sessions.
19. Use specialist software tools.
20. Plan and organise yourself and your work appropriately when working in a group.

Subject Content

1. Pre CCNP review
2. Routing Services
3. Researching networking
4. Configuring EIGRP
5. Configuring the OSPF protocol
6. Manipulating routing updates
7. Implementing path control
8. Implementing a BGP Solution for ISP Connectivity
9. Implementing Routing Facilities for Branch Offices and Mobile Workers
10. Implementing IPv6 in an Enterprise Network

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
TMA - Develop a network, Evaluate protocols, Complete Cisco activities	1000 words	16	Y	Individual

TMA - Build a network, Critique a model, Complete Cisco activities	1000 words	17	Y	Individual
TMA - Group Case Study, Evaluate a protocol, Cisco final exam (not for accreditation)	1000 words	17	Y	Individual
Final Examination	3 hours	50	Y	Individual

COMP 7002 Advanced Topics in Networking

Credit Points 10

Legacy Code 300252

Coordinator Seyed Shahrestani (https://directory.westernsydney.edu.au/search/name/Seyed Shahrestani/)

Description This subject focuses on the advanced features of networked systems and the emerging network technologies and services. The subject provides students with an in-depth understanding of relevant protocols, the emerging standards, and standards organisations. The emphasis of the subject is on development of the student skills to enable them to do proficient research and development works and studies in the computer networking discipline.

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Students should be familiar with the fundamentals of computer networking. In particular, students should have a good understanding of the OSI model, the TCP/IP protocol suite, and current Internet and networking technologies. Therefore, it is strongly advised that students must have either taken an appropriate subject in computer networking (e.g., 300695 Network Technologies), or have equivalent knowledge.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the important concepts relevant to emerging networks and the Internet technologies and architecture.
2. Explain the contemporary issues in security, forensics, and reliability of modern networked systems.
3. Explain the important issues in modern applications and services relying on networked systems.
4. Evaluate the technologies and performance of emerging networks.
5. Demonstrate their proficiency with key research and development issues in the field of networking and network-based services.

Subject Content

Network Technologies Background
Research, Resources, and Citation
Contemporary Issues in Computer Networking
Advanced Networked Systems Forensics, Security, and Reliability
Advanced Network-based Services
Trends in Networking and Internet Technologies
Methodologies for Research in Networking

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

COMP 7003 Big Data

Credit Points 10

Legacy Code 301046

Coordinator Yi Guo (https://directory.westernsydney.edu.au/search/name/Yi Guo/)

Description "Big data" is the label for the ever-increasing gigantic amount of data with which humanity has to cope. The availability of data and the development of cloud computing architectures to process and analyse these data have made data analytics a central tool in our endeavours. This subject will introduce students to the realm of "big data", covering the important principles and technologies of retrieving, processing and managing massive real-world data sets. It is designed to provide the basic techniques required by any discipline that needs to make sense out of the growing amount of data, and to equip students with the knowledge and key set of skills set to be competitive in the growing job market in the analytics field.

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

It is expected that students enrolled in this subject should have basic programming skills in any programming language and working knowledge in elementary probability and statistics, including the concepts of random variables, basic probability distributions, expectations, mean and variance.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the major trends in technology, business, and science behind big data
2. Analyse and compare a selection of major big data management techniques in use today, including parallel databases, NoSQL, MapReduce, cloud services
3. Evaluate the relative strengths and weaknesses of MapReduce and parallel database systems and apply the appropriate technique to tackle relevant big data problems
4. Apply proper methods of data pre-processing and cleaning for big data analysis

Subject Content

1. Foundations and recent trends of big data
2. Parallel database management systems
3. Data parallelism and the MapReduce framework
4. NoSQL databases and cloud services
5. Data processing and manipulation for big data analysis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 hours per Practical (10 in total at 2% each)	20	N	Individual

COMP 7004 Cloud Computing

Credit Points 10

Legacy Code 301042

Coordinator Rodrigo Neves Calheiros (https://directory.westernsydney.edu.au/search/name/Rodrigo Neves Calheiros/)

Description Cloud computing has become a driving force for information technology over the past several years, and it is moving towards a future in which we won't rely on local computers, but on centralised facilities operated by third-party compute and storage utilities. Governments, research institutes, and industry leaders are rushing to adopt Cloud Computing to solve their ever-increasing computing and storage problems arising in the Internet Age. This subject offers "Academy Cloud Foundations" (ACF) curriculum as part of Amazon Web Services (AWS) Academy. Students will develop knowledge and skills in the areas of virtualization technologies, cloud architecture, AWS core services and their pricing, security, architecture, and support.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Basic knowledge of networking and computer systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Characterise fundamental architecture of Cloud computing
2. Analyse the basic service models in Cloud systems
3. Characterise different virtualisation technologies for Cloud computing
4. Examine compute, storage, network and database services in Cloud systems
5. Evaluate Cloud security and well-architected design principle in systems

Subject Content

1. Parallel and Distributed Computing
2. Virtualisation Technologies
3. Cloud Economics

4. Cloud Computing Services
5. Cloud Security
6. Cloud Architecting
7. Cloud Support Services

Assessment

COMP 7006 Data Science

Credit Points 10

Legacy Code 301044

Coordinator Liwan Liyanage (https://directory.westernsydney.edu.au/search/name/Liwan Liyanage/)

Description The explosion of data in the internet age opens up new possibilities for agencies and business to better serve and market to its customers. To take full advantage of these opportunities requires the ability to consolidate, manage and extract information from very large diverse data sets. In science, data sets are growing rapidly, with projects routinely generating terabytes of data. In this subject we examine the software tools and analytic methods that underpin a successful Data Science Project and gain experience in big data analytics.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Basic Statistics, Computer Programming.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the issues (computational and social) in data science
2. Show when and how to apply the MapReduce paradigm to solve data analytics problems
3. Select and apply appropriate Machine learning and statistical algorithms to extract information from data
4. Evaluate and interpret the utility of information found using Data Science

Subject Content

1. Introduction to Data Science
2. The Map-Reduce paradigm for Big Data
3. Unsupervised Learning; Clustering, Dimension Reduction
4. Supervised Learning; Regression and Classification
5. Unstructured data
6. Visualisation and Visual Analytics

COMP 7007 Information Security Management

Credit Points 10

Legacy Code 301162

Coordinator Yun Bai (https://directory.westernsydney.edu.au/search/name/Yun Bai/)

Description Cyber Crime costs are increasing at an alarming speed. Security management and ICT project management skills are now essential for IT industry. This unit provides the knowledge, skills, techniques and mechanisms on information security management as well as general ICT project management for postgraduate students. It covers topics on management aspect of information security such as business and Cybercrime, security awareness, security risks, security fundamentals, risk assessment and security system design, planning and regulatory issues for information system security. It also covers general ICT project management phases such as conception and initiation, project planning, project execution, performance and monitoring, and project close.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Basic knowledge of computer system, computer security and basic programming skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the impact of global interconnectedness on contemporary businesses, identifying potential vulnerabilities and threats stemming from cybercrimes.
2. Evaluate the application of fundamental project management principles and their challenges in the context of information security management.
3. Develop comprehensive strategies for effective project planning, including budgeting and scheduling, tailored to the unique demands of information security projects.
4. Explain the foundational concepts and the significance of information security, promoting best practices within an organisational context.
5. Assess security vulnerabilities across various stages of project management, devising measures and strategies to mitigate risks and ensure a secure project lifecycle.
6. Design security mechanisms to safeguard information assets and systems, including project management aspects.

Subject Content

1. Globalisation, business and cybercrimes
2. Project management basics and challenges
3. Project planning, budget and schedule
4. Information security basics and awareness
5. Security issues in various phases of project management
6. Security risks
7. Security mechanisms
8. Project risk assessment
9. Managing risk
10. Project execution, performance and monitoring
11. Security architecture
12. Security system design
13. Planning and regulatory issues for security

COMP 7008 Internet of Things

Credit Points 10

Legacy Code 301175

Coordinator Seyed Shahrestani (https://directory.westernsydney.edu.au/search/name/Seyed Shahrestani/)

Description The Internet of Things (IoT) is drastically changing the way organisations operate and how individuals interact with the world. IoT is an infrastructure consisting of fairly constantly communicating objects, or things, that may be smart and process or act on data. The IoT facilitates detailed and meaningful interactions between humans, digital devices, and many other industrial and household equipment, appliances, and things. The IoT is also the enabler of smart environments, including smart homes, buildings, cities, transport, and healthcare, among many others. This subject discusses IoT technologies and applications in detail. It also introduces the students to trends, challenges, and key research topics in relevant areas.

Pre-requisite(s) Students enrolled in 2761 Master of Business Administration Information and Communication Technology

specialisation must have successfully completed COMP 7015 Programming Proficiency and INFS 7007 Systems Analysis and Database Management Systems
Students enrolled in all other courses must have successfully completed INFS 7009 Web Technologies

Restrictions

Successful completion of 40 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop programs for mobile platforms
2. Implement input and interaction in mobile applications
3. Manipulate files and databases in mobile applications
4. Employ advanced user interface methods to produce graphical applications
5. Apply data management and security in mobile applications
6. Explain the theoretical fundamental of mobile technologies
7. Identify strengths, opportunity and limitation of platforms, development tools and programming languages for mobile applications
8. Apply common user interface elements into applications
9. Install mobile development tools, such as Android and iOS

Subject Content

1. Data management and security
2. Advanced topics for mobile platforms, including file, database and advanced user interface
3. Input and Interaction for mobile platforms
4. Introduction to mobile technologies, including strengths, opportunity and limitation of development for mobile devices
5. Basic programming for mobile platforms, including variables, data types, arithmetic, control, function, arrays and objects
6. Overview, architecture and installation of programming languages for mobile platforms
7. Software development frameworks, tools and mobile applications
8. Mobile platform overview and common User Interface Elements

COMP 7011 Multimedia Communication Systems

Credit Points 10

Legacy Code 300256

Coordinator Mohammad Ahmadi (https://directory.westernsydney.edu.au/search/name/Mohammad Ahmadi/)

Description This subject covers advanced concepts and technologies used in emerging multimedia communication systems. Theory, practice and standards for IT professionals endeavouring to build data compression systems for multimedia applications are emphasised.

School Computer, Data & Math Sciences

Discipline Computer Science, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Basic knowledge in digital compression and coding, digital communication systems and fundamentals of data communication and networking.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of current data compression schemes for all sources of information: audio, data, images, and video.
2. Describe current compression standards and why the various design choices and tradeoffs were made.
3. Demonstrate an understanding of the main issues involved in designing, implementing, selecting and evaluating data

compression methods, algorithms and standards for providing multimedia services.
4. Describe and analyse common protocols used in various contemporary networks for multimedia communication.

Subject Content

- Overview of multimedia and multimedia communication systems
- frequency domain coding
- still-Image compression Standard and Developments
- video compression techniques and Standards
- speech coding techniques and Standards
- multimedia conferencing Standards
- multimedia communication protocols and Standards
- multimedia Communications over networks
- Recent Advances in multimedia Communications

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1 hour	20	N	Individual
Report	3000 words	30	N	Individual
Final Exam	2 hours	50	N	Individual

COMP 7012 Network Management

Credit Points 10

Legacy Code 300255

Coordinator Seyed Shahrestani (https://directory.westernsydney.edu.au/search/name/Seyed Shahrestani/)

Description The performance of any modern organization is heavily dependent on their networked systems and how these systems are managed. The increasing demand for ICT services and the huge growth of the Internet have resulted in large heterogeneous networks. This subject addresses the issues relevant to management of such networks and the services that run on them. It covers the principles and current practices pertinent to integrated management of networks, systems, and services. The subject helps the students to understand relevant protocols, standards, and standards organizations. It also introduces them to trends and key research areas in management of networked systems.

School Computer, Data & Math Sciences

Discipline Networks and Communications

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) INFO 7002 Advanced Topics in Artificial Intelligence OR

COMP 7015 Programming Proficiency AND INFS 7007 System Analysis Database Management Systems OR
MATH 7012 Programming for Data Science AND MATH 7016 The Nature of Data

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Familiar with the fundamentals of computer networking and data communications. In particular, a good understanding of the OSI model, the internet protocol suite and current internet technologies.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe network management functions and architecture
2. Describe important standards and protocols for network and system management
3. Describe various management functions and applications
4. Explain important aspects of integrated management of services and applications
5. Explain the role and functions of network management software and platforms
6. Discuss the emerging trends in management of networked and distributed systems
7. Explain key research issues in management of networked systems

Subject Content

Overview of Networking and Network Management
Simple Network Management Protocol (SNMP) and Related Standards
Common Management Information Protocol (CMIP) and Related Standards
Broadband Network Management
Telecommunications Network Management
Network Management systems
Network Management Applications
Web-Based Management
Research in Network Management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Pop quizzes - Multiple choice or short answer quizzes based on the material covered to the point.	Short quizzes during Lecture sessions. There will be 4 quizzes. Each quiz is worth 5% and will last a maximum of 10 minutes.	20	N	Individual
Project or Case Study - Report and its Presentation	Report 10 pages long	30	N	Group
Final Exam	Two hour, closed book written exam	50	N	Individual

COMP 7013 Network Technologies

Credit Points 10

Legacy Code 300695

Coordinator Ante Prodan (https://directory.westernsydney.edu.au/search/name/Ante Prodan/)

Description Computer networking is one of the fastest growing technologies of our time. The Internet interconnects billions of computers providing many new exciting opportunities and challenges. The Internet and the World Wide Web have provided the communication and infrastructure needed for global collaboration and information exchange. As a result of the rapid growth of networked systems and the diverse applications that run on them, success in many professions depends on a sound understanding of the technologies underlying these systems and applications. This subject explores these issues and provides the students with such an understanding. It covers the principles and current practices pertinent to computer networking and communications. It describes some of the important technologies and devices used in modern networks for information distribution and data sharing. The subject helps the students to understand important models, protocols and standards in networking and internetworking.

School Computer, Data & Math Sciences

Discipline Networks and Communications

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 5883 - Network Technology and Data Communications

Restrictions

Students must be enrolled in a Postgraduate program.

Assumed Knowledge

The students should be familiar with the fundamentals of computer architecture and programming principles. They should also have a working knowledge of the World Wide Web.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate and analyse the primary concepts of networking and internetworking.
2. Evaluate the significance of the OSI and TCP/IP models and analyse the operation of their relevant protocol stacks for communications and networking.
3. Evaluate the functions of important communication devices such as, repeaters, bridges, routers, switches and gateways, create various types of network configurations and analyse their performance.
4. Analyse the operation of the major protocols used in local area and wide area networks including network security associated algorithms, applications and devices.
5. Analyse the Internet architecture and internetworking technologies, and create research reports on data communications, computer networking and internetworking technologies.

Subject Content

Overview of Networking Technologies
The Internet and TCP/IP Protocol Suite
Network Applications and Application Level Protocols
Local Area Networks
Internetworking and Routing Protocols
Fundamentals of Network Management
Fundamentals of Network Security
Emerging Network Technologies
Fundamentals of Wireless Networking and Mobile Computing
Fundamentals of Multimedia Networking
Practical aspects of basic LAN and WAN devices

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	15 minutes per practical	20	N	Individual
Professional Task	60 minutes	30	N	Both (Individual & Group)
Case Study	Approximately 3,000 words for two students	25	N	Group
Intra-session Exam	60 minutes	25	N	Individual

COMP 7014 Optimising Networks

Legacy Code 301067

Coordinator Ante Prodan (https://directory.westernsydney.edu.au/search/name/Ante Prodan/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Restrictions

Students must be enrolled in the online program Master of Advanced Networking or any other postgraduate Western Sydney University program where this subject can be taken as an unspecified elective and where there are sufficient credit points available in the study program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Knowledge and understanding
2. 1. Explain troubleshooting and meeting the network requirement in a converged network environment.
3. 2. Describe how VoIP is implemented.
4. 3. Assess troubleshooting technologies and queue types used in IP QoS.
5. 4. Identify different troubleshooting methodologies to support traffic management.
6. 5. Identify the range of techniques in use to deliver a resilient routed, switched network infrastructure.
7. 6. Explain support and troubleshoot a wireless infrastructure and its impact on QoS and scalable networks.
8. Cognitive skills
9. 7. Research, investigate and troubleshoot.
10. 8. Use direct feedback after Cisco, Netlab and Packet Tracer assessments to evaluate your own learning.
11. 9. Integrate knowledge from other sources to gain a deeper understanding of the subject and provide context to the Cisco view.
12. Key skills
13. 10. Communicate accurately and reliably, in a structured and coherent fashion, recognising purpose and audience.
14. 11. Work effectively with others in a distance setting where the collaboration is undertaken via computer-mediated communication.
15. 12. Work effectively with others in a lab setting via moderated ALE on Netlab+.
16. 13. Use appropriate numerical and mathematical skills to analyse data.
17. 14. Find and select information for a specific purpose, including via the Web, Cisco SDM or a Router/Switch CLI.
18. 15. Organise time, study methods and resources to suit the circumstances.
19. 16. Use independent resources to undertake academic research in Advanced Networking.
20. Practical and/or professional skills
21. 17. Configure routers, implementing complex routed scenarios through online lab sessions.
22. 18. Use specialist software tools.
23. 19. Reflect on first-hand experience of configuring and managing network equipment (through attendance at the day school or alternative learning experience).
24. 20. Plan and organise work appropriately when working in a group (online lab sessions).

Subject Content

1. Planning maintenance for complex networks
2. Troubleshooting processes for complex enterprise networks
3. Using maintenance and troubleshooting tools and applications
4. Maintaining and Troubleshooting Campus Switched Solutions
5. Maintaining and Troubleshooting Routing Solutions
6. Troubleshooting Addressing Services
7. Troubleshooting Converged Networks
8. Troubleshooting Network Performance Issue
9. Maintaining and Troubleshooting Network Security Implementations
10. Troubleshooting Complex Enterprise Networks

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
TMA - Cisco activities; Discussion paper; Problem solving	800 words	16	Y	Individual
TMA - Cisco activities; Critical review; Problem solving	1000 words	17	Y	Individual
TMA - Cisco activities: Cisco final exam (not for accreditation); Individual Reflection on Group case study	Cisco activities: Cisco final exam (not for accreditation) - 1000 words; Individual Reflection on Group case study - 150 words	17	Y	Individual
Final examination	3 hours	50	Y	Individual

COMP 7015 Programming Proficiency

Credit Points 10

Legacy Code 301038

Coordinator Maria Mikhail (https://directory.westernsydney.edu.au/search/name/Maria Mikhail/)

Description This subject is aimed at the students whose undergraduate study is in a discipline other than computing or information technology. This subject first covers the programming fundamentals on data types, conditional selections and loop structures, and then further develops the problem solving skills through the use of user-defined functions, records, files, as well as the basic concept and techniques of object-oriented programming. A high level programming language is employed to implement all the problem solutions.

School Computer, Data & Math Sciences

Discipline Programming

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss and explain the concepts of data and procedural representation, programming languages, compilers, interpreters, and development environments.
2. Design and/or represent programs with flow chart and pseudo code.
3. Use effectively the basic data types, selection control, and loop structure.
4. Utilise a high-level programming language to develop problem solutions using standard IO or a proper user interface, files, and record or class structure.
5. Apply a modular design or an OO design to the software solution.
6. Explain the concept of object-oriented programming, and apply the concept to developing a software solution within an OOP environment.

Subject Content

1. The programming environment: computer systems architecture, hardware, operating systems, compilers, interpreters.
2. Data representation and basic data and multimedia types.
3. Program flowchart, pseudo code and the concept of algorithms.
4. Programming basics: syntax, declarations, operators, expressions, assignment, selection, iterations.
5. Other programming features: IO, GUI, functions, arrays, records, files, and classes.
6. Program design, and the coding, testing, and debugging of the programs.
7. The OOP paradigm, method overloading and overriding, inheritance and polymorphism.
8. The solution development within an OOP environment.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour	15	Y	Individual
Quiz	1 hour	15	Y	Individual
Quiz	2 hours	25	Y	Individual
Practical	8 hours	20	N	Individual
Applied Project	8 hours	25	N	Group

COMP 7016 Visualisation

Credit Points 10

Legacy Code 301112

Coordinator Zhonglin Qu (https://directory.westernsydney.edu.au/search/name/Zhonglin Qu/)

Description This subject introduces the fundamentals and technologies of information visualisation. It covers the major concepts of information visualisation, human-computer perception and methods for visual data analysis. Students will learn the knowledge and skills required for identifying suitable visualisation techniques and tools appropriate for various data types and applications. The subject provides students with opportunities to explore recent research in the visualisation field. Please note any offerings at Melbourne campus are only applicable for Australian Technical and Management College (ATMC) students.

School Computer, Data & Math Sciences

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MATH 7016 (for students in 3779)

Incompatible Subjects MATH 2014 Visual Analytics

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Familiarity with computer software programs, such as Microsoft Office.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the purpose of information visualisation
2. Identify strengths, limitations and opportunity of visualisation techniques
3. Evaluate common visualisation techniques for relational data, multi-dimensional data and spatio-temporal data
4. Analyse interaction methods in visualisation
5. Apply common visualisation tools for data analysis
6. Evaluate visual analytics technologies and tools for data analysis

Subject Content

Information visualisation including main concepts and overview
Visual mappings and visual perception
Trees and graphs visualisation
Multi-dimensional data visualisation
Spatio-temporal data visualisation
Interaction
Using visualisation and tools to understand data
Visual Analytics

Attendance

Attendance at tutorial / practical classes is considered compulsory and students are expected to attend all tutorial classes. Students should attend the tutorial that they registered in and continue to attend this tutorial throughout the semester. This practice enables students to maintain adequate performance and continuity in their program and tutors to maintain contact and monitor students' progress.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 hours each	20	N	Individual
Report	1,500 to 2,000 words report	30	N	Individual
Report	1,500 to 2,000 words report	30	N	Individual
Quiz	60 minutes	20	N	Individual

COMP 7017 Wireless Networking

Credit Points 10

Legacy Code 300389

Coordinator Mahsa Razavi (https://directory.westernsydney.edu.au/search/name/Mahsa Razavi/)

Description Wireless technologies are amongst the most exciting and rapidly growing areas in computing and information technology. They implement applications that profoundly impact our personal way of communication, as well as how business in a variety of industries and organisations are conducted. This subject goes into details of such issues. It discusses wireless networking technologies and their related applications. The main features of wireless and mobile communication systems and the networked services that are based on these systems are also presented. The subject provides students with an in-depth understanding of relevant protocols, the emerging standards and standard organisations. The students are also introduced to some of the relevant current key research issues of the field.

School Computer, Data & Math Sciences

Discipline Networks and Communications

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program offered by the School of Computer, Data and mathematical Sciences.

Assumed Knowledge

Students should be familiar with the fundamentals of computer networking and data communications. In particular, they should have a good understanding of the OSI model, the Internet protocol suite and current internet and networking technologies equivalent to satisfactory completion of an introductory networking subject at the undergraduate level such as 300086 offered at Western Sydney University or one year professional experience in networking.
The subject is at an advanced level and students would not be able to complete the subject successfully unless they have a good understanding of fundamental issues in computer networking, Internet protocol suite and Internet technologies.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain advantages, the current use, and applications of major wireless technologies
2. Compare and contrast wireless and wired networks
3. Discuss the current wireless and mobile networking technologies
4. Explain various relevant industry standards and discuss their distinctions
5. Explain security features of wireless and mobile networks
6. Discuss the challenges in wireless networking
7. Discuss the emerging wireless networking technologies
8. Evaluate the performance of modern wireless networks
9. Explain key research issues in wireless networking and mobile computing

Subject Content

Overview of Networking and Enabling Technologies
Wireless Communication Technology
Cellular Wireless Networks
Cordless Systems
Narrowband and Broadband Fixed Wireless Access
Wireless LAN Technology
IEEE 802.11 Networks
Universal Short-range Wireless Standards
Mobile Networking
Wireless Application Protocol (WAP)
Research in Wireless Networking

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	10 minutes each	20	N	Individual
Report	Report 10 pages long, presentations 15 - 20 minutes	30	N	Group

COMP 7018 Advanced Cloud Computing

Credit Points 10

Legacy Code 301363

Coordinator Rodrigo Neves Calheiros (https://directory.westernsydney.edu.au/search/name/Rodrigo Neves Calheiros/)

Description This subject offers the Amazon Web Services (AWS) Academy "Academy Cloud Architecting" (ACA) curriculum and provides deeper understanding of advanced cloud computing services and how to architect cloud solutions. Students will learn advanced cloud computing concepts including notification and messaging, serverless computing, API gateways, NoSQL databases, and content delivery networks. The subject also explores strategies to enable high scalability, reliability, cost-efficiency, performance, and operational excellence in a cloud-based system. All these aspects are explored in practice with AWS services. Upon completion of this subject, students will be prepared for the AWS Certified Solutions Architect - Associate exam.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) COMP 7004

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess different design patterns for web-scale storage and recommend the most appropriate pattern for a specific problem.
2. Analyse common design patterns and architectures for loosely coupled cloud computing systems and recommend the most appropriate pattern for a specific problem.
3. Evaluate strategies to enable high scalability, reliability, cost-efficiency, performance, and operational excellence in a cloud-based system.
4. Examine concepts of security and infrastructure automation in a cloud-based system.
5. Design and deploy scalable, reliable, and efficient systems that utilise advanced cloud services.

Subject Content

1.Design patterns for loosely coupled cloud computing systems: microservices and serverless architectures
2.Design patterns for web-scale storage: content delivery networks, object storage, and relational and no-relational databases
3.Advanced cloud services: API gateways, stream processing, and serverless computing
4.Queueing and notification systems
5.Advanced cloud security
6.Reliability in clouds
7.Cost and performance efficiency in cloud computing
8.Infrastructure automation
9.Common cloud design patterns and cloud architectures

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

COMP 7019 Applied Machine Learning

Credit Points 10

Legacy Code 301312

Coordinator Vernon Asuncion (https://directory.westernsydney.edu.au/search/name/Vernon Asuncion/)

Description This subject introduces the foundation and concepts underpinning Machine Learning (ML) at a more abstract level, and provides more focus on its practical applications in areas such as: the classification and extraction of text data from various documents and web pages, image processing, Google's PageRank algorithm and relational data mining (RDM). These learning objectives are achieved through various ML software and a series of practicals and projects. The subject covers the concepts and notions of supervised, unsupervised and reinforcement learning, perceptron, neural networks, support vector machines (SVM), knowledge representation (KR) based RDM, and a comprehensive introduction to the Scikit-learn ML Python libraries.

School Computer, Data & Math Sciences

Discipline Artificial Intelligence

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Some probability and statistics knowledge would be advantageous.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the scope of current machine learning approaches and applications for both current and future use.
2. Determine the most appropriate tools to use for machine learning tasks using software applications including Python and R programming languages.
3. Explain the core principles behind machine learning algorithms.
4. Distinguish between supervised, unsupervised and reinforcement learning notions.
5. pply Machine Learning software to real-world problems.

Subject Content

1. Review of the fundamentals of probability theory, statistics and basic linear algebra notions.
2. Installation and introduction to common ML software, which includes the introduction on the use of R and Python as needed for this course.
3. Introduction to linear, multiple and logistic regression.
4. Model selection, regularization and cross-validation:
Applications I: Introduction to NLP and classifying text data using logistic regression and naive Bayes.
5. Introduction to support vector machines (SVM):
Applications II: Classifying text data using SVM classifiers.
6. Introduction to neural networks (NN):
Applications III: Classifying text data and image data using recurrent and convolutional NN.
7. Unsupervised learning: K-Means Clustering and Hierarchical Clustering:
Applications IV: Google?fs PageRank algorithm.
8. Introduc

Assessment

COMP 7020 Artificial Intelligence Ethics and Organisations

Credit Points 10

Legacy Code 301314

Coordinator Jiansheng Huang (https://directory.westernsydney.edu.au/search/name/Jiansheng Huang/)

Description Artificial Intelligence Ethics and Organisations provides students with a comprehensive grounding in the ethical issues of general ICT and AI technologies. Students will learn the general ICT professionalism, the relevant laws, regulations and policies with respect to ICT and AI ethics, and the existing framework and research trend in the field. With a series of case studies, students will learn how to apply general principles and guidelines in practice. They will also learn to identify potential risks and impacts, to ensure AI ethics are followed in different circumstances regarding data governance, automatic decisions, predictive analytics, autonomous system design and deployment, and structure changes of labour markets.

School Computer, Data & Math Sciences

Discipline Artificial Intelligence

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

General knowledge of artificial intelligence technologies and applications, including machine learning, robotics and autonomous systems, natural language processing and expert systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply knowledge of existing laws, policies, and international, national, organisational framework of ICT and AI ethics and research trends in the field.
2. Understand ICT Professionalism (the code of professional conduct)
3. Explain the similarities and Difference between the general ICT ethics and AI ethics
4. Identify potential risks of ICT and AI systems in practice.

5. Implement methods to confirm appropriate consent and avoid data breaches in information sharing (when data is collected, sold, shared, collated and used).
6. Determine designs for transparency, fairness and accountability of automatic decisions.
7. Identify bias and discrimination in AI predictive analytics.
8. Explain impacts of AI to labour markets as well as appropriate and flexible regulatory policies to expand social protection.
9. Justify through moral reasoning the use of autonomous systems.

Subject Content

- Emerging ICT and AI technologies and applications
- ICT Professionalism, the code of professional conduct
- General principles and guidelines of general ICT ethics and AI ethics
- Existing laws, regulations, policies and ethical framework of ICT and AI systems
- Understanding the general ICT ethics and AI ethics: Similarities and Differences
- Privacy and data governance
- Human oversight in automated decisions
- Bias and discriminations in AI predictive analytics
- Impacts of AI to the structures of labour markets
- Ethical rules of autonomous systems
- AI military ethics
- Applying principles in practices for ethical AI
- Research trend in AI ethics

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Literature Review	1,000 words	20	N	Individual
Quiz	2 Hours	30	N	Individual
Report	2000 words research report	50	N	Individual

COMP 7021 Knowledge Representation and Reasoning

Credit Points 10

Legacy Code 301315

Coordinator Yan Zhang (https://directory.westernsydney.edu.au/search/name/Yan Zhang/)

Description Knowledge representation and reasoning is one of the fundamental components of Artificial Intelligence. Students will learn the principles and methodologies that are used to represent and reason about human knowledge effectively in formal computational models, and eventually solve complex tasks using computer systems. This subject covers logic foundations of knowledge representation and reasoning, Answer Set Programming approaches for declarative problem solving, intelligent agent modelling, diagnostic and probabilistic reasoning. The subject plays an important part in preparing students for career paths as AI engineers, robotics engineers and intelligent software engineers.

School Computer, Data & Math Sciences

Discipline Artificial Intelligence

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) INFO 7002 Advanced Topics in Artificial Intelligence OR

COMP 7015 Programming Proficiency AND INFS 7007 System Analysis Database Management Systems OR
MATH 7012 Programming for Data Science AND MATH 7016 The Nature of Data

Restrictions

Students must complete 60 credit points before enrolling into this Subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1.Critically analyse the logic foundations of knowledge representation and reasoning in Artificial Intelligence.
2.Represent and reason about intelligent systems, based on the essentials and advancement of non-monotonic reasoning mechanisms.

3.Develop Answer Set Programming as a declarative programming language and use its applications in various complex problem solving domains.
4.Adapt formal languages based on Answer Set Programming to represent complex domains including robotic planning and diagnostic agents.

5.Evaluate and analyse different knowledge reasoning systems, by applying theories and principles of knowledge representation and reasoning.
6.Undertake independent research project that includes defining, formalising and specifying, and implementing system prototypes for real-world applications.

Subject Content

1. Logical Foundations for Knowledge Representation and Reasoning
2. Knowledge Representation and Non-monotonic Reasoning
3. Answer Set Programming: Syntax and Semantics
4. Declarative Problem Solving Using Answer Set Programming
5. Algorithms for Computing Answer Sets
6. Modelling Dynamic Domains
7. Planning and Diagnostic Agents
8. Probabilistic Reasoning

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	2 hours	30	N	Individual
Practical	5 hours per practical	30	N	Individual
Applied Project	1000 words (report + programming) + 15 minutes presentation	40	Y	Individual

COMP 7022 Natural Language Understanding

Credit Points 10

Legacy Code 301313

Coordinator Manas Patra (https://directory.westernsydney.edu.au/search/name/Manas Patra/)

Description Natural Language Understanding involves machine reading comprehension and the technologies using it are becoming increasingly widespread. This subject provides a foundation in using the Natural Language Toolkit, which is a leading platform for building Python programs working with 'human language' data, as well as an introduction to Python for Natural Language Processing. Students will use algorithms and explore accessing text corpora and processing raw text; categorising words and classifying text; understanding information from text and analysing sentence structures; and understanding semantic meanings of sentences. Students also gain real-world hands-on experience with Natural Language Understanding through the practical tasks and assignments.

School Computer, Data & Math Sciences

Discipline Artificial Intelligence

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

There are no assumed knowledge for this subject although an undergraduate degree with some probability and statistics is advantageous.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the Natural Language Toolkit to real world Natural Language Processing tasks.
2. Use text corpora for the engineering and evaluation of Natural Language Processing systems.
3. Determine the role of classification of words and text in Natural Language Processing algorithms.
4. Clarify the function of Natural Language Processing algorithms in understanding information from text and the semantic meanings of sentences.
5. Analyse artificial intelligence techniques employed in Natural Language Processing algorithms.
6. Manage linguistic data.

Subject Content

1.Installing and introducing the Natural Language Toolkit (NLKT):
-Introducing the Python programming language with emphasise for Natural Language Processing (NLP);
-Using Python string datatypes for the processing of words and texts.
2.Accessing text corpora (i.e., ?etext repositories?f) and the processing of raw text:
-Introduces the Gutenberg, Reuters, Inaugural Address and Annotated text corpus as well as Web and Chat text;
-Looking at text corpus structure.
3.Categorizing words and classifying text:
-Tagging corpora;
-Mapping words to properties through Python Dictionaries;
-Transformation based tagging;
-Determining the category of a word;

-Supervised, decision trees, naive bayes and ent

Assessment

COMP 7023 Predictive Analytics

Credit Points 10

Legacy Code 301495

Coordinator Rosalind Wang (https://directory.westernsydney.edu.au/search/name/Rosalind Wang/)

Description The information age has allowed business and science to take advantage of the vast amount of available data for predicting outcomes and estimating trends, to make informed decisions. Machine learning is the process of allowing a computer to learn from data, which at its heart is used in making these important decisions. This subject provides students with the knowledge and practice required to implement and effectively use these predictive models such as Neural Networks and Support Vector Machines, and provides opportunity for students to investigate state-of-the-art. Students will use the Python programming language throughout this subject.

COMP 7024 Programming for Data Science

Credit Points 10

Legacy Code 301493

Coordinator Franco Ubaudi (https://directory.westernsydney.edu.au/search/name/Franco Ubaudi/)

Description The use of computers and computer programming for Data Science is fundamental to the discipline. This introductory subject will briefly cover the use of spreadsheet systems and then will consider programming in the statistical system "R" in detail. Other special purpose languages will also be touched on briefly including SQL (Structured Query Language).

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

1. Use Excel to manage and manipulate data.
2. Extract, transform and load data using R and R-Studio; including reading and writing data files.

3. Create complex R programs to conduct Data Science tasks.
4. Use basic SQL to access databases.
5. Apply simulation techniques to Data Science tasks.
6. Create reports using Markdown and R-Markdown.

Subject Content

1. Introduction to R and R-Studio
2. Data Types, Variables , Expressions, and Data Structures
3. Input and Output
4. Control Structures: Loops, ,Conditional Expressions, and Functions
5. Simulation techniques
6. Object-oriented programming in R
7. Introduction to SQL
8. Using Markdown for reporting

COMP 7025 Social Media Intelligence

Credit Points 10

Legacy Code 301494

Coordinator Weicong Li (https://directory.westernsydney.edu.au/search/name/Weicong Li/)

Description Social Media Intelligence presents the theory and practice of extracting and analysing information from social media networks. The aims are to identify properties of social networks, and to make predictions about future events. Topics included will cover areas such as Graph theory, Game theory and Network dynamics and we will identify how these can be used to model and extract information from Facebook and Twitter.

COMP 7028 Hands-on Quantum Computing

Credit Points 10

Coordinator Tad Bak (https://directory.westernsydney.edu.au/search/name/Tad Bak/)

Description This subject enables students to understand the theory of quantum computing and build the skills needed for quantum programming. It covers essential topics, including basic principles of quantum mechanics, quantum bits (qubits), quantum gates, algorithms, programming with quantum simulators and with real quantum computers. Students will explore the fundamental differences between classical and quantum computation and learn quantum programming using a well-known open source toolkit. Additionally, the subject offers insights into quantum hardware and real-world applications, demonstrating the potential and relevance of quantum computing in various fields, from cryptography to optimisation problems. After completion students will be equipped with the essential knowledge to navigate the exciting realm of quantum computation.

School Computer, Data & Math Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Linear algebra, particularly vector and matrix manipulation. Ability to program in Python language. Familiarity with Jupyter Notebook and LaTeX typesetting is highly recommended.

Learning Outcomes

After successful completion of this subject, students will be able to:
1. Discuss the historical development and motivation behind quantum computing, including an appreciation of computing complexity and the distinctions between classical and quantum computation.
2. Design quantum circuits involving multi-qubit operations.
3. Implement quantum algorithms on simulators and real quantum hardware.
4. Assess existing quantum algorithms and their impact on problem-solving in various fields.
5. Apply basic techniques of quantum error correction to mitigate quantum noise.
6. Evaluate emerging practical applications of quantum computing.

Subject Content

1. History and motivation for quantum computing.
2. Quantum bits (qubits) and single-qubit gates.
3. Quantum circuits and multi-qubit operations.
4. Simple quantum algorithms.
5. Quantum Fourier transformation and its applications.
6. Quantum error correction.
7. Quantum cryptography and communication.
8. Emerging practical applications of quantum computing.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	About one hour each	40	N	Individual
Applied Project	About 100 lines of code, quantum circuit with up to 10 qubits	30	N	Individual
Final Exam	2 hours	30	N	Individual

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects HUMN 0016 - Key Ideas in Arts and Social Science (WSTC Prep)

Restrictions

Students must be enrolled at Western Sydney University, The College. Students must be enrolled in Extended or Standard Diploma programs in Social Science.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a foundational understanding of key theories, concepts, debates and perspectives relevant to first year university social science units.
2. Identify some of the causes and consequences of key debates and perspectives in social science.
3. Demonstrate an understanding of the importance of critical reflection when considering contemporary social problems.
4. Demonstrate an emerging capacity to use critical thinking, research, writing, public speaking and creativity when proposing solutions to contemporary social problems.

Subject Content

Introduction to tertiary study skills and career aspirations.
The importance of personal integrity within university and professional fields.
Differentiating formal learning at university versus life-long learning.
Introducing critical analytical thinking, emotional intelligence, collaborative learning, and creativity in a social science context.
Introducing key concepts in social sciences including:
- social construction
- secularisation
- modernity
- post modernity
- risk society and insecurity
- social and environmental crises

CULT 1001 Asia in the World

Credit Points 10

Legacy Code 101442

Coordinator Karen Entwistle (https://directory.westernsydney.edu.au/search/name/Karen Entwistle/)

Description This subject introduces Asian societies, cultures, religions, and histories. Considering both traditional and contemporary times, it seeks to place Asia's diverse cultures in a global context. It examines issues such as how to define Asia, how Asian states related to each other, and how Western ideas of international relations have transformed these relations. The subject considers how the great religions/philosophies of Asian societies - Buddhism, Hinduism, Islam, Christianity and Confucianism - have influenced Asian states and relations between them. It explores other forces which have shaped the civilisations, polities and communities of Asia and how they have related to each other and the world beyond.

School Humanities & Comm Arts

Discipline Society and Culture, Not Elsewhere Classified.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects LGYA 0912 - Foundations of Asia

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the diversity and complexity of Asia.
2. Critique the social manifestations and international political impact of Islam, Hinduism, Christianity, Buddhism and Confucianism in an Asian context.
3. Explain the balance between continuity and change in Asian traditions and contemporary societies.
4. Conduct research on traditional and modern concepts of international relations, particularly in an Asian context.

Subject Content

- Prehistoric Asia
- The Civilisation of Ancient India, China, Japan, Korea, and SE Asia
- Asian Religions
- Medieval SE Asia, Japan, Korea, China
- Imperialism in Asia
- Japan and The struggle for Asia

Assessment

CULT 1005 Crime, Deviance and Society

Credit Points 10

Legacy Code 102039

Coordinator Shima Shahbazi (https://directory.westernsydney.edu.au/search/name/Shima Shahbazi/)

Description This subject introduces students to the theory and practice of criminology and the sociology of deviance. It considers the ways in which social order is produced, maintained and transgressed from a range of perspectives, including the Chicago school, labelling and deviance theory, Marxism, feminism, and post-colonial theory. These perspectives are explored through a discussion of contemporary issues and controversies, such as terrorism, asylum seeking, the criminalisation of protest, Indigenous incarceration, alcohol and other drug use, and transnational crime.

CULT 1006 Crime, Deviance and Society (WSTC)

Credit Points 10

Legacy Code 700156

Coordinator Paul Rouillon (https://directory.westernsydney.edu.au/search/name/Paul Rouillon/)

Description This subject introduces the major approaches to the study of criminology and the sociology of deviance. It considers the ways in which social order is produced, maintained and transgressed from a range of perspectives, including the Chicago school, labelling and deviance theory, Marxism, feminism and queer theory. These perspectives are explored through a discussion of contemporary issues and controversies, such as crime in Western Sydney, the media and moral panic, the criminalisation of HIV transmission, Indigenous incarceration, and alcohol and drug abuse. The subject also addresses the politics of law and order and the resurgence of neo-liberalism in debates over crime and deviance.

CULT 1007 Introduction to Crime and Criminal Justice

Credit Points 10

Legacy Code 101560

Coordinator Erin Kruger (https://directory.westernsydney.edu.au/search/name/Erin Kruger/)

Description In 2019 this subject replaced by 102709 - Introduction to Criminal Justice.This subject provides an introduction to the study of criminal justice from a critical criminological perspective. How crime is measured and explained, who are identified as criminals or victims, and how to effectively respond to crime is not straightforward. The subject examines the workings of the criminal justice system, and analyses how police, courts and corrections influence the processes of criminalisation and victimisation, and the societal context in which this occurs. The subject looks at other forms of control and prevention beyond those of the criminal justice system.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the concepts central to crime and criminal justice;
2. Summarise the benefits and limitations of theories, debates and policy developments in relation to crime through reference to relevant academic literature and policy sources as appropriate;
3. Identify and describe a range of stakeholders involved in responding to crime, the criminal justice process, these stakeholders f roles and responsibilities and relationships between them;

Subject Content

Defining and measuring crime
Victims and victimology
Criminal justice institutions and practices
Issues and themes in criminal justice
Alternatives to the criminal justice process
1. Defining justice, including links between justice and morality.
2. The purpose of justice, consideration of the role of justice in society.
3. Justice and crime, connecting notions of justice to the politics of social control.
4. The link between justice and law, including the separation of powers between parliament, judiciary and the executive branch of government.
5. Criminal justice institutions and practices, discussing the role of police, courts, and corrections.
6. Measuring justice, crime and victimisation, an introduction to and critique of existing data and methods.
7. The criminalisation process and social inequality.
8. Comparing and contrasting approaches to justice (traditional and alternative approaches e.g. restorative justice).

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz online	10 quizzes (via vUWS, 10 questions each)	30	N	Individual
Workbook	1,500 words	30	N	Individual
Essay	1,500 words	40	N	Individual

Prescribed Texts

- A workbook which contains activities for tutorials as well as compulsory tutorial readings.

CULT 1013 Policing, Justice and Society (WSTC)

Credit Points 10

Legacy Code 700238

Coordinator Paul Rouillon (https://directory.westernsydney.edu.au/search/name/Paul Rouillon/)

Description In this unit, the role and function of police from a social, historical and comparative perspective as well as different policing practices in Australia and other nations, are described, explained and analysed. The structure, roles, and reform of police are addressed, as are other issues such as social diversity and community relations and debates about distinct policing strategies and their social impact. Students will explore the relevance of policing theories and concepts in contemporary society.

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in 7058 Diploma of Social Science (Policing) Extended and 7077 Bachelor of Social Science (Policing) Extended (WSTC First Year Program) must have successfully completed 700236 Introduction to Australian Law Enforcement before enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. After successful completion of this unit, students will be able to:
2. Describe the major trends underpinning past and contemporary policing in a democratic society;
3. Compare and contrast the range of policing roles;
4. Articulate the various policing models and strategies available;
5. Evaluate the key theories and concepts used to inform policing practice for the range of individuals and groups with which they engage.

Subject Content

1. Comparative and historical perspectives on policing
2. The roles and functions of police
3. Policing, inequality and social diversity
4. Gender, race, ethnicity, social class and policing
5. Policing ethics and accountability
6. Community and democratic policing
7. Recent strategies and effectiveness (problem oriented / intelligence/ evidence and partnership policing)
8. Working with victims and communities
9. Working with suspects and offenders
10. Reform and professionalisation
11. Policing, risk and terrorism

CULT 1017 Understanding Society

Credit Points 10

Legacy Code 101551

Coordinator Rachel Sharples (https://directory.westernsydney.edu.au/search/name/Rachel Sharples/)

Description Understanding Society introduces first year students to key sociological concepts, methods and theories used for the examination of individuals, social interactions, institutions and structures. Students explore how individual experiences are connected to wider social patterns. Considering questions of power, students will be introduced to various debates concerning structure and agency, and will examine social inequality. With a focus on contemporary social life, the subject provides opportunity for students to consider current social issues and processes of social change. At the conclusion of their studies in this subject students will have been presented with opportunities to develop skills in critical reading and sociological analysis.

CULT 1020 Working with Communities

Credit Points 10

Legacy Code 101900

Coordinator Nidhi Wali (https://directory.westernsydney.edu.au/search/name/Nidhi Wali/)

Description In 2021, this subject replaced by 102815 - Introduction to Indigenous Australia: Peoples, Places and Philosophies. A diverse range of professionals use social science research, theories and principles in their work with communities. In this subject students will explore common scholarly ideas and practices that inform work with communities and how these are applied in a range of professional settings. This subject introduces students to the methods and principles of community participation, capacity-building, community needs assessment, and resilience. Students will be guided to identify and analyse global, local, government and organisational aspects and interests in the development of their own and wider communities. Students will plan a professional approach to working with an example community by building and reporting on a chosen case study.

Incompatible Subjects WELF 1008 - Skills Development in the Human Services

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe key concepts and perspectives in community scholarship;
2. Explain how key concepts and perspectives are connected to their individual experience of community, and to a range of professions that work with communities;
3. Collect and analyse relevant information about an example community from scholarly and professional perspectives;
4. Propose an approach to working with an example community from a professional perspective;
5. Explain the importance of community empowerment, capacity-building, community diversity and social justice, to society and the individual;
6. Utilise online technologies to organise, share and communicate Indigenous-related topics and issues.

Subject Content

1. Threshold concepts and the main debates in community scholarship
2. ‘Communities’ as dynamic, social and cultural groups that are both political and contested entities and exist as multi-scalar (local, regional, international, and across time) collectives of interest, as virtual as well as place based.
3. Why community matters: power, social action, a sense of the past and future directions, contestation and decision-making
4. Assessing social needs and enacting change: How different organisations, stakeholders and groups within society can work together to achieve shared goals and visions

5. How different types of organisations and institutions – global to local – public and private – formal and informal- serve shared needs
6. Social justice and building community resilience
7. Ethical approaches to working with communities: Participatory methods, the issues of trust, cooperation, communication and collaboration in everyday life and in professional life
8. Communications – written and oral forms of communication in everyday and in professional practice to different intended audiences/ readerships, via a journal (assignment 1), a professional report (A2) and a website (A3).
9. Scholarly skills: ethical considerations and integrity, identifying issues, goal setting, time management, introductory research skills, analysing secondary data, writing professional reports and preparing a community engagement website.

CULT 1021 Working with Communities (WSTC)

Credit Points 10

Legacy Code 700139

Coordinator Mona Shrestha (https://directory.westernsydney.edu.au/search/name/Mona Shrestha/)

Description This introductory subject provides foundational skills and knowledge required for professional practice in a range of social science related careers in which working with and as part of communities is essential. With an emphasis on practical understanding through both team-work and fieldwork it introduces students to a range of skills in interpersonal and written communication, and to community and organisational processes and structures. It enables students to identify issues of change; conflicting and collaborative interests; participation and collaboration. It provides practical experience in working with others to achieve shared objectives with mechanisms for goal setting, issues identification, information and resource sharing that operate in everyday life and all professional contexts

CULT 1022 Working with Cultural Differences

Credit Points 10

Legacy Code 101664

Coordinator Teddy Nagaddya (https://directory.westernsydney.edu.au/search/name/Teddy Nagaddya/)

Description This subject is designed to develop student awareness of culture, identity and difference in the Australian context. Students are introduced to and expected to develop a working knowledge of the concepts of culture, identity, power relations, whiteness and difference. From these theoretical bases, issues of identity and difference and power relations are explored in the Australian context with particular focus on Indigenous/non-Indigenous relations and multiculturalism. In addition, the effects of socially constructed differences of race, gender, class, and sexuality are explored.

CULT 1024 Introduction to Criminal Justice

Credit Points 10

Legacy Code 102709

Coordinator Ryan Thorneycroft (https://directory.westernsydney.edu.au/search/name/Ryan Thorneycroft/)

Description This subject introduces students to criminal justice issues and practices through an examination of the Australian criminal justice system and its processes. This is achieved through a court visit (either virtual or physical) as a method of unobtrusive participant observation. Students will examine how the criminal justice system works (and sometimes fails to work), and how police, courts, and corrections influence the processes of criminalisation, victimisation, and (in)justice.

School Social Sciences

Discipline Criminology

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects CULT 1007 - Introduction to Crime and Criminal Justice CULT 1003 - Crime and Criminal Justice CULT 1008 - Introduction to Crime and Criminal Justice (WSTC) CULT 1025 - Introduction to Criminal Justice (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the concepts central to understandings of justice generally and criminal justice specifically.
2. Explain how the Australian criminal justice system works with reference to each branch of the system; police, courts, and corrections.
3. Discuss Australian criminal justice systems and processes and alternative forms of delivering justice.
4. Articulate an appropriate understanding of theories and concepts used to inform policing, courts and corrections when working with communities, groups and individuals with whom they engage.

Subject Content

A holistic understanding of crime and its relation to criminal justice process.
Defining justice.
The purpose of justice, consideration of the role of justice in society.
Justice and crime, connecting notions of justice to the politics of social control.
The link between justice and law, including the separation of powers between parliament, judiciary and the executive branch of government.
Criminal justice institutions and practices: reporting on the role of police, courts, and corrections.
The criminalisation process and social inequality ? gender/sexuality, indigeneity/race and class.
The purpose of punishment and sentencing.
Comparing and contrasting approaches to justice (traditional and alternative approaches e.g. restorative justice).
Defining policing, including the historical context of policing in Australia as well as features of modern policing.
The impact of police discretion, culture, misconduct and moral vulnerability upon police accountability as well as emerging trends in policing.

CULT 1025 Introduction to Criminal Justice (WSTC)

Credit Points 10

Legacy Code 700300

Coordinator Paul Rouillon (https://directory.westernsydney.edu.au/search/name/Paul Rouillon/)

Description This subject introduces students to criminology, policing, and criminal justice issues and practices through an examination of the Australian criminal justice process. Students will examine how the criminal justice system works (and sometimes fails to work), and how police, courts, and corrections influence the processes of criminalisation, victimisation, and (in)justice.

Level Undergraduate Level 1 subject

Equivalent Subjects CULT 1007 - Introduction to Crime and Criminal Justice CULT 1024 - Introduction to Criminal Justice CULT 1003 - Crime and Criminal Justice CULT 1008 - Introduction to Crime and Criminal Justice (WSTC)

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended College programs must have passed 40 credit points of the preparatory subjects in these programs in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define the concepts central to understandings of justice generally and criminal justice specifically.
2. Explain how the Australian criminal justice system works with reference to each branch of the system; police, courts, and corrections.
3. Discuss Australian criminal justice systems and processes and alternative forms of delivering justice.
4. Articulate an appropriate understanding of theories and concepts used to inform policing courts and corrections when working with communities, groups and individuals with whom they engage.
5. Demonstrate skills and knowledge about the theory and practice of what constitutes a successful, independent and reflective learner in tertiary education.
6. Communicate ideas and information in a style appropriate to an academic setting.

Subject Content

A holistic understanding of crime and its relation to criminal justice process.
Defining justice.
The purpose of justice, consideration of the role of justice in society.
Justice and crime, connecting notions of justice to the politics of social control.
The link between justice and law, including the separation of powers between parliament, judiciary and the executive branch of government.
Criminal justice institutions and practices, discussing the role of police, courts, and corrections.
The criminalisation process and social inequality ? gender/sexuality, indigeneity/race and class.
The purpose of punishment and sentencing.
Comparing and contrasting approaches to justice (traditional and alternative approaches e.g. restorative justice).
Defining policing, including the historical context of policing in Australia as well as features of modern policing.
The impact of police discretion, culture, misconduct and moral vulnerability upon police accountability as well as emerging trends in policing.
Tertiary Study Skills ? Defining tertiary learning strategies including the communication skills and educational technologies required to succeed in a transitional education environment.
A holistic understanding of crime and its relation to criminal justice process.

CULT 1026 Understanding Society (UG Cert)

Credit Points 10

Legacy Code 500042

Coordinator Mia Hatzistergos (https://directory.westernsydney.edu.au/search/name/Mia Hatzistergos/)

Description Understanding Society introduces students to key sociological concepts, methods and theories used for the examination of individuals, social interactions, institutions and structures. Students explore how individual experiences are connected to wider social patterns. Considering questions of power, students will be introduced to various debates concerning structure and agency and will examine social inequality. With a focus on contemporary social life, the subject provides opportunity for students to consider current social issues and processes of social change. At the conclusion of their studies in this subject students will have been presented with opportunities to develop skills in critical reading and sociological analysis.

CULT 1027 Working with Communities (UG Cert)

Credit Points 10

Legacy Code 500043

Coordinator Jack Isherwood (https://directory.westernsydney.edu.au/search/name/Jack Isherwood/)

Description A diverse range of professionals use social science research, theories and principles in their work with communities. In this subject students will explore common scholarly ideas and practices that inform work with communities and how these are applied in a range of professional settings. This subject introduces students to the methods and principles of community participation, capacity-building, community needs assessment, and resilience. Students will be guided to identify and analyse global, local, government and organisational aspects and interests in the development of their own and wider communities. Students will plan a professional approach to working with an example community by building and reporting on a chosen case study.

CULT 1028 Introduction to Criminology and Justice (WSTC)

Credit Points 10

Coordinator Paul Rouillon (https://directory.westernsydney.edu.au/search/name/Paul Rouillon/)

Description This subject introduces students to the development of criminology as a framework for analysis and offers a critical introductory insight into various applied institutional and legislative contexts through which criminal justice occurs. Students will consider the ways in which deviant and/or criminal behaviour is defined and how the legislative and policy responses to crime operate at the level of Police, Courts and Corrections as well as the communities in which they operate. By the end of this subject, students will consider a crime or deviance issue and reflect on current practice. Students will gain skills in assessing criminal justice issues holistically through a critical lens.

School Western Sydney The College

Discipline Criminology

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Diploma program at WSTC.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Identify relevant criminological and sociological theories of deviance.
2. Identify key concepts in criminal justice.
3. Define the ways in which deviance and crime are socially and culturally constructed.
4. Explain some advantages and disadvantages of the contemporary Australian criminal justice system in relation to community, police, courts, and corrections.
5. Identify an example of a crime or deviance problem and reflect on benefits and drawbacks to a current response.

Subject Content

1. Constructions and theories of deviance and crime at biological, psychological, social and environmental levels.
2. Relevant concepts and principles of criminal justice – such as rule of law, criminal responsibility, democratic policing and principles of sentencing.
3. Pillars of the modern criminal justice system: Police, Courts & Corrections.
4. Critical review of responses to deviance, crime and injustice.
5. Theory to practice: opportunities to improve.

CULT 1030 Pancasila

Credit Points 5

Description The Pancasila subject equips students with essential guidelines for studying and analysing state and national issues through the lens of Pancasila values, the foundational philosophy of the Republic of Indonesia. During the introductory session, students will explore the lives of key national figures from the independence movement, seeking examples that embody Pancasila values. Subsequently, students will examine some real-world applications of Pancasila values by looking into contemporary state issues. By engaging in discussions and analyses focusing on national values and Pancasila, students are encouraged to foster a positive attitude towards Pancasila as the cornerstone of the state and the guiding ideology of the Indonesian nation.

Level Undergraduate Level 1 subject

Restrictions

This subject is only available to students enrolled at Surabaya campus

Learning Outcomes

After successful completion of this subject, students will be able to:
1. Examine the relationships, similarities or differences in ideas among the multifaceted notions of Indonesian nationality and Pancasila values as articulated by historical figures or key actors.

2. Interpret knowledge from a carefully chosen historical figure or influential actor to gain deeper insights of the diverse facets of Indonesian nationality and the principles of Pancasila.

3. Use different ways to organise, compare, study, or test examples that show how Pancasila can solve problems in Indonesian society.

4. Offer assessment, opinion, suggestions for improvements, praise or awards grounded in Pancasila values to reflect on issues faced by students.

5. Apply Pancasila values within the broader contexts of society, nation, and state.

Subject Content

1. Introduction
2. Indonesian Consensus – BPUPK Assembly- Soekarno's Speech
3. Indo-Peranakan/Cross Breed Contribution for Nation Indonesia
4. Religion Contribution for Nation Indonesia
5. Youth and Youth Pledge 1928 and It's Contribution for Nation Indonesia
6. Women Movement Contribution for Nation Indonesia
7. Pancasila Philosophy

CULT 1031 Civic Education

Credit Points 5

Description This subject serves as an introductory exploration into the fundamental aspects of Civics. Through case studies and presentations, problem-solving tasks, and reflective exercises, students

delve into key concepts such as national identity, national integration, constitution, and the reciprocal obligations and rights between the state and its citizens. Students will address crucial aspects of governance, including law enforcement, human rights, democracy, and the dissemination of knowledge across societal domains. Furthermore, they will examine critical issues such as national defense, gender dynamics, and anti-corruption measures, fostering an understanding of the multifaceted responsibilities inherent in citizenship. By engaging with these topics, students will be able to navigate through the complex civic landscapes and contribute meaningfully to the benefit of society.

CULT 2011 Prisons, Punishment and Criminal Justice

Credit Points 10

Legacy Code 102036

Coordinator Selda Dagistanli (https://directory.westernsydney.edu.au/search/name/Selda Dagistanli/)

Description The demise of corporal punishment and the regular use of imprisonment are defining features of control in modern states. This subject provides an historical and sociological examination of the models, practices and justifications for punishment and incarceration. It begins with an overview of early liberal notions of the social contract, the modern movement away from corporal punishment towards incarceration, and criminology's emphasis on treatment, reform and rehabilitation. Following from this, the subject explores the development of probation and parole systems, decarceration, community corrections, mass imprisonment, and the contemporary control of risk and 'dangerous' populations. These themes are considered through the role of intersecting structural factors such as age, gender, sexuality, social class, racial/ethnic identity and disability, and the impact of imprisonment and corrections on different individuals and groups.

School Social Sciences

Discipline Criminology

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects CULT 2010 - Prisons and Punishment

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate in written form the relationship between punishment and society, the history of the prison and its relationship to modernism;
2. Critically analyse how social practices of punishment affect certain sectors of the population, including highly marginalised groups;

3. Describe the impact of contemporary issues in public policy and penality, including community-based measures, private prisons, the dispersal of punishment, restorative and therapeutic justice and vengeance;
4. Critically assess the contributions of philosophical approaches to contemporary debates about punishment goals and practices.

Subject Content

Punishment and criminal justice
Philosophical justifications for punishment
The rise of the prison
Juvenile detention and punishment of youth
Class, race, disadvantage and imprisonment
Gender and punishment
Non-custodial penalties and regulatory justice
Penal reform, activism and prison politics
Prison policies and correctional programmes
Decarceration and recarceration
Privatisation of prisons and corrections
Risk, fear and ?edangerousness?f

CULT 2016 Evidence and Investigation

Credit Points 10

Legacy Code 102691

Coordinator Adrian Leiva (https://directory.westernsydney.edu.au/search/name/Adrian Leiva/)

Description This subject provides an overview of police investigations with a specific focus on understanding the interaction of police powers and the investigative process. The subject will build on knowledge of the common criminal offences covered in the subject 'Criminal Law for Policing' and outline the investigative process through scenario-based case studies. The subject will refer to both NSW and Commonwealth legislation, and examine the role of the courts in applying the rules of evidence to determine its reliability to be admitted as evidence at a trial. The subject will examine the impact of technological change and forensic science on the traditional investigative process, and provide students an introduction to research into the organisation, processes and governance of Investigative Units.

Level Undergraduate Level 2 subject

Equivalent Subjects JUST 2005 - Criminal Investigations

Incompatible Subjects CULT 2006 - Evidence Investigations and Police Intelligence

Assumed Knowledge

An understanding of the basic criminal law offences in the Crimes and Summary Offences Act and Criminal Code Act (Cwlth), to allow non-Policing students to enrol in this subject as an elective without otherwise having to seek a rule waiver by the specification of a prerequisite subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and utilise a range of investigative practices.
2. Apply relevant legislation to the investigative process.
3. Identify the role and limits of police powers and their interaction with the investigative process.
4. Compare and contrast reliable and unreliable evidence and the role of the courts to evidence gathered by investigators.
5. Describe the organisation, processes and governance of different investigative models.

Subject Content

The process of criminal investigation and the scientific method, including the impact of modern technological advances on the investigative process across a range of jurisdictions.
Police powers of search and the rules of evidence as enacted by the Law Enforcement (Powers & Responsibilities) [LEPRA] Act.
The different sources and types of evidence applied by police in accordance with the Evidence Act NSW.
Models of investigation.
International co-operation in investigation of transnational crime.

Assessment

CULT 2017 Youth Justice and Practice

Credit Points 10

Legacy Code 102699

Coordinator Handun Athukorala (https://directory.westernsydney.edu.au/search/name/Handun Athukorala/)

Description This subject develops an understanding of the complexity of youth justice by addressing the historical, political, cultural and socio-economic factors associated with youth crime, constructions of youth, and, governmental strategies for regulating and preventing youth crime. Insights from legal practitioners, police, youth workers, adolescent psychologists, and juvenile justice case managers form part of the unit's inter-disciplinary framework. This is used to develop a critical appreciation of the impacts of the regulation of particular youth groups that are over-represented in the juvenile justice system, including Aboriginal and Torres Strait Islander youth, youth in out-of-home care, and other racial/ethnic minority youth. Lastly, the subject critically assesses a range of official interventions for working with young people within the youth justice system.

Level Undergraduate Level 2 subject

Equivalent Subjects CULT 2009 - Juvenile Crime and Justice

Restrictions

Successful completion of 40 credit points at Level 1.

Learning Outcomes
On successful completion of this subject, students should be able to:

1. Demonstrate knowledge of the multi-disciplinary literature relating to youth justice.
2. Make effective decisions in response to individual cases by applying youth justice principles.
3. Assess the social and political forces that have shaped interventions for working with young people.
4. Communicate effectively using a range of methods commonly used in criminal justice settings.

Subject Content
Origins of a youth justice system
The nature and extent of youth crime
Correlates of offending and victimisation
Youth governance models
Responding to offending - criminal and community justice
Youth as 'suspect'

CULT 2018 Crime Prevention and Drugs

Credit Points 10

Legacy Code 102708

Coordinator Sharon Kwok (https://directory.westernsydney.edu.au/search/name/Sharon Kwok/)

Description This subject will examine the theory, politics and practice of crime prevention while exploring how this relates to alcohol, illicit drug use and criminalisation. In particular, this subject will explore key elements of alcohol and other drugs (AOD) research, service delivery and policy approaches that are framed, both practically and symbolically as crime prevention measures. It will address current approaches to crime prevention, evaluate their effectiveness and examine emerging strategies in the field. Some key case studies in the field of critical drugs studies will be used throughout this subject to demonstrate some principles of crime prevention introduced in the first part of the subject.

Level Undergraduate Level 2 subject

Incompatible Subjects CULT 3008 - Crime Prevention and Community

Restrictions

Successful completion of 40 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain key theoretical frameworks underpinning approaches to crime prevention.
2. Analyse the concept of criminalization and its relationship to drug use and crime prevention.
3. Demonstrate knowledge of the link between critical drugs studies and crime prevention principles.
4. Communicate crime prevention strategies to community and industry stakeholders.

Subject Content

Origins and theoretical foundations of crime prevention.
Types of crime prevention (i.e. social, physical, neighbourhood).
Planning and crime prevention partnerships.
Crime and drugs nexus.
Drugs, crime and harm minimisation as crime prevention.
Criminalisation, decriminalisation and legalisation of drugs.

CULT 2019 First Peoples and Criminal Justice

Credit Points 10

Legacy Code 102712

Coordinator Robyn Newitt (https://directory.westernsydney.edu.au/search/name/Robyn Newitt/)

Description In 2022 this subject replaced by HUMN 2070 First Peoples and Criminal Justice. How does colonialism underscore the foundational narratives, knowledges and operation of the legal and criminal justice institutions of colonised nations? Focusing primarily on the Australian context of colonial invasion and settlement, this subject explores the plight of Indigenous peoples and their severe over-representation in the Australian criminal justice system. Studying the impact of colonisation and exploring Indigenous narratives, students will critically examine issues faced by Aboriginal and/or Torres Strait Islander people and their experience of criminal justice in Australia. Overall, the subject will equip students with an understanding of the relationship between dominant colonial narratives of race and institutional racism, while considering how Indigenous knowledge can inform better social and criminal justice outcomes for Indigenous populations. Comparative examples of criminal (in)justice for Indigenous populations in other colonised nations will also be considered.

Professional Task: Report to be submitted to the relevant Criminal Justice organisation (eg coroner, police etc) on the same case study chosen for Assessment 1	900 words	30	N	Individual
Critical Review: Analysis of a criminal justice narrative from a decolonial/ postcolonial perspective	1,200 words	40	N	Individual

CULT 3001 Applied Social Research

Credit Points 10

Legacy Code 101552

Coordinator Julia Kantek (https://directory.westernsydney.edu.au/search/name/Julia Kantek/)

Description In this subject students continue their education in social research, building on 400337 Social Research Methods. Students gain experience in using tools and techniques for the collection, analysis and interpretation of quantitative and qualitative data using real world examples. They gain experience in using various primary and secondary sources of data and designing the collection of data through surveys and interviews. Students will also examine the application of research to, for example, program evaluation and policy development, thus preparing students for professional contexts as generators and critical consumers of social research.

CULT 3002 Children's Culture

Credit Points 10

Legacy Code 101265

Coordinator Nicola Burke (https://directory.westernsydney.edu.au/search/name/Nicola Burke/)

Description This subject explores the concept of children's culture and the diversity of cultures to which children belong. The subject focuses on current debates about childhood and children's culture, including the rise of children's consumer culture. Students will gain insights into children's lives and culture by critically engaging with a variety of objects and institutions that are part of children's lives, for example, toys, videogames, children's television programs, films and books. The subject will also examine the role of adults in children's culture, including in marketing and advertising to children.

School Humanities & Comm Arts

Discipline Other Society And Culture

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Successful completion of 60 credit points of study in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Engage in key debates about the relationship between children, childhood and children's culture.
2. Situate children's culture in the context of diverse social, cultural, economic and political changes.
3. Identify the varieties of cultures to which children belong.
4. Critique the rise of children's culture and its impact on children's lives.
5. Critically analyse a variety of cultural objects and institutions that are part of children's lives.
6. Identify children as social and cultural agents.

Subject Content

-What is children's culture? What is childhood? Relationship between children's culture and the discourses and societal assumptions about the nature of childhood.
-Historical perspectives on children's culture, for example, the development of books and toys made especially for children.
-Consideration of the diverse social, economic and political contexts that shape and influence children's culture. How can we discuss children's culture when experiences of childhood can vary so widely? Issues such as child labour, children's rights, will
-Children as social and cultural agents - children's play and games; relationship with peers, adults and their environment; children as cultural producers.
-Children's consumer culture key issues and debates - case studies, for example, Barbie, videogames, internet, children's film and television programs, marketing to children - issues and debates, including regulation, violence, adult involvement in childr

CULT 3004 Consumer Culture

Credit Points 10

Legacy Code 102413

Coordinator Di Dickenson (https://directory.westernsydney.edu.au/search/name/Di Dickenson/)

Description Consumption and consumerism are words that frequently have negative connotations in popular usage, yet globally, rates of consumption and consumerism continue to grow. This subject presents cultural research that investigates the range of consequences - positive, negative or otherwise - that the rise of consumer culture has brought to contemporary global societies. Students analyse a range of cultural products and practices, and consider topics including the ethics of consumption, the role of consumption in forming identities, how consumer culture relates to class, gender, race and ethnicity, the rise of brands, and consumer culture in the digital age.

School Humanities & Comm Arts

Discipline Family and Consumer Studies

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects CULT 3005 - Contemporary Debates in Social Sciences

Restrictions

Students must have successfully completed 80 credit points. Students enrolled in 1734 Bachelor of Policing must have successfully completed the following subjects before enrolling in this subject. 102314 Policing Practices, 101557 The Individual in Society, 102170 People, Place and Social Difference, 102250 Ethical Leadership and 400337 Social Research Methods. Students enrolled in 1665 Bachelor of Community Welfare must have successfully completed the following subjects before enrolling in this subject. 101551 Understanding Society or 101557 The Individual in Society and 101555 Ethics in the Social Sciences, 102170 People, Place and Social Difference, 400337 Social Research Methods. Students enrolled in all other programs must have successfully completed the following subjects before enrolling in this subject. 101551 Understanding Society or 101557 The Individual in Society, And; 101555 Ethics in the Social Sciences, 101900 Working with Communities, 102170 People, Place and Social Difference, 400337 Social Research Methods.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Integrate advanced theoretical and empirical knowledge in dealing with discipline specific real-world social issues;
2. Critically evaluate, interpret and apply knowledge derived from social science relevant published research to solve complex and novel social problems;
3. Exercise critical thinking, reflective, technical and basic professional skills to make informed decisions in the professional and applied context;
4. Demonstrate practical employability skills that can be useful for professional career development;
5. Demonstrate understanding of debate as a process of inquiry and advocacy and ability to apply it in applied context.

Subject Content

There will be two main themes covered in this subject:[1] Introduction to professional practice and [2] Application of professional practice to real-life social issues.
Theme one: Introduction to professional practice:
Applied Social Sciences and professional practice
Mapping the professional domain: Using Social Science in the profession
From degree to Profession: Developing employability skills
Introducing debate: Applied debate in professional context
Hierarchies of knowledge
Power and decision making
Theme two: Application of professional practice to Real-life Social Issues (such as social issues related to diversity, work and employment, place, sustainability, violence & alternatives to violence, health and cyberworld and cyber-experiences).
Two main themes are covered in this subject:
[1] Introduction to professional practice, and
[2] Application of professional practice to real-life social issues.
-Applied Social Sciences and professional practice
-Mapping the professional domain: Using Social Science in the profession
-From degree to Profession: Developing employability skills
-Introducing debate: Applied debate in professional context
-Hierarchies of knowledge
-Power and decision making
Theme two: Application of professional practice to Real-life Social Issues:
-Social issues related to diversity
-Work and employment
-Place
-Sustainability
-Violence & alternatives to violence
- Health
- Cyberworld and cyber-experiences
Students may source their own internship or work placement as a means to integrate social science theory as it applies to professional practice.

CULT 3008 Crime Prevention and Community

Credit Points 10

Legacy Code 102038

Coordinator Sharon Kwok (https://directory.westernsydney.edu.au/search/name/Sharon Kwok/)

Description In Spring 2020 this subject replaced by 102708 - Crime Prevention and Drugs. This subject will examine the theory, politics and practice of crime prevention. It will address current approaches to crime prevention, evaluate their effectiveness and examine emerging strategies in the field. The subject will consider the diversity of crimes and the ways in which some are constructed as preventable and others are not, while discussing the challenges posed by unreported crime, fear of crime and the relation between patterns of victimisation and social disadvantage. The subject will draw on empirical literature linking individual, social and contextual factors to the production and prevention of deviant behaviours and explore the potential of crime prevention strategies for alleviating the social ills associated with crime and deviance.

School Social Sciences

Discipline Criminology

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects CULT 2014 - Victimisation and Crime Prevention

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and explain key theoretical frameworks underpinning approaches to crime prevention
2. Critically evaluate traditional crime prevention policies and practices
3. Examine emerging innovations in crime prevention
4. Develop crime prevention solutions
5. Communicate crime prevention solutions to community and industry stakeholders

Subject Content

Fear, insecurity, risk and governance - examining the construction of targets for ?econtrol?f
Defining crime prevention - the origins and theoretical foundations of crime prevention

CULT 3010 Culture and Crime

Credit Points 10

Legacy Code 101562

Coordinator Ken Yates (https://directory.westernsydney.edu.au/search/name/Ken Yates/)

Description In 2020 this subject replaced by 102710 - Crime, Media, Culture. Contemporary societies are replete with images of crime, including in fiction, the media, film and television. In this subject we explore this phenomenon through the lens of cultural criminology and its interest in the exciting and adrenaline-inducing aspects of crime. We explore the link between culture and crime by looking at both textual/visual and ethnographic research. This means studying the way crime is experienced as 'thrilling' not only by those who consume it via images but also by those who actually engage in violent and transgressive conduct. This subject examines the relationship between cultural images of crime, the lived experience of criminal activity and its social and cultural impact.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects CULT 3024 - Crime Media Culture

Restrictions Successful completion of 80 credit points

Assumed Knowledge

A basic understanding of foundational criminological theory.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of the theoretical accounts and topics of research that are part of Cultural Criminology.
2. Make appropriate links between theoretical accounts and independent research.
3. Demonstrate the capacity to disseminate theoretical and empirical evidence of the links between culture and crime to a professional audience.
4. Critically assess cultural depiction of crime, criminals and the criminal justice system
5. Evaluate the value of textual analysis and ethnographic research for the development of criminal justice policy.

Subject Content

1. An Introduction to Cultural Criminology: Introduces Cultural Criminology as a sub-discipline of Criminology.
2. Rebellion: Explores symbolic resistance and social justice.
3. The Spectacle: Explore how spectacular images are used to dramatise crime and criminal justice issues in ways that remove or simplify context.
4. Hyper-reality: Explores the blurred distinction between the represented and the real.
5. Method: Outlines the way Cultural Criminologists do research through both textual and ethnographic analysis.
6. Technology: Discusses how technology alters the way we receive and interact with information about crime.
7. News: Discusses the way the relationship between commercial interests and criminal activity inform and impact news about crime.
8. Film: Discusses how popular culture representations of crime in film impact social expectations about crime and criminal justice issues.
9. Pleasure: Discusses the role of pleasure and enjoyment in the consumption and commission of crime.
10. The Night-Time Economy: Discusses the way cultural fantasies are played out through illicit practices in night-time entertainment districts.
11. Violence: Discusses the relationship between the consumption and commission of violence and aggression.
12. Militarisation: Discusses the way military imagery and ideology is increasingly incorporated into representations of and practices associated with crime control.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

CULT 3011 Ethical Leadership

Credit Points 10

Legacy Code 102250

Coordinator Robert Salama (https://directory.westernsydney.edu.au/search/name/Robert Salama/)

Description This subject focuses on major ethical theories, challenges, and concepts in a cross disciplinary environment. Students' knowledge and understanding of ethics will be further developed through interdisciplinary lenses on critical ethical thinking and decision-making. Students will be required to analyse ethical frameworks and systemic failure to discuss and reflect on various cross disciplinary challenges in diverse settings. By applying ethical concepts to personal journeys as citizen scholars and future professionals, students will develop their own ethical framework and gain skills required for future success as emergent leaders.

School Social Sciences

Discipline Society and Culture, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Students must have successfully completed 40 credit points of study in their course with a minimum GPA of 5.0 to enrol in this unit. Students who are enrolled in the Bachelor of Creative Leadership (BCL) must

enrol in the unit under the BCL. Enrolment in the unit for students enrolled in the BCL is at the discretion of the Academy or the Director of Academic Program.

Learning Outcomes

1. Apply major theories and concepts of ethical leadership to ethical decision making and leadership approaches from various disciplinary perspectives.
2. Evaluate the contributions of various disciplines to contemporary discourse on ethical leadership and decision making.
3. Critically examine the key challenges and dilemmas that impact ethical decision making for organisations and leaders.
4. Synthesise ways of thinking about ethical decision making and leadership in creating an ethical framework inherent to personal and professional goals.

Subject Content

1. Ethics from a cross disciplinary perspective.
2. Ethical frameworks: values, morals, and ethics.
3. Major philosophical, theological, psychological, and sociological perspectives.
4. Ethical leadership and decision making: Developing a framework and taking responsibility.
5. Natural Law and Moral Law: Foundations of public freedoms.
6. Social justice and the common good: Ethics of justice and ethics of care.

CULT 3013 Gender, Crime and Violence

Credit Points 10

Legacy Code 101561

Coordinator Ashlee Gore (https://directory.westernsydney.edu.au/search/name/Ashlee Gore/)

Description In recent decades, models and understanding of gender have become a major way of explaining crime and victimisation. Most obviously, feminist researchers have pioneered studies of the neglected victimisation of women from male violence and the impact of gendered discourses on the criminal justice system. This subject will critically engage with this material and also focus on contemporary accounts of the links between criminal offending and different violent and non-violent masculinities. Lastly, the shifting regulation of different sexualities and their criminalisation will be analysed.

Pre-requisite(s) CULT 1024

Restrictions

Successful completion of 80 credit points including the pre-requisite subject listed above.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of explaining the relationship between violence, crime and gender.
2. Apply key feminist and critical masculinities theories to contemporary issues pertaining to crime and victimisation.
3. Understand and analyse the gendered aspects of the law and criminal justice system.
4. Develop policy and practice-orientated responses to gendered crimes and victimisation.

Subject Content

1. The Continuum of Gendered and Sexual Violence: Key Trends and Issues
2. Theoretical Accounts: Feminist Theory, Masculinities, and Intersectionality
3. Cultures of Excuse: Hate, Honour, and Rage
4. Gender, War, and Militarisation
5. Colonization, Globalization, and the Abuse of Indigenous Women - Now and Then
6. Law, Justice, and Prevention

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 6067 Heritage Interpretation LGYA 1270 - Heritage Interpretation

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe heritage interpretation theory and its relationship to communications, museology, media and informal learning
2. Apply knowledge of heritage interpretation at a variety of heritage sites, and critically assess practice in terms of heritage interpretation theory
3. Produce a heritage interpretation plan, drawing on relevant theory and practice
4. Synthesise and critically evaluate issues in contemporary heritage interpretation, namely, cross-cultural interpretation, digital media, multi-cultural contexts, postcolonial contexts and emerging perspectives in the field, particularly embodiment and aesthetics

Subject Content

Introduction: defining the terrain of heritage interpretation
Early models of interpretation: Tilden, Uzzell & Vergo
Interpretation Strategies: Interpretation in practice at various Sydney sites
Models of material culture & the implications for heritage interpretation

The planning, the design & the evaluation of heritage interpretation
Interpretation and communication
Targeted interpretation ? understanding the visitor
Interpretation, multicultural communities, postcolonial contexts and cross-cultural translation
Heritage interpretation charters of principles (international, national and state)
Future directions: embodiment, aesthetics and digital media

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Undergraduate Level 3 subject

Incompatible Subjects LGYA 6066 Cultural Heritage and Tourism LGYA 1269 Cultural Heritage and Tourism

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the nature and issues of heritage resources in relation to tourism planning and management practices in Australia.
2. Analyse the complexities of heritage tourism including its nature, the market, visitor characteristics & motivations, the planning dimensions, attraction types & the issues surrounding these (especially politics in government policies, guidelines & regulations).
3. Examine the principles and issues of heritage management with particular reference to sustainable tourism planning and visitor management.
4. Apply these various understandings and principles to case-studies & in particular field work at The Rocks, Sydney.

Subject Content

- Key concepts: What is heritage ? definitions, nature, uses ? plus key concepts (identity, power, discourse, authenticity, visuality)
- Key management processes: Cultural Heritage Management ? principles, planning, stakeholders, community consultation, visitor issues, dealing with change (national and international context)
- Key tourism components: Heritage/cultural tourism - its nature, the market, visitor characteristics & motivations, the planning dimensions, attraction types & the issues surrounding these (especially politics in government policies, guidelines & regulations).
- Key Issues: The politics of heritage tourism, the political economy of heritage tourism, Heritage tourism in a global context: (case study based explorations ? Diaspora, pilgrimage, the exotic ?eother?f, than tourism) Application: the application of contemporary heritage tourism theory & practice in ?ereal world?f case-studies within Sydney (The Rocks).

CULT 3016 Indigenous Cultures: A Global Perspective

Credit Points 10

Legacy Code 101905

Coordinator Donna James (https://directory.westernsydney.edu.au/search/name/Donna James/)

Description In 2023, this subject is replaced by HUMN 3118 - Indigenous Cultures: A Global Perspective. Drawing on global case studies, this subject aims to introduce students to some of the pressing socio-cultural issues facing indigenous peoples around the world. The subject examines the complex relationships between globalisation, colonialism and post-colonialism and contemporary indigenous cultures and identities. It draws attention to the way in which issues of representation, cultural autonomy, cultural commodification, development and human rights play out with respect to indigenous peoples' lives. More specifically, the subject interrogates the power relations and politics central to many of these issues and examines the nature of contemporary indigenous and non-indigenous interactions, particularly in the contexts of tourism and heritage, the cultural industries, the environment, development and urbanisation.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 5759 - Indigenous Tourism LGYA 0631 - Indigenous Cultures and Tourism A Global Perspective

Restrictions

Successful completion of 60 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain how globalisation has complexified indigenous cultural identities.
2. Demonstrate a critical understanding of the historical and contemporary relationships between indigenous and non-indigenous peoples and cultures by discussing the theories and concepts of colonialism, postcolonialism, autonomy, participatory methods and self-determination.
3. Critically reflect on the issues of cultural representation and cultural consumption.
4. Analyse how politics, power, ethics, ontology and epistemology influence the treatment of indigenous peoples in one of the following contexts: tourism and heritage, the cultural industries, land management and the natural environment, and development.
5. Use online technologies to organise, share and communicate Indigenous-related topics and issues.

Subject Content

Understanding indigeneity in the changing world
Theories of colonialism and postcolonialism
Autonomy, self-determination and indigenous politics
Globalisation and indigenous identities and cultures
The representation and consumption of indigenous cultures
Mapping indigenous cultural landscape/s
Power, land rights, displacement and indigenous protected areas
Ethics, tourism, and cultural and environmental heritage
Sustainability, development and ethics in practice
Ethnography, travel and the Other

CULT 3017 Legislation, Courts and Policing

Credit Points 10

Legacy Code 101568

Coordinator Kate Linklater (https://directory.westernsydney.edu.au/search/name/Kate Linklater/)

Description This subject introduces students to the adversarial system, the legislative context of everyday policing, and the different forms of state and federal courts. It includes an emphasis on police powers (NSW and elsewhere), summary and indictable offences, and the role of enforcement and discretion. In particular alternative resolution and specialist courts are described and their role and function analysed.

This subject is of value to students in policing, criminology, law, and community welfare.

School Social Sciences

Discipline Criminology

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Incompatible Subjects JUST 2012 - Law Evidence and Procedure

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse a criminal or traffic court matter.
2. Describe the general principles of criminal liability in relation to the major substantive criminal offence categories.
3. Explain the laws and acts which are most relevant to the policing role.
4. Consider alternatives available to police to prevent individuals entering the criminal justice system.

Subject Content

The adversarial system (exception of the coroner?fs court).
Awareness of issues specific to Aboriginal and Torres Strait Islander peoples, other indigenous peoples, and peoples from disadvantaged backgrounds.
Court processes (observation field trip).
The court system (Actus Reus and Mens Rea; indictable and summary offences; alternative resolutions; specialist courts).
Types of law; Acts, statutes (state, inter-state; commonwealth).
Law Enforcement (Powers and Responsibilities) Act 2002 (LEPRA) (NSW) (rule of law; enforcement and discretion).
Law and its interpretation concerning social disorder; property crime; prohibited drugs; crimes of violence (homicide; family violence; armed robbery; assault); Child Protection Act; fraud and computer/electronic crime.
Topical examples such as anti-terrorism laws, bike gang laws etc.

CULT 3018 Perspectives in Criminology

Credit Points 10

Legacy Code 102037

Coordinator Erin Kruger (https://directory.westernsydney.edu.au/search/name/Erin Kruger/)

Description Contemporary criminological knowledge typically concerns explanations of offending, victimisation, prevention and safety, but debates about these matters also reflect unequal power, social division and exclusion. The subject will focus on the criminological concern with offenders across all domains, with particular attention to crimes of the powerful. Additionally, it will analyse the impacts of the blurred lines between the public and private, the national and global, citizens and aliens, as well as evidence about the expansion of more intensive forms of governance in national and global contexts.

CULT 3020 Representing Crime

Credit Points 10

Legacy Code 101005

Coordinator Sara Knox (https://directory.westernsydney.edu.au/search/name/Sara Knox/)

Description This subject deals with the evolution of the figure of the detective and of the criminal; the development of an aesthetics of crime from the later 18th Century; the dynamic nature of fiction, film and television genres of detection. Literatures of sensation, detective fictions, true crime writing and the non-fiction novel will all be examined to allow an in-depth analysis of the changing ethical and psychological character of the detective, and of his nemeses. The crime story in film, television and in other new media may also be addressed to facilitate an analysis of changing cultural contexts for the crime story.

School Humanities & Comm Arts

Level Undergraduate Level 3 subject

Equivalent Subjects LGYC 1299 - Representing Crime

Restrictions

Successful completion of 60 credit points of study in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of theories of crime fiction in the context of debates about violence, modernity and popular culture;
2. Build analytical capacities in relation to concepts of genre, and the interdependence of different generic forms;
3. Identify change and continuity in discourses around crime from the later 19th to the early 21st century;
4. Analyse the relationship between textual forms of different media in the representation of crime and the figure of criminal and the detective.

Subject Content

Content may vary between semesters of offering dependent on the teaching staff expertise and interests. Content may draw from, or elaborate upon, the following pool of topics:

- Contemporary crime fiction
- The relationship between crime fiction and its readers.
- Literatures of sensation
- The Forensic Imagination
- True crime: modern genres
- The non-fiction crime novel
- Crime narrative, visual and oral culture
- The Spectacle of the criminal trial
- Moral panic around dangerous classes of persons
- The fame and infamy of the serial killer
- Storytelling and Crime
- Crime and Punishment in history
- Invasion, dispossession and genocide
- War crimes
- School shootings
- Violence against asylum seekers
- Family violence
- Performing violence

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

CULT 3023 Global Citizenship and Engagement

Credit Points 10

Legacy Code 301218

Coordinator Liz Thyer (https://directory.westernsydney.edu.au/search/name/Liz Thyer/)

Description This is a 10 credit point year-long subject taken over two terms (5 credit point in each term). The subject claims to engage students with current global contexts to integrate professional knowledge and develop skills, attitudes and behaviours that support them to be global citizens with inter-cultural competence. As part of the subject students will be required to undertake an global learning experience relevant to their studies. This experience may involve travel to an overseas organisation and/or community, or participation with a local or online globally focused organisation. The subject is completed across a year of study, with the first semester a preparatory experience, mid-semester the opportunity to complete an global short program, and the final semester a time to reflect. Students will immerse themselves in their new global environment, make sense of the organisation's or a community's modes of action and meaning, and negotiate their ways of acting and being in the process of becoming a member and contributing to the organisation and/or community with which they engage. Students in this subject will reflect on global engagement experiences to discuss self-learning and how this learning informs personal and professional development.

School Health Sciences

Student Contribution Band HECS Band 4 5cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) Students must have completed 120cp in their currently enrolled course prior to enrolling in this unit

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the sociocultural practice of a community and evaluate its impact on the people working in that environment, including self.
2. Identify social, cultural or technical challenges associated with international travel and engagement, and implement strategies to address them either collaboratively in a team or as an individual.
3. Contribute to the productivity of an international community.
4. Analyse the contribution of global engagement for an organisation and community
5. Evaluate the impact of global connections on the outcomes for the community, your team and one�fs professional development.
6. Critically reflect on global engagement experiences to discuss self-learning and how this learning has supported personal and professional de

Subject Content

1. Cultural responsive behaviours, attitudes and actions, including communication skills will be explored for development of cultural competency.
2. Ethical challenges related to international travel and aid, and to student?fs profession when applied to different cultural/global contexts

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Learning Contract	1,000 words	20	Y	Individual
Essay	1,000 words	30	N	Individual
Portfolio	1,000 words	30	N	Individual
Participation	500 words across at least four discussion forum posts	20	N	Individual

CULT 3024 Crime, Media, Culture

Credit Points 10

Legacy Code 102710

Coordinator Ken Yates (https://directory.westernsydney.edu.au/search/name/Ken Yates/)

Description There is a close relationship between representations of crime in mass and social media, and policy and legal responses to crime. Media consumers are producing and circulating content about crime and criminality through new media technologies, and some are using social media and the internet to engage in new forms of criminality. In this subject, we explore the complex role of mass media and 'new' media in debates over crime and crime control, and the facilitation of criminality by media technologies. This means studying contemporary media theory and its relevance for criminology, and the effects of social media and computing technology on representations and practices of criminality. The subject maintains a strong focus on the ways in which media and culture informs crime policy and criminal justice processes.

School Social Sciences

Discipline Criminology

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects CULT 3010 - Culture and Crime

Restrictions

Successful completion of 80 credit points

Assumed Knowledge

A basic understanding of foundational criminological theory.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of the theoretical accounts and topics of research that are part of criminological media studies.
2. Make appropriate links between theoretical accounts and independent research.
3. Demonstrate the capacity to disseminate theoretical and empirical evidence of the links between culture, media and crime to a professional audience.
4. Critically assess cultural depiction of crime, criminals and the criminal justice system.

Subject Content

1. An introduction to criminological media studies
- Explains the role and history of media studies within criminology.
2. The Spectacle and Hyper-Reality
- Explore how spectacular images are used to dramatise crime and criminal justice issues in ways that remove or simplify context, and the blurred distinction between the represented and the real.
3. News and true crime
- Examines how the relationship between commercial interests and criminal activity inform and impact news about crime, and how popular culture representations of crime in true crime media impact social expectations about crime and criminal justice issues.
4. Internet and social media
- Introduces the internet as a ‘new media technology’ as a conduit for discourse and representations of criminality and also a potential instrument of criminality, with a focus on the effects of social media on contemporary society
5. Technology
- Examines how key technologies, such as drones and video games, feature in discourses of policing and crime control, and the role of computing technologies in mystifying state violence.
6. Impact on policy and practice
- Provides case studies of the entanglement between media and cultural discourses of crime and public policy, legislative reform and policing practice.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

CULT 3025 Prisons, Punishment and Criminal Justice

Credit Points 10

Legacy Code 102711

Coordinator Selda Dagistanli (https://directory.westernsydney.edu.au/search/name/Selda Dagistanli/)

Description The demise of corporal punishment and the rise of incarceration are defining features of control in modern states. This subject provides an historical and sociological examination of the models, practices and justifications for punishment and incarceration. It begins with an overview of early liberal notions of the social contract, the modern movement away from corporal punishment towards incarceration, and a subsequent welfare oriented emphasis on treatment, reform and rehabilitation. Following from this, the subject explores the development of probation and parole systems, decarceration, community corrections, mass imprisonment, and the contemporary control of risk and 'dangerous' populations. These themes are considered through an intersectional analysis of structural factors such as age, gender, sexuality, social class, racial/ethnic identity and the impact of imprisonment and corrections on different individuals and groups. This subject pays particular attention to the over-representation of Indigenous populations in Australian prisons.

School Social Sciences

Discipline Criminology

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Incompatible Subjects CULT 2011 - Prisons Punishment and Criminal Justice (Level 2)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate the relationship between punishment and society, the history of the prison and its relationship to modernism;
2. Critically analyse how social practices of punishment affect certain sectors of the population, including highly marginalised groups;
3. Describe the impact of contemporary issues in public policy and penality, including community-based measures, private prisons, the dispersal of punishment, restorative and therapeutic justice and the law and order driven imperatives of retribution and vengeance;
4. Critically assess the contributions of philosophical approaches to contemporary debates about punishment goals and practices.

Subject Content

Punishment and criminal justice
Philosophical justifications for punishment
The rise of the prison
Juvenile detention and punishment of youth
Class, race, disadvantage and imprisonment: Indigenous over-representation
Gender and punishment
Non-custodial penalties and regulatory justice
Penal reform, activism and prison politics
Prison policies and correctional programmes
Decarceration and recarceration
Privatisation of prisons and corrections
Risk, fear and ?edangerousness?f

CULT 5001 Organised Crime and Criminal Organisations

Credit Points 10

Description Organised crime generates serious individual and collective social harm, and poses threat to both national, regional and international security. It challenges states, exploits individuals, pursues profit, wrecks economies, destroys civil society, and ultimately weakens democracy. This subject explores the emergence and growth of various types of organised crime and criminal organisations over the world from critical and inter-disciplinary perspectives. It also equips students with critical understanding of the nature and operation of various organised crime and criminal organisations, as well as their growing portfolio of illicit activities across borders and its impact on national and global security. While considering the security threat organised crime and criminal organisations pose at national and global level, this subject aims at nurturing students ability to develop a wholistic, humanistic, and just policies to prevent and control organised crime - not just stepping up policing and securities measures.

CULT 5002 Fundamentals of Cyber Crime and Security in a Global World

Credit Points 10

Coordinator Wayne Plumridge (https://directory.westernsydney.edu.au/search/name/Wayne Plumridge/)

Description This subject focuses on cyber-crime theory, and analyses the intersection between criminal behaviour, cyber-crime trends and patterns, and security and justice. It analyses topics ranging from online identity theft and fraud to cyber terrorism. Common cyber-attacks, offending methodologies, and victimology are explored to understand the multi-faceted nature of these crimes and their prevalence. In this subject, the essential cyber security concepts, risk management procedures, and data protection and security measures are introduced for the detection and prevention of cyber-crime across human and technology dimensions.

School Social Sciences

Discipline Criminology

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Restrictions

Students must be enrolled in postgraduate programs only.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Define the methods, theories, and terms related to cyber crime and security and evaluate the relevant policies, standards and guidelines which respond to cyber crime.
2. Analyse the complexity of cyber criminal and traditional criminal behaviour and practices.
3. Examine the various roles, responsibilities, investigative and regulation capacities of government, law enforcement, public and private sector agencies for combating cyber crime.
4. Apply a critical and inter-disciplinary perspective to explore the emotional, financial, and societal harm resulting from cyber crime.
5. Design effective interventions to reduce cyber crime susceptibility and risks.

Subject Content

• Introduction to cyber crime and distinctions between traditional crime and cyber criminal practices
• Cyber victimology
• Cyber security concepts and theories
• Cyber threats and risk management frameworks and controls
• Government regulations and law enforcement in the cyber space
• Compliance and legal obligations when dealing with cyber crime

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

CULT 6002 Gender Security and Violence

Credit Points 10

Coordinator Selda Dagistanli (https://directory.westernsydney.edu.au/search/name/Selda Dagistanli/)

Description Deploying critical feminist and gender theory, this subject examines and distinguishes between specific issues pertaining to gender violence within war and peace, and across different domestic and international contexts. Through the lens of actual, threatened, and symbolic gender violence and its consequences, this subject also unpacks the concept of gender (in)security as both a part of, and as a distinct component from, human security more broadly. Throughout the semester, students will consider these themes through domestic and international case studies and will be required to discern effective practices and responses to gender violence, from those approaches that perpetuate gender inequity and harm. By the end of this subject, students will be able to draft theoretically informed gender security initiatives.

School Social Sciences

Discipline Gender Specific Studies

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Restrictions

Students must be enrolled in the Master of Global Security and Justice.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Analyse critical feminist and gender theory, and its applicability to understandings and responses to gender violence
2. Distinguish between notions of human (in)security and gender (in)security
3. Discern best practice responses and strategies to gender violence, from those responses that perpetuate inequities and harm
4. Make theoretically informed recommendations in response to real and fictional case studies

Subject Content

- Gender theory
- Overview of key feminist interventions, in theory and practice, from the Global South
- Cross-cultural concepts of gender
- Gender equality and equity
- Gender violence and its correlates in war and peace
- Feminist understandings of human (in)security
- How gender security can be differentiated from human security more broadly

CULT 7001 Economies and Ecologies

Credit Points 10

Legacy Code 800174

Coordinator Katherine Gibson (https://directory.westernsydney.edu.au/search/name/Katherine Gibson/)

Description This subject examines how the economy is being reclaimed as a space of political decision in the Anthropocene, the new geological epoch in which human activity is having global impact on the Earth's ecosystems. It critically explores how different ways of thinking about economy shape the worlds we inhabit. It analyses contemporary examples of economic experimentation and human-non-human assemblages that are making 'other worlds' possible. It explores connections between ecological and economic thinking and asks how our conception of the economy and subjectivity changes when we consider the needs of other species as well as our own.

School Graduate Research School

Discipline Other Society And Culture

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a range of thinking practices that open up the economy as a site of possibility

2. Review and participate/engage with current debates about economic alternatives
3. Apply methods for social and political theoretical development
4. Apply skills in peer reading, reviewing, editing and re-writing

Subject Content

1. Thinking for the Anthropocene
2. Representations of Economy
3. Thinking from Ecology/Nature/Matter
4. Anti-Essentialism and Class
5. Rethinking Economic Subjectivity
6. Decentering Subjectivity
7. Feminist Economic Thought
8. Neoliberalism Scripts and their Effects
9. Unravelling Community
10. Thinking Strategies for Decolonization
11. More-than-HumanPost-Development

CULT 7002 Engaging Discursive Fields

Credit Points 10

Legacy Code 102340

Coordinator Tanya Notley (https://directory.westernsydney.edu.au/search/name/Tanya Notley/)

Description This subject creates an opportunity for intensive reading on the candidate's research project. Lectures and seminars direct students to identify classic texts, watershed publications, leading scholars, and current debates in their chosen field of research. While expanding their knowledge of existing scholarship, they will become aware of the discursive structures and academic protocols that govern their discipline. What theoretical approaches are used? What does the field of research require of its scholars? What makes their work authoritative? What sources do they use? What questions guide their research? In what context? How has the discursive field changed over time? Such questions direct the formulation of a research project of current relevance.

School Humanities & Comm Arts

Discipline Society and Culture, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Establish a broader knowledge of existing scholarship in their field of research
2. Identify key texts and theoretical approaches used within their field of research
3. Demonstrate awareness of protocols of research and scholarship that govern the field
4. Identify current debates and leading scholars in the field
5. Demonstrate advanced skills in discriminating bibliographic research.

Subject Content

- advanced research techniques
- genres of academic writing
- Expectations of academic research and writing across and within fields of research
- concepts of discourse and The formation of knowledge
- Understanding and recognising sources and uses of academic authority
- Varieties and uses of sources across various media
- relationships between research and its dissemination
- modes of research dissemination beyond Print

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Critical Review of Work Read	2,000-3,000 words	50	N	Individual
Annotated Bibliography: Bibliography of additional reading for future reference assessed on the relevance, and range of resources	1,000 - 1,500 words - dependent on the topic and discipline	25	N	Individual
Quiz: 5 online quizzes based on work read in common. Five questions in each quiz, multiple choice and/or short answer.	30 minutes each	25	N	Individual

CULT 7003 Environmental Humanities

Credit Points 10

Legacy Code 102339

Coordinator Josh Wodak (https://directory.westernsydney.edu.au/search/name/Josh Wodak/)

Description This subject provides an overview of the emerging interdisciplinary field of Environmental Humanities. It provides a space of dialogue for Humanities, Arts and Social Sciences (HASS) and Science, Technology, Engineering and Mathematics (STEM)

students to work collaboratively in developing novel ways of thinking about the relationships between culture and nature. The subject centres on emerging conceptual trends interrogating notions such as: Anthropocene, extinction, planetary boundaries, critical zones, socio-ecological change dynamics, as a way of engaging with fundamental questions of meaning, justice, value, responsibility and purpose in a time of rapid and escalating change. The subject also focuses on methodological issues and tackles questions of co-construction between HASS and STEM disciplines.

School Graduate Research School

Discipline Society and Culture, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a critical awareness of the historical, philosophical and political implications of human transformation of the environment and the ways we rethink our relations with other non-human beings.
2. Define the major theoretical traditions in environmental humanities identifying the multiple subareas within environmental humanities and understanding their origins, connections, and divergences.
3. Use a range of methods to analyse, critically interrogate, and offer solutions to diverse perspectives on contemporary environmental concerns and dilemmas.
4. Use interdisciplinary approaches to tackling complex problems, including developing research, writing and presentation skills that successfully integrate knowledge from humanities, social sciences, science and technology, and the natural sciences.
5. Demonstrate the ability to translate and present research in an academic forum.

Subject Content

This subject is offered through a combination of online and face-to-face delivery. Students are required to attend 5 x 2 hour lectures, 10 x 2 hour seminars and 1 x 2 hour symposium. The subject makes extensive use of blended learning for accessing resources and activities. Students are expected to spend approximately 120 hours on this subject, working through the reading program, contributing to online discussions, completing the assessment tasks and attending the compulsory lectures/seminars.
Preliminary content include:
1. Conceptualising the environmental humanities: concepts and methods for studying cultures/natures
2. Understanding living systems and coupled socio-ecological dynamics
3. Living in the Anthropocene: exceeding planetary boundaries
4. Approaches in Environmental History
5. Debates in Environmental Anthropology
6. Sustainability and Design
7. Normative principles of Environmental Justice
8. Science, democracy and citizenship
9. Researching global change; interdisciplinary challenges.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Literature review	2,000 words	25	N	Individual
Research Article or Paper	4,000 words	35	N	Individual
Symposium Presentation	15 minutes	35	N	Individual
Provocation	3 images	5	N	Individual

CULT 7004 Global Digital Futures

Credit Points 10

Legacy Code 102412

Coordinator Brett Neilson (https://directory.westernsydney.edu.au/search/name/Brett Neilson/)

Description This subject explores how innovation in the digital era is transforming society on a global scale. Reflecting on examples drawn from around the world, students learn about the latest trends in communication, media, computing and the knowledge economy. Current and future directions are surveyed in the context of contemporary issues such as big data, digital identity and privacy, social media and crowdsourcing, gaming and visualisation, geographical information systems, virtual environments and artificial intelligence.

School Humanities & Comm Arts

Discipline Society and Culture, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects CULT 7007 - Text Media and Memory

Restrictions

Students must be enrolled in a postgraduate or a research program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Think critically about the implications of using digital technology and methods for compiling, storing, displaying, and disseminating humanities data.
2. Articulate the influence of earlier media, such as photography and film, on communication, research and information design so that digital innovations can be viewed in a broader context.
3. Appraise new formats, genres and methods for the production of knowledge, ranging from the personal and experimental to the institutional.
4. Articulate key ways in which the concepts of identity and community are changing in the digital information age.

Subject Content

The subject is structured around eight modules
1. Digital Futures
2. Data Politics and Algorithmic Governance
3. Digital Infrastructures - Data Centres and Undersea Cables
4. Artificial Intelligence/Machine Learning
5. High Frequency Trading and Flash Crashes
6. Contact Tracing
7. The Chinese Internet and the Digital Silk Road
8. Reverse Engineering

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Online Research and Learning Activities	Regular contribution to activities, totalling minimum 1,000 words	20	N	Individual
Oral Presentation	10 minutes	15	N	Individual
Project: a written work or a digital creative or critical work with an exegesis	3,000 words (or equivalent combination of digital work and written exegesis)	65	N	Individual

Prescribed Texts

CULT 7006 Rethinking Culture and Society

Credit Points 10

Legacy Code 800196

Coordinator Gregory Noble (https://directory.westernsydney.edu.au/search/name/Gregory Noble/)

Description This subject explores key ideas in social and cultural analysis - such as culture, society, experience, power, nature, local/global, etc - as a way of helping students think through their own research projects. It draws on an approach to cultural and social research, developed at the Institute for Culture and Society, which addresses the contradictions of a world that is increasingly globalised, culturally diverse and technologically mediated. A key aspect of this approach is to revisit the central concepts of social and cultural theory, linked to an overview of existing approaches, developing skills of critical analysis and reflecting on the challenges of interdisciplinarity, methodological pluralism, cultural complexity and engaged research.

School Graduate Research School

Discipline Other Society And Culture

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

This subject is considered mandatory for students supervised within the Institute for Culture and Society

Learning Outcomes

On successful completion of this subject, students should be able to:

1. understand the processes in articulating and unpacking key theoretical ideas
2. develop a formulation of their own keywords
3. reflect upon the challenges of interdisciplinarity, methodological pluralism, cultural complexity and engagement
4. develop skills in critical analysis

Subject Content

1. exploration of key concepts of social and cultural analysis, eg:
- culture, society, experience, practice, power, local/global, nature, economy, technology, etc
2. development of skills of advanced critical analysis
3. reflection on key challenges of:
- interdisciplinarity, methodological pluralism, engaged research, cultural complexity
4. participation in ICS seminar series

Assessment

CULT 7008 The Cutting Edge: Advanced Studies in Humanities and Communication Arts

Credit Points 10

Legacy Code 102298

Coordinator Brett Bennett (https://directory.westernsydney.edu.au/search/name/Brett Bennett/)

Description The School of Humanities and Communication Arts teaches across a range of disciplines including Design, Music, Creative Arts, Communications and Media, Languages and Linguistics, Cultural and Social Analysis, Philosophy, Literary Studies, History and Political Thought, International Relations and Asian Studies, Indigenous Studies. This shell subject provides advanced academic training, advanced knowledge and intellectual development in the student's academic discipline by focusing on current debates in selected fields of study. The content of this subject will change according to fields of research represented in the cohort of each year, the issues of current concern in the discipline streams taught, and staff expertise. It will be taught in streamed, parallel seminars organised by broadly defined disciplinary grouping.

School Humanities & Comm Arts

Discipline Society and Culture, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in the Bachelor of Research Studies/Master of Research or Master of Research.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate understanding of current debates in their field of study
2. Apply research methods across research topics, research methodologies, and research outcomes
3. Demonstrate advanced skills in analysis, synthesis, and exposition
4. Engage with professional academic research.

Subject Content

This subject provides advanced academic training, advanced knowledge and intellectual development in the student's academic discipline by focusing on current debates in selected fields of study.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	15 minutes	20	N	Individual
Essay	3,000 words approximately	60	N	Individual
Reflection	Weekly contributions	20	N	Individual

CULT 7010 Researching Post-Capitalist Possibilities (PhD Summer School)

Credit Points 10

Legacy Code 800216

Coordinator Stephen Healy (https://directory.westernsydney.edu.au/search/name/Stephen Healy/)

Description Researching Post-Capitalist Possibilities offers HDR students the opportunity to explore how the humanities and social sciences can play a role in making other worlds possible. It develops the thinking capacities we need as scholars to shape the world and reviews the ethical responsibilities that come with this work. It offers an opportunity to work with scholar members of the Community Economies Collective within the Institute for Culture and Society (ICS) who have been thinking outside or beyond capitalist relations since the publication of J.K. Gibson-Graham's The End of Capitalism (As We Knew It) in 1996.

School Graduate Research School

Discipline Other Society And Culture

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a Masters by research or PhD and must obtain permission from the subject Coordinator to enrol in the subject.

Assumed Knowledge

Students should have a working understanding of their disciplinary field at graduate level and familiarity with different social theoretical and methodological traditions in order to get maximum program benefit.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate key ideas of anti-essentialist political economy and feminist poststructuralism
2. Apply the thinking techniques and methodological approaches introduced in the course to student's current research.
3. Situate student-research within current theoretical debates in Feminist Political Economy, Science and Technology Studies and Environmental Humanities concerning economic and ecological futures
4. Design research strategies for instigating social and ecological transformation

Subject Content

This unit presents the conceptual foundations of feminist post-capitalist thinking and demonstrates its applicability. It will provide Master of Research and early stage PhD students with a demanding immersion in social theory debates.
1. Techniques of reading that open up possibility
Key theoretical concept: capitalocentrism
- Genealogy
- Deconstruction

- Queering
2. Theorizing subjects to open up possibility
Key theoretical concept: class as an entry point
- Marxian class analysis
- Anti-essentialist class analysis
- Class and subjectivity
3. Reframing 'the economy' to open up possibility
Key theoretical concept: diverse economies
- Reframing
- Inventory
- Reading for difference
- Performativity
4. Theorizing 'community' to open up possibility
Key theoretical concept: more than human community
- Reading 'property' for diversity
- From nouns to verbs: commons to commoning
- Applications of commoning
- Action research and assets based approaches

Assessment

Summer

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	7 minute	10	N	Individual
Essay	3,000 words	30	N	Individual

DESN 0001 Design Practice (WSTC Prep)

Credit Points 10

Legacy Code 700223

Coordinator Ben Fletcher (https://directory.westernsydney.edu.au/search/name/Ben Fletcher/)

Description Design Practice introduces students to the fundamental principles of graphic design practice. This subject investigates how the design process is applied to real-world industry design briefs to create a visual design. Students develop an understanding of the processes and practices used to support collaboration between clients, designers and specialists when designing and producing visual communications. Students are guided through the process of interpreting a design brief, creating and pitching a design response, presenting work for critique,

incorporating critique into a design solution and producing highly refined design outcomes to a professional standard. Students work on a number of design briefs using industry standard work practices, including time management strategies, multi-tasking, strict delivery deadlines, brief comprehension and job documentation as well as client/designer coordination and negotiation.

School Western Sydney The College

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions Students must be enrolled at Western Sydney University, The College.

Assumed Knowledge

Basic written English skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. describe and apply the processes and practices used to produce designs in the design industry and explain factors that influence these practices
2. apply the basic elements and principles of the design process to execute the design brief
3. describe and demonstrate the practices, techniques and processes used by designers in establishing briefs and in designing and producing designs that fulfil clientsðf needs
4. demonstrate competency in graphic design technology
5. conduct research and analysis as well as clearly communicate a rationale for design decisions
6. structure a brief
7. apply project and time management skills to achieve client deadlines
8. present, reflect and evaluate your own creative outcomes
9. maintain and store design documentation and job diaries at a professional standard

Subject Content

1. Design industry overview
2. Requirements and methodologies of design practice
3. The design brief
4. Core design techniques
5. Managing and communication with clients
6. Project management
7. Project delivery and presentation
8. Documenting and storing project documents

DESN 0002 The Design Process (WSTC Prep)

Credit Points 10

Legacy Code 700197

Coordinator Ben Fletcher (https://directory.westernsydney.edu.au/search/name/Ben Fletcher/)

Description The Design Process introduces the elements and principles of design as well as design processes and methods required to explore and creatively apply the design process. The Design Process focuses on the skills and concepts that contribute to interpreting and responding to design briefs, as well as researching, developing and presenting innovative design solutions. The core of any design process is the design brief. The Design Process acknowledges the importance of this and how it informs relationships between the client, designer

and specialists engaged to develop the design process. The subject addresses the purpose, sequence, major stages and application of the design process to synthesise solutions relevant to the design industry.

School Western Sydney The College

Discipline Graphic Arts and Design Studies

Level Undergraduate Level 0 Preparatory subject

Restrictions Students must be enrolled at Western Sydney University, The College.

Assumed Knowledge

Basic written English skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. implement a design process, including research, idea generation, prototyping and reflection, when responding to a brief
2. interpret the requirements of a design brief, the client, and a clearly defined audience and apply these to design work
3. use and apply specific research skills to collect ideas, information and resources relevant to the brief for inspiration, investigation, analysis and interpretation
4. develop the brief by identifying the client, their communication need/s, the purpose and context of the visual communication, the target audience and any constraints that affect the nature of the solution
5. explore a variety of design ideas that draw on the research and are appropriate to the brief
6. develop the concepts by selecting the preferred ideas and applying a range of methods, materials, media, design elements, design principles and presentation formats to create visual communications that address the brief
7. modify the design in response to feedback, reflection and evaluation against the brief
8. present and store work in a format which takes account of the need for professional presentation and potential need for samples in future work
9. select appropriate materials, tools and equipment required for the production of design samples in accordance with the brief
10. interpret and communicate the requirements of a design brief with the client, analyse their communication needs, the purpose of the visual communication and apply these to the design work

Subject Content

1. Stages of the design process
2. The design brief
3. Writing a design proposal
4. Research methods
5. Idea generation
6. Concept development
7. Evaluation, feedback and refinement
8. Creating and delivering an effective presentation

DESN 0003 Critical Thought in Design (WSTC Prep)

Credit Points 10

Legacy Code 700321

Coordinator Ben Fletcher (https://directory.westernsydney.edu.au/search/name/Ben Fletcher/)

Description Critical Thought in Design provides students with an understanding of the process designers use to structure their thinking and communicate ideas with clients, target audiences, other designers and specialists. The ability to think critically, creatively and independently is essential for success as a designer in generating and communicating innovative design solutions that meet the needs of the client and target audience. The aim of this subject is to provide students with the skills and techniques necessary to become an independent thinker able to research, analyse, argue and communicate effectively with clients. The subject examines a wide range of critical thinking and design, problem-solving methods including problem definition techniques, idea generation, brainstorming, as well as evaluation and analysis skills.

Restrictions Students must be enrolled at Western Sydney The College

Assumed Knowledge

Basic written English skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply lateral thinking techniques to develop creative responses to project briefs.
2. Analyse and evaluate concepts, assumptions, explanations, arguments and solutions to design problems.
3. Identify, correct and prevent errors in thinking and problem solving in design processes.
4. Demonstrate critical and analytical skills in the interpretation and appreciation of works of design.
5. Apply design thinking techniques while conceiving, communicating and presenting ideas.
6. Demonstrate design thinking and research strategies within design practice.
7. Generate ideas and determine solutions using creative thinking methods, and conduct research, anlyse, evalute and communicate rationale for design decisions.
8. Conduct research, analyse, evaluate and communicate rationale for design decisions.

Subject Content

1. Creative thinking and design practice.
2. Critically analyse, consolidate and synthesise knowledge.
3. Creative thinking tools, eg mind mapping, brainstorming, metaphorical thinking, attribute listing, morphological synthesis, lateral thinking and the creative problem solving process.
4. Critical thinking techniques.
5. Lateral thinking and brainstorming.
6. Research and interpretation.
7. Evaluating, implementing and communicating new ideas.

DESN 1003 Design Histories and Futures

Credit Points 10

Legacy Code 102262

Coordinator Karen De Perthuis (https://directory.westernsydney.edu.au/search/name/Karen De Perthuis/)

Description This subject introduces students to historical accounts and theories of design from the dominant perspective of Modernism in the first half of the 20th century, through post-war consumerism and the ensuing movements of the 20th century, such as Postmodernism, Punk and New Wave; design reactions to corporate culture, design for change and activism; and the digital design enablers of the 21st century. Students learn a contextual history of 20th century design practice by studying the doctrines around which the modernist movement cohered, and the conditions under which these doctrines are challenged by later movements. The subject explores various roles of the visual designer through history-avant-garde, futurist, revolutionary,

utopian design; client-service design; social activism, producer and digital enabler. These roles are expressed across a range of design outcomes such as photography, typography, illustration, print media, graphics, digital design, film and animation. Part of this exploration will examine the impacts of design histories on our past, present and future conditions, as well as changing the future for design. Students will complete visual and writing tasks that aim to build their understanding of design histories and futures, and scholarship in academic research and writing.

School Humanities & Comm Arts

Level Undergraduate Level 1 subject

Equivalent Subjects DESN 1001 - 20th Century Design Histories DESN 1004 - Design Histories and Futures (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and analyse examples of design as part of historical contexts of visual practice/expermimentation, ideas, social and/or cultural events.
2. Explain influential cultural themes, theories and doctrines that inform the design histories considered with reference to primary and secondary literature about exemplary design approaches.
3. Evaluate the contributions of select designers to these movements and periods of design practice by analysing examples, professional/cultural roles and relevant literature, and by making thinking visible through a design outcome.
4. Demonstrate understanding of the impact of design on contemporary society and the sustainability of the future.
5. Demonstrate research and English language literacy for critical thinking and writing about design history and scholarship

Subject Content

1. Introduction to Design Histories & Futures: Modernism in design: The experience of industrial urbanism and cultural responses to modernity
2. Experimental graphic design, Futurism and the European modernist avant-garde
3. Constructivism, utopianism and the revolutionary role of the designer in the Soviet transformation
4. The Bauhaus: Modernist principles and model of design education
5. New Typography, the International Style of modernism and assimilation into US advertising and visual identity systems.
6. Disturbances: Postmodernism, New Wave and Punk Graphics
7. Writing an Essay: Assessment 2b: Case-Study (essay) on design movement
8. Revolution: Change agendas of the designer as activist and critical thinker
9. The role of the designer in the 21st century and digital design enablers of networked communication
10. Imagining the future 1: design's speculations about future life and 'social dreaming'.
11. Imagining the future 2: sustainable futures and 'futuring'.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

DESN 1007 Graphic Branding and Identity

Credit Points 20

Legacy Code 102264

Coordinator Alison Barnes (https://directory.westernsydney.edu.au/search/name/Alison Barnes/)

Description This subject enables students to further develop their understanding and application of the design process within the field of graphic branding and identity design. Students will interrogate the fundamental principles of branding and explore diverse and creative approaches to branding and visual identity design from concept to outcome. Students' understanding of a design brief, client, competitors and audience will deepen and they will be introduced to some design specific research skills, such as mood board and persona development, which will help them begin to build a toolkit of methods to use throughout their degree. Students will explore the power of storytelling in the creation of compelling brand narratives and explore ways a brand can communicate with an intended audience. Key software will be introduced and supported by online resources, and students will continue to develop their visual design and communication skills in the fundamental areas of typography, image-making and composition.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) DESN 1009

Equivalent Subjects DESN 1008 - Graphic Design Process and Practice (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the fundamental principles of branding in the creation of visual solutions to an assessment brief.
2. Develop design ideas in response to a branding and identity design brief that are based on research and analysis, using a sketchbook to record this process.
3. Apply an iterative design process underpinned by experimentation to the development of a brand story and visual identity.
4. Produce design solutions appropriate to the brief, client and audience and support the development of these through a process of reflection, peer evaluation and critique.
5. Communicate clearly through the presentation of design ideas and outcomes.
6. Design professional standard outcomes using relevant media (including the major features of Adobe CC).

Subject Content

- The fundamental principles of branding: Brand values, brand promise and brand purpose
- Brand archetypes
- Brand personality and tone of voice
- Copywriting and brand manifestos
- Understanding a brief, client, and project context
- Defining competitors (precedent and documentary research skills)
- Understanding audience: Using personas and mood boards (design specific research skills)
- Visual interpretation of message and expression to an identified audience
- Designing visual identity systems
- Brand storytelling
- Further development of Adobe CC skills
- LinkedIn Learning tutorials as specified

Special Requirements

Essential equipment

Students are expected to have:

- A basic kit of graphic design ‘tools’—pencils (HB, 2B, 3B), eraser, ruler, scissors and paper glue.
- An A4 plain paper (not lined) sketchbook
- Access to a computer
- Access to Adobe CC
- A digital storage device (USB or external hard drive)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Course 6011 - Diploma in DesignBachelor of Design (Visual Communication)
Students enrolled in the combined DiplomaBachelor courses listed below must pass all College Preparatory units listed in the course structure before progressing to the Year 2 units

Equivalent Subjects DESN 1007 - Graphic Design Process and Practice

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in extended diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret the requirements of a design brief, the client and a clearly defined audience and apply these to their design work.
2. Develop a range of design specific research skills and apply such methods as part of their design process.
3. Apply lateral thinking and design thinking techniques to develop creative responses to project briefs.
4. Utilise a range of appropriate visual approaches in the fundamental areas of type, image and composition.
5. Utilise a wider range of features of Adobe CC as an industry standard software application for production.
6. Create a brand identify in response to a client brief.
7. Interpret and communicate complex information to a specific audience.

Subject Content

Branding:
1. What is branding ? it?fs more than just a logo.
2. What is a client? Defining the client ? precedent and documentary research skills.
3. What is an audience? Defining your audience
4. Mood boards and personas ? design specific research skills
5. Precedent research skills.
6. Brand personality, tone of voice etc.
7. Logo design.
8. Copywriting.
Introduction to information design:
1. Basic models of information design.
2. The role of purpose, audience and context within information design.

3. The taxonomy of organisation.
4.

DESN 1009 Graphic Design: Understanding the Principles

Credit Points 20

Legacy Code 102261

Coordinator Alison Barnes (https://directory.westernsydney.edu.au/search/name/Alison Barnes/)

Description This subject introduces students to the fundamental principles of visual language and graphic design practice. Through a series of workshops, exercises and project briefs, students will learn how elements such as colour, composition, text, typography and image can be used to communicate meaning in a variety of contexts. Through the project briefs students will begin to develop their awareness of graphic design as a problem solving activity and apply their understanding of the design process in relation to research skills, idea generation, reflective practice, and both written and verbal communication skills. Students will learn the importance of prototyping, developing and refining their ideas through practice, and aspects of the digital print production process will also be introduced. Students will be introduced to design software packages and to support the ongoing development of their digital media skills they will be provided with access to resources for independent online learning.

Legacy Code 700193

Coordinator Ben Fletcher (https://directory.westernsydney.edu.au/search/name/Ben Fletcher/)

Description This subject introduces students to the fundamental principles of visual language and graphic design practice. Through a series of workshops, exercises and project briefs, students will learn how elements such as colour, composition, text, typography and image can be used to communicate meaning in a variety of contexts. Through the project briefs, students will begin to develop awareness of graphic design as a problem solving activity and apply their understanding of the design process in relation to research skills, idea generation, reflective practice and both written and verbal communication skills. Students will learn the importance of prototyping, developing and

refining their ideas through practice and aspects of the digital print production process will also be introduced. Students will be introduced to design software packages and to support the ongoing development of their digital media skills they will be provided with access to resources for independent online learning.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Co-requisite(s) Students enrolled in the combined DiplomaBachelor courses listed below must pass all College Preparatory units listed in the course structure before progressing to the Year 2 units

Equivalent Subjects DESN 1009 - Graphic Design Understanding the Principles

Incompatible Subjects DESN 1016 - Introduction to Typography DESN 1006 - Digital Design Production

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in extended diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop, refine and present digital and non-digital outcomes to a professional standard.
2. Generate compelling solutions to visual problems that demonstrate an applied understanding of type, image colour and composition using the principles of design.
3. Implement a design process, including research, idea generation, prototyping and reflection, when answering a brief.
4. Use relevant media and image-making processes in developing solutions to visual problems within a set brief.
5. Use the major features of Adobe CC as an industry standard software application for production.
6. Undertake methods of peer evaluation and critique and apply an iterative process to their design work.

Subject Content

What is graphic design?
Elements of design and principles of design.
Colour
Lateral thinking and idea generation.
Communicating through text and image.
Typography and layout.
Lynda.com tutorials as specified.
- Foundations of Colour.
- Foundations of Typography
- InDesign CC Fundamentals
- Illustrator CC Fundamentals.

DESN 1011 Image Design

Credit Points 10

Legacy Code 102263

Coordinator Enrico Scotece (https://directory.westernsydney.edu.au/search/name/Enrico Scotece/)

Description This subject introduces students to photographic image making and applications of photomedia in visual communication design contexts. The experience of image making is covered using the first principles of the photographic medium, camera handling and studio procedures. The principles of visual composition are learnt from the dual perspectives of creating and evaluating photographic and digital imagery, using lens and light-based techniques and methods.

Equivalent Subjects DESN 1013 - Image Design Illustration DESN 1015 - Introduction to Photomedia DESN 1012 - Image Design (WSTC)

Restrictions

Students must be enrolled in one of the following programs 1571 Bachelor of Design (Visual Communication), 1696 Bachelor of Communication, 1736 Bachelor of Communication (Dean's Scholars), 1737 Bachelor of Design - Visual Communication (Dean's Scholars), 1838 Bachelor of Creative Industries, 1839 Bachelor of Design/Bachelor of Creative Industries, 1840 Bachelor of Communication/Bachelor of Creative Industries, 1841 Bachelor of Music/Bachelor of Creative Industries, 1842 Bachelor of Arts/Bachelor of Creative Industries, 1843 Bachelor of Graphic Design (Pathway to Teaching Secondary), 6007 Diploma in Communication/Bachelor of Communication, 6009 Diploma in Communication/Bachelor of Creative Industries, 6011 Diploma in Design/Bachelor of Design (Visual Communication), 6013 Diploma in Design/Bachelor of Graphic Design (Pathway to Teaching Secondary), 6015 Diploma in Communication/Bachelor of Screen Media (Arts and Production).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Employ photographic techniques and principles for light and lens-based image making

2. Employ compositional devices and visual organisation in designed outcomes

3. Develop creative strategies using a range of photographic methods and techniques to convey meaning

4. Research historical and contemporary image-makers and visual communication outcomes

5. Utilize visual research in concept development

6. Generate solutions that demonstrate an understanding of the relationship between design brief, client and target audience

Subject Content

• Introduction to the image and photo-graphic methods as a tool of communication and research
• Introduction to the camera's functions and its use in the process of visual representation
• Light and lens-based capture and output
• Introduction to the history and use of the image in various genres, forms and applications
• Introduction to professional studio methods and workflows
• The construction of meaning through single, sequential images and editing

Special Requirements

Essential equipment

1 x 16 gig storage drive

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Students must be enrolled at Western Sydney University, The College. Students enrolled in extended diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and utilise the elements of design and compositional strategies used in the design of an image.
2. Create images that interpret verbal language and written concepts.
3. Analyse and interpret signs and signifiers used in visual communication and apply these principles to the construction of images.
4. Implement the use of visual metaphor and symbolism for image based practices.
5. Employ a range of image production methods.
6. Utilise appropriate methods of image organisation and manipulation.

Subject Content

Development of visual literacy skills for the effective analysis of image design.
Explore the relationship between visual and verbal language.
The impact of photographic and illustrative media on the reading of a designed image.
The potential of style, technique and media to communicate and evoke a range of image reading experiences.
The process of creating and evaluating photographic and illustrative images.
Appropriate research methodology skills.
Lynda.com tutorials as specified.

DESN 1018 Visual Storytelling

Credit Points 10

Legacy Code 101921

Coordinator Jacki Montgomery (https://directory.westernsydney.edu.au/search/name/Jacki Montgomery/)

Description Visual storytelling is increasingly being used in a variety of contexts including websites, magazines, advertising, business and public affairs, exhibitions and events and television, often working across a number of platforms at the same time as requiring responsive design approaches for a diversity of viewing experiences. With access to increasing amounts and types of data, professional communicators need to be able to extract meaning to connect with a variety of different audiences in creative, dynamic, and emotional ways. This subject introduces students to story archetypes, structure and flow. It encourages metaphorical and anagogical storytelling using appropriation making reference to genre and research. This practical subject explores a range of traditional hands-on techniques and digital software commonly used across the communications sector. Students are encouraged to explore and develop their own mark and image making skills aimed at specific target audiences and communication contexts.

School Humanities & Comm Arts

Level Undergraduate Level 1 subject

Equivalent Subjects LGYA 2353 - Design Principles 2D3D DESN 1005 - Design Thinking DESN 1019 - Visual Storytelling (WSTC)

Assumed Knowledge

Basic written English skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate understanding of the role of visual storytelling for exploring the relationship between content and context.
2. Evaluate visual communication contexts to identify principles and structures for visual storytelling.
3. Apply visual storytelling approaches using a range of digital media applications.
4. Apply visual approaches to generate relevant findings as storytelling outcomes for given briefs.

Subject Content

1. The subject introduces fundamental skills and literacies in visual design principles of layout for print and screen interfaces including readability, hierarchy, usage of information graphics and photography, typography and colour theory.
2. Visual storytelling principles are then applied through written and practical tasks that push understandings about the visual vocabulary of storytelling across a range of media platforms.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1.3 Equivalent to 30-60 secs or a minimum of 12 key frames plus portfolio	45	N	Individual
Applied Project	2.3 Equivalent to 2 x A4 or 1 x A3 format with minimum of 12 frames plus portfolio.	45	N	Individual
Quiz	Equivalent to 50 words - 5 quizzes with 10 multiple choice over 14 weeks	10	Y	Individual

DESN 1021 Web and Time-based Design

Credit Points 10

Legacy Code 101922

Coordinator Greg Hughes (https://directory.westernsydney.edu.au/search/name/Greg Hughes/)

Description Students will develop fundamental computer software skills and design understandings appropriate to using major web and time based design technologies such as HTML and CSS. They will develop a working understanding of production literacies for online design and time-based design. Students will engage in practical studies of web authoring. Emphasis will be placed on understanding the roles, functions and features of key screen based technologies, design production context for online delivery, current industry best practices,

and a working understanding of the responsibilities inherent in the digital design and production process.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects DESN 1020 - Web and Time-based Design DESN 1022 - Web and Time-based Design (WSTC)

Assumed Knowledge

Introductory level understanding of and skills in design principles particularly basic layout, colour and typographic knowledge. Digital basics including working in a networked environment on a Macintosh computer. Ability to manage, transport and store digital information.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply graphic design concepts appropriate to the specific concerns of a time-based and/or online environment.
2. Apply methods and processes for planning web sites and time-based outcomes.
3. Demonstrate an applied understanding of designing to a brief with regard to online contexts, audiences and genres.
4. Use terminology and apply industry practices appropriate to preparing, generating and deploying web sites and time-based outcomes.
5. Demonstrate an applied understanding of the major technologies such as HTML, CSS and JQUERY as the basis for authoring web sites..
6. Demonstrate an applied understanding of the standard software applications for producing, optimising and manipulating images or artwork for web and/or time-based outcomes.

Subject Content

- introduction to key front-end web design and development languages: HTML and CSS.
- production processes for designing, developing and delivering online responsive websites.
- fundamental online concepts: responsive design, information architecture, interface design, navigation, user experience and user interaction.
- File formatting, naming conventions, File pathways and how to transfer files to and from A web server.
- Image optimization and preparation for online delivery.
- fundamental time based design concepts: Basic animation principles and graphics in motion.
- production processes for designing, developing and delivering time-based web elements.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	20 minutes, in-class quiz	10	N	Individual
Applied Project	Multi or single page (long scroll) website	35	N	Individual
Applied Project	Multi or single page (long scroll) website	15	N	Individual

DESN 2001 Australian Design

Credit Points 10

Legacy Code 101923

Coordinator Karen De Perthuis (https://directory.westernsydney.edu.au/search/name/Karen De Perthuis/)

Description This subject continues the focus on academic and visual literacies for visual communication designers initiated in level one subjects. Students will investigate the Australian visual communication design profession, largely through the documentation of selected output and established methods across industry sectors producing graphic, photographic, illustrative, typographic, broadcast, interactive and online design. Lectures and selected case studies will outline professional scenarios and support the student in learning about the design industry's organisation and methods. Assessment tasks are designed to develop research and writing skills through the evaluation of professional resources and publications.

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Investigate the Australian visual communication design profession and methods of practice.
2. Review professional and academic publications and resources about Australian design.
3. Evaluate examples of professional profiles and case studies.
4. Identify established approaches to design thinking and methods in industry practice.
5. Develop investigative questions about professional practice and methods in response to existing documentation.

Subject Content

- industry sectors, professional resources, trade publications, associations, industry body websites, selected professional profiles and case studies
- Established design approaches and methods of Visual production and analysis in design.
- instruction on evaluation and writing for assessment tasks

Assessment

DESN 2005 Graphic Design: Interactive Digital Media

Credit Points 20

Legacy Code 102265

Coordinator Sarah Waterson (https://directory.westernsydney.edu.au/search/name/Sarah Waterson/)

Description Digital technology shapes the way we interact with our world. Design of these interactions is a crucial role for today's designers. This subject will develop students' critical interaction and visual design skills in the digital realm, including interface and experience design. Digital design specific research skills, methods and processes are covered. These include user research, persona development, storyboard development, lo-fi and hi-fi prototyping, wireframes and proof of concept methods. Students will engage with problem-based project briefs, and develop solutions that are appropriate for both client and audience needs across a range of devices. Outcomes include app, web and screen designs.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) DESN 1021

Assumed Knowledge

Students should have skills in producing documents or illustrations using Photoshop and Illustrator.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Employ a user-centric view in the context of the digital design process
2. Implement a critical outlook and be able to identify key issues in designing for the digital realm
3. Utilise a range of methods of describing a designed experience
4. Define an experience design problem as well as resolve and present that resolution to design team colleagues
5. Apply interactive design processes and planning methods
6. Work effectively to produce a designed digital artefact.

Subject Content

- social, historical, technical and cultural contexts in which digital design occurs.
- experience design concepts and processes
- Instructional design basics
- Interaction design fundamentals and methods, including:
- screen design basics
- interface design: navigation systems and information architecture
- goal directed design, implementation Models and mental Models, Understanding users, Personas and goals, scenarios and requirements
- Qualitative research methods--UX design, adopt A user and needs Mapping
- interactive digital media design processes, including planning, evaluation, Revision and testing

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are

regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Portfolio	Visual design work, lecture notes. Approx. 1,500 words	30	N	Individual
Proposal	Visual design work, annotations and precedent report. Approx. 1,500 words	30	N	Individual
Applied Project	Visual design work, annotations and brief user report. Approx. 1,000 words	40	N	Individual

DESN 2006 Graphic Design: The Professional Context

Credit Points 20

Legacy Code 102270

Coordinator Leo Robba (https://directory.westernsydney.edu.au/search/name/Leo Robba/)

Description In this subject, students begin to situate their graphic design practice within a contemporary professional context. Designers today need to collaborate with colleagues or other professionals, and the majority of graphic design briefs require solutions that converge across a variety of media platforms and two, three or four dimensions. Students will undertake projects that extend their design thinking in these areas. Part of the subject requires students to work as part of a team, to develop content and a solution that engages the audience through a range of different media. Throughout this subject, students continue to extend their visual language, and associated material and digital skills.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) DESN 1007

Assumed Knowledge

120 credit points in 1571 Bachelor of Design (Visual Communication) or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use a range of communication skills that facilitate working collaboratively in design teams.
2. Devise and apply effective workflow strategies as an individual and as part of a team.
3. Evaluate a range of digital and material methods in relation to the execution of ideas and differentiate between the appropriateness of such methods in the development of a designed solution.
4. Use appropriate digital and material processes in response to the design brief, client and audience.
5. Employ a conceptual approach to the development of design ideas and apply this thinking into three dimensional form and multi-platform scenarios.

Subject Content

- Packaging Brand essence
- Three dimensional form and design
- Materiality and experience
- sustainability and environmental considerations
- design management
- cross-platform publishing
- The design of complex multi-page material
- Typography, layout and Image design
- Proofing, prototyping and production

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1000 words 10 minutes	60	N	Both (Individual & Group)
Professional Task	3 process milestones plus final design solution	40	N	Individual

DESN 2007 Illustrating Narrative

Credit Points 10

Legacy Code 101017

Coordinator Janet Saunders (https://directory.westernsydney.edu.au/search/name/Janet Saunders/)

Description This subject explores the design of illustration as a linear narrative and its conceptual, stylistic, and format aspects. Students will create a linear illustrated narrative (12+ page book or equivalent digital format) where they will be encouraged to consider the design of different narrative forms, illustrative techniques, and styles for the target audience, client, context, and genre. Additionally, the subject aims to help students explore and enhance their image-making practices using traditional and digital tools.

School Humanities & Comm Arts

Discipline Graphic and Design Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) DESN 1013 OR
DESN 1011

Equivalent Subjects LGYA 0045 - Illustrative Narrative 3 and LGYA 0052 - Illustrative Narrative 4

Assumed Knowledge

An ability to use the computer programs 'In-Design, Photoshop, and Illustrator' in a Macintosh
computer lab.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Employ a range of diverse illustrative mediums, techniques, styles and typography to create specific sequential 'reading' experiences through illustration.
2. Explain how the design elements and format of a book design can influence the 'reading' experience of the target audience.
3. Reflect on the effectiveness of image making strategies through illustrative practices.
4. Employ the compositional strategy of visual weight and directed tension in the design of an illustrated book.
5. Explain how the needs of the target audience, the content of the written text, and the social context of the proposed book influence the design criteria.
6. Employ concept mapping to identify the structure and communication options for illustrated narrative design.
7. Employ appropriate format design options for an illustrated book.
8. Demonstrate the development of professional accountability, through effective time management and participation in critical discussion in feedback, on project work.

Subject Content

1. Experimentation with a range of traditional and digital mediums and illustration techniques to develop individual image-making practices.
2. Composition, format design, visual weight and directed tension in relation to designing an illustrated linear narrative.
3. Visual strategies to convey concepts of space, time and movement.
4. Explore format design, page/screen layout, relationship of type to image, colour, and other design devices.
5. Analysis of text for conceptual content and the development of appropriate visual signifiers.
6. Research and analysis of context, target audience and conceptual content of selected written text, with the purpose of developing suitable illustrations for that text.
7. Producing drafts of character/s, backgrounds or other stylistic approaches while mapping story flow for teacher/client feedback.
8. Provide evidence of original thinking through your drafts and evaluation of your process.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Portfolio	Visual work, 500-word research report	50	N	Individual
Applied Project	Visual work	50	N	Individual

DESN 2011 Motion Design

Credit Points 10

Legacy Code 102273

Coordinator Greg Hughes (https://directory.westernsydney.edu.au/search/name/Greg Hughes/)

Description This subject introduces students to the fundamentals of motion design practice. Students will discover how elements of static graphic design can be incorporated with sequence, time, space and sound to enhance the exchange of information and meaning in a variety of project contexts and kinetic media outcomes. Additionally, students will discover the purpose and function of motion design and be able to identify professional pathways associated with these skills and knowledge. Students will be exposed to a range of motion design preproduction and production methods, from fundamentals and guidelines to experimental and expressive approaches. Students

will learn the importance of planning, mapping and evaluating linear narrative, in combination with the introduction of key software supported by online video courses, for successful motion design outcomes.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) DESN 1021 OR
COMM 2042 OR
COMM 2051 OR
COMM 2051 AND
COMP 2020

Assumed Knowledge

Students are expected to have computer literacy including working in a networked environment on a Macintosh computer; management, transportation and storage of digital information and digital production processes such as scanning, pdf production and file storage.Literacy with image manipulation software - Photoshop and Illustrator is required.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Employ a motion design vocabulary for professional design production and group critique.
2. Analyse the purpose and function of motion design in historical, cultural, social, technological and industry contexts.
3. Synthesise motion design preproduction solutions utilising print and screen-based media to specific design briefs.
4. Produce motion design artefacts utilising time-based media and software to specific design briefs
5. Creatively apply kinetic typography as a means to enhance the relay of information and meaning for improved communication.
6. Apply graphic design knowledge in a time-based medium as a means to enhance the relay of information and meaning for improved communication.
7. Produce and present project work to a professional standard.

Subject Content

- Print-based graphic design fundamentals are reviewed and extended to screen-based and kinetic media considerations.
- The fundamentals of kinetic screen-based motion design, including: image, colour and typography: preproduction and production techniques: sequence, transitions, time and space; framing and editing; and sound.
- The purpose and function of Motion design in historical, cultural, linguistic, semiotic and technological contexts.
- Motion design industry pathways and key influential practitioner case studies.
- terms, principles and conventions of Motion design practice.
- preproduction and production processes and practical Activities for specific Motion design contexts.
- reflection, Discussion and deconstruction of Motion design processes and artefacts, from both industry and student work development, via peer andclass presentation critique feedback activities.
- software skills development via in-class and online video course materials, Activities and engagement.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1. Static graphic design piece; 2. Production planning material (500 words or equivalent); 3. 20-30 second motion design video.	40	N	Individual
Applied Project	1. Production planning material (500-750 words or equivalent); 2. Documentatio of design development (500 words or equivalent); 3. 60-120 second motion graphics piece.	60	N	Individual

DESN 2013 Photomedia: Photographic Practice

Credit Points 10

Legacy Code 102268

Coordinator Enrico Scotece (https://directory.westernsydney.edu.au/search/name/Enrico Scotece/)

Description This subject introduces and examines the multifaceted nature of photographic practice. Students will be introduced to current methods of photographic image production and design for the

purpose of Visual Communication. It explores the relationship between photographic technique, genre and the reception of photographic imagery. Students will be introduced to photographic studio practice as the means of controlling image reception, through the intrinsic principles of the photographic medium, including the control of light, exposure in a studio situation and digital post production.

School Humanities & Comm Arts

Discipline Photography

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) DESN 1015 OR
DESN 1011

Equivalent Subjects DESN 2012 - Photomedia LGYA 0818 - Designing the Image LGYA 0835 - Photo Documentary LGYA 2354 - Introduction to Photomedia

Restrictions

Students must be enrolled in 1571 Bachelor of Design (Visual Communication) or 1737 Bachelor of Design - Visual Communication (Dean's Scholars). Specialist photography facilities with limited space, equipment and limited specialist technical support preclude other students from taking this subject as an elective.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Exhibit proficiency in a range of specialization areas in Photographic practice.
2. Exhibit understanding of principals used to control lighting in the studio and on location.
3. Use both mainstream and alternative image production methods as a means of generating visual material.
4. Exhibit proficiency in visual narrative and image flow, for multi paged outcomes.
5. Art direct an idea from concept to final outcome.
6. Use appropriate visual methods to reach identified target audiences based on research.

Subject Content

- students will engage in Project-based resolutions to Image design problems
- Exercise work will explore The nature and function of photographic Image making, through The experience of areas of specialization within photographic practice.
- research and Project work will explore The process of thematic Image production for designed outcomes.
- The development of skills in visually communicating concepts in A design context, through The use of photographic imagery.
- through in class Activities, students will develop control of The medium, for use in client driven designed outcomes.
- Lynda.com courses: as determined.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Visual work - length/ duration not appropriate	60	N	Individual
Applied Project	Visual work - length/ duration not appropriate	40	N	Individual

DESN 2014 Researching the Visual

Credit Points 10

Legacy Code 102266

Coordinator Alison Gill (https://directory.westernsydney.edu.au/search/name/Alison Gill/)

Description This subject will introduce students to various ways of seeing and reading images in the visual environment. Students will learn how to conduct visual research using a tool kit of methods including semiotic analysis, content and thematic analysis, and basic observational research across the digital and material environments of visual communications design, and to apply their findings in the development of visual concepts. Students will continue to engage as reflective practitioners and learn to position themselves as visual researchers within a particular cultural and personal context.

School Humanities & Comm Arts

Discipline Graphic Arts and Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) DESN 1003 OR
DESN 1011 OR
DESN 1021

Restrictions

Students in program 1791 Bachelor of Screen Media (Arts and Production) must have successfully completed 60 credit points of Level 1 subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Exhibit a critical understanding of visual languages at work in contemporary culture
2. Demonstrate a theoretical understanding of key concepts in visual research
3. Exhibit competency in designing, conducting and presenting visual research
4. Apply techniques of visual analysis to collected visual data
5. Effectively utilise visual research findings in the development of original design concepts

Subject Content

1. Introduction to visual research: an overview of approaches (sociology, archaeology, anthropology, semiotics)
2. Creative referencing
3. Mood boards
4. Content analysis
5. Thematic analysis
6. Semiotics, Decoding and Recoding
7. Visual Rhetoric
8. Ethics in visual research
9. Visual ethnography
10. Visual research for cultural contexts

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	5 minute presentation + PDF (750 words)	25	N	Group
Report	Images + 500 words	25	N	Individual
Report	750 words + images	50	N	Individual

Prescribed Texts

- There is no prescribed text for this subject. Each Lecture Topic will include a reference list that supports that topic and should be referred to as required by students in the completion of their work.

DESN 2016 Creativity, Design Thinking and Visualisation

Credit Points 10

Legacy Code 800237

Coordinator Robert Salama (https://directory.westernsydney.edu.au/search/name/Robert Salama/)

Description This cross-disciplinary subject allows students to explore their creative potential and broaden their perspectives of innovation, through the lens of design thinking. Design thinking offers a range of strategic and practical approaches to creativity and innovation, including making use of different 'types of thinking and reflection; leveraging the dynamics of teamwork; and how conversation and dialogue can generate new thinking about complex problems. Students will apply these key ideas methodologies form design thinking and methods of visual communication, to addressing broad social issues in innovative and creative ways.

School Social Sciences

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects DESN2002 - Creativity Innovation and Design Thinking

Restrictions

Students must have successfully completed 40 credit points of study in their course with a minimum GPA of 5.0 to enrol in this unit. Students who are enrolled in the Bachelor of Creative Leadership (BCL) must enrol in the unit under the BCL. Enrolment in the unit for students enrolled in the BCL is at the discretion of the Academy or the Director of Academic Program.

Learning Outcomes

1. Demonstrate broad and contemporary knowledge of creativity and its influences on sustainability focused design.
2. Discuss design thinking approaches through the dimensions of creativity and innovativeness.
3. Apply design thinking principles and methodologies to create innovative solutions to challenges in interdisciplinary environments.
4. Apply visual communication techniques to communicate complexity.

Subject Content

1. Principles of design thinking
2. Brainstorming and reverse brainstorming.
3. Approaches to mapping in design thinking: empathy mapping, ecosystem mapping, journey mapping.
4. Applying design thinking in cross disciplinary environments
5. Creativity, design thinking and innovation.
6. Visual means for communicating complexity: the golden ratio, posters, infographics, and colour themes.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	10 pages (700 words)	35	N	Individual
Applied Project	10 pages (700 words)	35	N	Individual
Portfolio	10 pages (700 words)	30	N	Individual

DESN 3001 Contextual Design Studies

Credit Points 10

Legacy Code 102275

Coordinator Alison Gill (https://directory.westernsydney.edu.au/search/name/Alison Gill/)

Description Contextual design studies is the study of what happens around design practice - before, during and after - to explain its meaning and effect. Successful communication design has always depended on the connection between form, content, audience and context, and the designer's abilities to analyse, understand and clarify the contexts of communication have become more important to creative practice. In this subject students will learn to apply the theoretical frameworks of semiotic, thematic and rhetorical analysis used by the interdisciplinary field of Design Studies to interpret design's potential as cultural expression and communication. Students will analyse visual signs and conventions as both targeted and tacit responses to a range of contexts revealing design's interests in marketplaces, society and identity. Students will analyse various graphic examples, and design literature, as they investigate the significance and agency of design interactions, media artefacts and systems.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) DESN 2014

Equivalent Subjects DESN 2003 - Design Issues

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply terminology and theoretical frameworks used in design studiesto analyse what design means and does.
2. Research and investigate the social, economic and/or political contexts that inform visual design in explicit and tacit ways;
3. Critically evaluate examples of contemporary design practice that respond to these contexts.
4. Reconceptualise codes and conventions or redirect visual concepts to address an audience and construct a context for visual design including enriching social diversity and environmental sustainability.
5. Demonstrate advanced visual and text-based literacy skills in effective written and visual communication.

Subject Content

1. An investigation of the political, social, cultural, and place-based contexts informing communication design practice using the theories and methods used in the interdisciplinary field of design studies.
2. An investigation of the interplay between form, content, and audience, and designers' abilities to analyse, understand and clarify these connections as critical to the contexts of communication and creative practice.
3. Analysis of visual languages employed in these contexts to enhance the student's own practice and understanding of the importance of graphic expression, message, execution, and audience interaction.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Critical Review	Images + 800 words	30	N	Individual
Essay	1800 words + images	40	N	Individual
Applied Project	Visual outcome + reflection up to 500 words	30	N	Individual

DESN 3002 Data Visualisation

Credit Points 10

Legacy Code 102269

Coordinator Sarah Waterson (https://directory.westernsydney.edu.au/search/name/Sarah Waterson/)

Description We live in an era of data. The designer's role is increasingly one of structuring and transforming data into accessible and meaningful information. In this subject students will be introduced to basic techniques for the visual representation of data. This subject covers both how to design successful charts, maps, and diagrams, as well as how to use these graphics to compose cohesive storytelling pieces. Students will also discuss both practical and theoretical issues when visualising data, and how Graphic Design and Interactive Design principles apply to the visualisation of information. Students will learn how to design basic infographics and mock ups for interactive visualisations, and they will develop skills to start producing compelling and elegant infographics and data visualisation.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) DESN 1021 OR
DESN 1007

Assumed Knowledge

Students should have at least moderate skills in producing documents or illustrations using Photoshop and Illustrator.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an applied understanding of the key techniques and theories used in visualisation, including data models, graphical perception and techniques for visual encoding and interaction
2. Identify the common data domains and corresponding analysis tasks, including multivariate data, networks, text and cartography.
3. Build and evaluate visualisations from data.
4. Use data to tell a story.

Subject Content

- how to analyse and critique Infographics and visualisations in newspapers, books, online and screen media, and how to propose alternatives that would improve them
- how to plan for data-based storytelling through charts, maps, and diagrams
- how to design Infographics and visualisations that are aesthetically pleasing, informative and accurate
- The foundations of graphic design and of interaction design, applied to Infographics and visualisations

Assessment

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) DESN 2014 OR
DESN 3013

Restrictions

Students must be enrolled in program 1571 Bachelor of Design (Visual Communication), 1737 Bachelor of Design - Visual Communication (Dean's Scholars), 1839 Bachelor of Design/Bachelor of Creative Industries or 6011 Diploma in Design/Bachelor of Design (Visual Communication). Successful completion of 160 credit points of undergraduate study and one design field of study subject pairing.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and report on research outcomes, applying this to the design process.
2. Devise appropriate strategies for creative experimentation.
3. Iteratively develop ideas, and creative work.
4. Present design prototypes at industry standard.

Subject Content

Explore a variety of research methods in context.
Analyse and report on research findings.
Write a self-directed brief.
Undertake creative experiments.
Reflect on the design process.
Incorporate feedback into the iteration of design artefact/s.
Refine ideas and develop a design prototype.

Assessment

DESN 3006 Graphic Design: Developing a Personal Portfolio

Credit Points 10

Legacy Code 102276

Coordinator Dan Johnston (https://directory.westernsydney.edu.au/search/name/Dan Johnston/)

Description This subject focuses on the development of your industry orientated practice and personal portfolio development. Throughout the previous core subjects and subject pairings you will have developed particular skills and interests that are beginning to define your design practice and your portfolio. The briefs set in this subject offer you the opportunity to specialise further and to develop your portfolio and will, where possible, include live briefs and competitions. You will continue to refine and develop your visual language, material and digital skills, and continue to develop as an independent learner. The subject will culminate in an industry event, where students will have the opportunity to get their portfolios critiqued by design industry representatives.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) DESN 2006 OR
DESN 3001 OR
MKTG 2003 OR
MKTG 2003

Restrictions

Successful completion of 160 credit points in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Generate creative and appropriate solutions to design briefs that are executed to industry standards
2. Critique and evaluate your own work in order to develop a design portfolio and a body of work suitable for exhibition
3. Define your specific disciplinary interests within the broad field of contemporary visual communication
4. Employ an independent approach to learning and your design practice.

Subject Content

1. Online lectures on design practitioners, graduate experiences and portfolio development.
2. All seminar discussions will be conducted face to face, on campus.
3. All presentations will be conducted face to face, on campus.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

DESN 3007 Illustrating Popular Culture

Credit Points 10

Legacy Code 102271

Coordinator Leo Robba (https://directory.westernsydney.edu.au/search/name/Leo Robba/)

Description This subject explores the powerful qualities of illustration when used as a visual communication strategy in the design of popular culture: within an advertising campaign and as social commentary through editorial illustration. The potential of a range of illustrative styles, mediums and techniques, will be explored through experimentation with a variety of visual strategies that utilize lateral thinking, linked to the design of professional concepts, developmental processes and media considerations.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) DESN 1011

Equivalent Subjects DESN 2008 - Illustration Advertising and Editorial

Assumed Knowledge

An ability to use the computer programs "In-Design, Photoshop, and Illustrator" in a Macintosh computer lab.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Implement lateral thinking approaches to illustrative composition, style, technique and media to create illustration for specific design contexts.
2. Employ research findings in the development of a design concept.
3. Demonstrate an understanding of the interrelationship of the concept, client and target audience of an advertising campaign through illustrative design for specific publishing contexts.
4. Reflect on the effectiveness of illustrative communication strategies used in an advertising campaign.
5. Explain the design strategy and method of communication of the content of a range of editorial illustrations.
6. Explain how visual strategies such as metaphor, satire, symbolism and irony are used in editorial illustration.
7. Demonstrate the development of professional accountability, through effective time management and participation in critical discussion in feedback, on project work.

Subject Content

- development of A range of illustrative skills and lateral thinking approaches that include thumbnails, Working roughs, and experiments with illustrative mediums and techniques.
- illustrative style and its relationship to Target audience and design publishing context.
- how to interpret The design brief through illustration, understand The links between concept, client and Consumer needs, and be able to cost The illustrative design project.
- Analysis of "text" and design context in the creation of editorial illustration and illustration used in an advertising campaign.
- Utilise illustration as social commentary.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Visual work, 500 word research report	50	N	Individual
Applied Project	Visual work and 250 word analysis	50	N	Individual

Teaching Periods

DESN 3008 Interactive Design: Apps

Credit Points 10

Legacy Code 102267

Coordinator Sarah Waterson (https://directory.westernsydney.edu.au/search/name/Sarah Waterson/)

Description This subject focuses on design methodology for the development and delivery of interactive media applications (apps). Particular concepts addressed include conceptual integration and convergence of various media forms, screen design, navigational hierarchy and structures, and designing engaging interactive interfaces. General principles of interface, information architecture and interaction design will be introduced, alongside principles of digital media production.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ENGR 1021 OR
DESN 1021

Equivalent Subjects DESN 2010 - Interactive Design 1

Assumed Knowledge

Computer literacy including working in a networked environment on a Macintosh computer;
management, transportation and storage of digital information and digital production processes such as scanning, pdf production and file storage. Skills in design principles: layout, colour and typography. Literacy with image manipulation software - e.g. Photoshop.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design and produce appropriate screen design, information architecture and interface design for a mobile/tablet app.
2. Produce a design document that successfully applies user scenario and user-centred design processes to project development.
3. Develop and produce an interactive app that demonstrates the appropriate application of interaction design principles.
4. Apply and select appropriate digital media formats and design processes within the project work, including planning, evaluation, revision and testing methods.
5. Identify key issues in the app design domain.

Subject Content

- screen design
- interface design, navigation systems and information architecture.
- interaction design fundamentals and methods, including user scenarios and personae.
- interactive and user centred design practice for digital media apps
- App design principles and processes, including planning, evaluation, Revision and testing
- Lynda.com software tutorials as specified.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Portfolio	1500 words and design work	20	N	Individual
Proposal	1500 words and design work	30	N	Individual
Applied Project	500 word report and 5 minute presentation	50	N	Individual

DESN 3011 Public Memory and Commemoration

Credit Points 10

Legacy Code 101253

Coordinator Pamela James (https://directory.westernsydney.edu.au/search/name/Pamela James/)

Description Throughout history various forms of material culture (such as art, architecture, sculpture, objects and photographs) have been used to memorialize individuals as well as to commemorate events, both personal and national. As such, an examination of commemorative works offer valuable insights into the production of public memory and history. This subject explores the particular contexts of such memorials; their meaning, design and, politics. The diverse expressions of commemoration in Australia and the consequent production of public memory provides the arena for such considerations.

School Humanities & Comm Arts

Discipline Graphic Arts and Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 0528 - Dangerous Visions LGYA 1028 - Dangerous Visions

Restrictions

Successful completion of 60 credit points of study in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use particular examples to explore the construct of public memory through commemorative modes.
2. Describe the relationships between public memory, commemoration and political constructs.
3. Analyse the relationship between the commemorative object, public memory and the aesthetic models of a particular period.
4. Explore the consequences of changing perceptions of meaning in commemorative objects.

Subject Content

1. Design, politics and the construction of public memory.
2. The diverse expressions of commemoration
3. The changing meanings and contexts of memory: Rayner Hoff and Sacrifice
4. Public Memory, Mourning and Memorialisation: Road side memorials, funereal cultures and 'high' art commemorations.
5. Remembering and Re-Telling: Stories, images and meanings in personal collections.
6. Memento Mori and Memorabillia
7. Maintaining the past. The renovation of the Queen Victoria Building and State Theatre in Sydney and Captain Cook's cottage in Melbourne
8. Art and commemoration.

- Subject Reader

DESN 3013 Social Design: Research and Practice

Credit Points 10

Legacy Code 102274

Coordinator Leo Robba (https://directory.westernsydney.edu.au/search/name/Leo Robba/)

Description This subject introduces students to the idea that graphic designers can be agents of change. Set project briefs will focus on social and political issues exploring the potential inherent in graphic design practice to make a real difference to society. The subject will encourage students to go beyond the definition of a problem solver, encouraging them to act as a problem seeker, who can use their design thinking skills to develop ideas that respond proactively to society's problems rather than reacting to a client's set brief. The subject will introduce further design-led, social and participatory research methods, that continue to build on the design process, and further expand the methods that underpin aspects of research and practice during the remainder of the degree. Students will refine and develop their visual language skills, in combination with material and digital skills, facilitating their development as an independent learner.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) DESN 2006 OR
DESN 2014

Equivalent Subjects DESN 3004 Design Research Training

Assumed Knowledge

Students should have completed one major pairing.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Undertake independent research relevant to a brief, with particular emphasis on the effective critical review of research findings and the translation of these into design strategy and outcome in an iterative process.
2. Exhibit a reflective and creative approach to project development and the design process
3. Employ a design process and practice in a context that requires sensitivity to, and an awareness of, social, cultural and environmental issues
4. Design an appropriately targeted communication strategy for a defined audience, group or stakeholder
5. Demonstrate ability to work collaboratively and respond effectively to feedback
6. Demonstrate ability to explain the process of design development and present soundly justified design concepts and ideas.

Subject Content

- introduction to social design
- Responding to A social design brief
- developing A theory of change to inform targeted and strategic design responses to The brief
- applying design research methods to immerse in The real World context defined by The brief
- engage stakeholders to learn more about The real World context defined by The brief
- developing design concepts in An iterative process of research, design development and reflection
- work collaboratively to refine design concepts
- Seek meaningful feedback from stakeholders and peers

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1,000 - 1,500 words plus images	40	N	Individual
Applied Project	500 - 750 words plus images	30	N	Individual
Professional Task	Student group will produce design campaign collateral (as per brief) to be featured in a 3 minute pitch video linked to a website. Plus a report of 500 words plus images.	30	N	Group

DESN 4005 Major Design Project

Credit Points 20

Legacy Code 102279

Coordinator Dan Johnston (https://directory.westernsydney.edu.au/search/name/Dan Johnston/)

Description In this year-long subject students will develop a self-directed project from initiation to completion, in consultation with an academic supervisor. The first semester involves engaging in background research to facilitate creative development. Students will

survey the field for their project identifying precedents and contexts, leading to experimentation and exploration of a range of potential options and addressing any arising issues, to develop a proof of concept. In the second semester students will develop the work to completion, through an iterative process of prototyping, reflection and analysis. The completed work will be prepared to a professional standard for display at a showcase event, It is expected that there will be a documented developmental process undertaken consistently across the year, resulting in the final work, which will be a professional outcome, relevant to a field of Visual Communication design. Students are expected to be self-motivated, and work as an independent professional practitioner throughout the duration of the subject.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) DESN 3003 - Design Research Project

Equivalent Subjects DESN 4001 - Communication Design Major Project

Restrictions

Students must be enrolled in 1571 B. Design (Visual Communication), 1737 B Design - Visual Communication (Dean's Scholars) or 6011 Diploma in Design/Bachelor of Design (Visual Communication) and achieve 240cps before enrolling in this subject.

Please note: students must enrol in DESN 4005 Major Design Project in both Autumn and Spring sessions in order to receive final grades and credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop a range of relevant research findings around a project theme, based on selected literature, precedent design examples, and project context..
2. Devise a self-directed brief that responds to an identified issue or area of interest within the broad discipline areas of Visual Communication.
3. Critically assess the appropriateness of a range of concepts, and the visualisation of these, in order to improve the design solution.
4. Produce and present a designed outcome that demonstrates an understanding of relevant professional contexts and utilises appropriate media, processes and strategies.
5. Employ an independent approach to learning and exercise an appropriate range of project management and communication skills.

Subject Content

1. Lectures on creative inquiry and project development
2. Regular Seminar discussions of student project work in progress, where students present a range of approaches in selected media forms towards their project execution
3. Presentations of student work to lecturers, peer panels, and for exhibition
4. Student discussion forums where ongoing peer learning is encouraged

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	Design work plus 1,000 words	25	N	Individual
Presentation	Design work plus 5 minute presentation	25	N	Individual
Presentation	4 x 5 Minute Presentations	20	N	Individual
Presentation	• Design work • 10 minute presentation • graduation exhibition display	30	N	Individual

DESN 4006 Professional Design Experience: The Individual Practitioner

Credit Points 20

Legacy Code 102280

Coordinator Leo Robba (https://directory.westernsydney.edu.au/search/name/Leo Robba/)

Description Students will continue to work in the Burrow studio, but in this subject they are positioned as a junior designer who is working individually in response to a range of briefs with their tutor as Creative Director. Students will develop their capacity to manage projects independently from briefing, research, development, costing, and pitching. Through this capstone subject, students will also develop a self-promotion strategy, and increase their understanding of a range of professional practice issues as they relate to the individual practitioner, further preparing them for the industry.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Student Contribution Band HECS Band 2 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) DESN 4007

Restrictions

Successful completion of 240 credit points in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Further develop professional standards of communication and conduct in relation to working with colleagues, supervisors, clients, and suppliers
2. Identify and use relevant research methodologies to inform understanding of target audience and develop appropriate concepts for client-driven briefs
3. Practise industry-standard methods of project management, pitching, costing, delivery as an individual practitioner
4. Engage with a variety of design development and production processes that lead to appropriate finished outcomes
5. Develop a design portfolio and self-promotion strategy for industry presentation.

Subject Content

1. Online material that cover professional practice issues such as design ethics, project management, professional communication
2. Resources and activities that introduce students to practical issues such as costing, invoicing, negotiation, pay rates
3. Field work as relevant to the brief (e.g. site visits, online research, attendance of meetings/events)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Written and visual work equivalent to 2,000 words.	50	N	Individual

DESN 4007 Professional Design Experience: The Studio

Credit Points 20

Legacy Code 102278

Coordinator Leo Robba (https://directory.westernsydney.edu.au/search/name/Leo Robba/)

Description The Burrow design studio simulates a professional environment where students heighten their design thinking and practice through work-integrated learning. In this subject, the student is positioned as a junior designer who is part of a team working in response to live briefs with real learning partners and tangible outcomes, under the guidance of tutors who act as creative directors. Students will develop their higher level professional design skills through working individually and collaboratively to manage projects from briefing, research, development, pitching, artworking, production and delivery. Through this subject, students will also advance their understanding of what the industry expects of junior designers, providing a bridge between study and work life.

School Humanities & Comm Arts

Discipline Graphic Design Studies

Level Undergraduate Level 4 subject

Pre-requisite(s) DESN 3006

Equivalent Subjects DESN 4008 - Professional Design Studio

Restrictions

Successful completion of 240 credit points in currently enrolled program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply a range of skills in idea generation, concept development, reflective practice, artworking, presentation and production
2. Develop professional and ethical standards of communication and conduct in relation to working with colleagues, supervisors, learning partners and suppliers
3. Identify and use relevant research methodologies to inform understanding of target audience and develop appropriate concepts for learning partner briefs
4. Practice industry-standard methods of project management, such as pitching, quoting and delivery as part of a studio team
5. Engage with a variety of design development and production processes that lead to appropriate finished outcomes.

Subject Content

- Online material pertaining to professional practice issues such as ethics, project management, communication
- Studio team meetings
- Learning partner visits to receive formative feedback

- Field visits as required by the brief

Assessment

EART 1004 Soils

Credit Points 10

Legacy Code 300823

Coordinator Jason Reynolds (https://directory.westernsydney.edu.au/search/name/Jason Reynolds/)

Description This subject provides students with a basic understanding of soil formation and erosion processes, soil physical, chemical and biological properties, and the diversity and classification of soils in the Australian landscape. These basic principles are explored in relation to the sustainable management of soils for horticultural and agricultural production and for environmental management, other land uses and in relation to forensic investigation and studies. The practical sessions are designed to reinforce the lecture material and include field description and analysis of soil profiles and properties, soil sampling principles and practice, laboratory measurement of soil physical and chemical properties essential/important for plant growth, soil biology and human and animal remains.

EART 2001 Climate Change Science

Credit Points 10

Legacy Code 300837

Coordinator Amy-Marie Gilpin (https://directory.westernsydney.edu.au/search/name/Amy-Marie Gilpin/)

Description A factual understanding of the energy balance of the globe, how this impacts on climate and how climate has varied in the past, is essential for any person working in the climate change area. This subject will introduce students to the concept of energy balance and climate, our understanding of how climate works, and how it has changed through time. Topics in basic atmospheric science will give students a critical understanding of current environmental concerns and debates about radiative forcing (the greenhouse effect), climate change, ozone depletion, photochemical pollution and acid precipitation.

School Science

Discipline Atmospheric Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 6248 - Atmospheric Science

Restrictions

Successful completion of 60 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the composition and structural characteristics of the atmosphere as they relate to the energy balance of the Earth, including solar radiation, aerosols, particulates, water vapour, ozone, and greenhouse gasses.
2. Describe the major process components of the climate system, including elevated CO2, temperature, precipitation, evaporation, transpiration, and wind, evaluate terrestrial feedbacks to climate change and how these may act to modify the rate of future change.
3. Describe the evidence for past climates (paleoclimates), including techniques to reconstruct climate through direct and indirect methods.
4. Explain the major theories and concepts of global climate change, including model scenarios of future climate regimes.
5. Evaluate the impact of climate change on physiology, growth, productivity and species interactions in biological systems. Understand the processes driving climate change impacts on ecosystem structure, diversity and function.
6. Evaluate human impacts - land use changes, industrial pollution, rapid population growth - on climate variables (CO2, temperature, precipitation) and their potential impact on biological and socio-economic systems, including indigenous culture.
7. Use spreadsheets and statistical tools in analytical programs to analyse and graph data, in order to generate appropriately conclusions.
8. Communicate findings correctly in oral or written form using an appropriate style, accessing scientific literature to place findings into context.

Subject Content

1. Introduction to atmospheric science, the structure and composition of the atmosphere.
2. The Earth's energy balance - the role of water vapour, aerosols, particles and gasses.
3. Understanding processes driving the climate system.
4. Relationships between atmospheric composition and climate - historical evidence.
5. Introduction to climate models and climate predictions.
6. Impacts of elevated carbon dioxide and climate change on plant physiology and interactions among plants, animals and microbes.
7. Effects of climate change on natural and managed ecosystems, including agriculture.
8. The carbon cycle and ecosystem feedbacks.
9. Socio-economic drivers of (and responses to) climate change, including population growth, urbanisation and land use change.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Undergraduate Level 2 subject

Restrictions

Successful completion of 60 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe soil and substrate properties and link their importance in the management for sustainable plant production
2. Design appropriate soil and substrate sampling protocols for use in professional and applied contexts
3. Perform basic field and laboratory tests of key soil and substrate physical and chemical properties for plant production and forensic evidence
4. Evaluate the significance of test results for plant production, accessing relevant published information to aid in interpretation
5. Develop information literacy and written communication skills through accessing, evaluating and integrating information from research journals in an essay on a soils topic of the students choice

Subject Content

1. Classification of Australian soils and their histories.
2. Soil and substrate chemical & physical properties and their application.
3. Functions of soil and substrate in biology and ecology.
4. Managing soil and substrate fertility for environmental and agricultural improvement
5. Regenerative approaches to improve soil and substrate fertility
6. Carbon farming and data driven systems management.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Must have passed 60 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe soil and substrate properties and link their importance in the management for sustainable plant production
2. Design appropriate soil and substrate sampling protocols for use in professional and applied contexts
3. Perform basic field and laboratory tests of key soil and substrate physical and chemical properties for plant production and forensic evidence
4. Evaluate the significance of test results for plant production, accessing relevant published information to aid in interpretation
5. Develop information literacy and written communication skills through accessing, evaluating and integrating information from research journals in an essay on a soils topic of the student's choice

Subject Content

1. Classification of Australian soils and their histories.
2. Soil and substrate chemical & physical properties and their application.
3. Functions of soil and substrate in biology and ecology.
4. Managing soil and substrate fertility for environmental and agricultural improvement
5. Regenerative approaches to improve soil and substrate fertility
6. Carbon farming and data driven systems management.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	2,000 words	40	N	Individual
Presentation	10 minutes	30	N	Individual
End-of-session Exam	2 hours	30	N	Individual

EART 3001 Biological Adaptation to Climate Change

Credit Points 10

Legacy Code 300909

Coordinator Justin Welbergen (https://directory.westernsydney.edu.au/search/name/Justin Welbergen/)

Description This subject investigates how organisms respond to variation in climate and what can be done to reduce their vulnerability to anthropogenic climate change. The subject makes use of a novel conceptual framework that defines 'vulnerability' as a function of the 'exposure' and 'sensitivity' of organisms to climate change. Therefore, we will begin by exploring how organisms are exposed to climate change, from regional climatic changes acting at the scale of populations, to local climatological effects acting at the scale of individuals. Next, we will examine what determines the sensitivity of organisms, focusing on the physiological, behavioural, and life-history traits that affect the ability of organisms to cope with and adapt to climate change. Then, we will show how exposure and sensitivity combine to determine the vulnerability of organisms, including in both managed and natural ecosystems. Finally, we will discuss the 'mitigation' and 'adaptation' strategies that can prevent the worst of the potential impacts from becoming realised and help protect our biodiversity in the face of anthropogenic climate change.

School Science

Discipline Ecology and Evolution

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Successful completion of 40 credit points at Level 2.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe how climate change will affect wildlife and ecosystems from local and global perspectives
2. Explain the significance of historical changes in climate in shaping ecosystems and species radiations
3. Evaluate climate change exposure at different temporal and spatial (global to microhabitat) scales
4. Evaluate climate change sensitivity at all levels of biological organisation
5. Analyse what drives vulnerability of organisms to climate change and what can help reduce impacts
6. Conduct investigations safely and ethically in the field and laboratory, using sampling methodology correctly to obtain valid data
7. Use spreadsheets and statistical tools in analytical programs to enter, analyse, and graph data; and use GIS and population modelling tools to draw appropriate conclusions from data
8. Communicate findings correctly in oral or in written form using an appropriate style, as well as accessing the scientific literature to place the findings in context

Subject Content

1. Overview on climate change impacts on biodiversity
2. Effects of climate change exposure at different temporal (means vs extremes) and spatial (global to microhabitat) scales
- Historical climate change, recent and future global & regional climate change (climate change-velocity etc.)
- Extreme events (changes in regimes)
- climate change refugia, microhabitat buffering
3. Comparison of climate change sensitivity at all levels of biological organisation
- Genetic change, acclimation/phenotypic plasticity Vs adaptation
- Cellular & epigenetic processes
- Plant physiology
- Animal physiology

- life-history, population dynamics
- species interactions & phenology
- Ecosystem function

4. Factors that drive vulnerability of organisms to climate change and can help reduce impacts
- Vulnerability - focus on biodiversity
- Vulnerability - focus on agriculture
- Prioritisation & conservation action

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quizzes	1 hr	20	N	Individual

EART 3005 Statistical Hydrology

Credit Points 10

Legacy Code 300991

Coordinator Ankit Agarwal (https://directory.westernsydney.edu.au/search/name/Ankit Agarwal/)

Description This subject covers the principles of statistical hydrology. It explores at-site flood frequency analysis, regional flood frequency analysis, trend analysis of hydrological data, linear regression analysis and multivariate statistical techniques to solve hydrological problems.

School Eng, Design & Built Env

Discipline Hydrology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) EART 4001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply at-site flood frequency analysis techniques to estimate design floods from recorded streamflow data.
2. Apply regional flood frequency analysis techniques to estimate design floods when no recorded streamflow data is available.
3. Apply trend analysis to rainfall and streamflow time series data to check the stationarity of the data.
4. Apply linear regression analysis to develop prediction models to estimate streamflow and rainfall indices.
5. Apply multivariate statistical techniques to hydrological problems.
6. Evaluate current Australian codes and software to solve statistical hydrological problems.
7. Critically evaluate current literature to benchmark recent problems and developments in statistical hydrology practice.
8. Design sustainable hydrology projects.

Subject Content

1. At-site flood frequency analysis
2. Regional flood frequency analysis
3. Trend analysis of hydrological data
4. Linear regression analysis as applied to hydrological problems
5. Multivariate statistical techniques as applied to hydrological problems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

Report	2,500 words	25	N	Individual
Final Exam	2 hour	55	N	Individual

EART 3006 Science of the Anthropocene

Credit Points 10

Legacy Code 301212

Coordinator Jason Reynolds (https://directory.westernsydney.edu.au/search/name/Jason Reynolds/)

Description The subject explores how the earth has been irreversibly altered through human activities. Topics include-the composition of the ocean, land, and atmosphere, and the impacts humans have had on these systems. The subject looks at the detection and control of modern pollutants with a focus on field sampling and modelling of selected environmental systems. These topics will be brought to life in a two-day field trip to sites of significant anthropogenic impact.

School Science

Discipline Geochemistry

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects EART 3002 Environmental Geochemistry
EART 3003 Environmental Geochemistry

Restrictions

Successful completion of 120 credit points

Assumed Knowledge

A basic understanding of scientific enquiry including the periodic table, equilibria, and pH. Introductory statistics including mean, standard deviation, and distributions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the chemistry of the surface of the Earth, and how it is modified by human activity.
2. Construct and detail the geochemical cycles of various elements
3. Studying the effects of equilibrium for acidity and alkalinity
4. Explain current environmental issues with a focus on the anthropocene
5. Discuss environmental quality criteria in terms of their significance and monitoring, remediation, and rehabilitation of various human-impacted environments.
6. Develop skills used to monitor environmental materials, including the design, construction, testing, and evaluation of a pollutant removal device.
7. Synthesise information on the impacts of the anthropocene for presentation to peers and an academic audience.

Subject Content

The formation of the solar system and Earth
The geological principles relating to elemental mobility
The impacts of humans cycling of elements
The artefacts of the Anthropocene on Earth
Current environmental issues and remediation
Field visits to sites having significant anthropogenic impact
The design and testing of devices to remove anthropogenic pollutants

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	4 x 10%	40	N	Individual

EART 3007 Land Degradation and Contamination

Credit Points 10

Legacy Code 301273

Coordinator Jason Reynolds (https://directory.westernsydney.edu.au/search/name/Jason Reynolds/)

Description This subject will examine current interdisciplinary topics on land degradation and contamination in both urban, peri-urbanand rural environments. The effects of the various human induced land degradation and contamination processes and pollutants in terrestrial environments will be explored and how impacts can be ameliorated and managed. The focus is on both the science of environmental pollutants and on the remediation strategies currently available. Topics include; basic concepts of soils, study of the processes, common soil pollutants, persistent organic contaminants and pesticides, acidification of soils, quantitative risk assessment, land reclamation, and landfill sites

Level Undergraduate Level 3 subject

Restrictions

Successful completion of 60 credit points

Assumed Knowledge

A basic understanding of scientific enquiry including the periodic table, equilibria, and pH. Introductory statistics including mean, standard deviation, and distributions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Detail the interactions between land, human activities and pollutants
2. Evaluate land data to assess degradation and contamination
3. Explain current land degradation and contamination issues and processes
4. Discuss current environmental quality criteria in relation to land management
5. Demonstrateskills used to monitor degradation and contamination on land
6. Synthesise data for reporting to peers and an academic audience

Subject Content

1.Soil concepts
2.The history of land degradation and contamination in Australia
3.Land degradation due to erosion, salinity, organic matter and fertility decline, soil acidity and alkalinity and other related factors
4.Environmental contaminants and their fate in the environment
5.Pathways for contamination mobility on land surfaces
6.Analytical techniques for measuring contamination and degradation
7.Statistical and modelling approaches to land evaluation and assessment

8.Environmental quality criteria for land evaluation and assessment

Equivalent Subjects ECON 0001 - Economics (WSTC Prep)

Restrictions

Students must be enrolled in a Western Sydney University, The College Foundation Studies program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define and explain basic economic concepts and relationships
2. Interpret economic information presented in a variety of forms: text, graphs, statistics, illustrations, diagrams
3. Integrate descriptive economics, economic theory and applied economics
4. Select and organise economic information from a variety of sources for relevance and reliability
5. Describe trends in Australia's economic performance and discuss contemporary issues affecting this trend

6. Explain the operation of government micro and macro-economic policies

Subject Content

1. Economic Concepts and Systems
(including economic growth and its measurement) Types of economic systems.
2. The Circular Flow and Economic Fluctuations
The circular flow of income, national income, expenditure and income.
3. The Price Mechanism
Demand, supply and equilibrium, price elasticity.
4. Market Structures
Features of market structures and the Australian capitalist economy, contemporary market capitalism, government market intervention in the Australian economy.
5. The Australian Financial System and Money
Financial institutions, money and interest, financial deregulation, monetary policy.
6. Economic Policies
Macroeconomic management in Australia, fiscal policy, monetary policy (brief review), prices + incomes policy and external policy, the 'Policy Mix'
7. Australia in the International Economy and contemporary issues

ECON 1002 Consumers, Firms and Markets (WSTC)

Credit Points 10

Legacy Code 700249

Coordinator Abdullah Al Aabed (https://directory.westernsydney.edu.au/search/name/Abdullah Al Aabed/)

Description This subject is an introduction to microeconomics. It provides students with an understanding of basic concepts such as value, rational consumer behaviour, the behaviour of firms in various market structures, the efficiency and failings of markets, the distribution of wealth and income, and the role of government regulation and intervention. It illuminates these concepts by considering and debating their application to contemporary economic and social issues such as: the influence of marketing on consumer choices, the concentration of market power in Australian industries, rising income and wealth inequality, minimum wage laws, and governmental responses to environmental problems and climate change.

ECON 1003 Financial Institutions and Markets

Credit Points 10

Legacy Code 200048

Coordinator Sean Toohey (https://directory.westernsydney.edu.au/search/name/Sean Toohey/)

Description The investment, financing and risk management decisions made by individuals, firms and governments are implemented by creating and trading financial instruments in financial markets, often with the involvement of a variety of institutions. Using the Australian financial system as an illustration, Financial Institutions and Markets introduces students to the theory and functions of financial institutions and markets. Students develop an understanding of the role and functions of bank and non-bank financial institutions and of markets in equities, debt, foreign exchange and derivatives.

School Business

Discipline Banking and Finance

Level Undergraduate Level 1 subject

Equivalent Subjects ECON 1004 - Financial Institutions and Markets (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the major institutional features of the Australian financial system;
2. Explain the function and operation of bank and non-bank financial institutions in the Australian financial system;
3. Explain the function and operation of markets in equities, debt, foreign exchange and derivatives;
4. Examine an element of the financial system and summarise and report relevant and contemporary information in the form of an oral presentation;
5. Examine an element of the financial system and summarise and report relevant and contemporary information in the form of a written report;
6. Evaluate the role of institutions, markets and regulators in the Australian financial system;
7. Perform calculations relevant to the use of various financial instruments.

Subject Content

Australian financial institutions
Equity markets
Time value of money
Short and long term debt markets
Foreign exchange markets
Derivatives markets

Assessment

ECON 1006 Introduction to Economic Methods

Credit Points 10

Legacy Code 200052

Coordinator Raja Mukherjee (https://directory.westernsydney.edu.au/search/name/Raja Mukherjee/)

Description Introduction to Economic Methods covers basic concepts in mathematics and statistics to help student understanding of subjects such as accounting, management, marketing, finance, and economics. Students taking this subject are expected to improve their numeracy and analytical skills. In particular, students will learn how to collect, analyse and interpret data using simple descriptive and inferential statistical methods including simple regression analysis. In addition, by working through applied exercises, students are expected to improve their problem solving skills and acquire a basic understanding of calculus relevant to fields such as finance.

Level Undergraduate Level 1 subject

Equivalent Subjects LGYA 9799 - Introduction to Economic Methods MATH 1030 - Statistics for Business MATH 1028 - Statistical Decision Making MATH 1029 - Statistical Decision Making (UWSC) MATH 1012 - Management Analytics MATH 1031 - Statistics for Business (WSTC)

Assumed Knowledge

HSC Mathematics or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply concepts of simple algebra and calculus in describing economic concepts and solve elementary problems in unconstrained optimisation as applied in accounting, finance and economics;
2. Collect data and analyse its main features using descriptive statistics and computer software;
3. Apply probability concepts to solve problems;
4. Evaluate arguments involving discrete or continuous probability distributions;
5. Perform statistical inference involving interval estimation and hypothesis testing of statistical population parameters;
6. Analyse the relationship between two variables using statistical techniques.

Subject Content

- functions and relationships between economic phenomena
- The use of calculus to model Basic economic and business concepts
- Unconstrained and constrained optimisation in economics using calculus
- Descriptive statistics, frequency and relative frequency distributions

- The concept of A statistical experiment and Basic probability concepts
- Discrete probability distributions including The binomial Distribution
- Continuous probability distributions: The normal Distribution
- The Sampling Distribution of The sample mean and The central limit theorem
- Point and interval estimation of A population mean, population proportion and population variance (including business applications)
- Hypothesis testing of A population mean, population proportion and population variance (including business applications)
- inference involving The student?fs Distribution and The chi-square Distribution
- Correlation analysis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Quizzes are non-compulsory. There are three online with each quiz having a weighting of 10%. 90 minutes are allowed per quiz for completion.	30	N	Individual
Report	800 words	10	N	Individual
Final Exam	3 hours	60	N	Individual

Prescribed Texts

- Comprehensive lecture notes will be provided for students on vUWS, and students will be referred to a variety of reference materials freely downloadable from the internet or available in the library.

ECON 1011 Principles of Economics

Credit Points 10

Legacy Code 200525

Coordinator Edward Mariyani-Squire (https://directory.westernsydney.edu.au/search/name/Edward Mariyani-Squire/)

Description This subject is an introduction to economic concepts and contemporary economic issues. It introduces students to basic concepts such as markets and their operation, the behaviour of firms, the efficiency and potential failings of markets, the role of government, key macroeconomic problems such as recessions, inflation and unemployment, as well as contemporary fiscal and monetary policies. It illuminates concepts via application to contemporary economic issues and debates over different theoretical perspectives. This subject also exposes students to recent developments and policy controversies in economics.

Level Undergraduate Level 1 subject

Equivalent Subjects ECON 1007 - Introductory Economics ECON 1009 - Microeconomics ECON 1010 - Principles of Economics ECON 1012 - Principles of Econnomics (WSTC)

Restrictions

External offerings for this subject during Autumn and Spring are only available to students who are enrolled in a Property program or field of study.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and apply key economic concepts appropriately;
2. Interpret economic data and apply simple economic models to the analysis of relevant economic issues;
3. Present logical economic arguments in written or oral form;
4. Interpret and solve economic problems;
5. Explain and evaluate the likely effects of government economic policy.

Subject Content

- Foundations of markets: Demand, supply, equilibrium and institutional foundations; elasticities; production and costs
- Market structures: Perfectly competitive markets; monopolies; monopolistic competition; oligopolies and strategic decision-making
- Government intervention: Efficiency and economic welfare; externalities; public goods; market power
- key macroeconomic Variables and problems: GDP, economic growth, unemployment and inflation
- Explaining business cycles, and the unemployment-inflation trade-off; long-term economic growth
- financial sector: banking, money and interest rates
- Domestic macroeconomic policies: Monetary and fiscal policies. Policy stances; debates over policy

- international sector: Balance of payments, international trade and exchange rates

ECON 1013 The Australian Macroeconomy

Credit Points 10

Legacy Code 200549

Coordinator Andrew Marks (https://directory.westernsydney.edu.au/search/name/Andrew Marks/)

Description This subject is an introduction to macroeconomic concepts, analysis and issues in the Australian context. Basic concepts introduced and applied include: national income accounting, economic structure, price indexes and inflation, the balance of payments, and labour market aggregates. These concepts are applied in describing and explaining the recent evolution of the Australian economy in terms of growth, structural change, price stability, and employment. This leads to a discussion of major policy issues such as the role of governments in managing economic fluctuations, and the implications of Australia's foreign liabilities. The course ends with a brief introduction to modelling income determination.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects ECON 1008 - Macroeconomics

Assumed Knowledge

HSC Mathematics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define, understand and employ standard macroeconomic concepts to describe actual economies;
2. Describe the macroeconomic features of the Australian economy and their recent evolution;
3. Find, present, manipulate and interpret time-series data on important macroeconomic variables;
4. Identify the main instruments of government policy and explain their effects;
5. Discuss alternative views about macroeconomic policy;
6. Use simple models to make qualitative predictions on the likely macroeconomic effects of policy changes and external shocks.

Subject Content

- structural change and Global integration of The Australian economy
- The labour market, employment and unemployment in Australia
- national income accounting
- Measuring economic aggregates: income Expenditure model
- price and output volatility in Australia: AD-as model
- The financial system and Monetary instruments
- Monetary and fiscal policy
- investment, saving and growth in Australia
- international trade and Balance of payments accounting
- exchange rates and macro adjustment

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Best 4/5 quizzes (5% each) x 60 minutes	20	N	Individual
Presentation	a) One presentation or debate – up to 10 minutes in total. b) One impromptu presentation up to 5 minutes in total	15	N	Both (Individual & Group)
Essay	1,000 words	15	N	Individual
Final Exam	2 hours	50	N	Individual

ECON 1014 Consumers, Firms and Markets

Credit Points 10

Legacy Code 201099

Coordinator Edward Mariyani-Squire (https://directory.westernsydney.edu.au/search/name/Edward Mariyani-Squire/)

Description This subject is an introduction to microeconomics. It provides students with an understanding of basic concepts such as value, rational consumer behaviour, the behaviour of firms in various market structures, the efficiency and failings of markets, the distribution of wealth and income, and the role of government regulation and intervention. It illuminates these concepts by considering and debating their application to contemporary economic and social issues such as: the influence of marketing on consumer choices, the concentration of market power in Australian industries, rising income and wealth inequality, minimum wage laws, and governmental responses to environmental problems and climate change.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 1 subject

Equivalent Subjects ECON 1002 - Consumers Firms and Markets (WSTC) MKTG 1005 - Consumers Firms and Markets

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply microeconomic concepts to contemporary economic settings.
2. Apply geometric and mathematical concepts and techniques of analysis.
3. Interpret basic theoretical models of market structures.
4. Explain how microeconomic concepts have informed public policy debate on a variety of contemporary politico-economic issues.
5. Analyse critically with respect to theory and policy.

Subject Content

1. Core microeconomic concepts

2. Demand and supply
3. Elasticities of demand and supply
4. Market equilibrium
5. Market welfare: efficiency and government intervention
6. Externalities and public goods: efficiency and government intervention
7. Market structures and firms: short run outcomes
8. Market structures and firms: long run outcomes
9. Strategic choices: game theory
10. Labour markets: demand and supply
11. Labour markets: power, institutions, discrimination
12. Inequality, poverty, fairness and justice

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 2002 Corporate Financial Management

Credit Points 10

Legacy Code 200488

Coordinator Girijasankar Mallik (https://directory.westernsydney.edu.au/search/name/Girijasankar Mallik/)

Description This subject introduces the fundamental concepts of finance theory and the tools of financial decision making in the context of the Australian institutional environment. These concepts relate primarily to the time value of money, risk and return, capital budgeting and capital structure. The unit's purpose is to develop an understanding of the basic practices of financial management from the perspective of a firm (both large and small). Students examine the investment, financing and dividend decisions of corporations.

Level Undergraduate Level 2 subject

Pre-requisite(s) ECON 1006 OR
MATH 1030

Equivalent Subjects ECON 2003 - Financial Management FINC 2001 - Corporate Financial Decision Making

Assumed Knowledge

Introductory economics or microeconomics, basic mathematics and statistics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and analyse the investment, financing and dividend decisions of corporations;
2. Apply the concept of time value of money to financial decision making;
3. Have knowledge of the sources of finance, and evaluate their costs in the Australian financial environment;
4. Evaluate capital-expenditure projects and sources of finance;
5. Evaluate leasing as an instrument of financing;
6. Demonstrate the financial techniques used to manage current assets and liabilities;
7. Assess business risk and apply risk management tools.

Subject Content

- financial mathematics and time value of money
- valuation of Securities
- investment decisions
- financing decisions
- Dividend decisions
- capital markets in Australia
- short term financial management
- futures, options and international financial management
- leasing
- Mergers, acquisitions and corporate analysis

ECON 2004 Globalisation and Trade

Credit Points 10

Legacy Code 200541

Coordinator Heath Spong (https://directory.westernsydney.edu.au/search/name/Heath Spong/)

Description Globalisation and Trade focuses on the role of trade in the process of globalisation. It covers the history and analytical methods of international trade theories and their applications in private industry and the public sector. The theories are applied to contemporary issues in their institutional settings, in particular to: growth and development; trading blocs; and trade strategies in the developed, underdeveloped and formerly planned economies. The subject provides students with a critical understanding of the major economic, environmental, social and ethical issues stemming from the process of globalisation and trade in the twenty first century.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ECON 1011

Equivalent Subjects ECON 2006 - International Trade Theory and Policy

Assumed Knowledge

Basic understanding of microeconomic theory.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain key economic concepts used in international trade theory
2. Apply simple economic models to the analysis of trade related economic issues
3. Appraise the theoretical models used to explain international trade
4. Critique the economic concepts and models used in international trade theory and explain their limitations
5. Explain and evaluate the process of globalisation in terms of the role played by trade and factor flows
6. Assess government policies and private sector activities with respect to globalisation and trade in terms of their economic, social and ethical implications for both developed and developing economies

Subject Content

1. Analytical and historical aspects of the theoretical models used to explain international trade.
2. The determination of the terms of trade.
3. Instruments of trade policy.
4. Trade and the distribution of income.
5. The political economy of trade policy.
6. Trade and industry policy in developed countries including Australia.

7. Problems for developing countries.
8. Economic, environmental, social and ethical issues arising from globalisation and trade.

Prescribed Texts

- Krugman, P & Obstfeld, M 2012, International economics: theory and policy, 9th edn, Pearson, USA.

ECON 2007 Macroeconomic Theory

Credit Points 10

Legacy Code 200547

Coordinator Mamta Chowdhury (https://directory.westernsydney.edu.au/search/name/Mamta Chowdhury/)

Description Macroeconomic Theory aims to provide alternative theoretical explanations of the working of the macroeconomy. The subject will be based on the analytical narratives of macroeconomic developments taught in Australian Macroeconomy. Starting from the basic IS-LM model, it derives the aggregate demand (AD) curve and examines the components of commodity and money markets. It also analyses the labour market and derives the aggregate supply (AS) curve of an economy. Using the AD-AS model, it examines the interdependent nature of macroeconomic problems (e.g. inflation, unemployment), and the effectiveness of fiscal and monetary policies within a closed economy context. The basic model is then extended to analyse open economy issues (e.g., exchange rates and balance of payments, external shocks and international interdependence). Whenever appropriate, alternative approaches to macroeconomics are evaluated.

School Business

Discipline Econometrics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ECON 1013

Equivalent Subjects LGYA 4311 - Macroeconomic Analysis

Assumed Knowledge

HSC Mathematics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the nature of macroeconomic problems and policy dilemmas: inflation-unemployment trade-offs, government budget surpluses and deficits, current account deficits, and exchange rate movements
2. Describe unemployment: causes, consequences, and policies
3. Analyse inflation: causes, consequences, and policies
4. Illustrate the link between balance of payments, exchange rates and interest rates
5. Examine the role and effectiveness of fiscal and monetary policies.
6. Apply analytical models of macroeconomics to understand economic policy in a changing environment

Subject Content

1. Current macroeconomic problems and issues
2. Equilibrium in the commodity market (the IS curve)
3. Equilibrium in the money market with endogenous money supply (the LM and MP curves)
4. Equilibrium in Goods and Money markets (the IS-LM model, the IS-MP model, and the aggregate demand curve)
5. Labour market and Unemployment, the aggregate supply curve
6. Exchange rates and balance of payments
7. Nature of inflation and unemployment and the Phillips curve
8. Monetary and Fiscal policy

ECON 3001 Applied Econometrics

Credit Points 10

Legacy Code 200054

Coordinator Gulay Avsar (https://directory.westernsydney.edu.au/search/name/Gulay Avsar/)

Description This subject builds on the econometric methods of Economic Modelling. The focus is on the linear model in econometrics in its application to economic and financial time series. The emphasis is on learning by doing in small group workshops.

School Business

Discipline Econometrics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 2002 OR
ECON 3004

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Choose the appropriate econometric model to estimate in terms of: a.The theoretical foundations of the model; b.The empirical

questions to be addressed, and; c.The nature of the data used to estimate the model
2. Identify variations on the classical linear model when using data which is both cross sectional and time series.
3. Explain issues of modelling with endogenous regressors.
4. Estimate and interpret and test models with limited dependent variables.
5. Estimate and interpret linear econometric models using modern time series methods.
6. Estimate models with panel data and show how they are related to modern policy evaluation.
7. Have developed proficiency in the use of STATA for econometric modelling.

Subject Content

Review of Topics in Regression Analysis
Discrete Dependent Variables:
Binary Response Model
The Tobit Model
Instrumental Variable Estimation:
Omitted Variables/Two Stage Least Squares
Errors in Variables Problem
Testing for Endogeneity and Overidentification
Regression Analysis with Time Series:
OLS, Serial Correlation and Heteroscedasticity
Distributed Lag Models/Unit Root
Spurious Regression/Error Correction Model

ECON 3002 Corporations, Economic Power and Policy

Credit Points 10

Legacy Code 200923

Coordinator Partha Gangopadhyay (https://directory.westernsydney.edu.au/search/name/Partha Gangopadhyay/)

Description Australia's industrial, financial and retail sectors are dominated by powerful corporations which engage in a wide variety of competitive and cooperative behaviours. This subject examines how modern corporations position themselves in terms of investment in large-scale production, technological innovation, the manipulation of information, marketing, and cooperative strategies to gain market share and enhance their profitability. It also explores the effects of the interactions of corporate behaviour and public policy, including the governmental function of constructing and regulating explicit market rules of exchange.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects ECON 3018 - Microeconomic Theory and Applications

Assumed Knowledge

Knowledge gained around consumers and markets, the Australian economy, economic methods and analysis.

Learning Outcomes

On successful completion of this subject, students should be able to:
1. Apply theoretical microeconomic concepts to the analysis of industry structure, conduct and performance;
2. Develop further understanding and modelling of strategic behaviour within and between firms;
3. Analyse microdynamic factors relating to strategic decision making of corporations;
4. Critically evaluate interactions between government and corporations;
5. Critically evaluate debates over industry and competition policy.

Subject Content

- Equilibrium and disequilibrium Models, Game theory and Rational Expectations
- Microstructure Models: inventory Models, information-based Models, strategic trader Models
- Industrial organisation and microdynamics: product selection, quality and marketing, vertical control and integration, dynamic price competition and tacit collusion, non-price competition, reputation and predation, R&D, innovation and new technologies
- Regulatory Issues: merger regulation, information provision, deceptive conduct, property rights, corporate welfare, Regulatory capture

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	10 minutes	20	N	Individual
Essay	2,000 words	30	N	Individual
Essay	2 hours	50	N	Individual

Prescribed Texts

ECON 3003 Derivatives

Credit Points 10

Legacy Code 200079

Coordinator Mark Thomas (https://directory.westernsydney.edu.au/search/name/Mark Thomas/)

Description This subject provides an introduction to the major classes of derivatives: forwards, futures, swaps and options. It examines how these instruments can be used by companies for the purposes of hedging, speculation and arbitrage. Each of these categories of derivatives is examined in some detail. Considerable attention is also given to various models used to price derivative products. The historical background to contemporary risk management is also considered.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ECON 1006 AND
ECON 2002

Equivalent Subjects LGYA 9824 - Risk Management LGYB 9004 - Options Futures and Derivitive Products

Assumed Knowledge

Knowledge of mathematics and statistics equivalent to that required for 200052, Introduction to Economic Methods.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the operational mechanics of derivatives trading;
2. Identify and explain the role of key participants in derivatives markets;
3. Evaluate the institutional and organisational structure of key derivatives markets;
4. Examine the theoretical background to the pricing of various types of derivatives;
5. Illustrate the historical development of derivatives.

Subject Content

- options, futures and forwards Overview
- mechanics of futures and forward markets
- interest rate mathematics and analysis
- forward and futures price analysis
- Hedging strategies
- interest rate derivatives
- FRAs and swaps
- option market structure and mechanics
- option strategies
- option pricing Models

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 3005 Economic Theories, Controversies and Policies

Credit Points 10

Legacy Code 200816

Coordinator Margaret Moussa (https://directory.westernsydney.edu.au/search/name/Margaret Moussa/)

Description In 2016, this subject replaced by 200925 - Growth, Cycles and Crises. Economic Theories, Controversies and Policies presents alternative approaches to economic theories, controversies and policies. Topics may include recent developments or theoretical controversies in development economics, international trade, monetary economics, labour economics, environmental economics, managerial and industry economics, political economy, the economics of inequality, behavioural economics or feminist economics. Controversial contemporary policy debates, both in Australia and globally, will be examined. This subject will be team taught to expose students to a range of perspectives.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ECON 1011

Assumed Knowledge

Basic understanding of economic and financial concepts.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply critical, reflective and creative skills to solve problems.
2. Demonstrate contemporary and detailed knowledge of a business discipline in local, national and international settings.
3. Identify ethical and social issues and make recommendations for improved practice.

Subject Content

The content will vary according to the interest of students and staff, but may include:
Managerial economics and industry policy:
- debates in industrial organisation
- alternative theories of The firm
- microeconomic reform
Development economics:
- policy dilemmas in The Asia Pacific and other regions
- inclusive growth
- relative deprivation, policy applications
- polarisation of income and wealth
- achievement of millennium goals
Labour:
- human capital, education and Migration
- alternative perspectives on unemployment, Technology and happiness
- outsourcing and offshoring
- segmented labour markets and discrimination
Trade:
- new trade theories
- Unequal exchange
- role of international institutions
Environmental economics:
- The biodiversity Crisis and orthodox economics solution
- Ontological and Ethical Controversies in economics
- A critique of The orthodox theory of endangered species management

- Heterodox economics and The biodiversity Crisis
Alternatives to neo-classical theory and controversies in economic methodologies:
- Neoclassical economics and its critics
- Controversies in The theory of value
- Monopoly capital
- Conflicting theories of The economy and The state
Political economy of money:
- money and Keynesian uncertainty
- Endogenous money: Heterodox Controversies
- A theory of financial instability and debt-deflation
- A Marxian theory of money, Credit and Crisis
Other areas may also include, but are not limited to:
- Behavioural economics, Feminist economics or The economics of inequality.

ECON 3006 Economic and Financial Modelling

Credit Points 10

Legacy Code 200916

Coordinator Maria Estela Varua (https://directory.westernsydney.edu.au/search/name/Maria Estela Varua/)

Description Economic and Financial Modelling examines regression analysis and its use in business especially in economics, finance and accounting. Topics will include the properties of estimators, hypothesis testing, specification error, multicollinearity, dummy variables, heteroskedasticity, serial correlation. It also introduces other modelling techniques in finance and economics. Empirical assignments undertaken by the student form an integral part of the unit. The emphasis is on learning by doing in small group workshops.

School Business

Discipline Econometrics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 1030 OR
ECON 1006

Equivalent Subjects ECON 3004 - Economic Modelling

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the basic elements of econometric modelling and forecasting.
2. Demonstrate how standard computer software may be used to analyse simple financial and economic problems with a statistical package.
3. Demonstrate ghands-onh experience in constructing econometric models.
4. Define business problems and analyse using appropriate quantitative techniques.

Subject Content

1. Econometrics and testing economic hypotheses. What should an econometrics report contain?
2. The probability foundations of econometrics.
3. Point estimation in the classical linear econometric model; least squares and likelihood criteria.
4. Hypothesis testing: the Wald, Lagrange multiplier and likelihood ratio tests.
5. Model diagnostics; heteroskedasticity, autocorrelation, model specification testing.
6. Generalised least squares, feasible generalised least squares including autocorrelated errors.
7. Dealing with binary independent variables.
8. Instrumental variable methods.
9. Model discrimination testing; nested tests and testing linear restrictions; non-nested tests.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 3007 Economics and Finance Engagement Project

Credit Points 10

Legacy Code 200537

Coordinator Kathy Tannous (https://directory.westernsydney.edu.au/search/name/Kathy Tannous/)

Description This subject will provide students with exposure to problems with which economists and finance professionals are confronted in their daily work. They will learn about and examine the multi-dimensional nature of the issues addressed by economists and finance professionals in real-life. Students will need to consider the nature of the problems, propose solutions, as well as address how realistic the solutions they are proposing are. They will learn how to systematically reflect on their contribution to the industry or community setting with which they engage.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Students in the following programs must have successfully completed 150 credit points: 2504 Bachelor of Economics, 2526 Bachelor of Economics/LLB, 2739 / 2753 Bachelor of Business and Commerce, 2741 / 2754 Bachelor of Business and Commerce (Advanced Business Leadership), 3655 Bachelor of Information and Communications Technology/ Bachelor of Business and Commerce, 3659 Bachelor

of Science/ Bachelor of Business and Commerce, 2740 Bachelor of Business and Commerce / Bachelor of Laws.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Show an in-depth understanding of a real-life problem in their field of study;
2. Choose and apply knowledge they have gained in different units to examine a particular problem;
3. Select and evaluate practical solutions in light of industry or community needs.

Subject Content

After an introduction to engaged research, students will choose a particular problem in an industry or community setting and develop solutions that are beneficial to the industry partner as well as based on state-of-the-art knowledge in the discipline. Students will work alone or in groups depending on the problem to be solved, and will provide a concise and comprehensive report for the industry partner. Throughout the project, students will keep a reflective learning journal.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 3008 Financial Institutions Lending

Credit Points 10

Legacy Code 200062

Coordinator Sean Toohey (https://directory.westernsydney.edu.au/search/name/Sean Toohey/)

Description The major focus of this subject is the assessment and management of credit risk exposures and resulting implications on loan decisions and loan pricing decisions. The subject provides students with knowledge of traditional and modern credit risk measurement and management techniques, regulatory capital adequacy guidelines and economic capital decisions. Special topics covered include modern lending products and pertinent issues in lending. The subject covers current developments and debates in the field.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Assumed Knowledge

Financial Institutions Management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Access, evaluate and use relevant information for decision-making purposes
2. Apply theoretical knowledge to a professional/applied context

3. (Demonstrate an understanding of) Understand the local and international relevance of lending; including recent developments
4. Understand (Explain) the importance of ethical conduct within the field of lending
5. Understand (Articulate) the interrelatedness of topics within the field as well as within an inter-disciplinary context

Subject Content

Financial institutions lending basics and introduction to the current credit and lending environment
Types of lending
Analysis of quantitative and qualitative company information
Analysis of industry and market information
Traditional credit risk models
Regulatory capital adequacy
Economic capital methodologies
Modern credit risk models
Loan pricing
Current issues and developments

ECON 3012 Growth, Cycles and Crises

Credit Points 10

Legacy Code 200925

Coordinator Andrew Marks (https://directory.westernsydney.edu.au/search/name/Andrew Marks/)

Description Growth, Cycles and Crises gives students an up-to-date understanding of macroeconomic developments, empirical puzzles, theoretical controversies and policy dilemmas of the day. It begins with an overview of different schools of thought and their historical roots. There follows an investigation of recent global crises, their underlying causes, and the policy responses in the major economic powers. We also consider the stresses on Australia resulting from global economic fluctuations and shifts, causing disruptive exchange rate swings and fiscal difficulties. Finally with major developments around the world and the controversies arising from them, such as debt crises and austerity debate, the problem of unbalanced growth in rapidly developing economies, and stagnation and policy zigzags apparent in some advanced economies.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects ECON 3005 - Economic Theories Controversies and Policies

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate alternative theoretical approaches to macroeconomic analysis.
2. Identify the theoretical perspectives of economic commentators.
3. Interpret and evaluate empirical findings relating to macroeconomic relationships.
4. Critically evaluate claims, predictions and policy recommendations regarding the domestic and international macroeconomy.

Subject Content

1. New classical, new Keynesians and post-Keynesians schools of macroeconomic thought.
2. Unemployment and inflation: alternative theories and evidence.
3. Overview of macroeconomic policy tools and dilemmas.
4. Fiscal policy controversies.
5. Monetary policy controversies.
6. Adjustment of the Australian macroeconomy to global shifts and fluctuations.
7. Macroeconomic dilemmas and controversies in the USA, Asia and Europe.

Assessment

ECON 3013 Industry Economics and Markets

Credit Points 10

Legacy Code 200531

Coordinator Satya Paul (https://directory.westernsydney.edu.au/search/name/Satya Paul/)

Description The first part of this subject develops an understanding of the relationships between industry structure, the conduct of firms, and market performance. Alternative theories of the firm and strategic market behaviour are considered. The subject then examines the characteristics and operation of particular markets, including public goods and utilities, human resources, and natural and environmental resources. The analysis developed in the subject is used to provide insights into applied policy areas such as competition policy, regulation of public enterprises, microeconomic reform and industry policy.

Level Undergraduate Level 3 subject

Pre-requisite(s) ECON 1009 OR
ECON 1007 OR
ECON 1011

Equivalent Subjects LGYA 4313 - Industry Economics and Policy

Assumed Knowledge

This subject requires an elementary knowledge of microeconomic principles.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply theoretical microeconomic concepts to the analysis of industry structure, conduct and performance
2. Develop further understanding and modelling of strategic behaviour within firms
3. Analyse the role of public sector enterprises
4. Analyse the operation of markets dealing with human and natural resources
5. Interpret and analyse competition policy (such as Trade Practices Legislation)
6. To undertake case study analysis of particular markets or sectors
7. To critically evaluate policy debate in the areas of industry policy and the reform of public sector enterprises.

Subject Content

- alternative theories of The firm
- industry structure-conduct performance- theory and empirical evidence
- pricing and Supply of public goods and public Utilities, including related privatisation and regulation Issues
- Competition policy in Australia
- industry policy
- The operation of ?elabour markets?f
- natural resources and environmental Issues

ECON 3014 International Finance

Credit Points 10

Legacy Code 200055

Coordinator Kevin Daly (https://directory.westernsydney.edu.au/search/name/Kevin Daly/)

Description The study of international finance from the vantage point of a multinational enterprise provides students with a global insight into international trade for both manufactured and financial products. The subject recognises the increasing importance of global integration of money and capital markets - a trend that is creating expanded opportunities for both investors and organisations that need to raise capital. The recognition and management of risks associated with international operations are explored including cost of capital and financial structure, international financial markets crisis, international financial management, international monetary system, international diversification, foreign exchange risk management including the use of futures and options, foreign investment analysis, determination of exchange rates, balance of payments analysis, international debt crisis and country risk analysis.

School Business

Discipline Economics

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ECON 2002

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the key financial products operating in the international and domestic financial markets;
2. Analyse the theoretical relationships between spot and forward rates, interest rates and inflation and industry best practice for managing currency and interest rate risk, with a view towards integrating risk management;
3. Classify international investment decisions at the portfolio and project level and examine the different ways of financing or investing, in foreign or domestic operations, the use of debt or equity for funding, and the use of derivative products for risk management;
4. Identify political or country risk issues and the implications arising from the interaction of investment and financing decisions and analyse macroeconomic issues regarding foreign direct investment, international portfolio theory and country risk;
5. Describe the functionality of an Australian multinational corporation and assess how it can take advantage of lower capital costs by being in the international capital market.

Subject Content

- Models of exchange rate determination and Balance of payments
- foreign exchange Risk and management
- The Eurocurrency market
- Parity and market efficiency
- Multinational Corporations ? foreign direct investment
- short-term and long-term international financing
- international banking
- financial Crisis management
- Country Risk management
- case studies

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 3017 Macroeconomic Measures and Models

Credit Points 10

Legacy Code 200926

Coordinator Mamta Chowdhury (https://directory.westernsydney.edu.au/search/name/Mamta Chowdhury/)

Description The subject equips students with formal tools to analyse macroeconomic problems. Students learn to use macroeconomic terms and measures competently in discussion, and interpret data from the income, product, external and government accounts, and labour force surveys. Through hands-on experience constructing and applying price indices, deflators and productivity measures, they acquire practical skills and a sound conceptual understanding of economic variables and the accounting framework. Students come to appreciate the power of macroeconomic models, learning how to capture myriad mechanisms and feedbacks in a single framework, for example to define and quantify multipliers and crowding-out effects. Finally, students gain an understanding of fundamental external constraints, such as international parity and balance of payments equilibrium conditions.

Level Undergraduate Level 3 subject

Equivalent Subjects ECON 3016 - Macroeconomic Issues

Assumed Knowledge

Knowledge acquired in introductory microeconomics, macroeconomics and accounting.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Access and transform statistical data from the income, product, external and government accounts, and labour force surveys.
2. Construct and apply price indices, deflators and productivity measures.
3. Demonstrate practical skills in manipulating and presenting data, and a thorough conceptual understanding of economic variables and the accounting framework.
4. Derive and interpret simple macroeconomic models and use them to define and quantify multipliers and crowding-out effects.
5. Explain and apply knowledge of an economy﷯fs fundamental external constraints, such as international parity and balance of payments equilibrium conditions.

Subject Content

1. Price indices and computation of real variables.
2. Income and product accounts; measurement of growth and cycles.
3. Labour market measures, Okun?fs Law.
4. Measurement and analysis of productivity growth.
5. Economic growth accounting, models and theories.
6. Income-expenditure, IS-LM, Phillips Curve and AS-AD models.
7. Demand management and multipliers: modelling and measurement.
8. Balance of payments accounting, dynamics of current account and external liabilities.
9. Parity conditions, external balance, adjustment mechanisms.
10. Exchange rate regimes, parity conditions, balance of payments equilibrium conditions.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 3019 Political Economy

Credit Points 10

Legacy Code 200065

Coordinator Heath Spong (https://directory.westernsydney.edu.au/search/name/Heath Spong/)

Description This subject examines various political economy approaches to the analysis of economics, mainly associated with Marxian, post-Keynesian, evolutionary schools of thought as well as development economics and the perspectives of international political economy. These may be regarded as the main alternatives to neo-classical economic theory. As they do not represent a unified body of thought, the subject will survey the main contributions of each, focusing on both the positive aspects of theory and the negative aspects relating to the critique of neo-classical theory.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ECON 1009 AND
ECON 1008 OR
ECON 1007

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the limitations of mainstream approaches to economics
2. Consider a wider range of economic and developmental problems in international political economy using research methods and methodologies appropriate to those problems
3. Clearly outline alternative schools of thought within political economy and critically evaluate the strengths and weaknesses of each of them
4. Conduct academic debate, and display the oral presentation skills necessary to verbally defend their own position in the context of academic debate
5. Apply excellent written communication skills

Subject Content

Post Keynesian Economics
Marxian Economics
Evolutionary Economics
Critiques of neoclassical economics from all the above perspectives

ECON 3021 The Superannuation Industry

Credit Points 10

Legacy Code 200077

Coordinator John Ablett (https://directory.westernsydney.edu.au/search/name/John Ablett/)

Description This subject provides students with an understanding of the economics of retirement and retirement income provision, with particular emphasis on the Australian superannuation industry. On completion of this subject, students should have a comprehensive understanding of superannuation in Australia, as well as an appreciation of the economic issues associated with alternative models of retirement income provision.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Assumed Knowledge

200049 - Macroeconomics, 200076 - Introductory Economics, 200488 - Corporate Financial Management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the major economic issues associated with an aging population and the retirement decision;
2. Understand the main economic issues related to pay as you go and fully funded age pension schemes, and defined benefit and accumulation superannuation schemes;
3. Describe the evolution the Australian superannuation industry;
4. Explain the likely/possible effects of mandatory retirement income saving on financial markets and macroeconomic variables;
5. Explain the major aspects of taxation and regulation of superannuation;
6. Understand the main investment aspects of superannuation and fund strategies;
7. View the Australian superannuation industry within the international context.

Subject Content

- Demographic transition, economic Rationale of retirement income policy
- alternative Models of retirement income provision: paygo, provident funds, mandatory private
- economic impacts of saving for retirement: The level of saving, labour markets, financial markets
- retirement income policy in Australia: evolution, Age pension, development of The superannuation industry
- theory of taxation and regulation of superannuation, role of trustees
- Investing for The long term, short termism, investment strategies, Australian practice
- retirement Benefits: adverse selection, alternative Benefits, The retirement decision
- pension reforms around The World

ECON 3022 Urban and Regional Economics

Credit Points 10

Legacy Code 200075

Coordinator John Ablett (https://directory.westernsydney.edu.au/search/name/John Ablett/)

Description Students wishing to enrol in this subject are advised to contact the Subject Coordinator. This subject deals with: models of short-run fluctuations of regional aggregates and the economic relations between regions; models of long-run change in regional aggregates and the long-run economic relations between regions; equilibrium models of intra-urban location; optimal models of intra-urban allocation; and optimal allocation of capital to urban land.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Assumed Knowledge

Microeconomics and Macroeconomics or Introductory Economics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand the nature and methodology of economics
2. Understand limitations and pitfalls encountered in studying economics
3. Understand the various economic relationships, both domestic and international
4. Learn how the economy works and why governments adopt various policies
5. Gain an understanding of the concepts to apply in their day to day life

Subject Content

- Centripetal versus centrifugal forces in location.
- impact analysis, Regional multipliers, Regional input output.
- shift-share analysis.
- Kaldorian Models of Regional growth versus neo-Classical Models of Regional growth and convergence.
- The fundamental location model of Von Th?nen.
- Equilibrium Models of Urban residential and business location.
- Optimal investment in buildings.
- government and The Urban and Regional economy.

ECON 4001 Advanced Analysis and Interpretation

Credit Points 10

Legacy Code 200897

Coordinator Suzan Burton (https://directory.westernsydney.edu.au/search/name/Suzan Burton/)

Description Building on the introduction to the analysis of qualitative data presented in the core subject Research Design 1: Theories of Enquiry this subject, Advanced Analysis and Interpretation, will provide candidates with the techniques necessary to use, analyse and interpret qualitative data in business research. Presented as a series of seminar-workshops, candidates consider the theories that underpin the employed analytical methods, and then move to employ introduced qualitative software tools to analyse and interpret research data.

School Business

Discipline Econometrics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Co-requisite(s) HUMN 4009

Restrictions

Students must be enrolled in program 8083 Bachelor of Research Studies/Master of Research.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe a range of possible research methodologies used to analyse and interpret qualitative business data.
2. Outline the theoretical basis for the methods of analysis they employ in research.
3. Employ a range of software tools for qualitative data analysis.
4. Critique researchers&#65533;f data analysis and interpretation methods.
5. Plan and undertake the analysis of qualitative business data.
6. Defend their methodological choices in a research proposal.
7. Demonstrate proficiency in citing and referencing a variety of sources.

Subject Content

Effective qualitative analysis is an increasingly important issue in business research. While there has been growth of interest in the area, quality reporting remains low, largely due to lack of training as to how to analyse and communicate qualitative data. this subject will be present a series of seminars/workshops on current and emerging qualitative analysis techniques to fill this gap. The seminars will consider the methods of qualitative analysis and the theories that underpin them. They will give an overview of the methods employed in business disciplines and attention will be given as to how to choose the best methods for analysing different qualitative data types. The nature and application of specific techniques and combinations of techniques will be covered in greater detail and hands-on analysis opportunities will give insights into effective analysis and its subsequent reporting. The seminars/workshops will highlight the use of two data analysis packages ? NVIVO and Leximancer. NVIVO is a qualitative data analysis computer software package produced and designed for working with very rich text-based and/or multimedia information, where deep levels of analysis on small or large volumes of data is required. Leximancer is a qualitative software analysis package that allows researchers to get text data automatically coded and analysed (rather than the analyst creating and inserting codes). this subject introduces these programs, their basic functions, and presents examples of exemplary original research that have used the programs, in order to give a sense of their

possibilities and to highlight how research students might employ them in their own research.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ECON 5001 Innovation Economy

Credit Points 10

Coordinator Heath Spong (https://directory.westernsydney.edu.au/search/name/Heath Spong/)

Description Innovation is essential to unlocking new frontiers of growth, development, and quality of life. Successful innovation requires a synergy of creative entrepreneurship and strategic management. In this subject, students will develop the ability to recognize both opportunities and the limitations of cognitive biases when pursuing potential prospects. Cognitive and neuropsychological processes underpin incremental and radical innovations and distinctive personality traits may also be associated with successful entrepreneurship. Further, students will also explore self-management, interpersonal management, and leadership skills as essential to succeeding in the innovation economy. Successful innovation has the potential to unleash forces of creative destruction that requires to assess the resultant social and economic transformations.

School Business

Discipline Economics

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Generate the organisational conditions in which innovation can emerge and succeed.
2. Critically analyse how innovation creates economic and social value in a business context.
3. Apply psychological processes of opportunity recognition
4. Identify distinctive psychological traits and mindsets of successful innovators
5. Evaluate and propose strategies to empower innovation in an organisational context

Subject Content

The innovation imperative

- The fundamentals of entrepreneurship and management of innovation
- The challenge of an innovation strategy: exploring the innovation space

Essential ingredients of creativity and innovation

- Back to sources: where do innovations come from?
- An invisible tribe: Innovation networks

Creating economic and social value

- Creating and growing value and ventures
- Innovative social entrepreneurship

Creativity and innovation (cognitive and neuropsychological)

- Process: Innate base; Learnt base
- Domain mastery; Incremental and radical

Mindset of entrepreneurs

- Personality: Main theories and the four types
- Models of entrepreneurial development, skills and support

Entrepreneurship in action: Application

- Self-management
- Inter-personal management
- Motivation and leadership skills

Special Requirements

Essential equipment

Computer and internet access

ECON 5002 Sustainability Economy

Credit Points 10

Coordinator Heath Spong (https://directory.westernsydney.edu.au/search/name/Heath Spong/)

Description What does it mean to live and work sustainably? There are many ways to ensure that businesses, communities and individuals continue to thrive into the future. This subject explores the evolving concept of sustainability in practice. Students will learn how to view complex policy, business, consumer, and individual performance problems and opportunities through the various lenses of sustainability. Through the application of psychological knowledge on individual values, collective power and impacts on human behaviour, student will develop the skills to implement new practices while also reconciling different aspects of sustainability in their own work or personal context.

School Business

Discipline Economics

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Critically engage with the concept of sustainability in a range of business and social contexts, Including from Indigenous perspectives.
2. Analyse the key role played by both government and consumers in driving sustainable practices.
3. Reconcile different aspects of sustainability, and the perspectives of different agents, in work and personal contexts.
4. Propose strategies that respond to the demands of consumers motivated by sustainable practices.
5. Develop sustainability goals, measures, and strategies, for a business or personal enterprise

Subject Content

The big picture

- Sustainability: multiple contested meanings
- Government to the rescue? Sustainable development priorities and policies

Sustainability in business

- The sustainability imperative for modern business
- Creating a sustainable business strategy

Sustainable consumption

- The rise of ethical consumption
- Collaborative consumption

Doing good: psychological drivers

- Organisational and personal responsibility – value conflicts and values
- Power shifts and the sustainability movement

Social responsibility and consumer psychology

- Environmental anxiety: Individual and organisational levels
- Cognitive style, interactions and human behaviour

Challenges and opportunities in application:

- Intergenerational deficit in health and supporting services
- Individual competency building for workforce sustainability - Case study: Aboriginal and Torres Strait Islander workforce leadership in health

Special Requirements

Essential equipment

Computer and internet access

ECON 7001 Economics

Credit Points 10

Legacy Code 200425

Coordinator Andrew Marks (https://directory.westernsydney.edu.au/search/name/Andrew Marks/)

Description This subject presents a broad overview of economics and the way economic activity, institutions and regulations shape social and business outcomes, knowledge that is critical for any student in a business-related discipline. Students will reflect critically on the key economic processes, theories and ideas. We study the way economics defines growth and wellbeing and the economic theories of income determination and business cycles that shape macroeconomic policy. Students will form perspectives on globalisation, trade, colonisation and development and the causes of, and solutions to, inequalities between Indigenous and non-Indigenous Australians. In the microeconomic component of the subject, we study the way economics understands and models individuals and the consumer, production and firms, markets and market structures, the role of government intervention and regulation, environmental outcomes and policy to control processes of economic power.

School Business

Discipline Economics

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 8981 Economics (PG)

Restrictions

Students must be enrolled in a postgraduate Business program or postgraduate Information and Communications Technology program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically reflect on the economic perspectives of growth, wellbeing, globalisation, trade and development;
2. Identify macroeconomic problems and make policy recommendations to reduce the severity of cycles and crisis;
3. Evaluate the economic outcomes from markets and make policy recommendations;
4. Apply economic principles to resolve environmental and social issues stemming from economic activity and the behaviour of firms;
5. Identify the historical, cultural and economic causes of inequalities between Indigenous and non-Indigenous Australians and evaluate policy recommendations.

Subject Content

Measures of economic activity and well being
Income determination and the causes of business cycles
Economic effects of globalisation, trade and development
Indigenous Australian?fs sovereignty and economic wellbeing and ?eclosing the gap?f on inequalities
Domestic and international macroeconomic policy and regulation
Individuals and the consumer in economic theory
Production and firms in economic theory
Markets and the role of government intervention
Environmental and climate effects of economic activity
The environmental and social responsibility of firms

Assessment

ELEC 1001 Digital Systems 1

Credit Points 10

Legacy Code 300018

Coordinator Upul Gunawardana (https://directory.westernsydney.edu.au/search/name/Upul Gunawardana/)

Description This subject provides students with a solid background in digital logic design which is foundational to the fields of electrical and computer engineering. Digital logic design involves building electronic components and hardware, such as circuit boards and microchip processors. Students are first introduced to the fundamentals of digital logic, basic logic devices and Boolean algebra. This is followed by analysis and design of combinational and sequential logic circuits.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects ELEC 1002 - Digital Systems 1 (WSTC AssocD)

Assumed Knowledge

Knowledge on basic principles of analysing an electric circuit, Kirchhoff's Voltage and Current laws and their use in electric circuits and concept of operational amplifier and its circuit would be desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe basic digital concepts and the operation of basic logic gates.
2. Apply Boolean Algebra to a range of logic expressions
3. Apply Karnaugh maps to a range of logic expressions.
4. Analyse and design combinational logic circuits.
5. Describe the operation of a range of memory devices.
6. Describe the principles of analogue-to-digital and digital-to-analogue conversion schemes.

Subject Content

1. Boolean algebra and logic simplification
2. Karnaugh maps
3. Combinational logic circuits
4. Flip-flops, counters, registers
5. Memory
6. Analogue-to-digital and digital-to-analogue conversion

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	3 hours (per Practical)	20	N	Individual
Intra-session Exam	1 hour	20	N	Individual
Final Exam	2 hours	60	N	Individual

ELEC 1003 Electrical Fundamentals

Credit Points 10

Legacy Code 300021

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description This subject introduces essential electrical engineering concepts that provide students with the basic requirements for analysing, designing, building, and testing simple engineering systems. Students use techniques for analysing different types of circuits based on their knowledge of electrical theory and the characteristics of power, electrical energy, signals, and electrical circuit components. Students have practical activities including conducting experiments in learning how electrical systems work. Students are introduced to Electrical Machines and Renewable Energy systems for a fundamental understanding.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects ELEC 1005 Electrical Fundamentals (WSTC) ELEC 1004 Electrical Fundamentals (WSTC Assoc Deg)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the elements in an electric circuit
2. Apply the basic principles of analysing an electric circuit
3. Apply nodal,mesh,superposition,Thevenin's analysis DC electric circuits.
4. Apply the principles of capacitors and inductors as energy storage elements and their first order circuits.
5. Explain characteristics of electronic devices
6. Explain basic principles of communication waves
7. Explain significance of Logic gates and number systems
8. Explain the operation of transformers, DC and AC machines.
9. Explain principle of operation of Renewable Energy systems
10. Explain the elements in electric circuits and electronic devices
11. Apply appropriate techniques in the analysis of electric circuits
12. Analyse the principles of capacitors and inductors as energy storage elements and their first order circuits
13. Explain the operation of transformers, DC and AC machines
14. Outline the key principles involved in the operation of Renewable Energy systems
15. Use appropriate equipment in conducting experiments in a safe manner.

Subject Content

Introduction to basic electrical quantities
Kirchhoffs current and voltage laws
Series and parallel resistors, current and the voltage divider rules
Nodal and Loop analysis, The principle of superposition and Thevenin and Norton equivalent circuits
Energy storage elements,capacitors and inductors. Transient Response of first-order circuits
An introduction to Electronics
An introduction to communcation waves
Logic gates and number systems
An introduction to Transformers, Electrical Machines
An introduction to Renewable Energy systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	4 x Inclass tests 15 minutes per test.	10	N	Individual

Intra-session Exam	1 hour and 30 minutes	20	N	Individual
Practical	6 x Laboratories 3 hours per practical	20	N	Individual
Final Exam	2 hours	50	N	Individual

Summer

ELEC 1004 Electrical Fundamentals (WSTC AssocD)

Credit Points 10

Legacy Code 700104

Coordinator Abbas Ranjbar (https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/)

Description The objective of this subject is to introduce to the student a number of concepts within electrical engineering. These include basic definitions of charge, current, potential difference, power; electric circuits and basic laws such as Ohm's and Kirchoff's Laws; Thevenin, Norton's and the maximum power theorems; electromagnetism and the associated fundamental laws; capacitor and resistor circuits and time constants; an introduction to Electronics; communication waves; Logic gates and number systems; and an introduction to Electrical Machines and Renewable Energy systems. Basic principles are explained and applied to a range of typical electrical circuits and devices. These foundations provide students with the basic requirements for a career in engineering where the concepts can be developed or applied to more complex engineering systems.

ELEC 1006 Engineering Computing

Credit Points 10

Legacy Code 300027

Coordinator Mazin Aouf (https://directory.westernsydney.edu.au/search/name/Mazin Aouf/)

Description Engineering computing is an introduction to using computation to solve real problems. The subject also aims to instil sound principles of program design that can be utilised in many subjects throughout the students' course. The basic elements and structures of a high level language are taught. Students are exposed to numerous engineering problems and are encouraged to implement solutions using an algorithmic approach.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects ELEC 1008 Engineering Computing (WSTC) ELEC 1007 Engineering Computing (WSTC Assoc Deg)

Assumed Knowledge

Basic knowledge in use of computers and Windows operating system.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise a typical software development environment.
2. Develop solutions to problems using an algorithmic approach.
3. Apply data structures of a common programming language, to translate an algorithm into a coded program. These programming structures should include the following as a minimum - Selection and Repetition statements - Functions - 1 & 2 dimensional Arrays - File processing
4. Implement basic features of data manipulation and graphing using a spreadsheet program, such as EXCEL.

Subject Content

Spread sheet applications - Spread sheet operations
Spreadsheet applications - Spreadsheet functions and macros
Spread sheet applications - Solving engineering problems using spreadsheets
Structured programming - Introduction to programming environment
Structured programming - Decision structures
Structured programming - Repetition structures
Structured programming - Modular programming
Structured programming - Exchanging data with external files
Problem solving & algorithm development will be embedded in each section

Description Engineering computing is an introduction to using computation to solve real problems. The subject also aims to instil sound principles of program design that can be utilised in many subjects throughout the students' course. The basic elements and structures of a high level language are taught. Students are exposed to numerous engineering problems and are encouraged to implement solutions using an algorithmic approach.

Level Undergraduate Level 1 subject

Equivalent Subjects ELEC 1006 - Engineering Computing ELEC 1008 - Engineering Computing (WSTC)

Restrictions Students must be enrolled in 7022 Associate Degree in Engineering

Assumed Knowledge

Basic knowledge in use of computers and Windows operating system.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise a typical software development environment.
2. Develop solutions to problems using an algorithmic approach.
3. Apply data structures of a common programming language to translate an algorithm into a coded program.
4. Implement basic features of data manipulation and graphing using a spreadsheet program, such as EXCEL.

Subject Content

1. Spreadsheet applications - Spreadsheet operations
2. Spreadsheet applications - Spreadsheet functions and macros
3. Spreadsheet applications - Solving engineering problems using spreadsheets
4. Structured programming - Introduction to programming environment
5. Structured programming - Decision structures
6. Structured programming - Repetition structures
7. Structured programming - Modular programming
8. Structured programming - Exchanging data with external files
9. Problem solving & algorithm development will be embedded in each section

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes (approx.)	15	N	Individual
Intra-session Exam	1.5 hours (approx.)	30	N	Individual
Report	Approximately between 50-100 lines of command code – 3 weeks duration	15	N	Individual
Applied Project	2 hours	40	N	Individual

Level Undergraduate Level 1 subject

Pre-requisite(s) Students enrolled in 7066 or 7162 Diploma in Engineering Extended or 7082 Bachelor of Engineering Extended (WSTC First Year Program) must pass COMP 0001 Introductory Programming (WSTC Prep) before enrolling in this unit

Co-requisite(s) Before taking ELEC 1008 students in program 6033 must have passed or be registered in MATH 0008 PHYS 0003 and GEDU 0008

Equivalent Subjects ELEC 1006 - Engineering Computing ELEC 1007 - Engineering Computing (WSTC Assoc Deg)

Restrictions Students must be enrolled at Western Sydney University, The College unless specific permission has been granted by the School of Computing, Engineering & Mathematics. Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year2 subjects.

Assumed Knowledge

Basic knowledge in use of computers and Windows operating system.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise a typical software development environment
2. Develop solutions to problems using an algorithmic approach
3. Apply data structures of a common programming language, to translate an algorithm into a coded program. These programming structures should be included as a minimum: Selection and repetition statements, Functions, 1 & 2 dimensional arrays, File processing
4. Implement basic features of data manipulation and graphing using a spreadsheet program such as EXCEL

Subject Content

1. Spreadsheet applications - Spreadsheet operations
2. Spreadsheet applications - Spreadsheet functions and macros
3. Spreadsheet applications - Solving engineering problems using spreadsheets
4. Structured programming - Introduction to programming environment

5. Structured programming - Decision structures
6. Structured programming - Repetition structures
7. Structured programming - Modular programming
8. Structured programming - Exchanging data with external files

Problem solving & algorithm development will be embedded in each section.

ELEC 1009 Electrical Circuit Fundamentals

Credit Points 10

Legacy Code 301336

Coordinator Leigh Sheppard (https://directory.westernsydney.edu.au/search/name/Leigh Sheppard/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject is an introductory unit in Electrical Engineering, which provides an introduction to electrical circuits and fundamental electrical elements as well as the technical skills to analyse such circuits. It is suitable for students pursuing further studies in Electrical Engineering such as Power and Energy, Telecommunications, Control, Instrumentation, as well as other related engineering disciplines including Computer Science and Engineering. In the practical section, this course provides hands-on experience in building and testing circuits. This subject is presented in such a way that students who have taken it are capable of building and analysing some practical, useful devices afterwards.

ELEC 1012 Electrical Fundamentals (Block)

Credit Points 10

Coordinator Maisha Tabassum (https://directory.westernsydney.edu.au/search/name/Maisha Tabassum/)

Description This subject introduces essential electrical engineering concepts that provide students with the basic requirements for analysing, designing, building, and testing simple engineering systems. Students use techniques for analysing different types of circuits based on their knowledge of electrical theory and the characteristics of power, electrical energy, signals, and electrical circuit components. Students have practical activities including conducting experiments in learning how electrical systems work. Students are introduced to

Electrical Machines and Renewable Energy systems for a fundamental understanding.

ELEC 1005 (700024) Electrical Fundamentals (WSTC)
ELEC 1004 (700104) Electrical Fundamentals (WSTC AssocD)

Restrictions

Students must be enrolled in program :-

7178 Diploma of Aerotropolis Industry 4.0 (Mechatronic Skills)

Learning Outcomes

1. Explain the elements in electric circuits and electronic devices
2. Apply appropriate techniques in the analysis of electric circuits
3. Analyse the principles of capacitors and inductors as energy storage elements and their first order circuits
4. Explain the operation of transformers, DC and AC machines
5. Outline the key principles involved in the operation of Renewable Energy systems
6. Use appropriate equipment in conducting experiments in a safe manner.

Subject Content

1. Introduction to basic electrical quantities.
2. Kirchhoffs current and voltage laws.
3. Series and parallel resistors, current and the voltage divider rules.
4. Nodal and Loop analysis, The principle of superposition and Thevenin and Norton equivalent circuits.
5. Energy storage elements, capacitors and inductors. Transient Response of first-order circuits.
6. An introduction to Electronics.
7. An introduction to communication waves.
8. Logic gates and number systems.
9. An introduction to Transformers, Electrical Machines.
10. An introduction to Renewable Energy systems.

ELEC 2001 Circuit Theory

Credit Points 10

Legacy Code 300005

Coordinator Jeffrey Zou (https://directory.westernsydney.edu.au/search/name/Jeffrey Zou/)

Description This subject aims to equip the student with the tools needed for the design and analysis of electrical and electronic circuits. It also introduces various techniques of circuit analysis, mutual coupling, frequency response and two-port networks.

School Eng, Design & Built Env

Discipline Electrical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ELEC 1003 AND
MATH 1019 OR
MATH 1035

Equivalent Subjects ELEC 2002 - Circuit Theory (WSTC AssocD)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the basic principles of analysing an electric circuit
2. Apply Kirchhoff's Voltage and Current laws and demonstrate their use in a number of electric circuit configurations
3. Apply nodal analysis, mesh analysis and linear circuit theorems to electric circuits.
4. Apply the Laplace Transform to electric circuits
5. Draw conclusions from frequency responses.
6. Mathematically analyse frequency-selective filters.
7. Describe and utilise magnetically coupled circuits
8. Describe and utilise two-port networks.

Subject Content

Phasors relationships for Circuit Elements
Kirchoff's Laws in frequency domain
Impedance combinations
Sinusoidal Steady state analysis (Nodal Analysis, Mesh Analysis, Superposition Theorem and Thevenin equivalent Circuits)
AC Power Analysis (Instantaneous and Average Power, RMS value, Maximum Power and Power factor correction)
Magnetically coupled circuits(Mutual Inductance, Energy in a coupled Circuit)
Frequency response
Laplace Transform and its applications in circuits analysis
Two port network

Level Undergraduate Level 2 subject

Pre-requisite(s) ELEC 1003 OR
ELEC 1009

Equivalent Subjects ELEC 2005 - Electronics (WSTC AssocD)

Assumed Knowledge

The prior knowledge on Vibrations and wave phenomena; Photoelectric effect, atomic structure and periodic table; Electricity and magnetism are required. Students should have a sound understanding on: basic principles of analysing an electric circuit; Kirchhoff's Voltage and Current laws and their use in electric circuits; Nodal analysis, mesh analysis and superposition analysis in DC electric circuits; Thevenin and Norton equivalent and their use in electric circuits; The storage elements capacitor and inductor and understand their performance in first and second order circuits.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the basic structure and mode of operation of pn junction diode.
2. Conduct an AC and DC analysis of a circuit with pn junction diode.
3. Explain the basic structure and mode of operations of BJT, MOSFET transistors and operational amplifiers.
4. Conduct an AC and DC analysis of single-stage amplifying circuits using BJT, MOSFET transistors and operational amplifiers.
5. Design simple electronic circuits for a given specification and application.
6. Use Electronics Workbench as a tool to simulate and understand electronic circuits

Subject Content

1. Semiconductors Diodes.
2. Diode applications.
3. Bipolar Junction Transistor (BJTs).
4. DC Biasing (BJTs).
5. Field Effect Transistors (FETs).
6. DC biasing of FET.
7. AC Analysis of FET Operational Amplifiers .

ELEC 2006 Engineering Electromagnetics

Credit Points 10

Legacy Code 300481

Coordinator Khoa Le (https://directory.westernsydney.edu.au/search/name/Khoa Le/)

Description This subject introduces Maxwell's equations in integral and differential form and their application to basic theory and application of electromagnetic structures, wave propagation, guides waves, antennas and Electromagnetic compatibility.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1019 AND
ENGR 1011 OR
ENGR 1028

Equivalent Subjects ELEC 2003 - Electromagnetics LGYA 5725 - Electromagnetic Compatibility

Assumed Knowledge

The students should have a good understanding of 300021 - Electrical Fundamentals or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the work of a transmission line
2. Analyse the wave propagation along transmission lines and waveguides
3. Explain the concept of Maxwell's equations in static and dynamic cases
4. Analyse and solve problems of Maxwell's Equations
5. Analyse and solve problems of boundary conditions
6. Explain the basic concept of Hertazian dipole
7. Analyse basic antennas and calculate radtion resistance, gain, ground and mutual impedance

Subject Content

Waves and Phasors
Transmission lines
Vector Analysis
Electrostatics
Magnetostatics
Maxwell's equations
Plane wave propagation
Wave reflection and transmission
Radiation and antenna
Introduction to electromagnetic compatibility
EMC requirement for electric and electronic systems

ELEC 2007 Engineering Visualization

Credit Points 10

Legacy Code 300029

Coordinator Jeffrey Zou (https://directory.westernsydney.edu.au/search/name/Jeffrey Zou/)

Description This subject aims to provide a comprehensive introduction to fundamental concepts and algorithms in engineering visualization. Topics covered include visualization hardware, scan conversion of geometric primitives, 2D and 3D transformations, 3D viewing and projection, hidden surface removal, solid modelling, illumination models and image manipulation.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) Students must have passed ELEC 1006 Engineering Computing and either ELEC 2009 Microprocessor Systems or ELEC 2008 Microcontrollers and PLCs

Equivalent Subjects LGYB 0688 - Computer Graphics

Restrictions Students must have successfully completed 160 credit points.

Assumed Knowledge

C++ Programming and 3-D Geometry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and select visualization hardware;
2. Draw 2D and 3D objects on a raster display device;
3. Perform affine transformations to 2D and 3D objects;
4. Model a 3D object, project it onto a view plane, and determine its visible surface;
5. Determine the shade of a visible surface
6. Manipulate image for visualization.

Subject Content

1. Visualisation hardware
2. Visualisation software
3. Scan converting primitives and clipping
4. Transformations
5. Curves and surfaces
6. 3D Viewing and visible surface determination
7. Image manipulation and storage
8. Solid modelling
9. Illumination and shading

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	3,000 words	30	N	Individual
Intra-session Exam	1.5 hours	20	N	Individual
Final Exam	2 hours	50	N	Individual

Prescribed Texts

ELEC 2008 Microcontrollers and PLCs

Credit Points 10

Legacy Code 300044

Coordinator Karthick Thiyagarajan (https://directory.westernsydney.edu.au/search/name/Karthick Thiyagarajan/)

Description Through completion of an applied project students will develop an understanding of the hardware, architecture and the assembly language of microcontrollers in addition to the control of a mechanical system with a programmable logic controller (PLC). The subject looks at the applications of timers, interrupts and serial ports. Furthermore, the general approach in designing a microcontroller in mechanical systems will be studied. Students will use an Omron PLC to control a factory represented by four pneumatic cylinders. After covering the Ladder Logic programming language, they will move on to cover sequential programming and numerical manipulation using PLCs.

School Eng, Design & Built Env

Discipline Plant and Machine Operations

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ELEC 2004 OR
ELEC 1003 OR
ELEC 1009

Assumed Knowledge

Fundamentals of electronics are required.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design small-scale microprocessor controlled mechanical systems.
2. Write software instructions to implement various microcontroller operations.
3. Program a PLC to control a mechanical system.
4. Use Ladder Logic to execute complex logic operations.
5. Use sequential programming and feedback from a mechanical system to control a complex sequence of tasks.
6. Use a PLC to perform numerical manipulation

Subject Content

1. Basics of number systems and Boolean algebra, hardware architecture of microcontrollers.
2. Assembly languages.
3. Timers, interrupts and their applications in microcontrollers.
4. Procedures of designing microcontroller based systems.
5. Operation of a pneumatic-mechanical system .
6. Ladder logic.
7. Sequential programming.
8. Numerical manipulation with PLCs.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	50-100 Rungs of Programs	40	N	Individual
Practical	2 hours per week for 12 weeks	30	N	Group/ Individual
Final Exam	2 Hours Open Book	30	N	Individual

Prescribed Texts

ELEC 2009 Microprocessor Systems

Credit Points 10

Legacy Code 300076

Coordinator Qi Cheng (https://directory.westernsydney.edu.au/search/name/Qi Cheng/)

Description This subject introduces students to the internal structure of microprocessors used in computing systems and their fundamental operations. Topics include assembly language programming, interrupt processing, CPU functions, memory organization, and peripheral programming. The microprocessor and embedded processors are discussed. Students write assembly language programs, debug and create executable files to control microprocessor systems.

School Eng, Design & Built Env

Discipline Computer Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ELEC 1001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Write assembly language programs
2. Debug assembly programs and create executable files
3. Describe interrupt (exception) processing
4. Explain CPU hardware functions and address decoding (memory/IO)
5. Program peripherals

Subject Content

Instruction format, instruction types and assembler directives
Memory segmentation
20-bit address formation and determination
Addressing modes
Types of instructions
Stack operation and access
Assembly programming
Interrupt processing
BIOS and DOS function calls
CPU structure and pin functions
Instruction execution cycles and system timing diagram
Memory and memory address decoding
Memory-mapped and interrupt-driven I/Os
Peripheral Programming

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Numerical Problem Solving	around 10 pages (each)	25	N	Individual
Multiple Choice	30 minutes (per quiz)	10	N	Individual
Practical	3 hours (per practical)	10	N	Individual
Final Exam	2 hours	55	N	Individual

ELEC 2010 Power and Machines

Credit Points 10

Legacy Code 300052

Coordinator Mahmood Nagrial (https://directory.westernsydney.edu.au/search/name/Mahmood Nagrial/)

Description This subject develops an understanding an understanding of the basic concepts of power and machines, including modern power systems and transformers, in addition to the fundamentals of electromechanical energy conversion. Students will also study magnetic circuits, modern permanent magnet materials and their characteristics, and balanced and unbalanced three-phase power systems.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ELEC 2001 OR
ELEC 2013

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain general arrangements of power systems.
2. Identify the various types of power stations, distribution systems, cost of operation and protection.

3. Analyse magnetic circuits with and without permanent magnet materials
4. Analyse magnetically coupled circuits.
5. Explain the construction of 3-phase and single phase transformers, their analyses and performance.
6. Evaluate basic concepts of energy conversion.
7. Understand general arrangements of power systems.
8. Gain knowledge of various types of power stations, distribution systems, cost of operation and protection.
9. Understand and analyse magnetic circuits with and without permanent magnet materials.
10. Understand magnetically coupled circuits.
11. Understand the construction of 3-phase and single phase transformers, their analyses and performance.
12. Understand basic concepts of energy conversion.

Subject Content

1.Historical Development, Arguments of AC versus DC.
2.Balanced and unbalanced three phase power systems, Single phase and three-phase circuits.
3.General arrangement of a power system, interconnected systems, standard voltage levels.
4.Distribution systems and substations, load characteristics and tariff structure and objectives of system protection and earthing systems.
5.Magnetic circuits with permanent magnets, fundamentals and properties of permanent magnet materials
6.Transformers (Construction, Equivalent circuits, Performance, Losses and efficiency, Voltage regulation and tests of transformers), Determination of equivalent circuit parameters and Three-phase transformers
7.Electromagnetic energy conversion principles; DC and AC machine fundamentals, Practical considerations and design limitations.
Historical Development
Arguments of AC versus DC for widespread usage-examples.
Balanced and unbalanced three phase power systems.
Single phase and three-phase circuits.
General arrangement of a power system.
Interconnected systems, standard voltage levels.
Distribution systems and substations.
Load characteristics and tariff structure.
Objectives of system protection and earthing systems.
Fundamentals and properties of permanent magnet materials.
Magnetic circuits with permanent magnets.
Mutual and leakage inductances.
Construction of transformers.
Equivalent circuits of transformers.
Performance of transformers.
Losses and efficiency of transformers.
Maximum efficiency of transformers.
Voltage regulation and tests of transformers.
Determination of equivalent circuit parameters.
Three-phase transformers, typical connections and phasor group.
Electromagnetic energy conversion principles.
DC machine fundamentals.
AC machine fundamentals.
Practical considerations and design limitations.

ELEC 2011 Signals and Systems

Credit Points 10

Legacy Code 300057

Coordinator Upul Gunawardana (https://directory.westernsydney.edu.au/search/name/Upul Gunawardana/)

Description This subject aims to develop students' understanding of continuous-time and discrete-time concepts and methods. It covers various signals and their analysis, as encountered in the fields of electrical, computer and telecommunication engineering.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1019 AND
ELEC 1003

Equivalent Subjects ELEC 2012 - Signals and Systems (WSTC AssocD)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain common signal types and properties in electrical engineering
2. Explain continuous-time, discrete-time, linear and non-linear systems
3. Describe concepts of power, energy, power spectral density, energy spectral density of signals.
4. Determine impulse response, frequency response and stability of a system
5. Apply the principle of convolution to solve problems in linear systems
6. Perform Fourier analysis and Laplace analysis

7. Apply Z-transforms to discrete-time systems
8. Utilise MATLAB for solving signals and systems related problems

Subject Content

Classification of signals
Time Domain Representations of Linear-Time Invariant Systems
The Fourier series
The Fourier Transform and Its Applications
The Laplace Transform
Discrete-Time Signals and Systems and Z-Transforms

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 2013 Circuits and Signals

Credit Points 10

Legacy Code 301352

Coordinator Leigh Sheppard (https://directory.westernsydney.edu.au/search/name/Leigh Sheppard/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject covers the fundamentals of circuit, system and signal analysis on which most other courses in the electrical engineering curriculum are built. The subject provides a foundation in frequency domain analysis and in transform methods, as well as significantly extending alternate current analysis, transient analysis and other fundamental circuit analysis tools. Although there is a practical program in the laboratory, the theory aspects of this course are the primary focus.

School Eng, Design & Built Env

Discipline Electrical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) ELEC 1009

Restrictions

Must be enrolled in 3771 Bachelor of Engineering Advanced (Honours)

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Apply transform methods in the analysis of continuous-time linear systems.
2. Explain the functions involved in the interaction between signals and linear systems.
3. Analyse simple and complex electric and magnetic circuits in the time and frequency domains.
4. Describe concepts related to AC power analysis.

Subject Content

- Transform Methods: Periodic signals and Fourier series, aperiodic signals and Fourier transform, Laplace transforms and their application to signals and circuits.
- Circuit Analysis: AC circuits with sinusoidal inputs in steady state, use of phasors and complex impedance in AC circuit analysis, AC power (real, reactive, apparent), power factor, leading/lagging, series and parallel resonance, transformers and coupled coils, application of network theorems in AC circuit analysis, two-port network analysis.
- System Analysis: Linear systems and convolution, impulse response, frequency response and transfer functions, steady-state analysis of linear systems, transient analysis of the 1st and 2nd order systems, circuit analysis using transform methods.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	9 x weekly supervised in-class lab session activities and 5-page log book.	20	Y	Individual
Intra-session Exam	1.5 hours	30	N	Individual
Final Exam	2 hours	50	Y	Individual

Prescribed Texts

- Alexander, CK & Sadiku, MNO 2017, *Fundamentals of electric circuits*, 6th edn, McGraw-Hill, New York, NY.

ELEC 2014 Mathematics for Electrical Engineers 1

Credit Points 10

Legacy Code 301338

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. The subject combines two maths components, Vector Calculus and Complex Analysis, both of which incorporate calculus and linear algebra and have many applications to physics, engineering and mathematics, particularly electrical engineering. Vector Calculus involves calculus in two and three dimensions, theory of curves, vector functions and partial derivatives, two- and three-dimensional integration, line integrals and curl and divergence. Complex Analysis extends calculus from real numbers to complex numbers, and develops the theory of analytic functions, complex integration and Cauchy's theorem, series expansions, the residue theorem and applications to real improper integrals and trigonometric integrals.

ELEC 2015 Mathematics for Electrical Engineers 2

Credit Points 10

Legacy Code 301339

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject builds on two maths components begun in first year engineering, that is linear algebra and statistics. For linear algebra, the aim is to learn and apply the theoretical elements about linear combinations of vectors and matrices amongst other topics to problem sets. For statistics, the aim is to learn the various ways in which random variation arises in engineering contexts and apply methods and models for understanding data and making decisions. In both components, students will expand their skills in analytic thinking.

ELEC 2017 Requirements and Design Workshop

Credit Points 10

Legacy Code 301346

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject has a series of software engineering workshops designed to teach students to work in teams and apply their knowledge to solve real-life problems. These workshops offer students opportunities to concentrate on software requirements analysis and design issues including artefacts produced as well techniques and tools to support this process (brainstorming, problem statements, requirements elicitation, producing design documents and prototyping). In addition, it provides students with some teamwork skills, requirements engineering and design techniques that an engineer would use in the early stages of the development process. The students are also getting experience on different aspects of designing a Web application with a major focus on the front-end.

Credit Points 10

Legacy Code 301345

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject reinforces the understanding of discrete mathematics and the role it plays in computing science and engineering. Students learn how to systematically derive implementations from formal specifications using simple mathematics. Students also learn to develop an understanding of the rules for deriving implementations from specifications. Why do they work? What do we have to prove and how? This is crucial for later industrial software engineering practice.

School Eng, Design & Built Env

Discipline Computer Engineering

Discrete mathematics, particularly predicate calculus
Programing in procedural language (C, Python or Java)
Competence with Unix commands, and interacting with the operating system.

ELEC 3001 Communication Systems

Credit Points 10

Legacy Code 300007

Coordinator Khoa Le (https://directory.westernsydney.edu.au/search/name/Khoa Le/)

Description This subject will provide a basic introduction to communication systems and techniques. Specific topics covered include energy and power spectral density, amplitude modulation, frequency modulation, pulse modulation, an overview of digital modulation techniques, noise in communication systems and an overview of current telecommunication systems; spread spectrum systems, optical communication systems, radio broadcasting and mobile communication systems.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2011

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse analogue modulation techniques such as amplitude and frequency modulation
2. Analyse pulse modulation techniques, quantisation methods, delta modulation, and pulse code modulation
3. Evaluate analogue communication systems performance in the presence of noise
4. Describe basic digital modulation techniques
5. Apply modulation and Fourier transform techniques to explain spread spectrum systems and other mobile communication systems

Subject Content

Review of Fourier Series and Fourier Transforms
Continuous-wave modulation (AM, DSBSC, SSB, FM)
Pulse Modulation (PAM, PPM, PWM)
Delta Modulation
Digital Data Transmission
Introduction to Digital Modulation techniques
Introduction to spread spectrum communication systems
Mobile Communication System basics

Assessment

ELEC 3002 Data Communications

Credit Points 10

Legacy Code 300997

Coordinator Ranjith Liyanapathirana (https://directory.westernsydney.edu.au/search/name/Ranjith Liyanapathirana/)

Description This subject is concerned with the principles and topics of fundamental importance to digital data communication, computer communication networks and telecommunications. The lower layers of the protocol structure (physical layer, data link layer and some aspects of the network layer) and the physical medium (hardware and transmission lines) are emphasized. An engineering approach will be taken to provide an insight to transmission and transmission media, communication techniques and transmission efficiency.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2011

Incompatible Subjects ELEC 4001 - Data Networks

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Outline common data transmission concepts and techniques.
2. Identify the concepts and physical mechanisms underlying data communication in telecommunication networks.
3. Analyse the telephone network to identify the concepts and physical mechanisms underlying data communication.
4. Evaluate the differences between circuit switching and packet switching, and explain how a data communication system can detect and correct channel errors in transmission.

Subject Content

1. Data transmission
2. Guided (including optical fibre) and unguided (wireless) transmission
3. Signal encoding
4. Interfacing
5. Data link control
6. Multiplexing (Synchronous, Asynchronous, Statistical)
7. Spread Spectrum Modulation (Frequency Hopping, Direct Sequence)
8. Error control and flow control techniques
9. Circuit switching and packet switching

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	5 x 3 hours (group) Written report max 10 pages (individual)	20	Y	Both (Individual & Group)
Intra-session Exam	1.5 hours	20	N	Individual
Final Exam	2 hours	60	Y	Individual

ELEC 3003 Digital Signal Processing

Credit Points 10

Legacy Code 300069

Coordinator Jeffrey Zou (https://directory.westernsydney.edu.au/search/name/Jeffrey Zou/)

Description Students will develop an understanding of the fundamental concepts and principles in digital signal processing by applying the theory learned in their classes to practical exercises. The subject matter includes discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, filter design techniques, structures for discrete-time systems, the discrete Fourier transform and computation of the discrete Fourier transform.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2011 OR
ELEC 2013

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse discrete-time signals and systems;
2. Apply the z-transform to signal processing;
3. Explain the sampling of continuous-time signals;
4. Apply filter design techniques to the design of discrete-time filters;
5. Analyse structures for discrete-time systems;
6. Apply the discrete Fourier transform to signal processing.

Subject Content

Discrete-time signals and systems
The z-transform
Sampling of continuous-time signals
Transform analysis of linear time-invariant systems
Filter design techniques
Structures for discrete-time systems
The discrete Fourier transform
Computation of the discrete Fourier transform

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	1600 words (per report)	20	N	Individual
Intra-session Exam	1.5 hours	30	N	Individual
Final Exam	2 hours	50	N	Individual

ELEC 3004 Digital Systems 2

Credit Points 10

Legacy Code 300019

Coordinator Qi Cheng (https://directory.westernsydney.edu.au/search/name/Qi Cheng/)

Description This subject covers modern logic design techniques and the process of creating logic circuits and systems from design specifications to implementation. Topics include logic design techniques for combinational and sequential logic circuits; hardware description language (HDL); logic circuit implementation using an HDL; state-of-the-art logic circuit design tools; and programmable logic devices.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 1001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe functions of encoders/decoders, adders/subtractors, multiplexers/demultiplexers and their design procedures; and design them using VHDL (combinational logic)
2. Describe functions of flip-flops, registers, counters, finite-state machines and their design procedures; and design them using VHDL (sequential logic)
3. Build ALUs using VHDL
4. Describe VHDL memory functions and use them to design RAM units
5. Describe VHDL bus and I/O functions and use them to design bidirectional bus and tri-state buses
6. Implement logic circuits on FPGA boards

Subject Content

Logic function optimization
State diagram, state table
Logic circuit design
Hardware description languages (VHDL)
Statements, structures, data, variable, signal, type
Logic circuit modelling using VHDL
RAM implementation
Bus implementation
ALU implementation
Field programmable gate array devices
Implementation of logic circuits on FPGA

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Numerical Problem Solving	Approximately 10 questions each, individual theoretical and programming tasks	15	N	Individual
Practical	3 hours per session/ Approximately 5-10 pages	20	N	Individual
Final Exam	2 hours	65	N	Individual

ELEC 3005 Electrical Drives

Credit Points 10

Legacy Code 300070

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description Through practical laboratory exercises students will analyse and evaluate electrical machines and drives. They will examine various types of electrical motors and drive systems, their applications and control. They will also study various types of speed control, starting and braking systems and dynamics.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 3006

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse various types of electrical drive systems.
2. Evaluate recent developments in the control of electric drive systems.
3. Apply various drive systems to different applications.

Subject Content

Introduction to machine drives. Principal characteristics and requirements. Basic Components of an Electric Drive System.
D.C. motors. Circuit representation. Speed-torque characteristics.
Speed Control of D.C motors
Induction motors. Circuit representation. Speed-torque characteristics.
Speed control of Induction Motors: voltage control, slip-energy recovery, speed control by inverters, frequency and Voltage/Frequency Control.
Power electronic devices and basic power converters.
Three-phase naturally commutated bridge circuit
Braking of Electrical Motors: Regenerative, Dynamics and counter-current braking.
Dynamics of DC and Induction Motors

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1.5 hours	25	N	Individual

ELEC 3006 Electrical Machines 1

Credit Points 10

Legacy Code 300071

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description This subject introduces the fundamental principles of electrical machines, the principles of electromechanical energy conversion and the operation and analysis of Direct Current (DC) generators and motors, induction motors and synchronous machines. Students apply principles and theory to practical exercises to develop their understanding. The subject also introduces various special purpose electrical machines, such as permanent magnet machines, step motors and reluctance machines for an understanding on different types of machines.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2010 or
ELEC 3011

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the principles in the operation of DC generators and motors, as well as Induction Motors
2. Apply machine theory techniques in the calculation of voltages, currents, power, speed and torque.
3. Outline the difference between AC & DC machines and their use.
4. Predict the expected responses of electrical machines to the input power.
5. Describe a machine circuit, calculation of machine parameters, machine efficiency and the losses in an electrical machine.
6. Identify different methods of speed control of DC motors and ways to control the speed of Induction Motors.

Subject Content

1. DC Machines
2. Permanent Magnet/ Brushless Machines
3. Induction Machines
4. Synchoronous Machines.
5. Single-phase Motors
6. Special Machines

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 3008 Instrumentation and Measurement

Credit Points 10

Legacy Code 300075

Coordinator Gaetano Gargiulo (https://directory.westernsydney.edu.au/search/name/Gaetano Gargiulo/)

Description Through practical exercises students will engage with engineering measurement and instrumentation systems. Students determine the most appropriate measurement method and instrument, such as multimeters, digital oscilloscopes and interfacing modules, for particular applications. They will gain experience with the measurement of physical quantities and the instrumentation required to accurately present information to a controller. Additionally, transducers used to measure common physical quantities are presented in detail, while instrumentation includes a detailed analysis of zero-span circuits, Wheatstone bridges, instrumentation amplifiers, isolation amplifiers, voltage-to-current and voltage-to-frequency modules used for faithful signal transmission, digital-to-analogue and analogue-to-digital circuits to deepen student learning.

School Eng, Design & Built Env

Discipline Electronic Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2001 OR
ENGR 2001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Make use of a variety of transducers to measure physical parameters
2. Estimate the errors involved in making measurements
3. Design and test electronic instrumentation using discrete and integrated circuit components
4. Interface a wide variety of transducers
5. Utilize A/D and D/A converters in the context of digital control
6. Avoid configurations of equipment that lead to grounding problems

Subject Content

Estimation of errors in measurements.
Transducers, primary & secondary sensors.
General measurement systems.
Design of Signal Conditioners.
Effects of loading in electronic circuits.
Noise in measurements.
Aspects of grounding practices.
A-D/D-A Conversion.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Task	4 submissions required	50	N	Individual
Practical Exam	2 hours	50	N	Individual

Prescribed Texts

ELEC 3009 Power Systems

Credit Points 10

Legacy Code 300771

Coordinator Mahmood Nagrial (https://directory.westernsydney.edu.au/search/name/Mahmood Nagrial/)

Description This subject provides students with a global picture of electrical energy systems. Through practical exercises students will examine and analyse the basic processes of generation, transmission and distribution, power system analysis and planning as well as power systems operation under steady-state and transient conditions. Various aspects of power system operation including harmonics, fundamentals of protection, environmental issues and renewable energy systems are also covered in this subject.

School Eng, Design & Built Env

Discipline Electrical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2010 or ELEC 3011

Assumed Knowledge

Basic knowledge of power frequency devices and systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Summarize and critique the operation of the power supply system grid under normal and transient conditions.
2. Complete basic power systems analysis.
3. Identify and utilize the notions and implications of power system fault levels and stability.
4. Explain Harmonics and their causes, power factor including harmonics.
5. Explain some of the environmental issues associated with energy conversion systems.
6. Identify and critique alternative energy sources.

Subject Content

Overview of generation, transmission and distribution in power systems

Determination of transmission line parameters
Power systems behaviour in steady state and transient conditions
Power system stability
Economic dispatch and unit commitment
Renewable energy sources and their impact on power systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 3010 Renewable Energy Systems Design

Credit Points 10

Legacy Code 301425

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description This subject prepares engineering students to be conversant with renewable energy systems. Students will learn to appraise environmental, social, legal, economic and political issues concerning renewable energy systems. Students will also learn relevant design skills related to renewable energy systems.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 1003 AND
ENGR 1011

Equivalent Subjects ELEC 4006 Sustainable Energy Systems

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the technical aspects of renewable energy systems.
2. Design renewable energy systems for a given set of conditions.
3. Assess the social, legal, policy, political economic and environmental issues associated with renewable energy systems.
4. Demonstrate communication and collaboration skills in working with others in an ethical and respectful manner to produce professional analyses and reports

Subject Content

1. Introduction and principles of renewable energy
2. Heat transfer/solar radiation
3. Solar photovoltaics
4. Wind energy
5. Biofuels
6. Hydro-power
7. Wave energy and tidal power
8. Geothermal energy
9. Nuclear energy
10. Environmental impact of renewable energies
11. Economic issues
12. Political, social, policy and legal issues

Assessment

ELEC 3011 Power and Machines

Credit Points 10

Coordinator Mahmood Nagrial (https://directory.westernsydney.edu.au/search/name/Mahmood Nagrial/)

Description This subject develops an understanding of the basic concepts of power and machines, including modern power systems and transformers, in addition to the fundamentals of electromechanical energy conversion. Students engage in practical activities to develop knowledge and skills in magnetic circuits, balanced and unbalanced three-phase power systems, and transformers. These concepts comprise essential knowledge for electrical engineers.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2001 OR
ELEC 2013

Learning Outcomes

1. Analyse magnetic circuits with and without permanent magnet materials
2. Analyse magnetically coupled circuits.
3. Analyse balanced and unbalanced 3-phase power systems.
4. Apply theoretical knowledge of electrical and magnetic circuits
5. Analyse the construction and performance of 3-phase and single phase transformers at different loads.
6. Evaluate basic concepts of energy conversion.
7. Conduct laboratory experiments in a safe, responsible and professional manner that replicates real-world scenarios

Subject Content

1. Historical Development, Arguments of AC versus DC.
2. Balanced and unbalanced three phase power systems, Single phase and three-phase circuits.
3. General arrangement of a power system, interconnected systems, standard voltage levels.
4. Distribution systems and substations, load characteristics and tariff structure and objectives of system protection and earthing systems.
5. Magnetic circuits with permanent magnets, fundamentals and properties of permanent magnet materials
6. Transformers (Construction, Equivalent circuits, Performance, Losses and efficiency, Voltage regulation and tests of transformers), Determination of equivalent circuit parameters and Three-phase transformers
7. Electromagnetic energy conversion principles; DC and AC machine fundamentals, Practical considerations and design limitations.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 4002 Power Electronics

Credit Points 10

Legacy Code 300772

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description The subject covers various types of power electronics systems, their applications and use in Electrical Drive Systems. It also covers application considerations and modern developments in electronic systems. This course provides the fundamentals of Power Electronics and Industrial Electronics.

School Eng, Design & Built Env

Discipline Electronic Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 2010 AND
ELEC 2004

Assumed Knowledge

Basic knowledge of power frequency devices and systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe various power electronic systems and their requirements.
2. Describe power semiconductor devices characteristics.
3. Describe and analyze various types of: Diodes (uncontrolled) rectifiers AC-DC rectifiers Non-isolated DC-DC converters DC-AC converters (Inverters).
4. Examine the nature and analyze operation of semiconductor power switching devices and configuration for energy conversion purposes.
5. Describe new developments in power electronic system and some of the environmental issues associated with energy conversion systems.

Subject Content

Power Semiconductor Switches
Line-Frequency Diode Rectifiers: Line-Frequency ac Uncontrolled dc
Line-Frequency Phase-Controlled Rectifiers and Inverters: Line-Frequency ac Controlled dc
dc-dc Switch-Mode Converters
Switch-Mode dc-ac Inverters: dc Sinusoidal ac
Resonant Converters: Zero-Voltage and/or Zero-Current Switchings

ELEC 4003 Power Quality

Credit Points 10

Legacy Code 300995

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description This subject focuses on general power quality phenomena, how to define them, locate their sources and how to apply mitigation techniques. Through independent learning and teamwork on real world case studies, and by incorporating current standards and practices, students will develop skills to simulate and analyse power quality events. The skills developed in this subject will benefit students who are looking to incorporate sustainable and renewable energy solutions into their engineering career pathways.

School Eng, Design & Built Env

Discipline Electrical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Restrictions

Students must be enrolled in programs 3740 Bachelor of Engineering (Honours) or 3771 Bachelor of Engineering Advanced (Honours) and must have successfully completed 150 credit points.

Assumed Knowledge

Students are expected to be familiar with basic power system calculations including balanced and unbalanced three-phase systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse power quality disturbances, their causes, their impact on electrical equipment, and mitigation.
2. Critically apply Australian and international codes and standards in power quality analysis and risk assessment.
3. Measure power quality events using simulation software and hardware tools.
4. Present cost-effective mitigation solutions to power quality problems in written and oral forms.

Subject Content

- Power Quality events
- Sags and swells

- Harmonics, flickering
- Power factor and hosting study
- Simulation and Mitigation techniques
- Soft skills development such as technical report writing, teamwork, customer-focused orientation, and presentation

Special Requirements

Essential equipment

- Simulation software NEPLAN, MATLAB, MathWorks
- Hardware and measuring tools
- Field Trip

Assessment

ELEC 4004 Radio and Satellite Communication

Credit Points 10

Legacy Code 300489

Coordinator Ranjith Liyanapathirana (https://directory.westernsydney.edu.au/search/name/Ranjith Liyanapathirana/)

Description This subject is offered in alternate years. This subject will develop an understanding of the theory and practice of radio and satellite communication techniques and measurements and provide an introduction to space communication systems. It will complement the general communication engineering units, addressing advanced topics important and specific to radio and satellite communications.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 3001 OR
ELEC 4001

Equivalent Subjects LGYA 3699 - Satellite Communication

Assumed Knowledge

Physics and Materials, Mathematics for Engineers 1 and 2, Astrophysics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the special challenges and techniques of radio and satellite communications
2. Explain the launch, maintenance and operation of communication satellites and associated telescopes
3. Demonstrate practical knowledge of tracking stations, earth station equipment, telescopes and communication gateways
4. Explain the techniques and use of radio and optical telescopes and associated equipment used in ground based and space stations
5. Demonstrate an understanding of the different architectures and applications of low earth orbit, medium earth orbit and geostationary earth orbit satellite systems
6. Plan, conduct, interpret and document experiments performed in the laboratory

Subject Content

Satellite systems, orbits and launch methods
Radio wave propagation and polarization
Radio antennas, receivers and aperture synthesis
Analog and digital signals
The space link, interference, link budget calculation
Satellite access and services and mobile satellite systems
CCD, photometric systems and adaptive optics
Robotic observatories and space telescopes
Remote sensing of planetary systems and image processing and analysis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	1.5 hours per week over 12 weeks.	30	Y	Individual
Report	Each oral presentation 10 minutes per student. Report 2,000 words	10	N	Individual
Final Exam	3 hours	60	N	Individual

ELEC 4005 Smart Grids and Distributed Generation

Credit Points 10

Legacy Code 300996

Coordinator Mahmood Nagrial (https://directory.westernsydney.edu.au/search/name/Mahmood Nagrial/)

Description This subject is designed to model, analyse and control of newly developing areas of distributed generation and smart grids. The subject will cover modelling, control, simulation and protection of such systems. The subject will cover the impacts of renewable sources and power electronics on the operation of smart grids and micro-grids. The subject will also cover environmental and economic impacts of such systems.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 3009

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the technical aspects of the Smart Grid and Distributed Generation
2. Analyse and simulate the effects of renewable sources on operation of smart grids
3. Discuss and evaluate the control and protection requirements of smart grids
4. Critically examine and assess the environmental issues associated with the Smart Grid and Distributed Generation
5. Discuss and evaluate the economic aspects of the Smart Grid and Distributed Generation
6. Discuss the social, legal and political issues related to the Smart Grid and Distributed Generation

Subject Content

1. Modeling of Smart Grids
- Loads Impedance Model,
- PV Sources (Thermal and PV panels),
- Wind Turbines and Generators,
- Storage Systems,
- Rectifiers, Converters and Inverters.
2. Control of Smart Grid Systems
- Smart Meters,
- Micro grids,
- Control of Converters and Inverters,
- Load, Voltage and Power Control,
- Synchronized and Islanding Operations of Micro Grids,
- Design High MW PV Systems,
- Design of High Power Wind Farm,
- control of Smart Grid system with High Green energy Penetration.
3. Environmental and pollution issues.
4. Economic analysis of the Smart Grid and Distributed Generation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1.5 hours	25	N	Individual
Final Exam	2 hours	50	N	Individual
Report	Each group is expected to submit 2 assignments/ reports for assessment. Group reports in groups of 3-5 students. Length of reports between 8-10 pages each.	25	Y	Individual

ELEC 4006 Sustainable Energy Systems

Credit Points 10

Legacy Code 300998

Coordinator Ragbir Bhathal (https://directory.westernsydney.edu.au/search/name/Ragbir Bhathal/)

Description This subject prepares engineering students to work in the area of renewable energy systems and to be knowledgeable and be in a position to appraise environmental, social, legal, economic and political issues concerned with renewable energy systems.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Assumed Knowledge

Basic understanding of the principles and engineering applications of physics in energy systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the technical aspects of renewable energy systems
2. Critically examine and assess the environmental issues associated with renewable energy systems
3. Discuss and critically evaluate the economics of the renewable energy systems
4. Critically assess the social, legal and political issues as they relate to renewable energy systems

Subject Content

1. Introduction and principles of renewable energy
2. Heat transfer/solar radiation
3. Solar photovoltaics
4. Wind energy
5. Biofuels
6. Hydro-power
7. Wave energy and tidal power
8. Geothermal energy
9. Nuclear energy
10. Environmental impact of renewable energies
11. Economic issues
12. Political, social and legal issues

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Technical Report 1	3,000 words	60	N	Individual
Technical Report 2	1,500 words + Power point presentation 15 minutes	40	N	Individual

Prescribed Texts

- Boyle, G & Open University (eds) 2012, Renewable energy : power for a sustainable future, 3rd edn, Oxford University Press, Oxford.

ELEC 4007 Wireless Communications

Credit Points 10

Legacy Code 300065

Coordinator Ranjith Liyanapathirana (https://directory.westernsydney.edu.au/search/name/Ranjith Liyanapathirana/)

Description The subject covers the analysis, design and operation of modern wireless communication systems. The primary focus is on the physical layer and hardware, emphasizing the fundamentals of coding and modulation, spread spectrum and multiple access techniques. Current wireless architectures and mobile communication systems are also covered.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 3001 OR
ELEC 3002

Equivalent Subjects LGYA 5692 - Digital Communication Engineering

Assumed Knowledge

Students should have a good understanding of signals and systems, probability and random processes and fundamentals of communication systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and analyse current wireless communication systems including GSM, CDMA, PCS, W-LAN. Wi-Fi, Bluetooth, 3G and 4G mobile systems.
2. Describe and analyse coding and modulation techniques used in wireless communication systems.
3. Analyse bit error rates, receiver structures (correlation and matched filter), spectral occupancy and antenna diversity.
4. Explain the physical properties of the radio channel.
5. Describe basic forms of multiple access techniques applied to wireless communication.
6. Calculate a free-space link budget and a terrestrial link budget.
7. Determine bit error probabilities and coding gains of coding and modulation techniques used in wireless communication.
8. Design wireless communication systems

Subject Content

Evolution of mobile radio communication
The cellular system; design fundamentals
Frequency reuse, channel assignment strategies, handoff
Interference and system capacity
Mobile radio propagation; multipath fading, Rayleigh and Ricean distributions
Signal Space Design techniques
Matched Filter and Correlation Receiver
Coding and Modulation techniques for wireless communication,
Spread Spectrurm Modulation
Equalization, diversity and channel coding
Multiple access techniques (FDMA, TDMA, CDMA, OFDM)
Novel wireless architectures, wireless systems and standards (WCDMA)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1 hour, closed book, individual	20	N	Individual
Practical	5 x 3 hrs individual, practical assignments	20	Y	Individual
Final Exam	3 hours individual, closed book	60	Y	Individual

ELEC 4008 Electrical Drives

Credit Points 10

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description Electrical drives are electromechanical systems which enable electrical machines to function. Through theoretical analyses and practical laboratory exercises, students analyse and evaluate electrical machines and drives as well as examine various types of electrical motors and drive systems, their applications and control. Students conduct experiments on speed control, starting and braking systems, and dynamics of electric motors. These activities comprise essential knowledge and skills for students to be competent in the area of power engineering.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 3006

Learning Outcomes

1. Analyse various types of electrical drive systems.
2. Analyse a range of methods for speed control of DC and induction motors.
3. Analyse a range of methods of starting electric motors
4. Design different braking methods for electric motors
5. Integrate the concepts of braking of electric motors and renewable energy generation
6. Conduct laboratory experiments in a safe, responsible and professional manner that replicates real-world scenarios
7. Apply communication and collaboration skills, with ethical considerations, for reporting outcomes of experimental activities

Subject Content

1. Introduction to machine drives. Principal characteristics and requirements. Basic Components of an Electric Drive System.
2. D.C. motors. Circuit representation. Speed-torque characteristics.
3. Speed Control of D.C motors
4. Induction motors. Circuit representation. Speed-torque characteristics.
5. Speed control of Induction Motors: voltage control, slip-energy recovery, speed control by inverters, frequency and Voltage/Frequency Control.
6. Power electronic devices and basic power converters.
7. Braking of Electrical Motors: Regenerative, Dynamics and counter-current braking.
8. Dynamics of DC and Induction Motors.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 4009 Instrumentation and Measurement

Credit Points 10

Coordinator Gaetano Gargiulo (https://directory.westernsydney.edu.au/search/name/Gaetano Gargiulo/)

Description Through practical exercises students will engage with engineering measurement and instrumentation systems. Students determine the most appropriate measurement method and instrument, such as multimeters, digital oscilloscopes and interfacing modules, for particular applications. They will gain experience with the measurement of physical quantities and the instrumentation required to accurately present information to a controller. Additionally, transducers used to measure common physical quantities are presented in detail, while instrumentation includes a detailed analysis of zero-span circuits, Wheatstone bridges, instrumentation amplifiers, isolation amplifiers,

voltage-to-current and voltage-to-frequency modules used for faithful signal transmission, digital-to-analogue and analogue-to-digital circuits to deepen student learning.

School Eng, Design & Built Env

Discipline Electronic Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 2001 OR
ENGR 2001

Learning Outcomes

1. Use a variety of transducers to measure physical parameters and estimate the errors involved in making measurements.
2. Integrate theory and practice to the selection of electronic components fit to specs: “fit for the job”
3. Integrate theory and technical competencies to the design and test of electronic instrumentation.
4. Interface a wide variety of transducers/sensors.
5. Utilise A/D and D/A converters in the context of digital control.
6. Utilise embedded systems in the context of digital control.

Subject Content

1. Estimation of errors in measurements.
2. Transducers, primary & secondary sensors.
3. General measurement systems.
4. Design of Signal Conditioners.
5. Effects of loading in electronic circuits.
6. Noise in measurements.
7. Aspects of grounding practices.
8. A-D/D-A Conversions

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 6001 Applied Project in Neuromorphic Engineering

Credit Points 40

Legacy Code 800235

Coordinator Saeed Afshar (https://directory.westernsydney.edu.au/search/name/Saeed Afshar/)

Description This 40 credit point semester-long subject provides a capstone experience to students enrolled in the Master of Applied Neuromorphic Engineering. Students work on an industry-oriented project with practical application and outcome. Having the intention to go into industry, this subject provides opportunities for students to explore a relevant problem that can be completed in one semester. Students will gain valuable experience and industry insights.

School Graduate Research School

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Pre-requisite(s) INFO 7001 AND
ELEC 6003 AND

COMP 6001 AND
COMP 6002

Restrictions

Students must be enrolled in 8124 Master of Applied Neuromorphic Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Propose a feasible project plan in Neuromorphic Engineering
2. Appraise new opportunities in Neuromorphic Engineering with creativity and initiative
3. Systemically and critically analyse data and information sources that are related to the identified industry-oriented problem aiming to enhance the capabilities of the neuromorphic system
4. Effectively communicate a novel solution and its potentials to both specialist and non-specialist audiences by utilising a variety of multimedia formats that fit for purpose
5. Execute an industry-oriented project with practical application and outcomes in the area of Neuromorphic Engineering

Subject Content

- Project scoping
- Project proposal and plan
- Project execution and evaluation
- Stakeholder engagement
- Effective communication and negotiation
- Industry standards
- Processes and considerations for commercialisation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1000 words	5	N	Individual
Portfolio	2000 words or equivalent	20	N	Individual

Applied project	4000 words or equivalent	50	Y	Individual
Proposal	5 mins or 1200 words(or equivalent)	15	N	Individual

ELEC 6002 Master Dissertation in Neuromorphic Engineering

Credit Points 80

Legacy Code 800234

Coordinator Bharath Ramesh (https://directory.westernsydney.edu.au/search/name/Bharath Ramesh/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). This subject is offered exclusively on campus for students to benefit from mentorships and regular interactions with leading researchers in the field. Students will have the opportunity to contribute towards impactful research projects, aiming at academic growth and progress. To achieve this goal, the Dissertation subject is designed for students to plan and execute a research-based project in the area of Neuromorphic Engineering. The main task in the year-long 80 credit point dissertation subject is an academic research paper that meets publishing standards and is peer-reviewed by external reviewers (getting the article published on a journal is not a completion requirement to the unit). The students shall be part of regular International Center for Neuromorphic Systems (ICNS) interactions, and benefit from supervisors in a discursive setting as the candidate makes progress.

School Graduate Research School

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Restrictions

Students must be enrolled in 8123 Master of Neuromorphic Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Formulate a feasible research plan designed to enhance system capabilities compared to standard sensing frameworks
2. Integrate supervisor feedback into research outcomes using critical reflective practice
3. Systemically and critically analyse data and information sources that are related to the identified research question aiming to enhance the capabilities of the neuromorphic system
4. Effectively communicate project outcomes in a final scientific presentation
5. Compose a scientific research report that synthesises research findings in an application-centred task
6. Produce a scientific article that meets publishing standards by integrating the theory & novel experimental findings

Subject Content

- Literature view
- Research methods
- Ethics
- Portfolio
- Data collection and analysis
- Peer review
- Oral presentation
- Practical experiments
- Writing abstract
- Writing for publication

ELEC 6003 Neuromorphic Accelerators

Credit Points 10

Legacy Code 800231

Coordinator Mark Wang (https://directory.westernsydney.edu.au/search/name/Mark Wang/)

Description Problem-oriented thinking and distributed system design are essential for neuromorphic engineers. This subject is designed to provide students with sufficient understanding to neuromorphic processor. Students will be able to implement spiking neural networks by programming neuromorphic processors The lab work and programming assignments focus on different key aspects of programming neuromorphic processor. Neural modelling, Python programming, debugging code and hardware/software co-simulation. The workshops focus on the concrete implementation of neural networks.

School Graduate Research School

Discipline Electronic Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Restrictions Must be enrolled in 8124 Master of Applied Neuromorphic Engineering

Assumed Knowledge

Proficient in Python, basic in neural computing, basic in spiking neural networks.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design Spiking Neural Networks (SNNs) systems for efficient on-chip computing
2. Implement SNNs using the Neuromorphic Processors f programming framework
3. Critically appraise novel solutions for efficient neural network systems
4. Effectively communicate the significance and impact of neuromorphic processors to non-specialist audience
5. Accurately compile professional lab reports detailing the methodology employed in implementing the SNN architecture

Subject Content

* Architectures of Neuromorphic Accelerators
- Parallel computing
- Differences between Neuromorphic Accelerator architectures and conventional von-Neumann architecture
* Features of Spiking Neural Networks
- Difference between Spiking Neural Networks and conventional numerical computing systems
* Programming frameworks of Neuromorphic processors

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ELEC 6004 Neuromorphic Electronics Design

Credit Points 10

Legacy Code 800229

Coordinator Ying Xu (https://directory.westernsydney.edu.au/search/name/Ying Xu/)

Description Efficient, parallel, low-power computation is a hallmark of brain computation and the goal of neuromorphic engineering. The focus of this subject is to design, implement and test accurate, electronic, very large scale integrated (VLSI) circuit model of neural systems and the associated signal processing. Students will have opportunities to design and build a neural system on hardware and gain resultant insights into applying neuromorphic engineering to real-world problems. This subject will be undertaken at Parramatta City - Hassall St campus.

School Graduate Research School

Discipline Electronic Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Restrictions

Students must be enrolled in 8124 Master of Applied Neuromorphic Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design and implement Leaky Integrate-and-Fire (LIF) neuron circuits on Field-Programmable Gate Arrays (FPGAs) using Verilog Hardware Description Language (HDL).
2. Develop and implement spiking neural network systems to process event-based data using Verilog/Python
3. Develop a solution-orientated way of critically assessing real-world problems architecturally
4. Communicate the significance and impact of digital neuromorphic systems to non-specialist audiences

Subject Content

- Model and design Leaky knowledge of Integrate-and-Fire (LIF) neuron circuits on a hardware platform using a Hardware description language
- Knowledge and skills of implementing a High-speed interface between a hardware platform and PCs to realise high speed data transmission between the hardware and PCs
- Skills of designing and implementing a LIF neural network system on a hardware platform and PCs
- Knowledge and skills of architectural design of a neuromorphic system

Assessment

ELEC 7001 Advanced Control Systems

Credit Points 10

Legacy Code 300603

Coordinator Upul Gunawardana (https://directory.westernsydney.edu.au/search/name/Upul Gunawardana/)

Description This subject covers continuous and discrete control systems. It reviews and builds on the fundamental concepts of the theory of feedback in continuous and discrete time to examine the analysis and design of advanced continuous and discrete time linear control systems. Transfer function and state variable methods are employed. Instruction makes use of extensive experimental tasks. There is also considerable use of Matlab simulations.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects LGYA 5850 - Digital Control LGYA 5813 - Advanced Control Systems

Restrictions

Students must have competence in the use of test equipment, components and data sheets. Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge is assumed in Continuous time control systems, the use of Laplace and Z-transforms, Analog to digital, digital to analog conversion, Vector matrix difference equations, State variable models and familiarity with Matlab or similar software Knowledge is assumed in: Continuous time control systems; The use of Laplace and Z-transforms; Analog to digital, digital to analog conversion; Vector matrix difference equations; State variable models; Introductory Classical Control Systems Theory; Familiarity with MATLAB.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop and use mathematical models of systems in time domain and frequency domain
2. Formulate and analyse models of real systems using physical characteristics
3. Apply root locus and frequency domain techniques for design of feedback controllers
4. Use appropriate computer based tools and laboratory instrumentation to analyse and design feedback control systems.

Subject Content

Continuous and discrete time modelling
Transfer functions, block diagrams, signal flow graphs, state variable methods
Stability methods in s-domain, z-domain, time domain
Root Locus, frequency response methods
State feedback, pole placement and observers
Use of the digital computer as main control element
Converting theoretical designs into hardware

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are

regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	3 quizzes via vUWS, 2 hours per quiz. Quiz 1, 2 and 3 (10% for each test) * Broad coverage of concepts	30	N	Individual
Practical	2 hours per week in a computer lab The practical sessions are set up so that students can enhance and apply what is taught in the class. During practical sessions, MATLAB will be utilised for control system modelling and problem-solving. Students will be given 6 problem sets which are equally weighted and to be attempted and solved within a 2-week interval.	20	N	Individual
Final Exam	2 hours	50	N	Individual

Teaching Periods

Spring (2024)

Parramatta City - Macquarie St

ELEC 7002 Advanced Data Networks

Credit Points 10

Legacy Code 300173

Coordinator Ranjith Liyanapathirana (https://directory.westernsydney.edu.au/search/name/Ranjith Liyanapathirana/)

Description This subject covers all major network technologies: asynchronous transfer mode (ATM), Internet, and telephony. Essential networking topics such as protocol layering, multiple access, switching, scheduling, routing, congestion control, error and flow control, and network security are covered in detail. An engineering approach is taken to provide insight into network design.

School Eng, Design & Built Env

Discipline Electrical and Electronic Engineering and Technology, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Communication Systems / Digital Communication.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain network topologies and communication architectures
2. Explain and apply advanced level networking concepts and functions
3. Describe and analyze common protocols used in telephone networks, the Internet and ATM networks.

Subject Content

Introductory concepts: network topologies, packet switching, datagram packet switching and virtual circuits.
Queuing Theory: M/M/1 and other queues, simple applications.
ATM Switching: Service categories, protocol formats, switch fabric architectures
High-speed LANs
Internetworking
Security: private and public key encryption, authentication and digital signatures.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	No more than 15 pages	20	N	Individual
Practical	3 hours per week for 5 weeks	S/U	N	Individual

Intra-session Exam	1 hour	25	N	Individual
Final Exam	2 hours	55	N	Individual

ELEC 7003 Advanced Electrical Machines and Drives

Credit Points 10

Legacy Code 300601

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description The subject covers various types of electrical motors and drive systems, their applications and control. The subject aims to introduce an advanced study of electrical machines and drives. It also covers application considerations and modern developments in high performance drive systems. This course covers various types of the speed control, the starting, the braking and the dynamics of different electrical machines and drives.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects LGYA 5847 - Variable Speed Electric Drives LGYA 5844 - Special Electrical Machines

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Electric Circuits and Basic Electro magnetics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply various electrical drive systems to industrial and commercial applications and discuss their requirements.
2. Analyse various types of DC and AC drives.
3. Explain new developments in control of drive systems.
4. Discuss and explain the use of various electrical motors in different electromechanical systems.

Subject Content

Introduction to machine drives. Principal characteristics and requirements. Basic Components of an Electric Drive System.
D.C. motors. Circuit representation. Speed-torque characteristics.
Speed Control of D.C motors
Induction motors. Circuit representation. Speed-torque characteristics.
Speed control of Induction Motors: voltage control, slip-energy recovery, speed control by inverters, frequency and Voltage/Frequency Control.
Power electronic devices and basic power converters.
Three-phase naturally commutated bridge circuit
Braking of Electrical Motors: Regenerative, Dynamics and counter-current braking.
Dynamics of DC and Induction Motors

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Essay	25 pages which include all the circuits and graphics.	25	N	Individual
Intra-session Exam	2 hours	20	N	Individual
Final Exam	2 hours	55	N	Individual

ELEC 7004 Advanced Power Quality

Credit Points 10

Legacy Code 301025

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description This subject is to introduce students to power quality phenomena such as voltage sag/swell, distortions, unbalance, and flicker that occur in power systems. The subject also introduces terms and definitions associated with power quality, following which each phenomenon, that is, voltage sag/swell, transient overvoltage, and harmonics. In addition, flicker is presented and discussed in detail for students to understand the sources and impact of these occurrences on power system as well as typical mitigation techniques. Finally, students are introduced to power quality benchmarking, monitoring, assessment. In addition Advanced knowledge on network frequency responses is presented.

School Eng, Design & Built Env

Discipline Electrical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 3693 Master of Engineering, 3695 Graduate Certificate in Engineering or the Master of Research.

Assumed Knowledge

Students are expected to be familiar with basic power system calculations including balanced and unbalanced three-phase systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and classify power quality disturbances, their causes, and their impact on electrical equipment.
2. Apply Australian and international codes and standards to Power quality analysis as well as describe the terminology used in power quality engineering.
3. Review the types of hardware and test software tools available for use in power quality investigations.
4. Plan a power quality investigation, examine recorded data, and diagnose specific power quality problems.
5. Recommend appropriate mitigation techniques for power quality problems in proposed or existing designs.
6. Evaluate power quality problems and document your finding via a written report.

Subject Content

1. Power-Quality Standards
2. Voltage Distortion
3. Harmonics and Inter-harmonics
4. Harmonic Current Sources
5. Power Harmonic Filters
6. Methods for Correction of Power-Quality Problems
7. Power Quality Events
8. Power Quality Measurements
9. Advanced Power quality analysis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	No more than 3000 words	35	N	Individual
Report	No more than 5000 words.	65	N	Individual

ELEC 7005 Advanced Signal Processing

Credit Points 10

Legacy Code 300596

Coordinator Jeffrey Zou (https://directory.westernsydney.edu.au/search/name/Jeffrey Zou/)

Description This subject covers the principles and techniques in signal processing. The subject matter includes advanced topics in discrete-time signals and systems, the z-transform and its applications in signal processing, advanced topics in the sampling of continuous-time signals, FIR and IIR filter design, filter structures, and the discrete Fourier transform and its computation. Students develop skills of analysing and designing digital signal processing systems.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 5840 - Signal Processing 1

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Engineering mathematics, circuit theory, signals and systems.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse discrete-time signals and systems mathematically;
2. Explain the z-transform and its applications in signal processing mathematically;
3. Explain the sampling of continuous-time signals mathematically;
4. Design FIR and IIR filters;
5. Analyse filter structures mathematically;
6. Explain the discrete Fourier transform mathematically and apply it to signal processing.

Subject Content

Advanced topics in discrete-time signals and systems
The z-transform and its applications in signal processing
Advanced topics in the sampling of continuous-time signals
FIR and IIR filter design
Filter structures

The discrete Fourier transform and its computation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	5 pages each	20	N	Individual
Intra-session Exam	1.5 hours	30	N	Individual
Final Exam	2 hour	50	N	Individual

ELEC 7006 Advanced Smart Grids and Distributed Generation

Credit Points 10

Legacy Code 301026

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description This subject is designed to model, analyse and control of newly developing areas of distributed generation and smart grids. The subject will cover modelling, control, simulation and protection of such systems. The subject will also cover the impacts of renewable sources and power electronics on the operation of smart grids and micro-grids. The subject will also cover environmental and economic impacts of such systems.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the technical aspects of the Smart Grid and Distributed Generation
2. Analyse and simulate the effects of renewable sources on operation of smart grids
3. Discuss and evaluate the control and protection requirements of smart grids
4. Critically examine and assess the environmental issues associated with the Smart Grid and Distributed Generation
5. Discuss and evaluate the economic aspects of the Smart Grid and Distributed Generation
6. Evaluate and compare various operating requirements with case studies

Subject Content

1. Modelling of Smart Grids.
- Loads Impedance model
- PV sources (Thermal and PV panels)
- Wind Turbines and Generators
- storage systems
- Rectifiers, Converters and Inverters
2. Control of Smart Grid Systems.
- Smart Meters
- Micro grids
- control of Converters and Inverters
- Load, Voltage and power control
- Synchronized and Islanding Operations of Micro grids
- design High MW PV systems
- design of High power Wind farm
- control of Smart Grid system with High Green energy Penetration
3. Environmental and pollution issues
4. Economic analysis of the Smart Grid and Distributed Generation
5. Case Studies

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1.5 hours	25	N	Individual
Final Exam	2 hours	50	N	Individual
Case Study	Length of reports between 10-15 pages each	25	N	Individual

Prescribed Texts

- Keyhani, A, Marwali, M & Dai, M 2009, 'Smart Grid Distributed Generation Systems', in Integration of green and renewable energy in electric power systems, John Wiley & Sons, Inc., Hoboken, N.J.

ELEC 7008 Instrumentation and Measurement (PG)

Credit Points 10

Legacy Code 300515

Coordinator Gaetano Gargiulo (https://directory.westernsydney.edu.au/search/name/Gaetano Gargiulo/)

Description This subject covers topics associated with the measurement and presentation of physical parameters. A wide range of transducers are presented in detail, while instrumentation includes a detailed analysis of a multitude of analogue and digital circuits used to amplify, transmit, and display electrical signals. The application of these modules in modern measurement equipment is presented in details.

School Eng, Design & Built Env

Discipline Electronic Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Instrumentation and Measurement (PG).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain limitations of and apply a wide range of transducers
2. Design and analyse systems used for process control
3. Explain the techniques and trade-offs involved in A/D and D/A conversion
4. Design and specify requirements for interfacing a large number of analogue signals to a digital controller
5. Design complete instrumentation systems

Subject Content

Transducers
Amplification techniques (signal conditioning)
Digital-to-analogue conversion
Analog-to-digital conversion
Digital devices

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	15 minutes	20	N	Individual
Professional Task	Four report submissions	80	N	Individual

ELEC 7009 Personal Communication Systems

Credit Points 10

Legacy Code 300196

Coordinator Ranjith Liyanapathirana (https://directory.westernsydney.edu.au/search/name/Ranjith Liyanapathirana/)

Description This subject covers the design fundamentals of cellular systems, including frequency reuse, channel assignments, radio wave propagation in mobile environments, modulation techniques, coding techniques, spread spectrum and multiple access. It includes topics from emerging wireless technologies, and third-generation mobile communication systems and standards.

School Eng, Design & Built Env

Discipline Communications Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Communications Systems. Digital Communications.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of current wireless communication systems including GSM, CDMA, PCS, and 3G systems.
2. Describe coding and modulation techniques used in wireless systems.
3. Demonstrate at an advanced level understanding of implementation issues such as bit error rates, receiver complexity, spectral occupancy and antenna diversity.

Subject Content

Evolution of mobile radio communication

The cellular system; design fundamentals
Frequency reuse, channel assignment strategies, handoff
Interference and System capacity
Mobile radio propagation; multipath fading, Rayleigh and Ricean distributions
Modulation techniques for mobile radio
Equalization, diversity and channel coding
Multiple access techniques
Wireless systems and standards

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Seminar (15 min) and Paper (7500 words)	20	N	Individual
Numerical Problem Solving	1 hour	20	N	Individual
End-of-session Exam	3 hours	60	N	Individual

ELEC 7010 Power System Planning and Economics

Credit Points 10

Legacy Code 300197

Coordinator Mahmood Nagrial (https://directory.westernsydney.edu.au/search/name/Mahmood Nagrial/)

Description This subject covers planning techniques for energy and electrical power systems. It also covers the economics of various options and reliability of electrical power systems.

School Eng, Design & Built Env

Discipline Electrical And Electronic Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain and analyse power systems under normal and transient conditions.
2. Analyse power systems using various techniques.
3. Explain optimal control and economic operation of power systems.
4. Identify and utilise the notions and implications of power system fault levels and stability on transmission planning.
5. Explain and analyse harmonics, their causes and effects on system operation & control.
6. Explain and formulate environmental issues associated with energy conversion systems.
7. Identify and critique alternative and renewable energy sources.

Subject Content

Advanced power system components.
Advanced power system control and operation.
Review of econometric generation allocation methods and their limitations.
Transmission planning and distribution planning.
The National Electricity Market - structure, network service and retail services providers.
Alternative energy sources.
1.The National Electricity Market - structure, network service and retail services providers, energy 'wheeling' and trading, the energy 'pool' and typical price behaviours.
2.Review of conventional planning techniques and their limitations.
3.Demand forecasting.
4.System reliability.
5.Transmission planning.
6.Distribution planning and demand management.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	4 practicals with 2 hours duration for each practical	25	Y	Group
Intra-session Exam	One hour	25	N	Individual
Final Exam	2 hours	50	N	Individual

ENGR 0001 Academic Skills for Engineering (WSTC Prep)

Credit Points 10

Legacy Code 700202

Coordinator Zdenka Misanovic (https://directory.westernsydney.edu.au/search/name/Zdenka Misanovic/)

Description This subject is designed to assist students to become successful independent reflective learners. It introduces students to a range of theories and concepts to facilitate the development of practical skills and personal attitudes necessary for success in tertiary study. Emphasis is placed on developing the key competencies of scientific inquiry - collecting, analysing, organising and communicating information as well as solving problems, particularly when related to using mathematical ideas and techniques.

School Western Sydney The College

Discipline Engineering and Related Technologies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use both independent and collaborative learning strategies to advance the knowledge of the individual and that of their peers.
2. Communicate effectively through the development of critical reading, listening, speaking and writing skills in context.
3. Locate and use information technology systems and educational technologies to support learning and assessment.
4. Apply critical thinking, and use problem solving skills and research skills, to make informed decisions.
5. Apply the process of reflection to learning experiences, in order to assess their own learning styles and elearn how to learnf.
6. Describe criteria for successful posters and oral presentations and write and evaluate a scientific report.

Subject Content

Topic 1: Introduction to tertiary study
Topic 2: Blended learning
Topic 3: Advanced tertiary skills
Topic 4: Information skills
Topic 5: Research methods for science and engineering:
- Introduction to scientific methods
- Scientific report writing
- Data handling
- Critical reading
- Research and referencing (journal articles)
- Project report

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Oral presentation	5 minutes	10%	N	Individual
Reflective Learning Journal	800-1200 words	40%	N	Individual
Scientific Report Project: Part A: Analysis of provided data and proposed hypothesis – 10% Part B: Draft Introduction and Method – 10% Part C – Final report – 30%	1000-2000 words	50%	N	Individual

ENGR 1004 Design Science (WSTC)

Credit Points 10

Legacy Code 700126

Coordinator Robert Paluzzano (https://directory.westernsydney.edu.au/search/name/Robert Paluzzano/)

Description An explanation and description of how the built environment works is essential to designers and construction professionals. This subject provides an introduction to physical units of measurement, tolerance, statics, dynamics, acoustics and thermal properties. It also allows students to interpret and apply the concepts of electricity, energy, work and power to the built environment. Students engage with these concepts through a hands-on learning experience including practical projects and live demonstrations.

School Computer, Data & Math Sciences

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) Students enrolled in 7015 Diploma in Construction Management or 7065 Diploma in Construction Management Extended or 7042 Bachelor of Construction Management (WSTC FYP) or 7081 Bachelor of Construction Management Extended (WSTC FYP) must pass MATH 0027 Scientific Methods for Construction Management (WSTC Prep) before enrolling in this unit

Equivalent Subjects ENGR 1003 Design Science

Restrictions Students must be enrolled at Western Sydney University, The College in a Construction Management program. Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year 2 subjects.

Assumed Knowledge

The content of any NSW HSC Mathematics subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply SI units for measurements
2. Explain and apply the principles of industrial design and construction
3. Explain and use the concepts of forces, equilibrium and electricity
4. Explain and use the thermal properties of materials and use the principles of design in acoustics
5. Prepare a design portfolio to professionally document the design process
6. Plan, manage and actively contribute to a team based project

Subject Content

1. SI units and measurements.
2. Principles for design and construction.
3. Forces and equilibrium.
4. Introduction to electricity.
5. Thermal properties of matter.
6. Acoustics and design principles.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz (In Class)	30 minutes	5	N	Individual
Portfolio	20 hours	20	N	Group
Presentation	10 slides	10	N	Group
Report	3,000 words	40	N	Individual
Critical Review	2,000 words	25	N	Individual

ENGR 1006 Design Studio 2: Form and Production

Credit Points 10

Legacy Code 301075

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description From Spring 2020, this subject will be replaced by301286 - Designing for People: Applied Ergonomics. This subject equips students with the skills to use creative design and structured decision making to solve challenging problems. Students will develop their understanding of design process by creating experimental models using various methods, including 3D rapid prototyping. Students will also record their design process via multimodal media, in both digital and non-digital format. They will also reflect upon the design process through the CDIO framework (Conceive, Design, Implement, Operate) and CAD (Computer-Aided Design).

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1017 - Form and Production ENGR 1014 - Engineering and Design Concepts

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conceive design solutions to meet a brief, taking into account mechanical, structural, human and contextual requirements.
2. Develop and justify a design solution through an iterative process involving peer feedback.
3. Implement and test a design using prototyping.
4. Critically reflect on and document the design process and suggest improvement opportunities successes (using the CDIO framework).
5. Produce a project report reflecting design and engineering content.

Subject Content

History of creativity in design and engineering
Design brief interpretation and reframing
Functional analysis
Project reporting for designers

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Assessment 1: Object design in 3D in groups, evaluation report and visual process diary as e-portfolio.	Full scale physical model, e-portfolio. Consisting of 5 pages.	30	N	Group
Assessment 2: Object design - presentation of digital narrative and evaluation.	10 minutes presentation of design solution including evaluation of design outcome.	30	N	Individual
Assessment 3: Project report and demo presentation of operational model detailing abstract kinetic object design.	10 page e-portfolio and 10 minutes presentation and 1:1 scale kinetic model.	40	N	Individual

Engineering Materials (WSTC Assoc Deg) ENGR 1010 - Engineering Materials (WSTC)

Assumed Knowledge

HSC mathematics (not General Mathematics), physics and chemistry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. describe and identify the atomic structure, bonding, crystal structure and defects of materials;
2. explain and determine the various properties of materials (e.g., mechanical, thermal, electrical, optical, magnetic);
3. identify and explain the mechanical failures, corrosion, and degradation of materials and how to prevent them;
4. select an appropriate material for a given application;
5. apply sustainability principles in engineering practice.

Subject Content

Atomic structure and interatomic bonding
Crystalline structure and defects in solids
Mechanical and physical properties
Metals, ceramics and glasses, polymers, composites, and advanced materials
Materials selection
Materials and sustainability

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Self-Assessment	(1) Total mark for tutorials will be 20. (2) There are 10 weekly online tutorial s, and each weights 2 marks. 1 hour	20	N	Individual
Quiz	Two quizzes 15 marks each 1 hour each quiz.	30	N	Individual
Practical	2 hours each	20	N	Both (Individual & Group)
Final Exam	2 hours	30	N	Individual

Assumed Knowledge

HSC physics and HSC mathematics (not General Mathematics).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and apply System Internationale (SI) units in the areas covered in this unit
2. Analyse and solve problems by applying the laws and principles of engineering physics in the following areas covered by the subject: - Units, and Vectors, Linear, and circular motion, Photons, electrons, and atoms, Force systems, and equilibrium, Work, and energy applications, Dynamics of rotational motion, Fluid dynamics, Heat, and thermodynamics, Periodic motion, and wave phenomena, Electricity, and magnetism.
3. Plan, conduct and document experiments performed in the laboratory on - Measurements & uncertainties, - Acceleration due to gravity, - Coefficients of friction, - Standing waves, - Spectral line analysis.
4. Interpret the results of experiments against the theory including the estimation of experimental uncertainties.

Subject Content

Units and Vectors,
Linear and circular motion,
Photons, electrons and atoms,
Force systems and equilibrium,
Work and energy applications
Dynamics of rotational motion,
Fluid dynamics,
Heat and thermodynamics
Periodic motion and wave phenomena,
Electricity and magnetism.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	Complete during 2 hour practical session	10	N	Individual
Practical Exam	2 hours	13	N	Individual
Numerical Problem Solving	40 minutes	30	N	Individual
Final Exam	1 hour	40	N	Individual
Self-Assessment	Complete Modules 2 through to 8.	7	N	Individual

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1011 - Engineering Physics ENGR 1013 - Engineering Physics (WSTC)

Restrictions Students must be enrolled at Western Sydney University, The College in 7022 Associate Degree in Engineering

Assumed Knowledge

HSC physics and HSC mathematics (not General Mathematics).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and apply System Internationale (SI) units in the areas covered in this unit
2. Analyse and solve problems by applying the laws and principles of engineering physics in the following areas covered by the subject ? units and vectors, linear and circular motion, photons, electrons and atoms, force systems and equilibrium, work and energy applications, dynamics of rotational motion, fluid dynamics, heat and thermodynamics, periodic motion and wave phenomena, electricity and magnetism
3. Plan, conduct and document experiments performed in the laboratory on ? measurements and uncertainties, acceleration due to gravity, coefficients of friction, standing waves, spectral line analysis.
4. Interpret the results of experiments against the theory including the estimation of experimental uncertainties.

Subject Content

Units and Vectors
Linear and circular motion
Photons, electrons and atoms
Force systems and equilibrium
Work and energy applications
Dynamics of rotational motion
Fluid dynamics
Heat and thermodynamics
Periodic motion and wave phenomena
Electricity and magnetism

Assessment

ENGR 1018 Fundamentals of Mechanics

Credit Points 10

Legacy Code 300463

Coordinator Md Abdul Alim (https://directory.westernsydney.edu.au/search/name/Md Abdul Alim/)

Description In this subject students acquire knowledge about the action and interaction of forces, moments and couples in two and three dimensions. Students then apply this to the analysis of the equilibrium

of single bodies, and of trusses, mechanisms, and transversely loaded beams. In addition, students study the dynamics of a non-rotating body, and a body rotating about a fixed axis. Further, they study the friction between bodies. Students conduct experiments to see how the lecture content applies to the real world, and make extensive use of vector algebra.

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1020 Fundamentals of Mechanics (WSTC) ENGR 1019 Fundamentals of Mechanics (WSTC Assoc Deg)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use equilibrium to evaluate unknown reactions, internal loads and represent distributed forces.
2. Evaluate the internal forces in planar trusses, and mechanisms.
3. Calculate the acceleration of a body under the action of an unbalanced force or couple.
4. Analyse static and kinetic friction.
5. Construct bending moment and shear force diagrams.
6. Take measurements in the real world, and use them to verify the theory presented in the lectures.

Subject Content

Statics in two dimensions
Statics in three dimensions
Translational Dynamics
Rotational Dynamics
Beam Diagrams

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled at Western Sydney University, The College in 7022 Associate Degree in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the functions and nature of modern engineering business management.
2. Define the role, abilities and core competencies of the Engineering Associate in engineering businesses.
3. Evaluate the principles and processes of modern engineering business management and identify key areas of management in small, medium and large Engineering business for further improvement.
4. Integrate and apply the principles of engineering business management to solve complex engineering problems and become effective in the workplace.
5. Explain the internal and external environment of the business and formulate business strategies

Subject Content

This unit provides engineering students with basic knowledge of engineering business management. The contents of this unit are arranged to provide engineers with an introduction to many of the important topics of management, such as the role of engineers, decision making, human resource management, strategic management, business environment, organizing and leading a business, and control. The weekly contents are described as follows:
1. Introduction to management: roles, functions and organizations
2. The environment and corporate culture
3. Managing in a global environment
4. Ethics, social responsibility and sustainable development
5. Organisational planning and goal setting
6. Strategy formulation and implementation: environmental and internal analyses, and business strategies
7. Managerial decision-making
8. Fundamentals of organising
9. Human resource management
10. Managing diversity
11. Leading and motivation in organizations Marketing
12. Communication and teamwork in organizations
13. Managerial and quality control

Assessment

ENGR 1024 Introduction to Engineering Practice

Credit Points 10

Legacy Code 300964

Coordinator Ee Loon Tan (https://directory.westernsydney.edu.au/search/name/Ee Loon Tan/)

Description This subject encourages students to explore the professional responsibilities and challenges faced by Engineers. Students are introduced to emerging issues and approaches in the engineering profession, with particular attention given to using a systems approach to solve engineering problems. Students engage in a semester-long research and problem solving task that addresses technical, environmental and social sustainability imperatives and fosters fundamental research and communication skills. Special emphasis is placed on lifelong learning, academic literacy and professional skills including information literacy, project management, engineering drawing and teamwork which equip students for subsequent academic and professional pursuits.

ENGR 1026 Introduction to Engineering Practice (WSTC)

Credit Points 10

Legacy Code 700148

Coordinator Buddhima De Silva (https://directory.westernsydney.edu.au/search/name/Buddhima De Silva/)

Description This subject encourages students to explore the professional responsibilities and challenges faced by Engineers. Students are introduced to emerging issues and approaches in engineering profession, especially particular attention will be given to systems approach. Students engage in a term-long research and problem solving task that addresses technical, environmental and social sustainability imperatives and fosters fundamental research, communication skills. Special emphasis is placed on lifelong learning, academic literacy and professional skills including information literacy, project management, engineering drawing and teamwork which equip students for subsequent academic and professional contexts.

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the

combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year 2 subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Solve an engineering problem using systems approach.
2. Identify and reflect upon the professional responsibilities of the Engineer.
3. Deploy information literacy skills to investigate a complex problem context, alternate approaches and possible solutions.
4. Deploy academic standard literacy skills including academic writing, argument construction and referencing.
5. Communicate research and solutions clearly and professionally in visual and verbal presentations and an illustrated report.
6. Plan, manage, actively contribute to and assess a team based project.
7. Identify and apply environmentally and socially sustainable design criteria to a complex problem.
8. Produce and read an engineering drawing representing simple structures, landscapes and electric circuit.

Subject Content

1. Sustainability
2. Complex systems
3. Innovation
4. Problem-solving
5. Professional responsibility
6. Information literacy and the research process
7. Critical thinking
8. Academic literacy
9. Teamwork

ENGR 1038 Design Graphics: Presenting Innovation

Credit Points 10

Legacy Code 301283

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description Design visualisation in the form of 2D and 3D graphics is fundamental to the overall design process. This subject provides students with essential knowledge of design principles as used in visual communication. Students will employ graphic techniques to effectively convey a design proposal using creativity, technical skill, and quality design principles in a manner that is consistent with industry expectations. Students will produce graphic work that is portfolio-ready and suitable to display to potential clients and employers.

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1022 Industrial Graphics 1 Presentation ENGR 1021 Graphics 1 2D 3D Industrial Design Communication

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan a design solution for a specific design brief using graphic visualisation techniques.
2. Design an object or building concept through the use of Computer-Aided Design (CAD).
3. Use a range of low fidelity and high fidelity representations (ranging from hand sketches to digital models).
4. Communicate a response to a design brief in the form of concept sketches and 2D/3D digital design drawings.

Subject Content

?Use of 2D and 3D graphics tools to represent a design concept
?Design communication to explain working properties and features of design concepts
?Integration of basic drawing skills for industrial design and architecture students; and skills to communicate design ideas

ENGR 1039 Designing for Circular Economy

Credit Points 10

Legacy Code 301281

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Traditional linear consumption patterns have placed considerable load on available natural resources. The lack of comprehensive mitigation strategies has motivated local and international efforts around the United Nations Sustainable Development Goals (UNSDGs 2030) to finding resolutions towards making the world more equitable, sustainable, liveable and with opportunities for new sustainable businesses. Students will choose an existing product and apply the principles of the UNSDGs and Circular Economy to create a proposal and prototype to improve upon its current design. Throughout this process the students will consider product usage, durability, bio-ingredients, the product lifecycle, community impact, and sustainability.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1004 Design Science (WSTC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply appropriate methods of approach in designing for circular economy.
2. Examine the inter-relationships between human actions and natural ecosystems with a particular focus on a restorative approach with emphasis on product or service design, material optimisation for remanufacturing, reuse, or recycling processes and effective product design methodology.
3. Identify UNSDGs challenges and provide suggestions on how individuals can make a constructive contribution through their own discipline fields through discourse and reflection.
4. Engage and facilitate discussions around the principles of Circular Economy and their inclusion in all future project briefs.
5. Present a conceptual proposal for a product or service improvement that contributes positively to a circular economy approach at a local community or city-wide level.

Subject Content

1.Introduction to the concept of Circular Economy and power of Circular Design in responding to environmental challenges and meaningful professional practice with impact.
2.Moving from linear to circular economy and understanding your professional role mindset change and related progressive community actions.
3.Introduction to a selection of materials and processes used in the manufacture of consumer products and their related environmental impacts on consumer health and wellbeing.
4.The significance of recycled material utilisation through remanufacture toward new economic and environmental gains.
5.Introduction to the United Nations Sustainable Development Goals (UNSDGs) and relationship to professional practice.
6.Introduction to understanding biodiversity and ecosystems and positive effects of circular thinking through case studies and observing UNSDG progress and ethical decision-making in new product development.
7.Applying Circular Economy principles in conceptually redesigning a product or service in cooperation with an extended product life or material lifecycle strategy.

Special Requirements

Legislative pre-requisites

The WHS module must be completed successfully by all students as a requirement for accessing workshops and undertaking practical exercises.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	Design Brief (1000 words)	20	N	Group
Report	Report (1000 words), Visualisation (2x graphics)	30	N	Individual

ENGR 1040 Designing for People: Applied Ergonomics

Credit Points 10

Legacy Code 301286

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description Ergonomics is the study of the interaction between people, their environments, and their objects. A sound understanding of the principles of ergonomics allows a designer to develop products, systems and environments with optimum product usability and end user safety. In this unit, students are introduced to modelling workshop procedures and undertake their own ergonomic study. Students then build and test a hand-held scale product, and integrate user feedback into their redesign.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply ergonomics theory and methods to conduct, document and interpret ergonomics research.
2. Analyse the ergonomics of an existing hand-held consumer product.
3. Redesign a hand-held consumer product with reference to ergonomics theory and practical research.
4. Generate basic plan drawings for 1:1 scale Usability Model.
5. Apply modelling techniques to produce a 1:1 scale model to demonstrate product functions and to test product usability.
6. Locate and comply with relevant Australian product safety standards.

Subject Content

-Ergonomics principles and guidelines
-Usability testing
-Anthropometrics measurements
-Safety issues in the workshop ? induction
-Visual systems
-Ergonomics of lighting
-Visual and Auditory display
-Information / Control display
-Inclusive Design
-Research methods

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Ergonomics analysis report: 1,250 words (20%); Design brief: 1,000 words (10%)	30	N	Individual
Applied Project	3 x A2 Concept renderings (Photoshop & Illustrator)	20	N	Individual
Applied Project	Report: 1,000 words (Redesign report 15%, testing report 15%); Working model 1:1 (20%)	50	N	Individual

ENGR 1041 Designing for User Experience (UX)

Credit Points 10

Legacy Code 301284

Coordinator Mauricio Novoa (https://directory.westernsydney.edu.au/search/name/Mauricio Novoa/)

Description Understanding product-oriented user requirements and mapping user experience journeys provide rich inputs for new product and service innovations. In this subject students will focus on user needs and the interactive elements which, when combined, create successful user experiences through impactful user interfaces, and highly differentiated outcomes. Students will engage in an applied project in response to an interaction design challenge. As part of their project students will incorporate elements to evoke strong emotional, sensorial and functional connections which are essential in creating inclusive design, engaged usability, and high-quality human-centred experiences, for successful products and services.

ENGR 1042 Sustainable Materials and Smart Manufacturing

Credit Points 10

Legacy Code 301288

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description In this subject we explore the circular 'Cradle to Cradle' design philosophy through material choice and manufacturing systems. Introduced are conventional materials, smart materials, and manufacturing systems within an ecological assessment framework, equipping designers with the tools to select and assess materials and manufacturing processes appropriate to use. Students undertake a life cycle materials research project and a design for manufacture (DFM) project in the context of emergent Industry 4.0 principles.

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1032 Sustainable Design Materials Technology ENGR 1031 Sustainable Design 1 Materials Technology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the stages involved, and associated environmental and social impacts of contemporary materials processing and manufacturing
2. Identify and describe how the properties of materials relate to contemporary manufacturing processes
3. Use knowledge of materials properties and manufacturing processes in selecting suitable materials to meet a simple (closed) design brief for a physical artefact and to justify the selection
4. Describe potential applications of new and emerging materials and processes in the circular economy and Industry 4.0 framework

Subject Content

1. Introduction to the product manufacturing processes of plastics, metals, wood products, glass, plastic composites and smart materials
2. Material finishes and coatings
3. Material selection and specification for product design
4. Material aesthetics and personalities
5. Sustainable material selection, specification and comparison
6. Life cycle analysis using material library tools
7. Design for manufacturing and assembly
8. Simulating plastic forming through making
9. Introduction to Industry 4.0 for manufactured material accreditation and tracking

Assessment

ENGR 1043 Co-Designing Change with Local Communities

Credit Points 10

Legacy Code 301282

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description Collaboration is the foundation for some of the most successful world achievements ranging from medical breakthroughs, to space travel, to smart phones, to drones. Effective collaboration in diverse teams promotes a dynamic environment for creativity and innovation with good prospects for developing novel solutions. In a real world collaborative, co-design partnership with an external university partner, students will create a design proposal and prototype, based on a project brief. Through this collaborative process, students will develop skills in research, conceptualisation, communication and reflective practice whilst prototyping and testing their ideas before presenting them to their client.

Level Undergraduate Level 1 subject

Equivalent Subjects ENGR 1002 Applied Erognomics ENGR 1005 Design Studio 1 Patterns and Products

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify stakeholders and describe human-centred needs based on core requirements.
2. Develop and communicate conceptual design proposals based on a closed design brief.

3. Select a final design based on developed human-centred core attributes.
4. Build and test a design in the form of a simple operating model.
5. Describe and provide a written reflection on learning.

Subject Content

1. Understanding human factors in design through observation and engagement
2. Participating in a real-life collaborative professional challenge
3. User-centred design inquiry
4. Reframing a project brief that observes the integration of people, context, and rewarding experiences of products or services in use
5. Practical introduction to working in teams
6. Integrated design processes and iterative physical model making and prototyping

Assessment

Legacy Code 301285

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description Drawing skills can unlock and translate creative thoughts as actions, iterations, and guide collaborative dialogue in meeting common goals. In combination with Design Thinking essentials which include empathy, ideation, and experimentation, practiced drawing skills can accelerate decision-making for individuals or groups. This subject is focused on developing hand drawing skills as a tool for generating creative ideas and design solutions. Students will attain an understanding of spatial relationships between humans and objects, and natural and built environments. The emphasis is on using drawing as a method for conducting exploratory investigations, recording creative thinking processes through ideation and inspiring innovation. Students will gain confidence in communicating their creative ideas to a wide audience.

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify a variety of representational techniques to communicate three dimensional forms.
2. Identify relationships between humans and the built environment by undertaking observational drawing activities.
3. Apply visual-thinking techniques as a technique for creative problem solving.
4. Create a portfolio of works that apply drawing principles and techniques to generate 2D compositions.
5. Reflect on your drawing technique and development through the use of a sketch book diary.

Subject Content

1.Drawing as a tool for creative thinking
2.Observational drawing
3.Drawing tools and their use
4.Types of drawings and drawing systems
5.Ideation techniques
6.Explanatory drawings
7.Perspective technique and pictorial representation
8.Perception, viewpoints, depth, light and shadow
9.Design principles in drawing: line, shape, tone texture
10.Diagrammatic drawings
11.The human form in context of designed spaces and objects
12.Composition for communication
13.Rendering processes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	A4 Sketchbook of weekly tutorial exercises	40	N	Individual

Applied Project	15 x A3 Pages of perspective drawing exercises	30	N	Individual
Portfolio	3 x A3 Communication drawings	30	N	Individual

ENGR 1045 Engineering Programming Fundamentals

Credit Points 10

Legacy Code 301335

Coordinator Leigh Sheppard (https://directory.westernsydney.edu.au/search/name/Leigh Sheppard/)

Description An introduction to problem-solving via programming, which aims to have students develop proficiency in using a high level programming language. Topics covered in this subject include: algorithms, program structures (statements, sequence, selection, iteration, functions), data types (numeric, character), data structures (arrays, tuples, pointers, lists), storage structures (memory, addresses), introduction to analysis of algorithms, testing, code quality, teamwork, and reflective practice. The subject includes extensive practical work in labs and programming projects.

ENGR 1046 Human Centred Design Research Methods

Credit Points 10

Legacy Code 301280

Coordinator Mauricio Novoa (https://directory.westernsydney.edu.au/search/name/Mauricio Novoa/)

Description This subject introduces Human-Centred Design (HCD) to students as an interactive practice that puts people's views, behaviour, and their environment at the centre of problem-solving, design and innovation processes. Students will work on an applied research project that allows them to observe, experiment, gain feedback from participants, and think critically through co-designing to propose new interpretations and solutions for our changing built environment, design artefacts and social habits. In alignment with the United Nations Sustainability Development Goals (UNSDG), this subject's research methods cover professional skills on ethics, academic literacy, design and research iteration processes, interdisciplinary team approaches, and sustainability. Students will be presented with opportunities to interact with industry and community experts to enhance their understandings and make potential career connections.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Communicate findings with a range of multi-modal means (e.g., verbal, writing, video, portfolio, presentations, online collaborative tools) based on academic literacy expectation and ethical and professional standards of human-centred design (HCD)
2. Apply research to analyse existing products, built environment, user need, standards, and systems viability using HCD research methods and design, digital and visual literacy skills
3. Evaluate HCD problems individually and in groups while aligning to United Nations Sustainable Development Goals (UNSDGs)

4. Produce design solutions using design research suitable for use that demonstrate HCD and design process knowledge by practice through design research, prototyping, testing and iterations

Subject Content

- People and context
- Design and visual literacy and the research process
- Critical thinking
- Design methodology
- Problem-solving
- Design Innovation
- Professional responsibility and ethics
- Academic literacy
- Teamwork
- Professional communication skills: written, visual and verbal presentations
- Design actions responding to principles of United Nations Sustainable Development Goals (UNSDGs)

Assessment

ENGR 1047 Advanced Engineering Physics 1

Credit Points 10

Legacy Code 301334

Coordinator Leigh Sheppard (https://directory.westernsydney.edu.au/search/name/Leigh Sheppard/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. The aim of this subject is to introduce students to the conceptual, mathematical and practical aspects of the following topics in advanced engineering physics, viz: vectors, linear and circular motion, photons, electrons and atoms, Newtons laws of motion, work and kinetic energy, dynamics of rotational motion, fluid dynamics, thermodynamics, periodic motion and waves/acoustics. The content will be delivered via a combination of lectures, tutorials and hands-on practicals in order to develop the growth of theoretical and applied engineering physics knowledge. This will provide students with a solid foundation for their engineering studies.

Assumed Knowledge

HSC Physics and HSC Mathematics Extension 1 (not General Mathematics).

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Identify and apply System Internationale (SI) units.
2. Identify and solve problems by applying the laws and principles of engineering physics.
3. Plan, conduct and document experiments performed in the laboratory.
4. Interpret the results of experiments against the theory including the estimation of experimental uncertainties.

Subject Content

1. Units, Physical Quantities and Vectors
2. Motion along a straight path
3. Motion in two and three dimensions
4. Newton's Laws of motion
5. Work and energy applications
6. Momentum, impulse and collisions
7. Rotation and dynamics of rigid bodies
8. Temperature and heat
9. Periodic motion and mechanical waves

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	2 hours per practical	15	N	Individual

Restrictions

Students must be enrolled in the program : 7178 Diploma of Aerotropolis Industry 4.0 (Mechatronic Skills) or 7182 Undergraduate Certificate in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and identify the atomic structure, bonding, crystal structure and defects of materials.
2. Explain the various properties of materials (eg mechanical, thermal, electrical, optical, magnetic).
3. Identify and explain the mechanical failures, corrosion and degradation of materials and how to prevent them.
4. Select an appropriate material for a given application.
5. Apply sustainability principles in engineering practice.

Subject Content

1.Atomic structure and interatomic bonding
2.Crystalline structure and defects in solids
3.Various properties of materials (mechanical, thermal, electrical, magnetic and optical)
4.Metals, ceramics and glasses, polymers, composites and advanced materials
5.Diffusion and phase diagrams
6.Corrosion and degradation of materials
7.Materials selection
8.Materials and sustainability

ENGR 1049 Introduction to Engineering (Block)Practice

Credit Points 10

Legacy Code 500063

Coordinator Shubhekshya Basnet (https://directory.westernsydney.edu.au/search/name/Shubhekshya Basnet/)

Description This subject encourages students to explore the professional responsibilities and challenges faced by Engineers. Students are introduced to emerging issues and approaches in engineering profession, especially particular attention will be given to systems approach. Students engage in a term-long research and problem solving task that addresses technical, environmental and social sustainability imperatives and fosters fundamental research, communication skills. Special emphasis is placed on lifelong learning, academic literacy and professional skills including information literacy, project management, engineering drawing and teamwork which equip students for subsequent academic and professional contexts.

Students must be enrolled in 7178 Diploma of Aerotropolis Industry 4.0 (Mechatronic Skills) Or 7182 Undergraduate Certificate in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Solve an engineering problem using systems approach.
2. Identify and reflect upon the professional responsibilities of the Engineer.
3. Deploy information literacy skills to investigate a complex problem context, alternate approaches and possible solutions.
4. Deploy academic standard literacy skills including academic writing, argument construction and referencing.
5. Communicate research and solutions clearly and professionally in visual and verbal presentations and an illustrated report.
6. Plan, manage, actively contribute to and assess a team based project.
7. Identify and apply environmentally and socially sustainable design criteria to a complex problem.
8. Produce and read an engineering drawing representing simple structures, landscapes and electric circuit.

Subject Content

1.Sustainability
2.Complex systems
3.Innovation
4.Problem-solving
5.Professional responsibility
6.Information literacy and the research process
7.Critical thinking
8.Academic literacy
9.Teamwork
10.Time and project management
11.Professional communication skills: written, visual and verbal presentations
12.Systems approach
13.Engineering drawing

ENGR 1050 Sustainable Engineering Fundamentals

Credit Points 10

Legacy Code 301418

Coordinator Sathaa Arumugam Sathasivan (https://directory.westernsydney.edu.au/search/name/Sathaa Arumugam Sathasivan/)

Description Engineers need to ensure that their practice is guided by sustainability principles. This subject will introduce students to sustainability and provide an understanding of the environmental and social impacts of human development. Students will be introduced to various national and international initiatives including the United Nations Sustainable Development Goals. Students will learn fundamental scientific concepts in chemistry and ecology, and conduct and report on laboratory experiments relevant for emerging issues. Students will apply concepts such as material and energy flow, limiting nutrients, carrying capacity, climax, biodiversity, food chain and irreversibility in relation to how an ecosystem responds to changes in the environment to real world case studies.

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the need for sustainable development and key national and international initiatives.
2. Explain the concepts of ecology.
3. Apply the concepts of ecology to evaluate the effects of human activities on ecosystem.

4. Identify the concept of chemical equilibrium used to evaluate phenomena related to chemical reactions including acids and bases.
5. Apply concepts of oxidation and reduction to analyse electrochemical cells and corrosion.
6. Communicate concepts, experiments and results in a clear and ethical manner.
7. Work safely and collaboratively in groups on laboratory experiments and projects, contributing to reports.

Subject Content

1.Introduction to sustainability
2.Ecology and ecosystems
3.Effects of economic development on environment and society
4.Key international and national initiatives on sustainable development

5.Stoichiometry
6.Chemical equilibrium
7.Acids and bases
8.Electrochemistry
9.Chemical reaction kinetics

ENGR 1052 Fundamentals of Mechanics (Block)

Credit Points 10

Coordinator Maisha Tabassum (https://directory.westernsydney.edu.au/search/name/Maisha Tabassum/)

Description In this subject students acquire knowledge about the action and interaction of forces, moments and couples in two and three dimensions. Students then apply this to the analysis of the equilibrium of single bodies, and of trusses, mechanisms, and transversely loaded beams. In addition, students study the dynamics of a non-rotating body, and a body rotating about a fixed axis. Further, they study the friction between bodies. Students conduct experiments to see how the lecture content applies to the real world, and make extensive use of vector algebra.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in program :-

7178 Diploma of Aerotropolis Industry 4.0 (Mechatronic Skills)

Learning Outcomes

1. Use equilibrium to evaluate unknown reactions, internal loads and represent distributed forces.
2. Evaluate the internal forces in planar trusses, and mechanisms.
3. Calculate the acceleration of a body under the action of an unbalanced force or couple.
4. Analyse static and kinetic friction.
5. Construct bending moment and shear force diagrams.
6. Take measurements in the real world, and use them to verify the theory presented in the lectures.

Subject Content

1. Statics in two dimensions
• Vectors
• Forces Moments and Couples
• Free body diagrams
• Equilibrium
• Friction
• Trusses
• Frames and Machines
2. Statics in three dimensions
• Vectors
• Forces Moments and Couples
• Free body diagrams
• Equilibrium
3. Translational Dynamics
• Acceleration
• The work-energy equation
• Potential energy
4. Rotational Dynamics
• Acceleration
• The work-energy equation
5. Beam Diagrams
• Internal loads
• Bending moments and shear force diagrams
• Distributed forces

ENGR 1053 Applied Physics for Engineers (WSTC)

Credit Points 10

Description This subject provides you with an introduction to the fundamentals of engineering physics, tailored for relevance in various engineering contexts. You will master the use of System Internationale (SI) units and engage deeply with core principles spanning from mechanics and thermodynamics to electricity and magnetism. This subject not only equips you with an understanding of the theoretical knowledge of engineering physics, but also places a strong emphasis on the practical application through a series of experiments. You will hone your skills in planning, conducting, and documenting experiments, allowing you to draw meaningful connections between theoretical principles and experimental results.

- Electricity and magnetism

ENGR 2001 Automated Manufacturing

Credit Points 10

Legacy Code 300735

Coordinator Leo Zhang (https://directory.westernsydney.edu.au/search/name/Leo Zhang/)

Description Automated manufacturing is about increasing the capacity of productivity through a range of integrated technologies, such as digital transformation platforms so that manufacturing operations can run simultaneously. These processes are used in industrial settings. Students will be introduced to the fundamentals of manufacturing operations, automation, and control technologies, including numerical control and industrial robotics. This subject aims to deepen the understanding of the material selection process and enables students to identify appropriate manufacturing processes in a product manufacturing design. Various manufacturing processes such as material removal, bulk deformation, sheet-metal forming, and non-traditional processes will be examined. Through problem-solving activities, students will enhance their manufacturing engineering skills in the computer-aided design (CAD) and computer-aided manufacturing (CAM) areas and acquire the skills to machine their CAD models on a computer numerical control (CNC) machine.

Equivalent Subjects ENGR 3002 - Automated Manufacturing

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply knowledge of manufacturing processes and automation control technologies to solve problems and design components.
2. Use CAD software to create and modify components designs and CAM software to generate code files for manufacturing those components.
3. Use suitable problem-solving techniques for problems and contexts in manufacturing design.
4. Discuss the advantages of computer integrated manufacturing, flexible manufacturing processes and their applications in the manufacturing industries.
5. Apply mathematical techniques in a manufacturing engineering problem.
6. Conduct work safely and responsibly in the manufacturing lab.

Subject Content

Material properties and product attributes
Engineering materials
Solidification processes
Particulate processing of metals and ceramics
Metal forming and sheet metalworking
Material removal processes
Property enhancing and surface processing operations
Joining and assembly processes
Manufacturing systems
Manufacturing support systems
Manual and CNC machining processes and tools
CAD/CAM technologies, applications and programming
Cost estimation in manufacturing
Flexible and fixed automation
Applications of robotics in automated manufacturing
Computer-integrated manufacturing & processing planning

Level Undergraduate Level 2 subject

Restrictions

Students must be enrolled in 7022 Associate Degree in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Manage, integrate and control project time, cost, quality and safety and health.
2. Prepare for project activity planning, time scheduling and project budget.
3. Allocate and balance resources, labour and cash flow within time and cost constraints.
4. Monitor and control the execution of a project.
5. Perform contract and job-site administration.

Subject Content

This unit provides the students with the engineering project management skills and knowledge. It will cover contemporary practices in project planning, costing, scheduling, resourcing, monitoring, controlling, contract administration and job-site administration. The detailed contents are described as following:
1. Introduction to project management (Kloppenborg, 2009)
2. Project selection and prioritization (Kloppenborg, 2009)
3. Organizational capability: structure, culture and roles (Kloppenborg, 2009)
4. Defining scope and constructing work breakdown structures (WBS) (Kloppenborg, 2009)
5. Scheduling projects 1: network technology (Kloppenborg, 2009)
6. Scheduling projects 2: Gantt Chart and MS Project (Kloppenborg, 2009)
7. Resourcing projects 1: Resource allocation (Kloppenborg, 2009)
8. Resourcing projects 2: Compress the project schedule (Kloppenborg, 2009)
9. Budgeting projects 1: cost planning and cost estimating (Kloppenborg, 2009)
10. Budgeting projects 2: cost budgeting and cost control (Kloppenborg, 2009)
11. Project supply chain management (Kloppenborg, 2009)
12. Determining project progress and results Project control (Kloppenborg, 2009)
13. Job-site administration (Gould and Joyce, 2009)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Assignment – Report	2,000 words	30	N	Individual
Online Quizzes x 10	30 minutes each	20	N	Individual
Final Exam	2 hours	50	N	Individual

ENGR 2010 Engineering Project (WSTC AssocD)

Credit Points 10

Legacy Code 700110

Coordinator Abbas Ranjbar (https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/)

Description In this unit, students will use project management tools, techniques and practices to plan and control a project that achieves stated requirements on time and within budget. Students will plan a project including the creation of a statement of work, a work breakdown structure and an appropriate set of supporting work packages.

Level Undergraduate Level 2 subject

Pre-requisite(s) ENGR 2018 OR
ENGR 2031

Restrictions

Students must be enrolled at The College in 7022 Associate Degree in Engineering. Student must have completed at least 100 Credit Points in their Associate Degree in Engineering Program prior to enrolling in the 700110 Engineering Project (WSTC AssocD).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the theoretical knowledge gained during the subject to develop practical and innovative engineering solutions.
2. Apply the project management principles to an engineering project.
3. Recognise the importance of client/end-user consultation and satisfaction and good oral presentation and engineering report writing skills.
4. Familiarise themselves with ethical, social, economical and environmental responsibilities of an engineer.
5. Use time and cost management tools and knowledge to plan and control the engineering project.
6. Demonstrate the methods/practices of carrying out systematic engineering project management.

Subject Content

This unit is designed to provide engineering students with the opportunity to create and manage an engineering project with the integration and application of the knowledge and skills of engineering project management. The detailed contents are described as follows:
1. Project brief, assignment, tasks and assessment brief
2. Achieving the primary project objectives: Time, cost, quality and safety
3. Defining the project scope and Planning project activities/tasks
4. Application of project scheduling skills
5. Issues in scheduling and use of MS project
6. Application of financial management skills
7. Application of resources allocation skills
8. Application of project monitoring and control skills
9. Updating master schedule
10. Project quality management planning
11. Project risk management planning
12. Project safety, health and environment management planning
13. Post project reviews

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	Min 3,000 words / group (excluding appendices and annexures)	30	N	Group/ Individual
Quiz	20 minutes each	20	N	Individual
Presentation	Usually 20 minutes are to be assigned per group with 5 minutes for Q&A at the end	15	N	Group
Report	Min 5,000 words (excluding appendices and annexures) Individual contributions to be specified in the report	35	N	Individual

ENGR 2011 Graphics 2: Visual Simulation

Credit Points 10

Legacy Code 301076

Coordinator Chris Nash (https://directory.westernsydney.edu.au/search/name/Chris Nash/)

Description From 2020, this subject will be replaced by 301287 - Designing Graphics: Engineering Documentation. Three-dimensional digital simulations are used to model manufactured artefacts, create virtual environments and simulate dynamic processes or systems. In this subject students will use 3D modelling software to simulate static and dynamic 3D structures. High quality photorealistic rendering and 3D printing file preparation will also be covered.

Type	Length	Percent	Threshold	Individual/ Group Task
Assessment 1. Product design.	Detailed manufactured drawing sheets - 10 x A3	40	N	Individual
Assessment 2. Designing and detailing of a product with photorealistic environment.	Prototyping file format document 4 x A3, Photorealistic rendering 1 x A3	40	N	Individual
Assessment 3. Rendered product visual simulation in environment.	Rendered 20 second visual simulation movie	20	N	Individual

ENGR 2012 Graphics 3: 3D Engineering Specifications and Visualisation

Credit Points 10

Legacy Code 301079

Coordinator Jean Payette (https://directory.westernsydney.edu.au/search/name/Jean Payette/)

Description From 2020, this subject will be replaced by 301290 - Design Graphics: Communication for Manufacture. This subject introduces formal graphical communication methods used by professionals engaged in the design, manufacture and management of manufactured items. Students will learn how to follow Australian Standards for engineering drawings, and to use Computer-Aided Design (CAD) software for accurately representing and modelling basic parts and assemblies. The documentation of design concepts in the form of three dimensional (3D) computer models provides data that can be applied in a wide variety of ways to facilitate the understanding and production of parts and assemblies. The objective of this subject is to introduce students to the industry standard software and hardware employed to generate these models, via a "hands on" approach to creating 3D data. Issues such as data transfer, rapid prototyping, computer numerical control (CNC) machining and visualisation will also be discussed.

Level Undergraduate Level 2 subject

Pre-requisite(s) ENGR 2012

Equivalent Subjects ENGR 3018 - Industrial Graphics 4 Surface

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the principles and theories of human computer interaction in both designing and evaluating virtual worlds and 3D environments.
2. Make an informed choice from a range of different software platforms to create interactive 3D environments.
3. Construct dynamic simulations of natural or artificial ecosystems.
4. Create 3D virtual environments in which users interact with digital agents.
5. Use algorithmic and parametric modelling software to simulate static and dynamic 3D structures.

Subject Content

3D environments and 3D models
Software tools to create 3D models
Application Areas of 3D environments
User Perception Aspects of 3D environments
Components and structure of 3D environments in relation to Computer Graphics
Algorithmic Modelling
Game Development

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Assessment 1a - Initial Representation of 3D environment	Submitted project files and code (1000 lines)	15	N	Individual
Assessment 1b - Demo presentation of 3D environment including interactions	10 minutes presentation and project files/code submitted (2000 lines)	30	N	Individual
Assessment 2 - Weekly Tutorial/Lab activities	Set of exercises (5 exercises, 90 minutes each)	40	N	Individual
Assessment 3 - In class Quizzes X 2	1 hour each	15	N	Individual

ENGR 2016 Pavement Materials and Design

Credit Points 10

Legacy Code 300984

Coordinator Qinghua Zeng (https://directory.westernsydney.edu.au/search/name/Qinghua Zeng/)

Description This subject will provide students the basic knowledge and concepts on pavement materials and design. It will cover the common materials used in pavement construction such as aggregates, cement, asphalt, and concrete. It will also cover the pavement design system, pavement construction, design of flexible pavements, design of rigid pavements, and pavement maintenance.

Level Undergraduate Level 2 subject

Pre-requisite(s) ENGR 1008 or PROC 1008

Equivalent Subjects ENGR 1007 - Engineering Geology and Concrete Materials ENGR 2017 - Pavement Materials and Design

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the properties and manufacture of pavement materials;
2. Design asphalt mix and concrete mix;
3. Evaluate and select the pavement materials for specific pavement construction;
4. Explain the pavement design system;
5. Apply the basic principles to the structural design and construction of flexible and rigid pavements;
6. Conduct pavement evaluation and describe the pavement maintenance practices.

Subject Content

1. Pavement materials and their selection
2. Granular materials: role and function, behaviour, production, properties, and tests for quality

3. Asphalt: mix types, materials selection, mix design, manufacture, and paving
4. Cement: composition, hydration, and properties
5. Concrete: materials selection, mix design, and steel reinforcement materials
6. Pavement design system
7. Design of flexible pavements
8. Design of rigid pavements
9. Pavement construction
10. Maintenance of pavement

Level Undergraduate Level 2 subject

Pre-requisite(s) ENGR 2009

Restrictions

Students must be enrolled at Western Sydney University, The College in 7022 Associate Degree in Engineering.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Effectively build, motivate and manage project team.
2. Apply managerial communication skills and establish effective communication channels to achieve best professional practice.
3. Make effective oral, written and visual communications.
4. Describe and promote sustainable engineering.
5. Manage occupational health and safety.

Subject Content

This unit provides the engineering students in Australia with the tools and techniques that facilitate the application of the knowledge of engineering management in practical engineering work and study. The detailed contents are described as following
1. The engineering method
2. Learning to be an engineer
3. Managing occupational health and safety
4. Understanding communication
5. Enabling skills for engineers
6. Information skills
7. Problem-solving tools
8. Sustainable engineering
9. Ethics in engineering
10. Managing engineering projects
11. Developing risk management plan, knowledge management plan and quality plan
12. Communicating information
13. Planning your career

Assessment

ENGR 2022 Design Practice: Sustainable Manufacturing

Credit Points 10

Legacy Code 301308

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description Reflecting upon the life cycle of products and their components is important in understanding how decisions at the design level impact on people, resources, sustainable goals and how these contribute towards sustainability-oriented local and global value chains. This subject focuses on sustainable decision-making at the design level. It challenges and motivates students towards using sustainability principles to promote good Design for Disassembly (DfD) practices with linkages to material durability, and material reuse. Through a project-based approach, students will appraise manufacturing considerations for product design applying in succession Design for Manufacturing, Assembly and Disassembly (DfM, DfA, DfD) principles to their products and reflect on product lifecycle management best practice.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 2 subject

Assumed Knowledge

The ability to communicate a design proposal using 2D or 3D computer software with annotations, and application of Australian Standards AS 1100 is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conduct a product review and re-design based on principles on DfM, DfA and DfD focusing on durability in regard for fit-for-purpose, and circular economy principles
2. Improve sustainable outcomes by applying Design for Manufacturing, Assembly and Disassembly techniques and approaches
3. Employ design methods that enhance the ease of manufacturing component assemblies and ease of disassembly
4. Effect positive sustainable change in design, manufacture, and end-of-life-cycle use of components supporting a sustainable systems approach

Subject Content

1.Emergent local and global perspectives in Sustainable Manufacturing

2.Design for Assembly (DfA), Manufacturing (DfM), and Disassembly (DfD)
3.Design parts with: self-fastening features, handling & insertion, component symmetry, component minimisation, standardisation, modularity, and waste and part minimisation
4.Product Lifecycle Management (PLM) with emphasis on disposal and reuse of manufactured products material resource legacies

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	1,000 words	20	N	Group
Applied Project	500 words (10%) 6 X A2 size concept development (20%)	30	N	Individual
Applied Project	Engineering drawings (15 pages)	30	N	Individual

Pre-requisite(s) ENGR 2025

Equivalent Subjects ENGR 2014 Industrial Graphics 2 Transition

Assumed Knowledge

Prior knowledge of computer aided design modelling as well as working knowledge of Australian Standard AS1100 for engineering drawing would be desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Incorporate sustainability manufacturing to product development and manufacturing.
2. Use 3D surface and solid modelling to design parts.
3. Produce engineering drawings in compliance with Australian Standards (AS) 1100 Parts 101 (General Principals) and 201 (Mechanical Drawing).
4. Design products specific to a variety of manufacturing processes.

Subject Content

1.Surface modelling
2.Engineering Drawing to AS1100
3.Manufacturing parts ready for manufacturing
4.Materials and manufacturing processes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects ENGR 2011 - Graphics 2 Visual Simulation

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the principles of AS1100 to specify designed products and parts.
2. Use and interpret standard conventions used in engineering drawing.
3. Generate 2D part(s) and assembly engineering drawings using computer-aided design.
4. Communicate manufacturing requirements for designed parts and product assemblies using CAD software (engineering and reverse engineering).
5. Use 3D CAD modelling to design parts.
6. Design products specific to a variety of manufacturing processes.

Subject Content

Introduction to 3D modelling
Introduction to engineering drawing AS1100
Manufacturing processes
Materials specifications

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	20 x CAD exercises; & 10 sketchbook exercises	15	N	Individual
Annotated Bibliography	15 parts 3D Modelling and Full set of Engineering Drawings (30 pages)	40	N	Individual
Applied Project	15 parts 3D Modelling and Full set of Engineering Drawings (30 pages)	45	N	Individual

ENGR 2026 Design Semantics: Exploring Product Form

Credit Points 10

Legacy Code 301289

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description Products can engage our senses to evoke an emotional response or mediate an experience. This is a powerful psychological tool for industrial designers to understand in terms of the design interface as it provides a strategic opportunity for innovation. In this subject students will create meaningful and active product relationships, and use product semantics as an agency for proposing design solutions in areas such as health and well-being, ageing populations, and sustainable design.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects ENGR 2006 - Design Studio 1 Themes and Variations ENGR 2008 - Design Studio 3 Design Process and Function

Assumed Knowledge

Students will be required to have basic workshop skills and/or model-making skills. A basic understanding of graphics software, for example Adobe Photoshop and Illustrator, is assumed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the principles of product semantics as a strategy for creating innovative product solutions.
2. Develop a design brief to address a design problem.
3. Create 2D concepts and 3D prototype models to communicate a design proposal.
4. Validate the product design through testing and evaluation of the designed solution.
5. Apply professional practice and team collaboration in the context of a design project.

Subject Content

Product Semantics as a contemporary research area
Investigation of key sub-topics and their impact on product form and features: Affordances and signifiers; Design Activism; Kansei Engineering; gender and product design; stereotype; behavioural change; ergonomics and semantics; relationships with objects; people centred design
Psychology and design opportunity
The product interface and ?eease of use?f
Manufactured details
Development of the Design Brief
Concept graphics to communicate a design solution
Exploratory model-making to investigate product language

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1 x A4 Written document (1500 words)	10	N	Individual
Applied Project	3 x A3 Annotated Graphic compositions; 1 x A3 Process Diary (30 pages);	40	N	Individual
Portfolio	1 x A3 set of detail drawings; 1 x Full scale model	50	N	Both (Individual & Group)

ENGR 2027 Engineering Design

Credit Points 10

Legacy Code 301341

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. Design thinking is a fundamental skill that every engineer must have for the 21st Century. It is one of the skills that profoundly distinguish human intelligence from artificial intelligence, which greatly impacts an engineer's long-term career success in the workplace. This subject aims to equip students with the domain-independent and solution-neutral design thinking, which can be applied to whatever technical stream students choose to pursue in the future.

School Eng, Design & Built Env

Discipline Engineering and Related Technologies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions

Must be enrolled in 3771 Bachelor of Engineering Advanced (Honours)

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Conduct collaborative product planning to formulate a unique design problem by translating customer needs to functional requirements
2. Perform collaborative conceptual design to generate, evaluate, and select the functionally simple and physically certain concepts
3. Document the design process and present the design outcome through presentation, report, logbook, and CAD drawing.
4. Design mechanical components to satisfy the target functional requirements against design constraints

Subject Content

- Design, innovation, and design thinking concepts
- Team building and logbook writing
- Formulate a unique design problem as functional requirements
- Generate design concepts by systemic design methods
- Organize design concepts based on the independence axiom
- Evaluate design concepts based on the information axiom
- Improve design concepts by resolving contradictions
- TRIZ and CAD drawing
- Component introduction and shaft design
- Bearings, couplings and alignment
- Belt and chain drive
- Motor selection and fly wheels
- Assembly, access, maintenance

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Log/ Workbook	10 pages	30	N	Individual
Report	12 pages	60	N	Group
Presentation	5 minutes	10	N	Group

ENGR 2028 New Product Innovation with IoT Data

Credit Points 10

Legacy Code 301305

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Design Thinking has had a considerable effect on the ways firms innovate, design and evaluate products and services for use. The evolution of smart products and services in recent years offers both challenges and rewards for organisations as the big data generated provides insights to current product and service utilisation. Interpretation and integration of these new knowledge streams can support future product development, by enhanced understanding of human behaviour and features of sensor technologies. Students will produce an IoT influenced project design brief that provides the directional basis for the deployment of both human and technological resources in preparation for their career progression as a future innovation manager in a global, online marketplace.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects ENGR 2003 - Design Management 1 Product Design Audit
ENGR 2002 - Design Management 1 Process and Manufacturing

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply design thinking methods to a context based challenge;
2. Evaluate a product or service from an Internet of Things requirements perspective;
3. Create a narrative by mapping essential considerations for either product or service use;

4. Develop a design innovation strategy incorporating compelling contextual factors framed in a design brief with actionable items that consider necessary resources to progress to a prototype planning stage.

Subject Content

- introduction to The internet of things (IoT) features as A strategic planning approach to new Product development (NPD) or redesign.
- planning Product to market resource utilisation Employing design thinking methods and IoT feature integration
- Leveraging innovation methodologies supporting Entrepreneurship through user-centred approaches
- Scaffolded design brief planning reflecting upon collaborative transdisciplinary practices
- enhancing Product and service development from An end-Consumer-centred Product innovation perspective

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report and Annotated Bibliography: Identify and analyse contextual scenario in IoT Context Report with annotated bibliography	1,000 words (report, 20% with annotated bibliography, 10%)	30	N	Individual
Critical Review: IoT Resource Identification critical review with Mapping visualisation	1,000 words (critical review 20%) And Mapping visualisation(1	30	N	Individual
IoT Innovation Report with Design Brief & proposal	750 words (design brief 15%) and 1250 words (proposal report 25%)	40	N	Individual

ENGR 2029 Simulation in Virtual and Augmented Realities

Credit Points 10

Legacy Code 301306

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description Simulation in three-dimensional (3D) environments provide valuable insights to human-centred perspectives. Whilst investigating the fundamentals of Virtual Reality (VR) and Augmented Reality (AR), students will analyse aspects of functionality, user interfaces, spatial relationships in built environments, sustainability, efficient resource management, instructional support for safety and training, and accelerated design conceptualisation in detailed new product, service or environmental innovation. Students' experiences will equip them for future employment as VR and AR experience designers, interactive experience producers, or creative technologists.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Assumed Knowledge

Possession of 2D or 3D modelling skills is desirable but not essential.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify opportunities to accelerate new product of service development with VR and AR technology strategies
2. Design a 3D model within a virtual reality environment that engages a VR audience
3. Apply VR or AR process steps in developing a new product model for use in a 3D environment
4. Simulate a design for an interactive VR or AR proposal
5. Present a design for an interactive VR or AR proposal that engages an audience in a collaborative discussion around the sustainable simulation benefits of a VR or AR approach

Subject Content

1.Introduction to interactive media namely Virtual Reality (VR) and Augmented Reality (AR)
2.Explore interactive computing and emergent VR and AR applications
3.Discover enabling capabilities for VR and AR
4.Experience VR and AR
5.Designing with VR and for AR
6.Present a design proposal for a 3D environment using interactive media

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1 X Story Map PDF poster, 1 X 2-4 minute video presentation	20	N	Individual
Applied Project	2-4 minute video	25	N	Individual
Applied Project	5 minute presentation of working prototype	55	N	Individual

ENGR 2030 Industrial Experience (Associate Engineer) (WSTC AssocD)

Credit Points 10

Legacy Code 700311

Coordinator Abbas Ranjbar (https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/)

Description Industry experience provides a significant opportunity for students to understand employer expectations in relation to working on projects and with others in a professional capacity. Students undertake six weeks full-time (37.5 hours per week) employment (or part time equivalent) to obtain relevant workplace experience in Engineering under the supervision of professional engineers in one or more companies. Students identify learning opportunities and goals with a focus on applying academic learning in practice, learning project management, work culture, professional attitude and self-awareness. Students develop critical reflective skills in reporting their progress.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions Students must be enrolled at The College in 7022 Associate Degree in Engineering. Students must have completed 60 credit points.

Assumed Knowledge

A broad background knowledge in the relevant engineering discipline (ie equivalent to that obtained after completing one and a half (1.5) years of the associate engineering program).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate planning and goal setting skills with a comprehensive plan for work experience.
2. Critically reflect on personal and professional skills required for the workplace context.
3. Report on your experience applying academic learning in the workplace and on your experience learning engineering, engineering processes, and work culture in the workplace context.
4. Provide evidence of working effectively and inclusively with others in multi-disciplinary teams.
5. Assess your work performance using self-assessment and assessment by others.

Subject Content

225 hours of industrial training under the supervision of a professional engineer(s) or engineer associate(s).

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 2031 Management Practices for Engineer Associates (WSTC AssocD)

Credit Points 10

Legacy Code 700307

Coordinator Bader Unnisa Mehdi (https://directory.westernsydney.edu.au/search/name/Bader Unnisa Mehdi/)

Description This subject will enable students to support the achievement of organisational goals. The unit's major focus is project management, culminating in a practical project which gives students the opportunity to work as part of a team to apply key project management skills and knowledge. It also introduces some of the management practices engineers need to understand and master in order to work effectively in the field. This includes effective communication, especially when working in a team, work health and safety, and an ability to plan, develop and build a career as an Engineer Associate.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects ENGR 2009 Engineering Management for Engineer Associates (WSTC AssocD)
ENGR 2018 Professional Practice for Engineer Associates (WSTC AssocD)

Restrictions

Students must be enrolled at The College in 7022 Associate Degree in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and use appropriate criteria to reflect on career development pathways in engineering.
2. Apply ethical and sustainable engineering principles.
3. Demonstrate an understanding of workplace health and safety.
4. Analyse and apply engineering project management principles, tools and procedures in an engineering project.
5. Communicate professionally and effectively as part of a team.

Subject Content

- Engineering career planning and development.
- Effective study and workplace communication skills.
- Sustainable engineering and ethics in engineering.
- Managing workplace health and safety.
- Fundamentals of project management.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	10 multiple choice questions per quiz	20	N	Individual
Reflection	300 words each	25	N	Individual
Professional Task	1,000 words	25	N	Individual
Presentation	500-750 words per student	30	N	Group

ENGR 2032 Sustainability Analysis and Design

Credit Points 10

Legacy Code 301419

Coordinator Sathaa Arumugam Sathasivan (https://directory.westernsydney.edu.au/search/name/Sathaa Arumugam Sathasivan/)

Description In this unit, students will learn and appropriately apply technical and socio-economic approaches of achieving sustainability, such as life cycle assessment, environmental impact assessment, environmental auditing, circular economy, design for the environment and cleaner production to real world problems. The students will be taught about policy, financial and social approaches to achieving sustainability through real life problems/cases.

School Eng, Design & Built Env

Discipline Environmental Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Perform Systems Analysis including Environmental Auditing for simple systems or products.
2. Explain the implication of Circular Economy to Sustainable Development.
3. Perform Life Cycle Assessment for a given case.
4. Perform Environmental Impact Assessment for a given project.
5. Explain the term Cleaner Production or Industrial Ecology with examples of applications.
6. Modify a system or product design and perform option analysis considering multiple aspects such as environmental, social, cultural, political, economic, and regulatory factors.
7. Communicate solutions to specialist and non-specialist audiences.

Subject Content

1.Systems analysis and auditing
2.Circular economy
3.Environmental auditing
4.Technical approaches to sustainability such as life cycle assessment; environmental impact assessment
5.Non-technical approaches to sustainability such as tax, policy, marketing.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	3000 words	35	N	Individual
Intra-session Exam	1 hour	30	N	Individual
Report	2000-3000 words and 15 minutes	35	N	Both (Individual & Group)

ENGR 2033 Industrial Experience (Engineering Technologist)

Credit Points 0

Legacy Code 301441

Coordinator Mobarak Hossain (https://directory.westernsydney.edu.au/search/name/Mobarak Hossain/)

Description Industry experience is a significant opportunity for students to understand employer expectations in relation to working on projects and with others in a professional capacity. Students undertake 8 weeks full-time (37.5 hours per week) employment (or equivalent) to obtain relevant workplace experience in Engineering under the supervision of professional engineers or engineering technologists in one or more companies. Students identify learning opportunities and goals with a focus on applying academic learning in practice, learning project management, work culture, professional attitude and self-awareness. ENGR 2034 Geometric Design of Roads (WSTC AssocD)

Credit Points 10

Coordinator Abbas Ranjbar (https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/)

Description This is an introductory subject covering the design of dimensions and configurations of the visible features of a roadway. It will provide students with an understanding of pavement widths, horizontal and vertical alignment, slopes channelization, intersections and other features that can significantly affect the operations, safety, and capacity of the roadway network. This subject is designed in collaboration with Transport for NSW.

School Eng, Design & Built Env

Discipline Transport Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH1010 Fundamentals for Engineering Studies

Restrictions

Students must be enrolled at The College in 7022 Associate Degree in Engineering

Learning Outcomes

1. Explain highway terminology and concepts of geometric design of roads.
2. Evaluate the various social, technical and environmental aspects involved with road geometry design.
3. Analyse the factors influencing geometric roads design and link these to safety.
4. Perform basic calculations related to road geometry design and traffic flow.
5. Explain the methods of design including horizontal and vertical alignment design and design of cross-sections as well as earthwork volume calculations.

Subject Content

1. Introduction
2. Fundamental Considerations
3. Speed Parameters
4. Cross-section
5. Sight Distance
6. Horizontal Alignment
7. Vertical Alignment
8. Coordination of Horizontal and Vertical Alignment
9. Intersections and Auxiliary Lanes
10. Bridge Considerations

Design parameters include: road classification; design speeds; design vehicles; alignment controls; cross-section components, including travel lanes, shoulders and verges; and provisions for public transport and cyclists.

Speed parameters include: operating speed, desired speed and design speed; and their relationship with each other.

Horizontal and vertical alignments (include development and application of: circular curves; superelevation; grades; vertical curves; procedures for the grading of a road alignment; and determination of sight distances across vertical curves.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 2035 Modern Digital Design and Development

Credit Points 10

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject provides fundamental knowledge and skills development in Digital Manufacturing and Design (DMD) technologies for Advanced Manufacturing, Product Design and Industry 4.0. Digital transformation happens throughout the world in Product Development and Design (PDD). Students will engage with digital technologies which stimulate innovative, integrated and sustainable product development

processes and workflows from design to manufacturing. As part of their engagement with real-world design projects, students will apply their skills to areas such as design, scenario analysis, rapid prototyping and testing for improved manufacturing outcomes. A number of opportunities, such as the WSU Formula SAE Race Car project, will allow students to work alongside industry partners and develop job ready practices for their future careers.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Learning Outcomes

1. Develop fundamental knowledge and skills in Digital Manufacturing and Design (DMD) technologies.
2. Solve a design problem using digital technologies and processes.
3. Implement appropriate digital design processes and workflows in designing a component for a real-world application.
4. Discuss the importance of social aspects of Industry 4.0 and digital engineering including economics, ethics, safety and societal impact.
5. Work collaboratively for a digital design project.
6. Communicate in a clear, concise manner to a diverse audience in a range of formats, verbal and written, following ethical and academic integrity guidelines.

Subject Content

- Engineering Drawing and Drafting
- Australian and International Standards for Engineering Drawing
- Product Design and Development (PDD)
- Fundamentals of Design for X (DfX)
- Computer Aided Design (CAD) and Computer Aided Manufacturing (CAM)
- Virtual Reality (VR) and Augmented Reality (AR)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 2036 Professional Development in Teams-based Projects

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description Voluntary student-led projects provide many benefits to students including improved on-campus experience and the expansion of peer, academic and professional networks alongside extra-curricular opportunities for skills development. Students working on these projects will develop their professional skills to match the expectations of partners, stakeholders, and team-mates who they are working alongside. This subject will support the development of professional skills among students who have demonstrated a significant commitment to a recognised student-led project which will contribute to their career development.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions

Students must seek approval from the Subject Coordinator and academic lead for the specified student-led project AND have completed 80 credit points before enrolling in the subject.

Assumed Knowledge

Students must demonstrate a commitment to a voluntary student-led project for a minimum of 2 semesters prior to enrolling.

Learning Outcomes

1. Plan for the development of professional skills relating to a team-based project.
2. Develop and appraise communication skills relating to a team-based project.
3. Reflect on personal and interpersonal behaviours relating to teamwork and collaboration, and propose alternatives.
4. Reflect on personal and interpersonal behaviours relating to stakeholder management, and propose alternatives.

5. Design and evaluate strategies for resolving team-based issues relating to team member conduct, culture, safety and ethics.

Subject Content

- Articulation of role and responsibilities in student-led project
- Identification of required professional skills and planning for their development
- Identification of required technical skills and planning for their development
- Teamwork and collaboration
- Stakeholder management
- Conduct, culture, safety and ethics

Special Requirements

Essential equipment

WHS Module and specialist lab inductions

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	500-1000 words	10	N	Individual
Portfolio	Regular entries with an average of 1 per week (200-300 words per week)	30	N	Individual
Interview	10-15 minutes (each)	30	N	Individual
Reflection	1500-2000 words	30	N	Group

ENGR 3001 Advanced Engineering Topic 1

Credit Points 10

Legacy Code 300666

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description This subject provides students with the opportunity to tackle challenging engineering problems. They will study advanced topics in selected areas under the supervision of academics. The advanced topics will prepare students for further study and research.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Students must be enrolled in program 3666 Bachelor of Engineering (Advanced) or 3690 Bachelor of Engineering Advanced (Honours) and must have a program GPA equal to or greater than 5.5. Students should have successfully completed 160 credit points to be able to study the advanced engineering topics in the subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an ability to apply the knowledge learned in the first 2 years of study to a specific area of interest;
2. Demonstrate an ability to tackle a challenging problem in a particular area with limited supervision;
3. Demonstrate an ability to communicate effectively;
4. Demonstrate technical competence in a particular area in engineering.

Subject Content

Lectures for introducing the requirements of this subject;
Self-motivated study in specific topics.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

ENGR 3003 Biomedical Electronics

Credit Points 10

Legacy Code 301122

Coordinator Gaetano Gargiulo (https://directory.westernsydney.edu.au/search/name/Gaetano Gargiulo/)

Description This subject will cover recent advances in biomedical electronics including electronic diagnostic devices, implanted devices, human-computer-interface, bioinstrumentation and neuromorphic engineering. Topics covered span from the bio-electromagnetism and related applications to regulatory aspects (IEC standards and TGA/FDA approval processes) and electrical safety of instrumentation. This subject will have a strong practical design focus with laboratories and tutorials focused on the design of real instrumentation (including manufacturing) dealing with real biomedical signals.

School Eng, Design & Built Env

Discipline Biomedical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2001 OR
ENGR 2001

Assumed Knowledge

Basic electronic (amplifiers and filters); computer skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. identify and describe medical diagnostic devices and biomedical technologies;
2. assess safety and risks of biomedical technologies;
3. apply fundamental principle of bio-electromagnetism to typical biomedical engineering problems;
4. design and test biopotential amplifiers in practical case studies.

Subject Content

1. Introduction to Bioelectronics - The cell and the volume conductor
2. Amplifiers and filters for biomedical signals
3. Interfaces with the 'volume conductor'
4. Electrical safety
5. Biomedical technologies

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 submissions required	30	N	Individual
Applied Project	2 submissions required	40	N	Individual

ENGR 3006 Control Systems

Credit Points 10

Legacy Code 300009

Coordinator Upul Gunawardana (https://directory.westernsydney.edu.au/search/name/Upul Gunawardana/)

Description This subject introduces the fundamental concepts of automatic control engineering. It covers traditional and contemporary design and analysis techniques; the concepts required to design continuous time and discrete time controllers. Matlab is utlilized considerably.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ELEC 2011 OR
MECH 3004

Assumed Knowledge

200238 - Mathematics for Engineers 2
• Ordinary Differential Equations
• First order, Second order, and Higher order.
• Laplace transforms
• Multivariable Calculus
• Functions of two or more variables
• Double integrals
• Triple integrals.
Similar to that contained in 200238 - Mathematics for Engineers 2.

Students should also have the appropriate background and competence in the safe use of computers, test equipment, components and data sheets.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the meaning of open and closed loop configurations to control systems.
2. Formulate and analyse models of real systems using physical characteristics.
3. Evaluate the performance of control system configurations in the time domain.
4. Analyse block diagrams and signal flow graph models.
5. Apply complex frequency concepts to the s-plane in the context of damping, damped frequency and stability.
6. Apply root locus methods for design of controllers.
7. Identify the issues associated with the use of digital controllers such as the computer.

Subject Content

Continuous and discrete time modelling
Notion of negative feedback, error and error reduction
Transfer functions, block diagrams, signal flow graphs, state variable methods
Time domain responses and stability analysis
Bode diagrams, root locus, Nyquist stability
Introduction to digital control concepts

Assessment

ENGR 3010 Design Studio 4: Innovation through Systems Thinking

Credit Points 10

Legacy Code 301080

Coordinator Mauricio Novoa (https://directory.westernsydney.edu.au/search/name/Mauricio Novoa/)

Description From 2020, this unit will be replaced by 301292 - Biomechanics in Product Innovation. This unit explores strategies for Industrial Design within the complex context of design work in the 21st century. Students will carry out projects in user-centred design, developing an innovative responses to a semi-open and open briefs using the CDIO (Conceive, Design, Implement, Operate) process. The projects will range from low fidelity cardboard prototypes to more fully developed everyday products and services that can be implemented and operated to meet an identified user need.

Level Undergraduate Level 3 subject

Restrictions

Students must be enrolled in 3691 Bachelor of Engineering Science, 6033 Diploma in Engineering/Bachelor of Engineering Studies or 7117 Diploma in Engineering/Bachelor of Engineering Studies and must have successfully completed 160 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Annotate and review technical publications;
2. Develop verbal and written communication skills in engineering professionally;
3. Examine Engineering profession and the environment in which these professions operate;
4. Apply the process involved in contract and project management in engineering via a capstone project; and
5. Apply WHS requirements to an engineering project.

Subject Content

1. Research techniques and technical presentation
2. Technical and environmental risk management
3. Professional management principles and practices
4. Project initiation, tender process and tender analysis
5. Contract management, human resources management and value management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Undergraduate Level 3 subject

Pre-requisite(s) ENGR 3013

Restrictions

Students must be enrolled in 3691 Bachelor of Engineering Science, 6033 Diploma in Engineering/Bachelor of Engineering Studies or 7117 Diploma in Engineering/Bachelor of Engineering Studies and must have successfully completed 180 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. apply theoretical knowledge gained during the course to develop practical engineering solutions;
2. apply project management principles to an engineering project;
3. demonstrate a understanding of the importance of client/end-user consultation and satisfaction;
4. develop engineering communication skills related to oral presentation and engineering report writing; and

5. implement the ethical, social, economic and environmental responsibilities of an engineer in the context of an engineering project.

Subject Content

1. Development of integrated practical and innovative solutions to engineering problems.
2. Application of engineering project management skills.
3. Client/end-user consultation process and satisfaction assessment.
4. Development of good oral and written presentation skills appropriate for an engineer.
5. Evaluation of the social, economic and environmental impacts of an engineering project.
6. Application of risk analysis, time and financial management skills to an engineering project
7. Development of research skills.

Assessment

ENGR 3017 Industrial Experience (Engineering)

Credit Points 0

Legacy Code 300741

Coordinator Mobarak Hossain (https://directory.westernsydney.edu.au/search/name/Mobarak Hossain/)

Description Industry experience is a significant opportunity for students to understand employer expectations in relation to working on projects and with others in a professional capacity. Students undertake 12 weeks full-time (37.5 hours per week) employment (or equivalent) to obtain relevant workplace experience in Engineering under the supervision of professional engineers in one or more companies. Students identify learning opportunities and goals with a focus on applying academic learning in practice, learning project management, work culture, professional attitude and self-awareness. Students develop critical reflective skills in reporting their progress.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects ENGR 3016 - Industrial Experience (Engineering)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate planning and goal setting skills with a comprehensive plan for work experience.
2. Critically reflect on personal and professional skills required for the workplace context.
3. Report on your experience applying academic learning in the workplace and on your experience learning engineering, engineering processes, and work culture in the workplace context.
4. Provide evidence of working effectively and inclusively with others in multi-disciplinary teams.
5. Assess your work performance using self-assessment and assessment by others.
6. be able to relate academic course material to workplace conditions

7. develop experience in various aspects of engineering and engineering management -planning, organizing and time management of engineering projects, understanding, and adapting to, the workplace culture
8. develop appropriate workplace skills, work habits and professional attitudes by working with a professional engineer
9. be able to report the work-log book recording and report writing
10. be able to work in a team environment.

Subject Content

A 12 week period of industrial training under the supervision of a professional engineer(s)
A 12-week period of industrial training under the supervision of professional engineers.

ENGR 3020 Numerical Methods in Engineering

Credit Points 10

Legacy Code 300488

Coordinator Haiping Zhu (https://directory.westernsydney.edu.au/search/name/Haiping Zhu/)

Description The finite element method is a powerful numerical tool for analysing a wide range of engineering problems. The objective of this subject is to introduce the basic and fundamental principles of the finite element techniques by primarily focusing on their applications in the area of structural, solid and soil mechanics.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 1019 AND
MECH 2003

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the basic principles of finite element theory to analyse the mechanical behaviours of beams, trusses, frames and 2D plane stress and plane strain problems;
2. Formulate finite element algebraic equations for elasticity;
3. Explain the workings and limitations of commercial finite element packages;
4. Apply finite element programs to solve practical engineering problems.

Subject Content

Constitutive stress-strain relationships in elasticity
Strain-displacement relationship
Potential energy in elastic body
Principle of minimum potential energy
Finite element method for bar, beam, frame and truss analysis
Governing equations of elasticity
Shape functions
Plane analysis
Two dimensional and axisymmetric finite element analysis
Linear triangular element,
Four noded quadrilateral element
Higher order elements (six-noded triangle and 8-noded quadrilateral Element)
Solver appreciations
Constraints and pressure loadings
Stress and strain results
Sources of errors

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 3021 Professional Practice

Credit Points 10

Legacy Code 300053

Coordinator Linna Geng (https://directory.westernsydney.edu.au/search/name/Linna Geng/)

Description This subject focuses on ethical conduct for construction managers and on the range of procurement systems utilised in the modern construction industry. It deals with matters of professional responsibility to the community, as well as, honourable and lawful practices in the conduct of business. The issues of confidentiality of information and conflict of interest are examined in the context of real project histories. Risk management and its relationship with quality project delivery are considered in the light of the changing nature of an industrialised, digitalised and globalised construction industry.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ENGR 1029 OR
ENGR 1024 OR
ENGR 1036

Assumed Knowledge

Some experience with the range of employment opportunities that are available in the Australian construction industry.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify ethical behavioural requirements of a construction professional in relation to codes of conduct of relevant professional associations
2. Research and evaluate the options available in response to an ethical dilemma on a construction project
3. Describe the most common types of procurement options in use in the modern construction industry and compare their advantages and disadvantages
4. Prioritise risk management strategies on a construction project
5. Reflect on the future direction of the construction industry both in Australia and globally

Subject Content

Individual responsibilities under Professional Codes of Conduct
Characteristics of modern construction procurement systems
Innovation delivery in the construction industry context
Risk management and risk wrapping in project delivery
The future of an industrialised, digitalised and globalised construction industry

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1500 words	25	N	Individual
Report	2800 words	45	N	Individual
Report	4000 words and 15 minutes	30	N	Group

ENGR 3022 Special Technical Project

Credit Points 10

Legacy Code 301089

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description This is an elective subject offered to students who are engaged in a School of Engineering, Design and Built Environment approved project (solar car, Greenhouse, Formula SAE, Purple roof and sustainable house). The subject can be taken during the third year of Engineering, Construction Management and Industrial Design programs and is a capstone subject for students enrolled in Minor Eco-Socially Conscious Design and Manufacturing. This subject consolidates and deepens a student's knowledge and capabilities developed through previous years of study. Students will develop complex solutions by collaborating with various discipline specialists. This subject develops management, reflective and leadership skills including the ability to work with team members from other fields of study through practical application.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Students must seek approval from the Subject Coordinator AND have completed 140 credit points before enrolling in the subject.

Assumed Knowledge

Students must demonstrate commitment to a voluntary student-led project for a minimum of 2 semesters.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Synthesise and apply specialist knowledge to develop practical and innovative solutions.
2. Collaborate within a transdisciplinary team to design and develop elements of a project.
3. Demonstrate project management and organisational skills development whilst participating in a technical project.
4. Reflect on professional skills development.

Subject Content

1. Major Project Formulation, Planning and Execution
2. Development of integrated practical and innovative solutions to project related challenges
3. Development of document management processes and procedures
4. Application of project time and financial management skills

Special Requirements

Legislative pre-requisites

WHS Module and Specialist Lab Induction.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	Between 1000 and 1500 words	20	N	Individual
Portfolio	Regular entries with an average of 1 per week, 1 page equivalent	50	N	Individual
Reflection	Between 1500 and 3000 words	30	N	Individual

ENGR 3023 Biomechanics in Product Innovation

Credit Points 10

Legacy Code 301292

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description In this subject students apply practical design thinking skills to propose viable solutions for solving complex problems in both human and environment centred contexts. Whilst working on an industry-based project, students will develop an understanding of human biomechanics and human anatomy and the challenges they bring to the design process. Students interested in design-based careers which involve improving ways people interact with products, systems and spaces will benefit from the skills developed in this subject.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects ENGR 3010 Design Studio 4 Innovation through Systems Thinking

Assumed Knowledge

The ability to generate design concepts that reference human scale and basic knowledge in prototype model fabrication is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop research skills by conducting ethical observations to collect quantitative data and report on findings.
2. Collaborate with others to develop, design and communicate concepts and designs.
3. Develop an experiment to understand the physical limitations in performing tasks associated with ageing.
4. Develop conceptual product designs that take advantage of applied biomechanical knowledge and empathic understanding.
5. Communicate design concepts, analysis and solutions in a variety of formats for a diverse audience.
6. Follow an iterative design discovery process in developing a product that improves product usability and user quality of life in a real-world scenario.

Subject Content

1. Human movement, levers and forces.
2. Basic human systems: circulatory, musculoskeletal, nervous, endocrine and integumentary systems.
3. Fine and gross motor movements and kinetic chains.
4. Anthropometric measurement tools, functions and procedures for using.
5. Basic data collection techniques, analysis and interpretation of results
6. Measurement of flexion, extension, and range of motion in joints.
7. Kinetic chains in human movement.
8. Empathic design methods; identifying challenges within human scenarios and identifying unique needs.
9. Ergonomic design.
10. Ethical research in undertaking observation methods and in reporting outcomes.
11. Iterative design methods including product conceptualisation, and model-making.
12. Design communication and presentation techniques

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1000 words with photos	10	N	Individual

Portfolio	5 minute A/V narrated video & 1200 words 3 x A3 size annotated conceptual drawings & low-resolution 3D model	35	N	Group/ Individual
Presentation	7 minute A/V narrated video & 2000 words & 3D model Industry Partner Pitch including 6 x A3 size working drawings	55	N	Group/ Individual

ENGR 3024 Design Research Methods (Advanced)

Credit Points 10

Legacy Code 301291

Coordinator Mauricio Novoa (https://directory.westernsydney.edu.au/search/name/Mauricio Novoa/)

Description Design and user research methods are critical in establishing efficient and effective processes around resource utilisation in designing, conducting and presenting research findings that are succinct yet open to new innovations. A range of advanced research design methods are presented and students are guided to the strategic selection of methods appropriate to their own self-sourced project theme. Data collection instruments are designed, operationalised, data coded and analysed via both qualitative and quantitative techniques and discussed in a vibrant peer environment inspired by design thinking and other research methods unique to the design profession and within university human ethics policy protocols.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects ENGR 3012 - Designed Inquiry ENGR 3005 - Contextual Inquiry

Restrictions

Students must have completed 160 credit points before enrolling into this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop a research proposal based on a design literature review and analysis of contextual problems.
2. Visualise a research design using conceptual diagrams, and apply in managing a research project.
3. Carry out field research into user needs following approved ethics protocols and contextual considerations.
4. Synthesise outcomes emerging from qualitative and quantitative data into design guidelines and recommendations.
5. Develop and apply a methodological research design as part of an iterative design enquiry.
6. Reflect upon and evaluate self-directed research processes.

Subject Content

-Advanced Design Research
-Research topics and design opportunities
-Creating a research design/plan
-Designing an appropriate research methodology
-Literature Review and Annotated Bibliography in design research
-Designing a Research Question
-Advanced referencing, written and oral communication
-Unobtrusive research and documentation
-Research Through Design
-University Human Ethics Protocol in observing and engaging product or service user research
-Field Research
-Designing an appropriate data collection instrument
-Quantitative and qualitative data analysis, reporting and evaluation
-Making and presenting a Research Proposal that meets Ethics Approval requirements
-On-going reflection upon, assessment and management of self-directed research

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Literature Review	1,500 words	20	N	Individual

ENGR 3025 Designing for Circular Economy (Advanced)

Credit Points 10

Legacy Code 301293

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Students examine their local circular economy and the United Nations Sustainable Development Goals 2030 (UNSDG) principles as they apply to designing a sustainable future with Circularity for extended product life cycle, reuse, remanufacture, value up-cycling, production, and waste resource management. Students work on an industry-based, real-world, socio-technical, environmental challenge project in collaboration with community and industry partners. The project is based in the local Western Sydney region and students propose design solutions that are scalable and relatable in diverse contexts. Students will be able to apply their awareness of the sustainability requirements within the community and industry to their future career activities, by creating new value, and new green employment opportunities with a sustainability skills approach.

Level Undergraduate Level 3 subject

Equivalent Subjects ENGR 2021 Sustainable Design Sustainable Futures

Restrictions

Students must have completed 100 credit points

Assumed Knowledge

Sufficient practical knowledge and skills in sustainable design and/or materials related life cycle is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the literature in relation Circular Economy approaches
2. Investigate contextual challenge to find promising problems
3. Formulate a solution using Circular Economy (CE) principles that references select United Nations Sustainable Development Goals 2030
4. Apply circular design principles into a professional practice technical workflow
5. Reflect upon own knowledge development in addressing solutions contributing innovation
6. Communicate in a clear, convincing and ethical manner concepts and designs to diverse stakeholders in a range of formats.
7. Report on the synthesis of CE principles in the solution development and final design.

Subject Content

1. Circularity principles
2. Authentic case studies from previous industry projects
3. Working through a Circular design brief
4. Introduce circularity into industry and integration to transdisciplinary professional practice
5. Developing a sustainable Circular design proposal

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 3026 Design Thinking for Successful Brands and Products

Credit Points 10

Legacy Code 301301

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Students will learn how to develop a strategic design management plan that helps a firm not only present itself to its target audience but also clearly differentiate amongst competitors. Foundation design principles involving the evaluation of two-dimensional and three-dimensional designs are explored through

a series of case studies based on commercially successful design management strategies. To simulate global, real-world design consultation scenarios students interact in an online environment in preparation for evidence-based innovation in their future workplaces as design managers.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the concepts of design management to a business case study.
2. Evaluate the companyðfs corporate identity aims and their potential impact on its design strategy.
3. Apply a series of methodological approaches in the analysis of pre-existing corporate identity using a staged audit process.
4. Systematically analyse the success of an existing corporate identity outcome by applying the principles of SWOT Analysis methodology.
5. Present and argue for the merits of a design strategy to enhance a companyðfs corporate identity through product portfolio from design perspective.

Subject Content

1.Understanding the attributes of successful brands and products
2.Competitive advantage achieved through differentiated design management strategies
3.Evaluating two and three dimensional designed attributes that combine to communicate and achieve superior marketplace reception and performance
4.Conducting a product, service and brand identity audit
5.Design Thinking methods supporting decision making in new product development

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Critical Review	800 words (critical review 20%) 3 minutes (Presentation 10%)	30	N	Individual
Report	1,000 words (report 25%, visualisations 5%)	30	N	Individual
Report	1,250 words (report 30%) 5 minutes (Presentation 15%)	40	N	Individual

ENGR 3027 Mentored Practice in Design Innovation

Credit Points 0

Legacy Code 301296

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Students will be acculturated to professional practice and conduct in a real work environment setting through a series of webinars and self-guided industry placement. On conclusion of the unit, students will develop a report that summarises their own personal reflections relating to workplace responsibilities, and other experiences accrued throughout the unit. Mentored Practice in Design Innovation seeks to match students with mentors in areas they aspire to be prospective employees or in related fields of professional interest across a 10-week program.

ENGR 3028 Mentored Practice in Design Innovation

Credit Points 10

Legacy Code 301401

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description Mentored Practice offers a program of professionally oriented activities that refine planning for graduate destinations in the design, innovation and manufacturing industries and in particular new product development. Students will focus on career and practical industry attributes, and attend design industry seminars that directly influence their major project, honours thesis, or industrial design capstone project from a strategic and professional practice perspective. This subject assists students on preparing a strategic early career plan which includes a personal portfolio of works with tips on how to commercialise their current academic project, observations and analysis of current design industry practice, and a self-directed practical placement for up to 70 hours.

Equivalent Subjects ENGR 3031 Mentored Practice in Design (Industry)

Restrictions

Students must be enrolled in Bachelor of Design and Technology, Bachelor of Industrial Design or Bachelor of Industrial Design (Honours) and have successfully completed 160 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Reflect upon real-life experience in developing new products or services within a firm and through mentor-guided professional practice growth with view to enhance employment prospects
2. Report on some of the decision-making processes that affect the development process of industrially produced products
3. Discuss the multidisciplinary nature of the interaction of all those involved in the product or service development process from the conception of the idea to the introduction of new product to the market place and related strategic development processes
4. Test the validity of the design practice methods on a real-life situation
5. Observe and reflect on a company's "culture" and the various methodologies that companies develop over time to conceive, develop and produce new products
6. Strategise approaches for future employment

Subject Content

1.Professional Practice Seminars
2.Professional Portfolio Development
3.Mentor Relationship Strategies and Procurement
4.Reflective Professional Practice Report
5.Strategic Career Planning

ENGR 3031 Mentored Practice in Design (Industry)

Credit Points 10

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Mentored Practice in Design (Industry) is designed to provide students with professional practice experience working with an industry mentor and a multi-disciplinary team. Students prepare for their experience and create an action plan documenting their skills and knowledge with the aim of enhancing these throughout the semester. This prepares them for a reflective report and mentorship presentation. Students are assisted finding a suitable mentor in areas in which they aspire to be prospective employees or in related fields of professional interest across a 10-week program responding to the changing Future of Work. This subject can be undertaken during any semester during the year and can most likely be completed during semester breaks either in Winter or Summer. Students gain valuable insights in the professional practice setting of themselves and of industry expectations, providing opportunities for employment.

Students must be enrolled in 3729 Bachelor of Design and Technology, 3730 Bachelor of Industrial Design or 3731 Bachelor of Industrial Design (Honours) and have successfully completed 160 credit points.

Learning Outcomes

1. Demonstrate planning and goal setting skills with a comprehensive plan for work experience.
2. Critically reflect on personal and professional skills required for the workplace context.
3. Report on the experience applying academic learning of Industrial Design in the workplace.
4. Provide evidence of working effectively and inclusively with others in multi-disciplinary teams and the workplace culture.
5. Assess work performance using self-assessment and feedback from others reflecting on actions taken in relation to feedback.
6. Manage the self to produce documentation requirements and deliverables in both the academic and workplace settings.

7. Communicate in a clear, concise manner to a diverse audience in a range of formats, verbal and written, following ethical and academic integrity guidelines.

Subject Content

- Professional practice seminars
- Mentor – mentee relationships (e.g. relationship building, expectations)
- Documentation learning
- Placement preparation and firm targeting

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	5 pages	15	N	Individual
Report	2000 words	40	Y	Individual
Report	3000 words	35	N	Individual
Presentation	10 minutes	10	N	Individual

ENGR 3032 Humanitarian Design and Practice

Credit Points 10

Description In this subject, students will learn community engagement strategies and prototype development using the framework of human-centered design. Through international and domestic mobility programs students will collaborate with local stakeholders to co-develop solutions for priority community needs. Drawing on inter-disciplinary approaches (combining social sciences, design and engineering), students will gain socio-technical skills and apply these to real-world humanitarian problems such as disaster preparedness and sustainable development. This subject is co-designed and delivered with industry partners (e.g. Engineers Without Borders, RedR) and will prepare students for career pathways working with regional and international industry agencies and local community partners in other countries to develop humanitarian engineering interventions.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) ENGR 1043 OR
ENGR 1024

Restrictions

Students must complete a minimum of 140 credit points before enrolling in this subject

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Analyse the issues that affect sustainability in a design solution
2. Identify failure and success indicators of projects addressing community needs
3. Apply a systems approach towards the selection of socio-technical options for a given scenario
4. Provide socio-technical recommendations for community needs with appropriate justification
5. Apply collaborative skills in a team setting to address a socio-technical problem
6. Professionally communicate methodology, analysis, and outcomes of a prototype idea/ development process in a range of different verbal and written formats

Subject Content

- Emergency management frameworks and technology
- Humanitarian engineering and human-centered design
- Community participatory approaches and appropriate technology
- Community-focused sustainable development and disaster risk reduction

Prescribed Texts

- Mitcham, C & Muñoz, D 2010, *Humanitarian engineering*, Springer, Cham, Switzerland.

ENGR 3033 Digital Manufacturing and IIoT

Credit Points 10

Description This subject offers specialised knowledge and skill development in the areas of Digital Manufacturing and Industrial Internet of Things (IIoT), both important components within the landscape of Industry 4.0 and Advanced Manufacturing. Built into an ecosystem of connected devices in the digital manufacturing context, IIoT serves as an invaluable tool, providing insights into production processes. Moreover, it equips industries with heightened competitiveness, fosters innovation, and enhances customer experiences. As these technologies continue to evolve, artificial intelligence and machine learning will play an essential role in providing useful data for informed decision-making and production enhancements. Throughout this subject, students will discover the significance of IIoT in digital manufacturing, including its underlying technologies and system architecture while cultivating proficiency in digital manufacturing processes. Upon successful completion of this subject, students can explore a range of career avenues, including

roles such as Digital Manufacturing Engineer, IIoT Solutions Architect, Manufacturing Data Analyst and IoT Product Manager.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Co-requisite(s) ENGR 2035

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Develop specific knowledge and skills in IIoT, Digital Manufacturing and Industry 4.0 technologies.
2. Examine the benefits of an IIOT system for digital manufacturing.
3. Compare IIoT ecosystems (software, hardware, equipment and facilities) for different digital manufacturing purposes.
4. Propose solutions for system architecture and implementation for a particular digital manufacturing and IIoT context.
5. Work collaboratively on an IIoT and Manufacturing project involving the WSU Formula SAE Car Project.

Subject Content

Introduction to Industry 4.0, IIOT and Digital Manufacturing
Smart Machinery and Smart Factory
Big Data, Clouding Computing and Advanced Data Analysis
Digital Twins and Digitalisation
Artificial Intelligence (AI) and Advanced Robotics
Virtual Reality (VR) and Augmented Reality (AR)
Advanced Sensor Technology
Smart Control of Manufacturing Process

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes (per Quiz)	20	N	Individual
Short Answer	2 hours (per tutorial)	20	N	Individual
Practical	2 hours (per lab)	20	N	Individual
Applied Project	2000 words (approx. with inclusion of visuals) Plus 10 minutes presentation	40	N	Group/ Individual

ENGR 4001 Advanced Engineering Topic 2

Credit Points 10

Legacy Code 300667

Coordinator Ali Hellany (https://directory.westernsydney.edu.au/search/name/Ali Hellany/)

Description This subject provides students with the opportunity to tackle engineering problems that are more challenging than those in Advanced Engineering Topic 1. They will study advanced topics in selected areas under the supervision of academics. The advanced topics will prepare students for further study and research.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 3001

Restrictions

Students must be enrolled in program 3666 Bachelor of Engineering (Advanced) or 3690 Bachelor of Engineering Advanced (Honours) and must have a program GPA equal to or greater than 5.5.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an ability to apply the knowledge learned in the first 3 years of study to a specific area of interest;
2. Demonstrate an ability to tackle complex, challenging problems in a particular area with limited supervision;
3. Demonstrate an ability to communicate effectively;
4. Demonstrate technical competence in a particular area in engineering.

Subject Content

Self-motivated study in specific topics

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1,000 words	35	N	Individual
Report	3,000 words	65	N	Individual

Prescribed Texts

- No specific texts are required. Supervisors will recommend references based on the resources currently available from the library.

ENGR 4004 Design Studio 6: Ambience, Place and Behaviour

Credit Points 10

Legacy Code 301084

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description Designers responding to complex societal challenges require focus on people, places and systems thinking to make sense in guiding new investment in innovation. This subject builds industrial design expertise in four domains including human environments, responsible design, user-centred design, and technology development through applied design research, contextual inquiry methods, and articulation of innovation proposals through conceptual and validated physical modelling, and an interdisciplinary consultative viewpoint.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 4003

Equivalent Subjects ENGR 3011 - Design Studio 4 Simulate to Innovate

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply design processes, knowledge and skills to develop a product to meet tangible and intangible user needs.
2. Apply the principles and values embedded in formal professional , legal and industry standards.
3. Provide evidence of iterative design evolution through design research, prototyping and ePortfolio of work.
4. Produce functional and efficient market ready products according to needs, manufacturing constraints, and interdisciplinary protocols.
5. Use lifecycle management principles (e.g. cradle to cradle, analysis of materials and processes, CES EduPack) in the design of products or systems.
6. Scaffold an industrial design capstone project by developing a design brief toward creating a new value proposition of social, economic, and environmental significance.

Subject Content

Design brief development of relevance to a local real-world context
Cultural probe study
Product Development meeting tangible and intangible user needs
Product and service life cycle management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	3 low fidelity prototypes, 4 concepts, Pecha Kucha, e-Portfolio, 1000 words report.	35	N	Both (Individual & Group)
Presentation	3 high fidelity prototypes, 4 concepts, Pecha Kucha, e-Portfolio, 2000 words report.	65	N	Individual

ENGR 4005 Engineering Project

Credit Points 20

Legacy Code 300483

Coordinator Kejun Dong (https://directory.westernsydney.edu.au/search/name/Kejun Dong/)

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). This subject includes a capstone project which demonstrates student's professional level of identifying, planning, designing, executing, testing and documenting an engineering project or activity.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 3021

Co-requisite(s) ENGR 3017

Equivalent Subjects LGYB 1037 - Civil and Environmental Engineering Project 2

Incompatible Subjects LGYA 6084 - Engineering Thesis ENGR 4023 - Advanced Engineering Thesis

Restrictions

Successful completion of 240 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the theoretical knowledge gained during the course to develop practical and innovative engineering solutions.
2. Apply the project management principles to an engineering project.
3. Demonstrate the understanding on the importance of client/end-user consultation and satisfaction and develop engineering communication abilities on good oral presentation and engineering report writing skills.
4. Implement ethical, social, economical and environmental responsibilities of an engineer.
5. Recognise the importance of time and financial management in the context of an engineering project.
6. Understand methods for carrying-out systematic research.

Subject Content

- development of practical and Innovative solutions to Engineering problems.
- application of Engineering Project management skills.
- client/end-user consultation process and satisfaction assessment and development of good oral and written presentation skills appropriate to An engineer.
- evaluation of social, economical and environmental impacts of An Engineering project.
- application of time and financial management skills.
- development of research skills.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Progress Report	Approx. 50 Pages Report	15	N	Group
Presentation	30 minutes	15	N	Group
Final Report	Approx. 100 Pages Report	70	N	Group

ENGR 4006 Engineering Project 1

Credit Points 10

Legacy Code 300971

Coordinator Kejun Dong (https://directory.westernsydney.edu.au/search/name/Kejun Dong/)

Description This subject describes engineering as a profession, including professional ethics and legal obligations highlighted. Fundamentals and theories related to contract and project management will form part of this subject. Throughout the semester, the focus will be on development of research and presentation skills of students enrolled in this subject. This will be achieved through employment of appropriate research skills on a capstone project which demonstrates student's professional level of identifying, planning, and designing engineering project and completion of a technical progress report. The capstone project will be continued in subject 300972 Engineering Project 2.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Co-requisite(s) ENGR 3017

Restrictions

Students must be enrolled in the Bachelor of Engineering, Bachelor of Engineering (Honours) or Bachelor of Engineering Advanced (Honours) and have successfully completed 200 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique technical publications;
2. Present written professional/technical reports;
3. Examine Engineering profession and the environment in which these professions operate;
4. Apply the process involved in contract and project management in Engineering industry via capstone project;
5. Analyse risk situations in an engineering project and manage them by applying the theories of risk management;
6. Apply WHS requirements to an engineering project;
7. Demonstrate an ability to work in a team.

Subject Content

1. Research techniques and technical presentation
2. Technical and environmental risk management
3. Professional management principles and practices
4. Project initiation, tender process and tender analysis
5. Contract management, human resources management and value management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Research Proposal	15-20 pages.	35	N	Group
Progress Report	30-40 pages.	65	Y	Group

Prescribed Texts

- Pinto, JK 2016, Project management : achieving competitive advantage, 4th edn, Boston : Pearson, 2016.

ENGR 4007 Engineering Project 2

Credit Points 10

Legacy Code 300972

Coordinator Kejun Dong (https://directory.westernsydney.edu.au/search/name/Kejun Dong/)

Description Throughout the semester, the focus will be on development of research and presentation skills of students enrolled in this subject. This will be achieved through employment of appropriate research skills on a capstone project which demonstrates student's professional level of executing, testing and documenting an engineering project and completion of a technical report. This subject is a continuation of 300971 Engineering Project 1.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 4006

Co-requisite(s) ENGR 3017

Restrictions

Students must be enrolled in Bachelor of Engineering, Bachelor of Engineering (Honours) or Bachelor of Engineering Advanced (Honours) and must have successfully completed 200 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the theoretical knowledge gained during the course to develop practical and innovative engineering solutions;
2. Apply the project management principles to an engineering project;
3. Demonstrate the understanding of the importance of client/end-user consultation and satisfaction and develop engineering communication abilities on good oral presentation and engineering report writing skills;
4. Implement ethical, social, economic and environmental responsibilities of an engineer;
5. Recognise the importance of time and financial management in the context of an engineering project;
6. Apply systems engineering methods for carrying-out systematic research;
7. Demonstrate an ability to work in a team.

Subject Content

1. Development of integrated practical and innovative solutions to engineering problems.
2. Application of engineering project management skills.
3. Client/end-user consultation process and satisfaction assessment and development of good oral and written presentation skills appropriate to an engineer.
4. Evaluation of social, economic and environmental impacts of an engineering project.
5. Application of time and financial management skills and risk analysis as well.
6. Development of research skills.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Progress Report Revision	30-40 pages.	15	N	Group
Oral Presentation	20 minutes each group, PowerPoint Slides, group work but marked individually	20	N	Group
Final Report	50-70 pages.	65	Y	Group

ENGR 4009 Major Project Commencement

Legacy Code 300459

Coordinator Jean Payette (https://directory.westernsydney.edu.au/search/name/Jean Payette/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Assumed Knowledge

Knowledge related to the successful completion of year 3 Industrial Design or equivalent (e.g. Design & Technology) is assumed.
Students undertaking this subject should be able to complete tasks using word processing programs and should have an understanding of basic research methods and the use of library databases.
There is an expectation that students have skills in academic writing, report-writing, research, referencing and citations standards.
Students should have a sound understanding of project management and record-keeping, including the use of process diaries and minutes to ensure they are able to manage their projects effectively.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Assessment Task 1: Design Research Report	1 x A4 printed & bound document, (12-15 pages)	25	N	Group

Assessment Task 2: Design Brief & Time Management plan (Autumn)	1 x A4 printed & bound document, 5 pages	10	N	Individual
Assessment Task 3: Product Design Specification	1 x A4 printed & bound document (5-8 pages)	15	N	Individual
Assessment Task 4: Concept Communicatio Part A: Process Diary Autumn Part B: Graphic Panel (Design Problem)	1 x A3 Process Diary (10%) PLUS 1 x A3 Graphic Concept Board (10%)	20	N	Individual
Assessment Task 5: Physical exploratory model	1:1 model	30	N	Individual

ENGR 4010 Major Project Completion

Credit Points 30

Legacy Code 300460

Coordinator Jean Payette (https://directory.westernsydney.edu.au/search/name/Jean Payette/)

Description Major Project Completion is the project realisation component of the student's final year program. The subject offers the student the chance to consolidate the range of methodologies and processes developed and evaluated in Major Project Commencement, that contextualise the principles and practices that will lead to the realisation of their identified design solution. The final design outcome will form part of the final year graduate exhibition. The design solution which students will be developing and submitting for this subject responds to the design brief developed in Major Project Commencement.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 30cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 4009

Restrictions Students must hav completed Industrial Design/ Engineering Workshop Safety Training.

Assumed Knowledge

Knowledge related to the successful completion of Year 3 Industrial Design is assumed and successful completion of Major Project Commencement.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan, manage and report on an in-depth design investigation.
2. Craft an exhibition standard presentation model.
3. Produce detailed industry-standard technical specifications for the manufacture and assembly or production of their design solution.
4. Generate engaging, professional graphic communications that explain their design solutions to a wide audience.
5. Present and defend a logical argument for the novelty, sensitivity/ appropriateness and feasibility of a design solution supported by scholarly and practical research and conceptual exploration and development to a wide audience.
6. Communicate how design decisions were arrived at with a detailed visual process diary and concept development models.
7. Prove the structural and/or mechanical integrity and manufacturability of any physical design solutions.

Subject Content

Core area studies which the subject supervisors will guide students through.
Staff/student meetings called on a needs basis to address final year management issues, e.g. exhibition.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	A4 x 5 page written document	10	N	Individual
Applied Project	1 x A3 Process Diary (50 pages), 1 x A3 set of draft engineering drawings, 1 x exploratory physical model (scale 1:1)	30	N	Individual

Applied Project	1 x A3 Final set of engineering drawings to AS1100, 1 x 3D CAD model, 1 x presentation model (scale 1:1), 1 x Powerpoint audio visual presentation (5 slides), 1 x A3 Graphic communication	60	N	Individual

ENGR 4011 Sustainability and Risk Engineering

Credit Points 10

Legacy Code 300798

Coordinator Dharma Hagare (https://directory.westernsydney.edu.au/search/name/Dharma Hagare/)

Description Analysis of sustainability with engineering perspectives is increasingly becoming important in the modern world. Also, often the risk analysis is required to be carried for true sustainable solutions. Engineers with in-depth understanding of different tools that can be used for both sustainability and risk analysis will have significant edge in their future career. The students will discuss and understand various engineering issues including renewable/alternative energy systems, energy/resource efficiency, sustainable/green buildings, sustainable transport and infrastructure, sustainable water management, environmental management systems, sustainability reporting, life cycle analysis, probability/reliability theory, risk assessment models and, overall system analysis.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) CIVL 2002 AND CIVL 4017

Restrictions

Successful completion of 200 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply engineering knowledge for sustainable analysis and sustainable design of engineering systems.
2. Choose appropriate tools/ methods for sustainability and risk analysis of engineering systems.
3. Conduct thorough energy/ water/ materials audit for a given engineering system.
4. Determine appropriate water, energy, transport and infrastructure system based on sustainability and risk management criteria.
5. Carry-out comprehensive life cycle analysis of engineering systems.
6. Conduct overall system analysis of engineering systems considering sustainability and risk criteria.

Subject Content

mass balance/ flow analysis
heat/energy flow/conservation/loss analysis
renewable/ alternative energy systems
energy/resource efficiency
sustainable/green buildings
sustainable transport and infrastructure
sustainable water management
environmental management systems
sustainability reporting/ framework
life cycle analysis
probability/ reliability theory
risk assessment models
integrated system analysis.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	13 x submissions and 13 x quizzes; 1 hour per quiz	15	N	Individual
Report	5,000 words including tables, figures and pictures	30	N	Group
Report	1,000 words including tables, figures and pictures	5	N	Group
Final Exam	3 hours	50	N	Individual

ENGR 4012 Industrial Design Major Project (Ideation)

Credit Points 10

Legacy Code 301297

Coordinator Jean Payette (https://directory.westernsydney.edu.au/search/name/Jean Payette/)

Description In this capstone subject students will immerse themselves in a complex real-world design problem and apply their expertise in conceptualisation, problem solving, human factors and aesthetics to create a novel solution. User-centred design, digital futures and sustainable design practice underpin all learning activities. A multidisciplinary approach is fostered, whereby students will engage with industry experts and community groups reinforcing the role of the graduate designer as an empathetic innovator.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 4020 OR
ENGR 4004

Restrictions

Must be enrolled in undergraduate program: Bachelor of Industrial Design (3730) and have completed a minimum of 220 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate research and design in relation to design project brief requirements
2. Produce advanced design research.
3. Generate a wide range of design concepts that respond to an advanced design project brief.
4. Present an evidence-based design solution that responds to user requirements, highlights differentiated innovation, and integrates sustainability principles.
5. Generate engaging, professional graphic communication and physical modelling that explains design research findings to a wide audience.

Subject Content

-Development of a design brief addressing a complex problem.
-Project management technique
-Applied and continuous iterative design process
-Utilisation of research methods to undertake background investigation of the design problem
-Design conceptualisation through annotated visuals such as graphic layouts, process diary, and working drawings.
-Application of inclusive design principles, sustainable design practice, human centred design, innovative design practice.
-Exploratory specification report on materials, manufacturing, technical package
-Engineering drawing documentation
-Model making of exploratory models and prototypes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Literature Review	3,000 words Research report 15%; Design brief 10%	25	N	Individual
Applied Project	3 X A3 portfolios Visual concept/ conceptual drawings 15%; Specification report 15%	30	N	Individual
Applied Project	1 X explanatory physical model 1:1 scale	45	N	Individual

ENGR 4013 Creative Business Model Innovation

Credit Points 10

Legacy Code 301303

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Innovation requires an agile mindset (being flexible and responsive), a broad view of social, economic, and environmental factors, and awareness of interdisciplinary approaches to succeed in a competitive marketplace. Students explore strategic directions for enterprises in creative ways through practical engagement and application of business model innovation methods and tools in a fully online learning environment comprising digital content and live webinars. Creative sustainable business model specialists are

sought after in the marketplace, and this subject provides insights in developing these specialist skills, thus highlighting students' potential as future business leaders.

ENGR 4014 Design Practice: Manufactured Product Lifecycle

Credit Points 10

Legacy Code 301310

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Visualisation analytics for sustainable manufacturing practices provide an essential contribution to planning and adoption for new product development. The application of product lifecycle management (PLM) methods through software interfaces permits the establishment of a digital environment to create, manufacture and manage innovation on a comprehensive basis. Students will engage with an innovation project from a PLM perspective as an extended enterprise with focus on time to market, waste optimisation, prototyping efficiency, and value chain collaboration.

Assumed Knowledge

The ability to communicate a design proposal using 2D or 3D computer software with annotations, and application of Australian Standards AS 1100 or related construction standards are desirable.

ENGR 4015 Design Practice: Self-Directed Specialised Mentor Project

Credit Points 10

Legacy Code 301311

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Mentorship is highly regarded in preparation for accelerated understanding of the competitiveness and excitement of professional practice. Specialised mentors provide insights and engage students in co-creative processes and guide the pursuit of design innovations that challenge markets and redefine career progression and employment opportunities. This subject permits students to develop their own idea from conceptual discovery to market strategy and launch preparations with the view to build a new commercial pathway and personal resilience by creating a new value proposition of merit.

Level Undergraduate Level 4 subject

Assumed Knowledge

The ability to communicate a design proposal using 2D or 3D computer software with annotations, and application of Australian Standards AS 1100 or related construction standards are desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Engage with specialised mentors in a co-creative and meaningful way
2. Develop detailed strategies for new product development and market launch
3. Employ a collaborative and iterative design process approach for a new product under specialised mentorship
4. Consider and respond to the commercial realities associated with a self-initiated project
5. Present to a professional peer audience in a competitive pitch environment

Subject Content

1. Self-directed product design development for unique market release and commercialisation
2. Consultative and iterative co-creative design innovation process
3. New Product Development product discovery and development under specialised mentor guidance
4. Intellectual Property
5. New product development pitch to expert panel

ENGR 4016 Design Practice: Sustainable Components

Credit Points 10

Legacy Code 301309

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description New Product development in architecture and construction industries draws upon construction knowledge, applied materials specification, design for durable systems, component interfaces supporting assembly and robust design principles with aesthetic considerations, functional and desirable product attributes. This subject forms part of the Design Practice specialisation and builds upon the principles of sustainable manufacturing and product life cycle in response to an emergent construction theme. In this subject, entrepreneurship and product detailing assist decisions that drive future advancements in construction component design.

Assumed Knowledge

The ability to communicate a design proposal using 2D or 3D computer software with annotations, and application of Australian Standards AS 1100 or related construction standards are desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate market opportunities in architectural and construction product industries
2. Employ design methods that enhance the design of component assemblies
3. Apply engineering and material specification knowledge to new product development
4. Improve connected interfaces between building materials through functional, efficient and aesthetic design considerations to a high quality and relevant manufactured standard

Subject Content

1.Connector design discovery for architectural and construction industries
2.Applied modular component design processes
3.Engineered material specification and detailing
4.Design for assembly, installation, and maintenance
5.Design for efficiency and elegance in resolution of functional and aesthetic requirements

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1500 words (design brief) (10%) and 3 x A2 Concept Rendering (20%)	30	N	Individual
Applied Project	CAD Assembly (15%) Full set of Engineering Drawings (30%)	45	N	Individual

ENGR 4017 Design Thinking for Competitive Advantage

Credit Points 10

Legacy Code 301302

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description Design Thinking has become widely adopted as a novel problem solving mechanism and asset to market growth, resource utilisation, and competitiveness. This approach incorporates human-centric attributes and iterative processes which are features of professional designers co-creating with stakeholders. In this unit, students focus on empathic viewpoints associated with understanding people, markets and the environment. They explore future possibilities for communities using decision-making processes, informed by global challenges as represented through the UNSDGs. This new global societal driver for equitable living standards, economic prosperity, and sustainable societies is explored through online study involving a series of webinars, digital interactions, and conclude with a student prototype presentation.

Level Undergraduate Level 4 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate opportunities for competitive advantage using Design Thinking methodology and employing empathetic viewpoints and visualisation techniques.
2. Synthesise knowledge into a human-centred approach that engages with an aspect of the UNSDGs and produces a differentiated outcome
3. Convince a range of stakeholders in multi-disciplinary contexts of the use of Design Thinking for competitive opportunities and outcomes

Subject Content

1. Design Thinking overview and as a strategic competitiveness method

2. Design Thinking as an organisational influencer
3. Empathic viewpoints that accelerate new product development
4. Framing a UNSDG-oriented project brief for new product development

5. Strategic decision-making around UNSDG outcome implementation and commercialisation

Assessment

ENGR 4019 Start-Up Product Launch

Credit Points 10

Legacy Code 301304

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description Students, working in cross functional teams and as individuals, will develop a mature value proposition for validation and launch of a market-ready product or service that includes promotional narratives and artefacts. Students will focus on entrepreneurial innovation and lean start-up models using design-led strategies such as CANVAS modelling, minimum viable product (MVP), and launching

in addition to strategies for securing external funding for projects. Students will be well placed to create dynamic adaptive organisation for business, government, wider communities and start-up businesses as career professionals.

Level Undergraduate Level 4 subject

Equivalent Subjects ENGR 3008 - Design Management 4 Design Process ENGR 4002 - Design Management 4 Strategy and Lean Start-Up

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Initiate a rapid design process for an idea to market outcome.
2. Integrate a design-led innovation process across a cross functional team.
3. Strategise a design-led approach to envision competitive advantages for a new product development.
4. Develop and launch new marketable ideas.
5. Foster teamwork collaborations toward improving creative and innovative team culture.

Subject Content

1. Lean start-up models for entrepreneurial innovation
2. Design thinking approaches (canvas modelling) for management of design and implementation
3. Product and service development in a cross-functional team
4. Rapid new product development
5. Business prototyping, implementation and operation
6. Promotional content development such as video

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	1:30 minute pitch + 3 x A3 posters	25	N	Individual
Poster	3 X Posters and MVP model	25	N	Individual
Presentation	3 Minute presentation video + 1000 word report	50	N	Individual

ENGR 4021 Studio: Interdisciplinary Global

Credit Points 10

Legacy Code 301294

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description This subject engages students in a collaborative evidenced based project with local and international expert partners including NASA in the thematic area of Designing for Space Missions 2025 for astronaut health and space architecture for habitat design. Students are able to explore new concepts and integrate their skills within teams across unique research domains. The traditional linear thinking of creativity and innovation is challenged, giving way to a dynamic workspace for discussion, exploration, discovery, critical reflective practice, and maker-culture. This leads to new co-created interdisciplinary innovations which assist in the preparation of students for the Future of Work and decision-making across diverse teams. The focus on the physical and psychological aspects of space are also informing new viewpoints in designing with COVID19 in the Built Environment.

Level Undergraduate Level 4 subject

Equivalent Subjects ENGR 3009 - Design Studio 3 Product Realisation ENGR 4003 - Design Studio 5 Symbol and Meaning Making

Restrictions

Student are required to have completed 120 credit points in any WSU degree.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate literature in relevant area to reframe a complex project brief in teams.
2. Propose a development plan based on a contextual evaluation and interdisciplinary approach to problem solving
3. Use systematic and empathic design thinking processes to meet a design project brief from introductory to advanced conceptual proposals and from multi-disciplinary viewpoints to integrated proposals.

4. Apply lifecycle management principles in the development of products, services, behaviours and systems for people
5. Confidently present the teamðfs iterative development processes for a product design using interdisciplinary perspectives.

Subject Content

1.Interdisciplinary teams engaging in a Project Based Learning themed real-world challenge
2.Reframing and advancing a project brief from interdisciplinary viewpoints using evidence-based research and collaborative team consensus approaches
3.Interdisciplinary discovery to systems lifecycle management observing select United Nations Sustainable Development Goals (UNSDGs) toward refined user-centred needs, and verifiable attributes central to system performance
4.Iterative conceptual and detailed development through prototyping as communication of intentions and proposal resolution
5.Work Integrated Learning (WIL) oriented professional practice with university and international external industry expert visitations and constructive feedback on team developments

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 4022 Studio: Design Synthesis Capstone

Credit Points 10

Legacy Code 301402

Coordinator James Berry (https://directory.westernsydney.edu.au/search/name/James Berry/)

Description This subject engages students in a significant project that synthesises creative thinking, design strategy and practical design skills in preparation to be 'work-ready' as a designer upon graduation. Students will apply the skills that they have acquired throughout their degree in core and specialised elective subjects toward their Design Capstone project. The amalgamation of multidisciplinary viewpoints with industry collaborators throughout the subject ensures a vibrant learning environment, culminating in well resolved design outcomes within a Work Integrated Learning (WIL) Framework with linkages to a real-world challenge.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique existing global design trends (within the overarching project theme) in relation to manufacturing, sustainability and entrepreneurial opportunities
2. Develop methods for responding to an advanced design project brief.
3. Apply a range of 2D and 3D design communication skills to propose a design solution to a complex problem or issue
4. Synthesise and apply design process, skills and knowledge to create innovative design solutions in multidisciplinary teams.
5. Present an evidence-based design solution that addresses local, national or global requirements

Subject Content

1.Advanced Integrated Product Design Investigation
2.Applied local and international design standards
3.Advanced iterative design methods incorporating analogue and digital communication
4.Actionable Manufacturing Documentation
5.Sustainable Lifecycle Design
6.Industry and community-centred contextually responsive value proposition
7.Course-length Skills Synthesis
8.Managing creativity and innovation in teams

ENGR 4024 Construction Management Honours Thesis

Credit Points 20

Legacy Code 301160

Coordinator Peng Zhang (https://directory.westernsydney.edu.au/search/name/Peng Zhang/)

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). This subject provides honours level students with the opportunity to undertake research on a specialist topic within their program of undergraduate studies. Each student is assigned to a supervisor (an expert researcher) based on the chosen research topic. Students are expected to meet the supervisor regularly and work progressively to complete the research. This research will be an extended investigation of a chosen subject that is undertaken using appropriate research methods. In addition to the specialist knowledge on the chosen research topic, students will learn a range of skills including academic writing, project management, critical thinking and analytical skills.

ENGR 4025 Final Year Project 1 (UG Engineering)

Credit Points 10

Legacy Code 301245

Coordinator Ee Loon Tan (https://directory.westernsydney.edu.au/search/name/Ee Loon Tan/)

Description This subject describes engineering as a profession, highlighting professional ethics and legal obligations. The focus will be on the development of design skills or research and presentation skills for students enrolled in this subject. This will be achieved through the use of appropriate design/research skills on a capstone project, which will be either design oriented or research oriented on a specialist topic. Under the direction of an academic supervisor and research mentor, the project will demonstrate the student's professional level of identifying, planning, and designing an engineering project while at the same time completing a technical progress report. The capstone project will be continued in the subject Final Year Project 2 (UG Engineering).

Restrictions

Students must be enrolled in 3728 Bachelor of Engineering (Honours)/ Bachelor of Business or 3740 Bachelor of Engineering (Honours) or 3690 Bachelor of Engineering Advanced (Honours) and they must have completed at least 200 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate and critique previous research in terms of its relevance to the given topic and how the latter has contributed to previous research.
2. Examine the Engineering profession from an environmental perspective and use appropriate contract, project, WHS and risk management processes and methodologies to manage an engineering project.
3. Design the major steps in the proposed research by developing the research problem, research hypotheses, research questions and preparing a realistic timeline.
4. Construct experimental design, use appropriate research methodology to identify data requirements and achieve the research objectives.
5. Apply effective written communication skills when preparing professional/technical reports.
6. Demonstrate the ability to work in a team environment when working in a design-oriented project or undertaking self-motivated research with minimal supervision.

Subject Content

1. Research techniques and technical presentation
2. Technical and environmental risk management
3. Professional management principles and practices
4. Project initiation, tender process and tender analysis
5. Contract management, human resources management and value management

ENGR 4027 Industrial Design Applied Research Project (Honours)

Credit Points 20

Legacy Code 301299

Coordinator Mauricio Novoa (https://directory.westernsydney.edu.au/search/name/Mauricio Novoa/)

Description The Industrial Design Honours Program provides candidates with an opportunity to undertake a significant design research project and research training component that explores design issues including products, services, systems and research methods. In this subject students combine scholarly inquiry, critical thinking, design thinking, applied design research methods and exploratory prototyping informed by state of the art research via literature review, and human-centred design methods with ethical considerations. Discussion of results of preliminary concept explorations of low to medium fidelity are further refined towards a reframed and detailed design brief, research project timeline, and evolved design research methodology in preparation for a high quality research proposal and a substantial creative work.

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Assumed Knowledge

Knowledge related to the successful completion of year 3 Industrial Design or equivalent (e.g. Design & Technology) is assumed. Ability to use: E-mail, Internet Web Browser, WebCT or equivalent, Word processing program, CAD software, Workshop machinery (e.g. mill, lathe, sander, rapid prototyping machine). Knowledge and/or experience in: Referencing, Lab/Workshop O&HS, Report writing, Essay writing, Process Diary, Group work, Research Methods for Industrial Designers, Project Management, Ethical Research Approval Process.

Special Requirements

Legislative pre-requisites

Ethics clearance if required.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Part A: Research Design, Literature Review and Ethics Approval Part B: Design Brief	Part A: 2000 words Part B: 500 words	15	N	Individual
Design Communicatio	3 x A3 Colour printed Concept rendering	15	N	Individual
Documentation -Part A: Draft Engineering Drawings to AS1100 - Part B: Visual Process Diary	Part A: 10 to 15 pages engineering drawings Part B: 1 x A3 bound document, 50 pages	30	N	Individual
Project Progress Report	5000 words	15	N	Individual
Project Proposal Presentation/ Project Pitch	10 minutes	5	N	Individual
3D Model	Physical/ Tangible 3D Model accompanied by a 10 mins demo presentation	20	N	Individual

ENGR 4029 Industrial Design Project (Completion)

Credit Points 40

Legacy Code 300774

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description The Industrial Design Honours Program provides students with an opportunity to apply their industrial design skills to an in-depth year long design research project. In Industrial Design Major Project (Completion), Honours candidates respond to the research findings and design brief that they produced in Autumn semester. They undertake detailed design development to resolve and communicate a final design solution, which is publicly exhibited at the end of the year. Their design and research communications present a strong argument for the final design and demonstrate the honours candidates capacity to undertake postgraduate design research and to join professional design practice.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 4028

Equivalent Subjects LGYB 1049 - Industrial Design Project (Completion)

Restrictions Students must be enrolled in Bachelor of Industrial Design or Bachelor of Industrial Design (Honours). Ethics clearance must be obtained if required.

Assumed Knowledge

Knowledge related to the successful completion of year 3 Industrial Design is assumed and successful completion of Industrial Design Project Commencement and Industrial Design Project Commencement's co-requisite subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan, manage and report on an in-depth design investigation
2. Produce a scholarly exegesis which demonstrates a critical, comprehensive understanding of industrial design methods.
3. Craft an exhibition standard presentation model.
4. Produce detailed industry-standard technical specifications for the manufacture and assembly or production of their design solution.
5. Generate engaging, professional graphic communications that explain their design solutions to a wide audience.
6. Present and defend a logical argument for the novelty, sensitivity/ appropriateness and feasibility of a design solution supported by scholarly and practical research and conceptual exploration and development to a wide audience
7. Communicate how design decisions were arrived at with a detailed visual process diary and concept development models.
8. Prove the structural and/or mechanical integrity and manufacturability of any physical design solutions.

Subject Content

Industrial Design Project (Completion) is the project realisation component of the students' final year of their studies.
The unit is composed of weekly lectures, tutorials, workshops and consultation sessions: core area studies which the subject supervisors will guide students through and staff/student meetings called on a needs basis to address final year management issues; eg. exhibition.
Topics discussed in the sessions include:
Research Methodology
Qualitative Analysis
Quantitative Analysis
Thesis Writing
Low and Hi Fidelity Prototyping
Career and Graduate Options

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
High Resolution Working Model	Working Model	35	N	Individual
Visual Process Diary Completion	A4 Visual Process Diary	3	N	Individual
3D Modeling & Engineering Drawings	Drawings	20	N	Individual
Exegesis	6000-8000 words (5000 words submitted in 300773)	40	N	Individual
Checkpoint Presentations	1) Concept Development (10 minute presentation) 2) Concept Development (10 minute presentation)	2	N	Individual

ENGR 4030 Industrial Design Research Thesis (Honours)

Credit Points 20

Legacy Code 301300

Coordinator Sasha Alexander (https://directory.westernsydney.edu.au/search/name/Sasha Alexander/)

Description In this unit, students will extend their research journey using appropriate applied design research methods that explore usability, design semantics, functionality, sustainability and product considerations. Students will submit a creative project and exegesis on their research endeavour providing a critical analysis and reflection on outcomes that situate the work within relevant literature, ideas and industrial design field discourse. In addition to the specialist knowledge on the chosen research topic, students will learn a range of skills including academic writing, and project management.

ENGR 4034 Climate Smart Engineering

Credit Points 10

Legacy Code 301420

Coordinator Sathaa Arumugam Sathasivan (https://directory.westernsydney.edu.au/search/name/Sathaa Arumugam Sathasivan/)

Description Climate change is one of the most significant and urgent challenges facing the world today. In this unit, students will learn and appropriately apply scientific principles, in an engineering context, to reduce our impact on climate as well as in adopting to changing climate conditions. Students will explore both current and emerging technologies, that address climate change, in order to propose workable real world solutions.

School Eng, Design & Built Env

Discipline Engineering and Related Technologies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate designs for climate smartness.
2. Design geoengineering approaches and explain the working principles.
3. Design three climate proof systems/infrastructure and explain the working principles.
4. Develop a comprehensive plan to improve climate smartness of a chosen product, infrastructure or system and communicate to technical and non-technical audience.

Subject Content

1.Climate change and its relation to the technology
2.Geoengineering ? emission reduction, carbon sequestration, forest expansion, orbital mirrors, sunshades etc.
3.Design of climate proof systems ? transport, building, water supply systems, agriculture, water resources etc.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes	15	N	Individual
Simulation	2000-2500 words and 10 minutes presentation per student	40	N	Both (Individual & Group)
Final Exam	2 hours	45	Y	Individual

ENGR 4035 Smart and Liveable Cities

Credit Points 10

Legacy Code 301423

Coordinator Dharma Hagare (https://directory.westernsydney.edu.au/search/name/Dharma Hagare/)

Description Students will apply smart and sustainability perspectives to design urban centres. Students will use a range of tools to conduct integrated system analysis for smart and liveable cities. Students work on real world projects including green buildings, blue/green space, sustainable transport and infrastructure, sustainable water management. Though these projects, students will achieve significant edge in their employability.

Level Undergraduate Level 4 subject

Pre-requisite(s) CIVL 2002 OR
ENGR 1050

Equivalent Subjects ENGR 4011 Sustainability and Risk Engineering

Restrictions

Successful completion of 200 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Integrate engineering and sustainability principles and tools in analysing and designing urban centres.
2. Conduct life cycle assessment and system analyses incorporating risk assessment for sustainability of resources for a given urban centre.
3. Design urban centres using smart cities principles to enhance liveability and wellbeing.
4. Justify smart city designs in terms of sustainability principles.
5. Communicate and collaborate with diverse team members, and key stakeholders in developing innovative designs and recommendations.

Subject Content

1. Water, energy and materials conservation
2. Design of sustainable and smart urban centres
3. Application of life cycle analysis to urban centres
4. Sustainable solutions incorporating risk assessment
5. Integrated systems engineering
6. Physical and mental wellbeing of inhabitants
7. Smart cities/ IoT/ Data analytics as applied to urban centres

Assessment

Project Report	5000 words (including tables, figures and pictures)	25	N	Group
Practical Report	1000 words (including tables, figures and pictures)	5	N	Group
Final Exam	3 hours	50	N	Individual

ENGR 4036 Advanced Engineering Thesis 2: Detailed Investigations

Credit Points 10

Legacy Code 301484

Coordinator Ee Loon Tan (https://directory.westernsydney.edu.au/search/name/Ee Loon Tan/)

Description Advanced Engineering Thesis 2 - Detailed Investigations subject consists of a research project designed and implemented under the direction of an academic supervisor and research mentor. This subject is the culmination of studies for students who have completed their first three years of an undergraduate degree and provides substantial training in detailed Investigations. Under staff supervision, students are allocated a particular topic for their research, design their own programme of research, and perform the research. The emphasis of this subject is on the application of research knowledge gained in other subjects and in Engineering Thesis 1 - Preliminary Investigations to the practical conduct of the individual research project. This subject provides final year Advanced engineering students with the opportunity to undertake research on a specialist topic within their Key Program of undergraduate study.

ENGR 4038 Biomedical Electronics

Credit Points 10

Coordinator Gaetano Gargiulo (https://directory.westernsydney.edu.au/search/name/Gaetano Gargiulo/)

Description This subject will cover recent advances in biomedical electronics including electronic diagnostic devices, implanted devices, human-computer-interface, bioinstrumentation and neuromorphic engineering. Topics covered span from the bio-electromagnetism and related applications to regulatory aspects (IEC standards and TGA/FDA approval processes) and electrical safety of instrumentation. This subject will have a strong practical design focus with laboratories and tutorials focused on the design of real instrumentation (including manufacturing) dealing with real biomedical signals. This subject uses basic and advanced electronic concepts including circuit simulator(s), embedded systems and requires manual assembly of circuits. Recap and catch-up modules to electronics, signal conditioning, advanced mathematics concepts such us Fourier Transform and their application to electronics as well as circuit simulator training and electronic instruments use training are provided, for students from non Electronic/Electrical background.

School Eng, Design & Built Env

Discipline Biomedical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Restrictions

Students must have successfully completed 200 credit points

Assumed Knowledge

Electronic (amplifiers and filters); computer skills; basic programming skills, basic human physiology, advanced mathematic concepts (Differential equation solution, Fourier & Laplace transformation).

Learning Outcomes

1. Identify and describe medical diagnostic devices and biomedical technologies

2. Assess safety, risks and adherence to Standards of biomedical technologies

3. Apply fundamental principle of bio-electromagnetism to typical biomedical engineering problems

4. Design and test biopotential amplifiers in practical case studies

Subject Content

1. Introduction to Bioelectronics - The cell and the volume conductor
2. Amplifiers and filters for biomedical signals
3. Interfaces with the 'volume conductor'
4. Electrical safety
5. Biomedical technologies and their Standards

Special Requirements

Essential equipment

Access to a computer at SCEM computer Labs

Access to specialisation lab (electronic) and/or Lab in Box

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 4039 Design for Advanced Manufacturing

Credit Points 10

Description This subject develops specific knowledge and skills in Design for Advanced Manufacturing technologies in the context of Industry 4.0 and Advanced Manufacturing. Advanced manufacturing represents state-of-the-art and cutting-edge manufacturing technologies and processes for high-quality and high precision production of materials and products. Throughout this subject, students will learn advanced manufacturing technologies and processes that lead to the transformation of materials and products into intelligent, sustainable, eco-friendly, and environmentally-conscious practices. Moreover, students will develop the ability to discern suitable practices, materials, and manufacturing processes, as well as analyse the outcomes of Advanced Manufacturing, with a focus on sustainability, efficiency, safety, and ethical considerations, all in the context of their application to the WSU Formula SAE Car Project. Upon successful completion of this subject, students can explore a range of career avenues, including roles such as Manufacturing Engineer, Product Designer, CAD/CAM Engineer, Materials Engineer, and related opportunities.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Co-requisite(s) ENGR 3033

Learning Outcomes

1.Develop specific knowledge and skills in Design for Advanced Manufacturing and Industry 4.0 technologies.
2.Analyse traditional and modern manufacturing technologies and processes and their roles in Product Development and Design through comparative analysis.
3.Develop an integrated and innovative Product Development and Design process including design, modelling, simulation, prototype, and manufacturing.
4.Evaluate advanced manufacturing processes and technologies through the analysis of relevant case studies.
5.Work collaboratively in designing for advanced manufacturing and fabrication project involving the WSU Formula SAE Race Car.

Subject Content

•Principles of Design for Advanced Manufacturing
•Digital Twins and Digitalisation of Advanced Manufacturing Process
•Virtual Reality (VR) and Augmented Reality (AR)
•Design for Additive Manufacturing
•Implementation of Advanced Sensor Technology in AM
•Implementation of Artificial Intelligence (AI) and Advanced Robotics in AM

ENGR 4040 Industrial Design Major Project (Ideation & Studio Practice)

Credit Points 20

Coordinator Karen Yevenes (https://directory.westernsydney.edu.au/search/name/Karen Yevenes/)

Description In this Industrial Design capstone subject, students will immerse themselves in a complex real-world design problem, with considerable social impact, which consolidates their industrial design knowledge and skills. Students will apply themselves in the areas of concept generation and iterative industrial design processes and problem solving. They will incorporate human factors and desirable consumer attributes to produce a creative and novel solution which meets manufactured quality standards and high-level sustainability principles. All learning activities are underpinned by Industrial Design professional practice, as well as research methods for user-centred design, health and wellbeing, digital futures, ergonomics, and sustainable design practice. During their design project, students will engage with industry experts and community groups reinforcing their role, upon graduation, as empathic innovators, and industrial design practitioners with a multidisciplinary viewpoint.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR4022 Studio Design Synthesis Capstone
OR
ENGR4004 Design Studio 6

Restrictions

Must be enrolled in 3730 Bachelor of Industrial Design and have completed a minimum of 220 credit points.

Learning Outcomes

1. Evaluate secondary research and market available designs in relation to industrial design project brief requirements.
2. Generate a wide range of design concepts that respond to an industrial design project brief.
3. Present an evidence-based design solution that responds to user requirements, highlights differentiated innovation, manufactured outcomes including feasibility and integrates sustainability principles.
4. Generate engaging, professional graphic communication and physical modelling that explains design research findings to a wide audience
5. Contribute new and unique knowledge of advanced complexity to the industrial design field

Subject Content

Development of an industrial design brief addressing a complex problem.
• Project management technique
• Applied and continuous iterative industrial design process in a Design Studio environment
• Utilisation of research methods to undertake background investigation of the design problem
• Design conceptualisation through annotated visuals such as graphic layouts, process diary, and working drawings.
• Application of inclusive design principles, sustainable design practice (Circularity), human centred design, innovative design practice.
• Exploratory specification report on materials, manufacturing, technical package
• Engineering drawing documentation
• Model making of exploratory models and prototypes
• Usability evaluation

Special Requirements

Essential equipment

Drawing, rendering equipment, visual process diary, partial model-making resources (dependent on project complexity), and access to industrial design computer software and related computer requirements are supplied by the university to complement personally held student devices.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	3000 words	20	N	Individual
Portfolio	1 x Design Process Diary of 50 pages; 3 x summary proposals	25	N	Individual
Applied Project	Draft AS1100 engineering drawings; 1 x exploratory physical model 1:1 scale; 10 x PowerPoint slides (5 - 10 minutes)	55	N	Individual

ENGR 5001 Fire Engineering 1 (Fire Dynamics)

Credit Points 10

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject is essential for anyone considering a career in Fire Safety and aims to develop detailed knowledge of fire behaviour and dynamics in the built environment. Students will better understand fuels and combustion processes, the chemistry of combustion, flammability limits, ignition characteristics and different types of flames and fire plumes. The subject also introduces students to the basic principles of fire safety design so that they can appreciate fire safety and develop appropriate fire safety engineering solutions.

School Eng, Design & Built Env

Discipline Fire Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Equivalent Subjects ENGR7006 Fire Engineering 1 (Fire Dynamics)

Restrictions

Only students enrolled in a postgraduate program can enrol in this subject.

Assumed Knowledge

Basic physics, chemistry and mathematics

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Apply mathematical calculations to estimate fire dynamics including heat transfer, burning of gases, liquids and solids, initiation and propagation, products of combustion and retardants.

2. Describe the principles used in fire engineering design and assessment and the functions of various fire safety subsystems according to the Australian Fire Engineering Guidelines.
3. Explain the dynamics and behaviour of fire plumes, suppression systems, smoke and heat control, detection, warning and how these parameters and how these parameters are used in the development of a fire safety engineering solution.
4. Apply mathematical principles to calculate fire loads, fire growth, ventilation factor.
5. Analyse a range of fire scenarios to develop fire safety engineering solutions.

Subject Content

- Fuels and the combustion process
- Chemistry of combustion in fire
- Flammability limits
- Premixed flames
- Diffusion flames
- Flames from natural fires
- Fire plumes
- Burning of gases and vapours
- Burning of liquids
- Burning of solids
- Smouldering combustion
- Flaming combustion
- Self-induced ignition
- Piloted and non-piloted ignition
- Propagation of smouldering and flaming combustion
- Growth to flashover
- Flashover
- Post-flashover fires
- Fire resistance
- Spread of fire from a compartment
- Production and measurement of heat, smoke and toxic gases
- Methods for assessment of fire behaviour
- Australian Fire Engineering Guidelines and fire safety sub-systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	2 hours	30	N	Individual
Numerical Problem Solving	2000 words (equivalent)	30	N	Individual
Numerical Problem Solving	2000 words (equivalent)	40	N	Individual

ENGR 6001 Bushfire Design and Climate Change

Credit Points 10

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject considers the concept of 'design bushfire' and the impact of climate change upon varying weather and climate conditions in Australia and globally. The potential implications of climate change on bushfire behaviour and bushfire design are developed. Students will be introduced to the concept of "Bushfire Protection Design Guidelines" including the concepts of Bushfire Design Brief and Bushfire Design Subsystems, as well as the Bushfire Verification Method adopted by the National Construction Code. Students will be able to calculate recurrence conditions for bushfire behaviour and bushfire weather conditions using extreme values techniques. Students will compare different bushfire behaviour models and their implications for future climatic conditions in developing performance solutions for bushfire protection. The role of landscape fires and fire generated winds will also be considered in the context of planning and building for bushfire protection. The role of traditional Aboriginal burning practices and culture also forms an important aspect of this subject.

Level Postgraduate Coursework Level 6 subject

Equivalent Subjects -

Learning Outcomes

1. Explain the effects of vegetation, topography and weather patterns on bushfire occurrence and behaviour;
2. Explain the impacts of historical bushfire events on loss of life and property;
3. Prepare a bushfire design brief, bushfire design sub-systems and acceptance criteria using bushfire design guidelines;
4. Evaluate weather observations and predict fire behaviour to current and future design bushfires;
5. Apply the Bushfire Verification Method to bushfire design for planning and building;
6. Apply suitable methods of fire behaviour and View Factor models for different design conditions;
7. Analyse differences in cultural burning practices and prescribed burning techniques and potential changes to fire regimes and ecological impacts including future climate scenarios;
8. Explain the implications of international conventions and investigations upon disaster resilience and climate adaptation especially bushfire.

Subject Content

1. Introduction to climate change and implications for world and Australia's fire weather patterns
2. Property and human life losses arising from historical bushfire events and risk
3. Vegetation, slope and weather concepts and bushfire behaviour
4. A model for Australian Bushfire Design Guidelines and Performance
5. Understanding fire weather data and statistical approaches in considering climate change
6. Comparison between fire behaviour models
7. The View Factor methodology and bushfire designUsing the Bushfire Verification Method for determining factors of bushfire design.
8. Short-fire runs and radiant heat barriers
9. Modelling landscape fires and fire generated winds
10. Concept of herd immunity and bushfire protection
11. Fire thresholds and ecosystem impacts, traditional burning practices and hazard reduction
12. Sendai Framework for Disaster Risk Reduction.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Essay	1000 words (2 x 500 words)	20	N	Individual
Case Study	1500 words	30	N	Individual

ENGR 6002 Planning for Bushfire Prone Areas

Credit Points 10

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject describes the relevant planning issues for bushfire prone areas and the measures that can be implemented to ensure appropriate development in these areas. Through collaboration with industry professionals students learn that knowledge and understanding of the planning, design and construction of the urban form is important in managing the risk of bushfire in the community. It is also fundamental in understanding of the management of development for bushfires and the necessary infrastructure requirements for bushfire suppression and property protection in bushfire prone areas. Students evaluate and report on planning principles and legal issues in bushfire prone areas, as well as use the legislative framework to determine impacts on property and assets. This subject challenges students to become more strategic thinkers in planning and preparing for bushfire. Knowledge gained in this subject/program will benefit students aspiring to careers such as bushfire consultants and land-use planners.

Level Postgraduate Coursework Level 6 subject

Equivalent Subjects ENGR 7016 - Planning for Bushfire Prone Areas

Assumed Knowledge

Understanding of land use planning system in State/Territory.

Learning Outcomes

1. Apply the process of determining bushfire prone areas.
2. Explain the concept of measures in combination to a range of developments in bushfire prone areas.
3. Discuss the process of identifying strategic planning measures for regional and sub-regional planning and bushfire prone areas.
4. Apply the relevant legislation that governs the development of land in areas subject to bushfires and how this may affect the determination of asset protection (including site assessment) and the bushfire attack levels for future buildings.
5. Collaborate with other practitioners in the design, siting and layout options available to reduce the impact of bushfire on a residential and rural-residential subdivision.
6. Ascertain the requirements for water, access, and other infrastructure on the safety of buildings subject to bushfire attack.
7. Apply the principles of landscaping in moderating bushfire impact on a building.

Subject Content

1. Measures in Combination for Bushfire Protection
2. Determining Bushfire Prone Areas
3. Planning Legislation and bushfire
4. Site Assessment for bushfire protection
5. Strategic and regional planning for bushfire
6. Defendable space (asset protection zones) and construction requirements
7. Subdivision layout and access
8. Services and infrastructure
9. Siting and design of dwellings
10. Vulnerable developments

11. Planning reports for bushfire protection
12. Commercial and industrial developments
13. Landscaping and maintenance

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 6003 Fire Technology and Engineering Principles

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description The subject introduces students to the basic principles of fire behaviour and fire safety design so that they can appreciate fire safety principles and interpret fire safety engineering design concepts. Students will learn the basics of combustion, building fire characteristics, smoke movement, responses of fire safety devices, building fire resistance, response of building occupants, fire safety engineering design and assessment methodology. The subject provides the basis for understanding fire safety engineering and the techniques and tools used in fire safety engineering. The subject is designed for building surveyors, who will be assessing performance solutions by fire safety engineers.

School Eng, Design & Built Env

Incompatible Subjects ENGR7011 Fire Technology Principles ENGR7009 Fire Engineering Principles

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Building construction knowledge by working in the construction industry in an appropriate capacity for at least two years.

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Interpret the basic principles of the fire phenomenon including the nature of fire, heat transfer, and initiation and propagation.
2. Analyse enclosure fire hazards and determine fire loads, fire growth rates and flashover.
3. Evaluate the principles used in fire engineering design and assessment.
4. Evaluate the functions of various fire safety subsystems, such as suppression, smoke and heat control, detection, warning and egress provisions, and risk management which are used in the development of fire safety engineering solutions.
5. Interpret fire safety engineering reports.

Subject Content

1. The nature of fire and heat transfer processes
2. Fire initiation and propagation
3. Enclosure fires
4. Fire suppression
5. Smoke, heat control and tenability
6. Detection and warning
7. Fire Testing standards (AS1530.1, AS1530.2, AS 1530.4)
8. Australian Fire Engineering Guidelines methodology
9. Risk assessment (event trees and fault trees)
10. Human behaviour in fires
11. Occupant characteristics, movement and egress
12. Risk treatments and risk management
13. Fire engineering reports

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 7001 Advanced Engineering Project 1

Credit Points 10

Legacy Code 301006

Coordinator Pan Hu (https://directory.westernsydney.edu.au/search/name/Pan Hu/)

Description In this unit, the students will be working on a major engineering project as a team of 2 to 5 students. The project will be supervised by an academic staff on topics related to his/her research expertise. The students will apply and further develop their expertise in research, engineering project management and planning, work health and safety, and professional writing skills. The students are required to present outcomes using a professional report which should include a background, objectives, a comprehensive literature review, the methodology and a project plan which can then be completed in Advanced Engineering Project 2.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) ENGR 7013

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and critique technical publications
2. Present written professional/technical reports
3. Examine the Engineering profession and the environment in which it operates
4. Apply the process involved in contract and project management in Engineering industry via capstone project
5. Analyse risk situations in an engineering project and apply the theories of risk management to negate or mitigate them
6. Apply Workplace Health and Safety (WHS) requirements to an engineering project

Subject Content

1. Research techniques and technical presentation
2. Technical and environmental risk management
3. Professional management principles and practices
4. Project initiation, tender process and tender analysis
5. Contract management, human resources management and value management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour online	20	N	Individual
Proposal	Minimum of 1,500 words	20	N	Group
Report	Minimum of 5000 words per group (students need to state individual contributions)	60	N	Individual

Prescribed Texts

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) ENGR 7001

Co-requisite(s) ENGR 7013

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the theoretical knowledge gained during the course to develop practical and innovative engineering solutions.
2. Apply the project management principles to completion of an engineering project.
3. Analyse the importance of client/ end-user consultation and satisfaction and develop engineering communication abilities on good oral presentation and engineering report writing skills.

4. Implement ethical, social, economic and environmental responsibilities that apply to engineers.
5. Apply time and financial management in the context of an engineering project.
6. Apply systems engineering methods for carrying-out systematic research.

Subject Content

1. Development of integrated practical and innovative solutions to engineering problems.
2. Application of engineering project management skills.
3. Client/ end-user consultation process and satisfaction assessment.
4. Development of oral and written presentation skills appropriate to an engineer.
5. Evaluation of social, economic and environmental impacts of an engineering project.
6. Application of time and financial management skills.
7. Risk analysis.
8. Development of research skills.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour online	20	N	Individual
Presentation	15 minutes in total with all team members to present	20	N	Individual
Report	8,000 - 12,000 words per group (individual student contribution has to be stated)	60	N	Individual

Prescribed Texts

ENGR 7004 Bushfire Fighting

Credit Points 10

Legacy Code 200500

Coordinator Grahame Douglas (https://directory.westernsydney.edu.au/search/name/Grahame Douglas/)

Description This subject describes the techniques, hardware and extinguishing agents used to fight and control bushfires and focuses on the logistics involved in ensuring safe, efficient and effective control. The content includes bushfire fighting strategies in the context of rural and interface environments, hazard reduction and brigade structure arrangements. The role of planning in supporting firefighting through water supply and access is also considered as are the findings from various Public Inquiries.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

This subject assumes that the student has undertaken undergraduate study in building surveying, planning or related areas or has gained the equivalent building construction knowledge by working in the construction industry in an appropriate capacity for at least four years.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the techniques, hardware and extinguishing agents used to fight and control bushfires;
2. Explain the varying logistics used in both the rural and urban interface during bushfires;
3. Evaluate the role of planning in supporting the firefighting effort during bushfires;
4. Evaluate the role of hazard reduction and its management for reducing fuels;
5. Implement firefighting strategies and incident control used to manage bushfire events.

Subject Content

Fire fighting techniques, hardware and extinguishing agents;
The rural and urban interface;
Planning and undertaking fire fighting operations;
Fire fighting strategies;
Hazard reduction management;
Hazard reduction;
Water supplies and access for developments;
Role of public inquiries

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	500 words	10	N	Individual
Essay	1.000 words	20	N	Individual
Report	2,000 words	40	Y	Individual
Case Study	1,500 words	30	N	Individual

ENGR 7005 Emergency Management for Bushfire Prone Areas

Credit Points 10

Legacy Code 200459

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject describes the organisational and administrative arrangements for the management of emergency events in Australia, including the role of States and local government and the techniques available to develop risk management strategies in order to minimise loss of life and property arising from bushfire emergencies. The subject describes how the three tiers of Government interact during major emergency events, the role of community engagement in emergency management and the process of developing a risk management plan for bushfire emergencies. The subject also discusses the role of post-event survey and emergency and evacuation planning at the property scale.

School Eng, Design & Built Env

Discipline Fire Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Bushfire behaviour, planning, building and bushfire fighting subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and describe the organisational and administrative arrangements applying to emergency events in their own jurisdiction
2. Describe the process of developing risk management strategies and their applicability to bushfire planning;
3. Discuss the techniques that can be used to develop risk management strategies, including community engagement, monitoring and review;
4. Predict the (qualitative) risk of an area arising from bushfire; and
5. Apply appropriate guidelines, standards and codes to the development of a bushfire emergency plan for a site.

Subject Content

Legislative requirements and organisational arrangements for emergencies
Integration of the fire services and other emergencies authorities
Prevention (mitigation), preparedness, response and recovery concepts

Bushfire risk management processes and strategies
Evacuation planning in bushfire emergencies
Community engagement in planning for bushfire emergencies
Post event surveys, research and their role in emergency planning
Recovery from emergencies.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	1000 words	20	N	Individual
Essay	3000 words	35	N	Individual
Report	2000 words	25	N	Individual
Professional Task	Workshop tasks including 20 minute oral presentation	20	N	Individual

ENGR 7006 Fire Engineering 1 (Fire Dynamics)

Credit Points 10

Legacy Code 300709

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject aims to develop a detailed knowledge of fire behaviour and dynamics in the built environment. Students will be able to understand fuels and combustion processes; the chemistry of combustion; flammability limits; ignition characteristics; and different types of flames and fire plumes. The content also covers the burning of liquids and solids; flammable vapour/air mixtures; extinction and extinguishment; flame spread mechanisms and modeling; flashover; fire resistance and fire severity; projection of flames from burning compartment openings; spread of fire from a compartment; production and measurement of smoke; and smoke movement.

ENGR 7008 Fire Engineering Design and Assessment

Credit Points 10

Legacy Code 300718

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject helps to develop a high level of knowledge of fire safety systems relevant to life protection and the design and assessment of such systems. The subject covers the process of fire safety engineering design and assessment including the fire engineering brief, conceptual design, regulatory objectives, fire safety engineering subsystems, verification methods, timeline analysis, design fires, evaluation of performance of passive and active fire protection systems, risk analysis and fire engineering project reporting.

School Eng, Design & Built Env

Discipline Fire Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 5425 - Fire Safety Systems (Life Safety)

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Fire safety engineering principles, building regulations, fire dynamics, building fire services, fire modelling and human behaviour in fires.

Learning Outcomes

1. explain the fundamentals of building fire modelling
2. undertake a range of calculation methods and utilise computational tools to tackle different aspects of fire safety engineering problems;
3. apply computational methods and simple fire modelling tools to predict fire behaviour and smoke movement in buildings and solve fire safety engineering problems.
4. conduct literature reviews to appreciate the range of model application in fire safety engineering and to obtain data for model input and evaluation.

Subject Content

Correlations and dimensional analysis
Fire plume calculations
Fire severity and fire resistance
Building structure and steel, concrete, timber and glazing elements behaviour
Radiation models
Detector and sprinkler activation models
Zone model and its application
Fundamentals of field models
Literature review

Special Requirements

Essential equipment

Calculator, PC or laptop.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1000 words	15	N	Individual
Report	1500 words.	20	N	Group
Report	2000 words	25	N	Group
Report	3000 words	40	N	Individual

ENGR 7010 Fire Engineering Science

Credit Points 10

Legacy Code 301048

Coordinator Won Hee Kang (https://directory.westernsydney.edu.au/search/name/Won Hee Kang/)

Description This subject aims to enhance students' knowledge of the fundamental principles of physics, including heat and mass transfer, fluid mechanism and thermodynamics, which govern the natural phenomena associated with fires. The subject also covers properties of materials, basic mathematics and numerical methods for students to become familiar with quantitative analysis of fire dynamics and structural response. In addition, students will learn probability and risk concepts in fire safety engineering. This is a bridging subject for students who are admitted to the Graduate Certificate and Graduate Diploma in Fire Safety Engineering without an engineering or physical science background. It lays the foundation for further studies in fire safety engineering courses.

Assignment 3	3,000 words	40	N	Individual

ENGR 7012 Fire Technology and Engineering Principles

Credit Points 10

Legacy Code 300948

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description The subject introduces students to the basic principles of fire behaviour and fire safety design so that they can appreciate fire safety systems and interpret fire safety engineering design concepts. The subject covers the basics of combustion, building fire characteristics, smoke movement, responses of fire safety devices, building fire resistance, response of building occupants, fire safety engineering design and assessment methodology. The subject provides the basis for understanding fire safety engineering and the techniques and tools used in fire safety engineering.

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects ENGR 7011 - Fire Technology Principles ENGR 7009 - Fire Engineering Principles

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Undergraduate study in building surveying, planning or related areas or has gained the equivalent building construction knowledge by working in the construction industry in an appropriate capacity for at least four years.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the basic principles of the fire phenomenon including the nature of fire, heat transfer, and initiation and propagation
2. Identify enclosure fire hazards and be able to determine fire loads, fire growth rates and flashover
3. Describe the principles used in fire engineering design and assessment
4. Describe the functions of various fire safety subsystems, such as suppression systems, smoke and heat control, detection, warning and egress provision, which are used in the development of a fire safety engineering solutions;
5. Interpret fire safety engineering reports.

Subject Content

The nature of fire and heat transfer processes
Fire initiation and propagation
Enclosure fires
Fire suppression
Smoke and heat control
Detection and warning

Introduction to International Fire Engineering Guidelines
The Fire Engineering Brief
Overview of fire engineering methodology
Fire safety subsystems A, B, C and D
Fire safety sub-systems E and F
Analysis and preparing report
Assessment of Fire engineering report

Assessment

ENGR 7013 Industrial Experience (PG)

Credit Points 0

Legacy Code 301027

Coordinator Mobarak Hossain (https://directory.westernsydney.edu.au/search/name/Mobarak Hossain/)

Description Students will undertake 12 weeks full time (37.5 hours per week) employment (or part time equivalent) to obtain relevant workplace experience in Engineering companies under the supervision of professional engineers in one company or more. This will give the student a solid grounding in the Key Program of engineering which they have chosen to pursue.

School Eng, Design & Built Env

Discipline Other Engineering And Related Technologies

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply your engineering knowledge gained through academic studies in real world environment
2. Undertake experience in various aspects of engineering and engineering management
3. Improve appropriate workplace skills, including inter-personal skills, work habits and professional attitudes by working with one or more engineer(s)

Subject Content

- Obtain information on the processes of exploring opportunities and gaining Industrial Experience;
- Attend workshops on resume writing and interview skills run by the WSU Careers team;
- Conduct work experience for 12 weeks full-time or equivalent part-time (60 days) participation in a usually unpaid position at a relevant engineering company. (This experience can also be gained at more than one engineering company.)
- Follow relevant work practices and procedures;
- Perform appropriate workplace tasks as directed;
- Seek feedback on assigned tasks from appropriate person;
- document evidence of Activities carried as required.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Log/ Workbook	12 weeks	S/U	N	Individual
Report	About 3,000 words	S/U	N	Individual
Professional Placement Performance	1-2 pages on company's official letterhead	S/U	N	Individual
Participation	4 hours	S/U	N	Individual

ENGR 7014 Master Project 1

Credit Points 10

Legacy Code 300597

Coordinator Eileen An (https://directory.westernsydney.edu.au/search/name/Eileen An/)

Description This subject is a problem based project subject. Students are expected to conduct self studies under supervision by academic staff. Students will identify research topics in consultation with supervisors, carry out literature survey in one of the fields of engineering, construction, information technology or data science. Students will be required to define research objectives and scope, establish research methodology and prepare a research plan.

School Eng, Design & Built Env

Discipline Engineering and Related Technologies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 5830 - Master of Engineering Specialist Reading LGYA 4574 - Built Environment Project LGYA 4576 - Built Environment Research Project

Restrictions

Students must be enrolled in a postgraduate program. Please note: Students enrolled in 3693 Master of Engineering must select the campus offering, not the online mode.

Assumed Knowledge

(1) Knowledge in one of the fields in engineering, construction, information technology, data science or a related discipline;
(2) Knowledge in research methodology; and
(3) Skills in literature review.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse literature in relevant area to identify potential research problems.
2. Identify and propose research questions and hypothesis based on literature review.
3. Justify the research proposal in relation to its significance in literature and its anticipated impact.
4. Develop a plan and methodology to conduct research on an identified question/issue/problem.
5. Present ideas, concepts, arguments/prototypes and conclusions in a professional report.

Subject Content

Questioning. Develop a research question or hypothesis. The end result of the student's initial reading should be a well-defined research question. The research question will help the student to focus on the scope of their work.
Problem identification. Identify a problem in a relevant field, such as engineering, building surveying, design and construction management, at a general or fundamental, technical or regulatory or philosophical level that needs investigation. It is important that the student examine the assumptions that underlie the problem.
Literature review. Critically review and appraise current literature related to the student's study topic is an essential first step. Extensive reading and referencing the key papers and other sources is seen as a part of the problem solving process. The students must read widely and compare the opinions of the many authors in their paper.
Definition of objective. Define research objectives and scope.
Methodology. Prepare research methodology for the investigation of the research issue.
Planning. Prepare a research plan for carrying out the research.
Reporting. Produce a report and present preliminary findings.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 7015 Master Project 2

Credit Points 10

Legacy Code 300598

Coordinator Gu Fang (https://directory.westernsydney.edu.au/search/name/Gu Fang/)

Description This subject is a continuation of subject Master Project 1 and is a problem based project subject. Students are expected to conduct self studies under supervision by academic staff and deliver the final outcomes of the research topics that are proposed in

Master Project 1. Students will employ the identified methodologies to carry out the research plans and fulfil the research objectives with the defined scope. Each individual student is required to produce an oral presentation and a final written report in one of the fields of engineering, construction, information technology or data science. Students will acquire problem solving skills in this subject.

Equivalent Subjects LGYA 5829 - Master of Engineering Project LGYA 4576 - Built environment Research Project

Restrictions

Students must be enrolled in a postgraduate program. Please note: Students enrolled in 3693 Master of Engineering must select the campus offering, not the online mode.

Assumed Knowledge

(1) Knowledge in one of the fields in engineering, construction, information technology, data science or a related discipline; (2) Knowledge in research methodology; and (3) Skills in literature review and oral presentation.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Continuous review of existing literature in the relevant area and draw relevance to the proposed research project.
2. Execute a prepared research plan using appropriate methodologies.
3. Analyse and evaluate research findings to achieve intended project outcomes.
4. Write technical documents on ideas, concepts, arguments and conclusions professionally.
5. Communicate research results at a professional level through an oral presentation.

Subject Content

1. Implementation of research methodology. The methodology and research plan that have been established in Master Project 1 are implemented in this subject. Students may carry out experimental work or numerical simulations or theoretical analysis or field studies.
2. Literature review. Further review and appraise current literature related to the student's study topic.
3. Analysis and discussion. Conduct detailed quantitative and qualitative analyses of the data collected and discuss the results.
4. Reporting. Produce a complete dissertation and present the final findings clearly stating the student's own original contribution to the topic.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

ENGR 7016 Planning for Bushfire Prone Areas

Credit Points 10

Legacy Code 301049

Coordinator Grahame Douglas (https://directory.westernsydney.edu.au/search/name/Grahame Douglas/)

Description This subject describes the relevant planning issues for bushfire prone areas and the measures that can be implemented to ensure appropriate development in these areas. A knowledge and understanding of the planning, design and construction of the urban form is important if we are to manage the risk of bushfire on the community. It is also fundamental in our understanding of the management of development for bushfires and the necessary infrastructure for bushfire suppression and property protection in bushfire prone areas. Topics include conceptual planning issues, determining bushfire prone areas, bushfire and planning legislation, strategic and regional planning for bushfire, subdivision, defendable space and construction, design, staging and siting, vulnerable developments, industry and other forms of commercial use, landscaping and maintenance, and water and access.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display skills in all aspects of communication, including for technical and non-technical, and academic and public audiences.
2. Evaluate information relevant to IT and engineering topics, using the full range of information-searching tools.
3. Describe and model ethical and professional codes of conduct for IT and engineering professions.
4. Demonstrate the concepts related to business risk management, security and privacy of information.
5. Explain legal, social and environmental issues related to computing, IT and engineering.
6. Explain project management principles and recognise their impact in the leveraging of professional practice in IT and engineering.
7. Work effectively as both leader and member of a team, to design, manage and complete a number of projects, and to resolve conflicts.

Subject Content

Academic and professional writing
Oral and visual presentation
Ethics, ethical behaviour and professional responsibility
Intellectual property rights
Risk management and management of data security
Project management
Contracts and arbitration
Work integrated learning and professional portfolio

ENGR 7020 Sustainability and Risk Engineering (PG)

Credit Points 10

Legacy Code 300939

Coordinator Dharma Hagare (https://directory.westernsydney.edu.au/search/name/Dharma Hagare/)

Description Analysis of sustainability with engineering perspective is increasingly becoming important in the modern world. Also, in the future sustainability will include risk engineering. Hence, engineers with in-depth understanding of different tools that can be used for both sustainability and risk analysis will have significant competitive edge in their future career. The main objective of this subject is to introduce different tools available for sustainability and risk analysis in various engineering applications. The content includes renewable/alternative energy systems, energy/resource efficiency, sustainable/green buildings, sustainable transport and infrastructure, sustainable water management, environmental management systems, sustainability reporting, life cycle analysis, probability/reliability theory, risk assessment models, overall system analysis.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Engineering problem solving skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply engineering knowledge for comprehensive analysis of engineering systems for sustainability.
2. Choose appropriate tools/methods for sustainability and risk analysis of engineering systems.
3. Conduct thorough energy/water/materials audit for a given engineering system and construct detailed mass balance tables.
4. Determine appropriate water, energy, transport and infrastructure system based on sustainability and risk management criteria.
5. Carry - out triple bottom line based life cycle analysis of engineering systems including rigorous economic analysis tools.
6. Conduct overall system analysis of engineering systems considering sustainability and risk criteria.

Subject Content

mass balance/ flow analysis
heat/energy flow/conservation/loss analysis
renewable/ alternative energy systems
energy/resource efficiency
sustainable/green buildings
sustainable transport and infrastructure
sustainable water management
environmental management systems
sustainability reporting/ framework
life cycle analysis
probability/ reliability theory
risk assessment models
integrated system analysis.

ENGR 7025 Human Physiology and Biomedical Technologies

Credit Points 10

Legacy Code 301210

Coordinator Gaetano Gargiulo (https://directory.westernsydney.edu.au/search/name/Gaetano Gargiulo/)

Description This subject aims to introduce a wide range of biomedical technologies and how they are used in medical practice. Topics will span from data acquisition technologies such as ECG, EEG, body plethysmography, to large imaging diagnostics such as CT scanner, PET scanner and bio-mechanical assisting devices often used for rehabilitation and support. The first part of this subject will include a module on human physiology and bio-mechanics. This module gives a basic understanding of the human body and introduces the scientific and medical terminology used for anatomy, physiology and biochemistry and bio-mechanics.

School Eng, Design & Built Env

Discipline Biomedical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Computer skills; basic concepts of electronics i.e. amplifiers and filters; knowledge of signal theory

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply basic principles of human physiology to biomedical engineering.
2. Apply the process of development of medical devices from inception to commercialization.
3. Apply principles relating to the functioning of major biomedical technologies.

Subject Content

Biomedical technologies: Signals based devices i.e. ECG, EMG etc
Biomedical technologies: Imaging based devices i.e. MRI, X-rays etc
Principles of human physiology

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Task	Submission 1 Part A: 20 questions; Submission 2 Part B: 3000 words	80	N	Individual
Presentation	15 minutes	20	N	Individual

ENGR 7026 Performance Solutions for Bushfire Protection

Credit Points 10

Legacy Code 301265

Coordinator Sameera Wijesiri Pathirana (https://directory.westernsydney.edu.au/search/name/Sameera Wijesiri Pathirana/)

Description This subject describes the processes and techniques available to develop performance outcomes to the planning and building of structures required for bushfire protection in Australia. This subject provides advanced methods to address performance when considering bushfire protection measures. It also introduces the 'bushfire protection guidelines' and processes similar to that used in developing performance solutions under the National Construction Code. These include the use of event tree analysis, verification methods, consideration of climate change and the use of annual exceedance probabilities when developing performance solutions. Students are required to develop suitable measures through a performance solution for bushfire protection of a building.

School Eng, Design & Built Env

Discipline Fire Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) None

Co-requisite(s) None

Equivalent Subjects ENGR 7003 Alternate Solutions for Bushfire Prone Areas

Restrictions

Students must be enrolled in 3793 Graduate Diploma in Bushfire Protection or 3708 Master of Bushfire Protection and have completed 40 credit points of study.

Assumed Knowledge

Students must have prior knowledge of Bushfire behaviour, planning, building, bushfire fighting and emergency management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the principles of performance-based design as it applies to bushfire protection.
2. Apply the bushfire safety protection guideline process and techniques applicable to bushfire.
3. Apply the appropriate bushfire protection systems to the development of suitable bushfire design.
4. Apply appropriate alternate performance approaches to access for bushfire protection.
5. Apply the use of 'measures in combination' for developments in bushfire prone areas.
6. Examine the use and limitations of event tree analysis in bushfire protection design.
7. Communicate assessments and recommendations for performance-based solutions for bushfire protection.

Subject Content

1. Introduction to performance-based approaches and bushfire protection measures.
2. Bushfire design guidelines and its application to the bushfire event.
3. Bushfire verification method and event/fault tree analysis.
4. Bushfire spray systems and its impact on design bushfires.
5. Bushfire protection measures in combination.
6. Performance planning as a driver of bushfire protection.
7. Tools, techniques and data for bushfire protection analysis.
8. Alternate access arrangements for performance.
9. Landscaping and maintenance to address performance.
10. Reporting and implementation of performance solutions.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	500 words (250 words for each question)	20	N	Individual
Essay	1000 words	20	N	Individual
Report	2000 words	25	N	Individual
Report	2500 words	35	Y	Individual

ENGR 7027 Spatial Tools and Mapping

Credit Points 10

Legacy Code 301264

Coordinator Grahame Douglas (https://directory.westernsydney.edu.au/search/name/Grahame Douglas/)

Description This subject offers practical applications in spatial information software. Students will be taught using Geographical Information Systems (GIS) software to prepare maps (such as bushfire prone land) as well as management plans required of planning and design practitioners. Workshops are provided to assist students in the practical use of the GIS system. Students are provided with online module notes and readings as well as assignments being submitted online. Emphasis is placed on teaching students practical software applications skills relevant to industry needs.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise and apply the capabilities of spatial software tools in a professional context.
2. Input, model and analyse data and systems using industry standard spatial software.
3. Apply spatial modelling and analysis tools to professionally represent environmental measures of a specific development proposal.
4. Apply software-generated imagery to support planning and construction reports, findings and recommendations.

Subject Content

1. Introduction to GIS
2. GIS Applications
3. Key Concepts
4. Introduction to emergency and environmental risk management planning
5. GIS and other software applications
6. GIS analysis tools
7. GIS mapping layouts
8. Bushfire Prone Land Mapping Guidelines
9. Bushfire Protection/Management Plans and other environmental management plans

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	1,000 words	25	N	Individual
Applied Project	1,000 words	25	N	Individual
Applied Project	2,000 words plus mapping	50	N	Individual

ENGR 7028 Engineering Project 1 (PG)

Credit Points 20

Legacy Code 301395

Coordinator Eileen An (https://directory.westernsydney.edu.au/search/name/Eileen An/)

Description This subject introduces the professional engineering skills necessary to practice as an engineer, including project management, professional communication, professional ethics and legal obligations. Students are required to conduct a critical literature survey on a relevant area, identify the design or research problems, propose a plan and methodology for the design or research problems, conduct some preliminary work and analysis, present their work, and complete a project proposal and a project report.

School Eng, Design & Built Env

Discipline Engineering and Related Technologies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge in the relevant field of chosen major.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique previous research in terms of its relevance and contribution to the given topic.
2. Manage an engineering project from an environmental perspective, using appropriate contract, project, WHS and risk management processes.
3. Evaluate the major steps in the proposed research by developing the research problem, research hypotheses, research questions and a realistic timeline.
4. Construct experimental design, using appropriate research methodology, identifying data requirements and conducting relevant research to achieve objectives.
5. Apply effective written and verbal communication skills when preparing professional/technical reports.
6. Work collaboratively in a team setting on a design-oriented project or research-based project under minimal supervision.

Subject Content

Introduction to communication
Workplace communication
Technical writing
Introduction to project management
Ethics and professional code of conduct
Statistical methods
Peer-assessed oral presentation
Literature survey
Research proposal
Preliminary study

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	15-20 pages (5,000-7,500 words)	20	N	Individual
Report	20-50 pages (7,500-1,5000 words including drawings and calculations)	50	Y	Both (Individual & Group)
Presentation	15 minutes	10	N	Both (Individual & Group)
Quiz	1 hour online	20	N	Individual

ENGR 7029 Engineering Project 2 (PG)

Credit Points 20

Legacy Code 301396

Coordinator Gu Fang (https://directory.westernsydney.edu.au/search/name/Gu Fang/)

Description This subject is a continuation of subject Engineering Project 1 (PG). Students will further develop their professional skills in engineering design, research, and presentation. This will be achieved through the independent work on the proposed engineering design or research topic under an academic supervisor. Students are required to employ the identified design plan or research methodologies to carry out the proposed design or research work, fulfil the design or research objectives, evaluate and analyse the results, and present the results and findings in an oral presentation, a research paper and a final project report. This subject will demonstrate students' professional level of conducting an engineering project.

Pre-requisite(s) ENGR 7028

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge in the relevant field of chosen major.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply project management principles that incorporate time and financial management to develop practical and innovative engineering solutions.
2. Apply effective written and verbal communication skills tailored to the appropriate audience.
3. Design engineering experiments using a well formulated problem, an appropriate research methodology, data requirements, hypotheses and research questions to achieve objectives.
4. Apply systems engineering methods for carrying-out systematic research.
5. Evaluate research outcomes on a particular field and to the realms of the Engineering professions.

Subject Content

This subject is about developing an individual engineering design or research under an academic supervisor.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	6-8 pages (2000-2500 words)	15	N	Individual
Presentation	15 minutes	20	N	Individual

ENGR 7030 Bushfire Design and Climate Change

Credit Points 10

Coordinator Grahame Douglas (https://directory.westernsydney.edu.au/search/name/Grahame Douglas/)

Description This subject considers the concept of ‘design bushfire’ and the impact of climate change upon varying weather and climate conditions in Australia and globally. The potential implications of climate change on bushfire behaviour and bushfire design are developed. Students will be introduced to the concept of “Bushfire Protection Design Guidelines” including the concepts of Bushfire Design Brief and Bushfire Design Subsystems, as well as the Bushfire Verification Method adopted by the National Construction Code. Students will be able to calculate recurrence conditions for bushfire behaviour and bushfire weather conditions using extreme values techniques. Students will compare different bushfire behaviour models and their implications for future climatic conditions in developing performance solutions for bushfire protection. The role of landscape fires and fire generated winds will also be considered in the context of planning and building for bushfire protection. The role of traditional Aboriginal burning practices and culture also forms an important aspect of this subjectt.

ENVL 1001 Understanding Landscape

Credit Points 10

Legacy Code 300812

Coordinator Suzanne Ermert (https://directory.westernsydney.edu.au/search/name/Suzanne Ermert/)

Description This subject explores the historical and cultural perceptions and perspectives of the term 'landscape' and the sustainability and management of landscapes. Students become familiar with the terminology and concepts surrounding the natural landscape experientially through a series of field trips and develop an awareness and appreciation of both of the conceptual and actual landscape issues. Skills in mapping and spatial awareness skills and technologies will be developed through field trips and workshop sessions including GIS. Such skills will assist in developing a capacity to comprehensively describe and analyse the landscape.

School Science

Discipline Environmental Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects LGYA 6199 - Understanding Landscape LGYB 9526 - Understanding Landscape

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Determine the relationship between humans and the natural environment and the impacts of the ecological health of that environment from human development.
2. Identify diverse concepts of landscape.
3. Recognise the range of values and meanings associated with the term ‘landscape’, including their own and those of their peers.
4. Explain the basis of selected landscape management issues. Evaluate the holistic nature of landscape systems and the links to landscape management issues.
5. Apply skills associated with maps, mapping, spatial investigation (GIS) and associated technologies, and landscape management techniques as a way to interpret the landscape.

Subject Content

1. Landscape concepts, issues and landscape conditions;
2. Effects of humankind on past, present and future landscapes;
3. Maps and mapping: Spatial analysis using GIS and mapping techniques in combination with spatial investigation technologies to characterise and assess landscapes for environmental assessment and the role of habitat;
4. Assessment of heritage landscapes, including aboriginal heritage;
5. Fire ecology in the Sydney Basin; including the influence of fire on various landscapes including urban and wilderness landscapes;
6. Spatial awareness;
7. Compass and map reading;
8. Spatial estimations and calculations using clinometers, measuring wheels;

9. Route construction through a nominated landscape using mapping techniques;
10. Basic plant identification using taxonomic key;
11. Humankind?fs historical and cultural involvement within the landscape;
12. Principles and practice of fire and fire management issues;
13. Underlying ?elayers?f within the framework of landscape;
14. Cultural, historical and artistic perspectives of the indigenous relationship with the lan

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Environmental Autobiography	1,000 words	15	N	Individual
Field trip tasks sheets which evaluate/ characterise sites visited	Completed during field trip	20	N	Individual
Poster / Presentation of analysis/ characterisation of specific landscape site not visited in field trips	15 minute presentation	25	N	Individual
Final Exam	2 hours	40	N	Individual

ENVL 1002 Environmental Issues and Solutions

Credit Points 10

Legacy Code 301271

Coordinator Michelle Ryan (https://directory.westernsydney.edu.au/search/name/Michelle Ryan/)

Description This subject explores a variety of environmental issues with a focus on emerging environmental issues. The relationships between human health and environmental health are explored through a number of case studies. Concepts explored include 21st Century contaminants, noise, energy and water. Through a combination of case studies and practical field experience, students will develop the skills and knowledge appropriate to develop solutions to a variety of environmental issues. Students enrolled in the Undergraduate Certificate in Environmental Sustainability will not complete the practical field experience component of this subject, as they will be studying online.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and describe a variety of environmental issues
2. Describe a number of emerging environmental issues due to urban development
3. Identify and explain essential characteristics of various environmental issues
4. Monitor, assess and make appropriate recommendations to address environmental noise issues
5. Identify and explain the legal and administrative components of noise.
6. Identify relevant environmental legislation and policy
7. Demonstrate competency in academic writing
8. Research and communicate a case study of an environmental issue
9. Demonstrate critical thinking by identifying solutions to a chosen environmental issue

Subject Content

-Introduction into a number of environmental issues
-Urban development and environment
-Energy use
-Water pollution
-Water security
-Urban environments and human health
-21st Century contaminants
-Environmental determinants of human health and wellbeing
-Environmental noise
-Assessment, regulation and control of environmental noise
-Environmental health policy, practice and stakeholder responsibilities
-Real world case studies

ENVL 1004 Introduction to Environmental Science

Credit Points 10

Legacy Code 301407

Coordinator Catriona Macdonald (https://directory.westernsydney.edu.au/search/name/Catriona Macdonald/)

Description Students learn how biology, chemistry and the physical sciences interact to regulate environmental processes in natural and built environments. They will evaluate concepts of sustainability and resilience and apply these perspectives to understand how human actions can alter the natural world. Students will use interdisciplinary approaches, including field studies, to investigate environmental processes and evaluate specific environmental challenges. Local and global environmental issues, sustainability, resilience and stewardship will be explored across diverse social and ecological contexts.

School Science

Discipline Environmental Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe how biological and physical sciences interact to regulate fundamental environmental processes in natural and built environments.
2. Identify key concepts of sustainability and resilience from different perspectives, including Aboriginal and Torres Strait Islander views.
3. Explain how human actions can influence environmental sustainability.

4. Articulate the interdisciplinary approaches, as an individual and in a team, to understand environmental problems in diverse social and ecological contexts.
5. Effectively communicate the scientific principles underpinning environmental processes and the impact of management on sustainability.

Subject Content

1. Framework for a sustainable future, including science and the environment, economics, politics, and public policy.
2. Ecology: the science of organisms and their environment.
3. Human population and essential resources, including human population & development.
4. Water, hydrologic cycle and human use.
5. Soil: foundation for land ecosystems.
6. Production and distribution of food.
7. Pests and pest control.
8. Harnessing energy for human society.
9. Pollution and prevention.
10. Stewardship for a sustainable future.

Assessment

ENVL 2001 Analysis of Spatial Data

Credit Points 10

Legacy Code 101646

Coordinator Awais Piracha (https://directory.westernsydney.edu.au/search/name/Awais Piracha/)

Description The making and the use of maps. This subject involves the critical examination of the way geographical data is produced, analysed, mapped and used to inform both private and public decisions. Natural environment, health, accessibility and residential amenity are examples of phenomena that have an important geographical dimension. Policy responses to these phenomena need to be specific with regard to locations and places. Geographic information systems software and census will be used to produce maps based on the analysis and interpretation of data relating to the student's field of interest.

ENVL 2002 Environmental Regulation and Policy

Credit Points 10

Legacy Code 300841

Coordinator Ian Wright (https://directory.westernsydney.edu.au/search/name/Ian Wright/)

Description This subject aims to provide students with a broad understanding of the current environmental regulations available to environment protection and planning authorities at the State and Local Government level to protect and manage the natural and built environments. This subject will also consider environmental policy introduced by the State and Commonwealth governments to manage land use activities so as to encourage sustainable development practices. It is a suitable subject for students entering government or industry in environmental management, health and planning roles. There is a particular focus on the use of legislation and preparation of policy to address environmental and health risks to the community.

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 6188 - Landuse and the Environment

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Utilise Ecological Footprint principles in the analysis of land-use.
2. Describe the principles of sustainable land-use.
3. Apply the principles of sustainability with respect to land-use.
4. Undertake an analysis at regional, country, enterprise or household level of the impacts of land-use on the environment.
5. Design and develop a computer based calculator for use in predicting the energy consumption of an enterprise.
6. Debate contemporary issues on landuse and the environment, including such issues as carbon emission trading; use of oil, coal and gas; alternative energy; and global warming myths and facts.

Subject Content

1. The theory of climate change and sustainable landuse options primarily for Australian landscapes.
2. ?eReal world?f examples of relevant landuse activities explored to develop an understanding of the interactions between land-use and the environment.

3. Interactions between land-use, production and consumption.
4. Calculation of the carbon emissions and ecological footprint for an enterprise of choice and with recommendations for improvement with regard to desirable and feasible change.
5. The environmental impact of enterprises and the ?eland equivalent?f required to sustain such enterprises.

ENVL 2005 Internet of Things for the Environment

Credit Points 10

Legacy Code 301275

Coordinator Basant Maheshwari (https://directory.westernsydney.edu.au/search/name/Basant Maheshwari/)

Description Internet of things (IoT) is about connecting platforms to internet for monitoring, managing and controlling them. Simply put, IoT can make 'dumb' things 'smart' by connecting them to the Internet and sensors. This results in improved efficiency of data collection, accuracy and decision making. The applications of IoT is rapidly expanding in environmental science and management, and the topics in this subject will cover aspects of IoT for water, air and noise pollution monitoring, extreme weather warning, river water flow monitoring, water quality management, irrigation management, flora and fauna monitoring, broadacre agriculture, protected cropping, biodiversity, ecosystems health, wildlife and more.

ENVL 2006 Environmental Planning and Climate Change

Credit Points 10

Legacy Code 301390

Coordinator Ian Wright (https://directory.westernsydney.edu.au/search/name/Ian Wright/)

Description This subject is an introduction to environmental planning in local and state government and in particular the role of planning in protecting the natural environment, enhancing population health and/or encouraging sustainable development practices. Students focus on goal-setting for environmental protection and then explore how planning policy can assist with achieving these goals. Current metropolitan planning and strategy is examined using the Metropolitan Strategy for Sydney as the primary case study. The subject scopes environmental planning policies introduced by state, local and Commonwealth governments to adapt to climate induced impacts on the environment and on community health and well being.

Incompatible Subjects NATS 2020 - Healthy Built Environments

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain Commonwealth, state and local environmental planning law and policy;
2. Research and set appropriate environmental planning goals for environmental protection and conservation within the built environment context;
3. Describe key elements of building design for energy efficiency, acoustic comfort and water conservation;

4. Outline the main components of the Sydney Metropolitan Plan in relation to the projected environment and human health impacts of climate change;
5. Propose sustainable planning solutions through the application of sustainability policy including BASIX and Part J of the building Code of Australia.

Subject Content

1. Environmental planning practice in local and state government;
2. Environmental planning to enhance environmental sustainability and population health and address the emergent and projected human health and environmental sustainability impacts of global climate change;
3. Professional competencies relating to planning and climate change as required by graduate employers and as reflected in professional accreditation criteria;
4. Environmental management opportunities provided by legislation and government policy such as:
a. Environmental Planning and Assessment Act (under review);
b. Applicable State Environmental Planning Policies (SEPPs);
c. Metropolitan Strategy for Sydney;
d. Relevant regional strategies; and
e. climate change policy including sea level rise policy and sustainability policy with reference also given to SEPP (BASIX) and part J of the Building Code of Australia.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Essay	1500 words	30	N	Individual
Quiz	up to 30 mins	30	N	Not Known
Report	2000 words	40	N	Individual

ENVL 2007 Environmental Monitoring and Assessment

Credit Points 10

Legacy Code 301408

Coordinator Ricky Spencer (https://directory.westernsydney.edu.au/search/name/Ricky Spencer/)

Description n this subject, you will develop the practical skills and underlying scientific knowledge required to address environmental questions across natural and built environments. Through practicals, workshops, and an independent research project you will learn how to design a monitoring and assessment program to characterise different environment situations, interpret data and propose management solutions to contemporary environmental challenges. The subject will introduce a range of topics, including the application of geographic information systems (GIS), remote sensing methodologies, environmental sensors, the internet of things and citizen science approaches to understand and improve environmental situations, and provides opportunities to research a chosen, real-world topic to assess an aspect of environmental sustainability.

School Science

Discipline Environmental Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions

Successful completion of 60 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain different concepts and approaches to environmental monitoring and assessment in the context of natural and built environments.
2. Critique monitoring data and environmental reports that utilise a range of environmental indicators including soil, air, water, microbial.
3. Apply different techniques and approaches for environmental monitoring.
4. Evaluate environmental data to assess the current state of the environment and manage risk in the context of environmental sustainability.
5. Communicate findings in report format and orally from research on a selected issue covering current regulatory requirements and best environmental management practices.

Subject Content

1. Why monitor and assess the environment?
2. Key parameters for monitoring and assessment.
3. Framework for designing a monitoring and assessment program, including field sampling considerations, data collection and statistical analysis.
4. Introduction to Geographic Information Systems.
5. Introduction to remote sensing for environmental monitoring and change detection.
6. Field application of sensors, Internet of things and drones for environmental assessment and management.
7. Plant, animal, microbial and soil monitoring.
8. River and catchment monitoring.
9. Air quality monitoring.
10. The role of citizen science/crowd sourcing in environmental monitoring.
11. Selected case studies for environmental impact assessment.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 min each	20	N	Individual
Case Study	2000 words maximum	20	N	Individual

ENVL 2008 Australian Ecosystems: Threats and Solutions

Credit Points 10

Coordinator Kristine Crous (https://directory.westernsydney.edu.au/search/name/Kristine Crous/)

Description Australian ecosystems are home to a unique and diverse set of plants and animals. This diversity underpins healthy functioning and resilience of our ecosystems, yet is under threat from habitat degradation, pollution, invasive species and climate change. In this subject you will be introduced to different Australian vegetation communities and explore interactions with soil, animals and climate. You will learn how environmental threats and disturbances affect Australian ecosystems and be introduced to the principles of ecosystem conservation and policy. Practicals include a mix of field- and lab-based activities to develop job-ready skills such as surveying and identifying ecological communities.

School Science

Discipline Environmental Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Learning Outcomes

1. Describe how Australian ecosystems are adapted to their current environment.
2. Explain how environmental threats and disturbances can affect ecosystem biodiversity and functioning.
3. Apply sampling techniques to draw inferences about the dynamics of Australian plant and animal communities.
4. Undertake primary ecosystem assessments tasks by using spreadsheets and statistical tools.
5. Describe the principles of conservation and associated indigenous aspects and policy tools.

Subject Content

1. Evolution of Australian landscape and ecosystem communities and their interactions with climate, soils and animals.
2. Importance of vegetation communities and animals of Australia as the foundation of ecosystem function and biodiversity
3. Environmental disturbances and threatening processes to Australian ecosystems including bushfires, invasive species, introduced predators, pollution, habitat loss/degradation and climate change.
4. Responses of ecosystems to major disturbances in their environment.
5. Introduction to the principles of ecosystem conservation management relating to indigenous aspects and policy

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

ENVL 2009 Ecosystem Restoration

Credit Points 10

Coordinator Paul Rymer (https://directory.westernsydney.edu.au/search/name/Paul Rymer/)

Description Ecosystem Restoration will cover the most widely used and successful management strategies employed to conserve and restore native species and communities facing land degradation and major threats. This subject will cover policy requirements and active management strategies involved in rewilding, ecological restoration, reintroductions, translocations, and their implementation at local, national and global levels. You will explore the full range of concepts and tools for conservation management. This subject will focus on restoration and conservation from individuals to landscapes. Indigenous and industry groups will guide workshop discussions. Its focus is ecological, although consideration is also given to socio-economic factors that influence restoration programs.

School Science

Discipline Environmental Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions

None

Learning Outcomes

1. Explain the principles and objectives of conservation and restoration measures.
2. Appraise the various restoration approaches and techniques and the conditions to which each is most suited
3. Assess optimal conservation actions and 'on-ground' techniques based on condition assessments
4. Effectively communicate ecosystem restoration project outcomes to diverse audiences.

Subject Content

1. Principles and objectives of ecological restoration
2. Biodiversity assessment methods in the context of biodiversity, indigenous elements and conservation policy
3. Components required (including Indigenous perspectives) to design optimal conservation strategies and monitor success
4. Species-centric and ecosystem-centric approaches to conservation
5. Toolbox for ecological restoration covering a range of approaches

Assessment

ENVL 2010 Conservation Priorities and Process

Credit Points 10

Coordinator Kate Umbers (https://directory.westernsydney.edu.au/search/name/Kate Umbers/)

Description Conservation Priorities and Practice examines the procedures involved in real world conservation interventions and their impact on biodiversity. You will develop the skills to assess the threatened status of species and ecosystems, and how decisions are made to prioritise resource allocation. You will be encouraged to think about conservation recovery plans in state, national, and international policy and governance frameworks. You will assess how conservation outcomes are managed on different land holdings such as private land including on farms (agroecology) and how biodiversity offsetting is applied. You will build a cross-disciplinary awareness of biodiversity conservation practices and how to engage with diverse interest groups.

School Science

Discipline Environmental Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions

None

Learning Outcomes

1. Analyse conservation assessments and recovery plans for species and ecosystems.
2. Explain the practical implications of Australian conservation legislation.
3. Assess decision science tools in order to assign conservation priorities.
4. Critically analyse how conservation projects are conducted on different land holdings including the application of biodiversity offsetting
5. Propose strategies to engage a broad range of interest groups, including government agencies, Non-Government Organisation's (NGO's) and indigenous and community groups, with conservation projects.

Subject Content

1. Threatened species and ecosystem identification and prioritization.
2. Conservation assessment mechanisms at state, commonwealth and international levels for species and ecosystems.
3. Application of management for the conservation of threatened species and ecosystems, including biodiversity offsetting
4. Conservation strategies for stakeholders on different types of land holdings

Assessment

ENVL 3003 Environmental Risk Management

Credit Points 10

Legacy Code 300858

Coordinator Samsul Huda (https://directory.westernsydney.edu.au/search/name/Samsul Huda/)

Description This subject examines the world of environmental risk management and will introduce students to environmental management systems including Environmental Impact Assessment and Environmental Auditing. The subject considers and examines the application of the precautionary principle in real world situations. Students will also be introduced to methods of quantitative risk assessment as applied to environmental and agricultural risks such as urban, peri-urban and rural growth; industrial and agricultural land use; contaminated land, and climate change.

School Science

Discipline Environmental Studies, Not Elsewhere Classified.

Level Undergraduate Level 3 subject

Equivalent Subjects ENVL 3004 - Environment Risk Management LGYA 6128 - Agriculture Risk

Restrictions

Successful completion of 120 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss and critique the environmental impact assessment process and its limitations as a management tool;
2. Explain the environmental auditing process, advantages and limitations of different auditing approaches and assessment and management of contaminated sites;
3. Apply AS 4360 and ISO 140004 in the appropriate context;
4. Apply principles of risk and uncertainty and tools for modelling risk;
5. Apply appropriate tools to effectively manage and/or transfer risk;
6. Research, evaluate, utilise and communicate information on risk assessment and management using multiple sources.

Subject Content

Environmental Impact Assessment (EIA)
Environmental Auditing (EA)
Review and processing of an EIA/EA
Identification, assessment and management of environmental risk
Application of risk management to solving real world problems
Management and assessment of Agricultural Risk
Management of risk from weather and climate change

Assessment

Test	2 hours	40	N	Individual

ENVL 3005 Planning the City: Development, Community and Systems

Credit Points 10

Legacy Code 101593

Coordinator Anna Leditschke (https://directory.westernsydney.edu.au/search/name/Anna Leditschke/)

Description This subject aims to provide students with a fundamental understanding of the role of government, focusing on the role and nature of planning across all levels of government from a variety of theoretical frameworks. It presents a critical examination of the urban development and planning processes, with particular attention given to the environmental and political issues associated with planning at the local government level. It looks at the changes and challenges confronting local government in view of the demands made on them by the changing social and economic conditions and societal values such as those relating to requirements for public participation, transparency and accountability. The subject also examines the role of private sector in planning and assessment processes.

Level Undergraduate Level 3 subject

Restrictions

Successful completion of 80 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the historical background and significance of the Planning profession;
2. Apply the key concepts involved in planning and managing development within the context of local planning;
3. Analyse urban development and planning processes within the planning framework; and
4. Explain changes in planning processes that reflect evolution of socioeconomic and cultural values.

Subject Content

1. Origins of town planning
2. The rationale for planning and regulation
3. The political and environmental issues related to the implementation of planning
4. Strategic planning
5. The development control system
6. Participatory planning, access and equity
7. Changes and challenges for Local Government
8. Planning by private sector

Assessment

ENVL 3006 Transport, Access and Equity

Credit Points 10

Legacy Code 101645

Coordinator Awais Piracha (https://directory.westernsydney.edu.au/search/name/Awais Piracha/)

Description This subject examines the equity and efficiency issues in the provision of transport in cities and regions from a critical social science perspective. Issues of transport disadvantage and policy and planning responses to improve access to urban services are examined. The social and environmental impact of transport systems are considered in the context of urban management.

School Social Sciences

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 7234 - Transport Access and Equity

Restrictions

Successful completion of 80 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. analyse problems associated with transport and access to urban services and to propose constructive alternatives
2. design and negotiate solutions to transport and access issues in a practical context.
3. Apply critical, reflective and creative skills to transport and access issues in an applied context
4. Demonstrate Social interaction and communication skills in a problem-driven context

Subject Content

- Environmental sustainability of transport systems,
- Social justice issues in the provision of public transport including: the needs of particular groups; social impacts of projects; access to urban services; remote and indigenous communities
- Transport planning and policy: transport demand modelling and management; transport infrastructure investment issues; impacts of telesubstitution.

Assessment

ENVL 3007 Urban Environment

Credit Points 10

Legacy Code 300860

Coordinator Michelle Ryan (https://directory.westernsydney.edu.au/search/name/Michelle Ryan/)

Description This subject explores the relationships between community, the natural environment and government within an urban context through considering how housing and urban development can influence population health. Concepts explored include "healthy housing", "active living" "safety by design" and "energy efficiency". Through a combination of case studies and practical field experience, students will develop the skills and knowledge appropriate to assessing the "healthiness" and sustainability of urban environments. The subject examines methods of construction and building regulation aimed at the preservation of health and amenity.

School Science

Discipline Environmental Studies, Not Elsewhere Classified.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 6254 - Urban Environment

Incompatible Subjects LGYB 9943 - Environmental Health Law ARCH 3007 - Urban Development Systems NATS 2020 - Healthy Built Environments

Restrictions

Successful completion of 120 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the requirements for sustainable and healthy urban design
2. Describe the principles of urban development assessment
3. Describe environmental, health and planning control of urban development projects
4. Describe the principles of liveable and healthy urban design
5. Analyse the relationship between disease prevention and housing design, including their relationship to epidemics of today - obesity, heart disease and depression
6. Research, evaluate, utilise and communicate relevant statutory and policy information

Subject Content

EHA professional accreditation requirements specific to the built environment;
Human health impacts of housing and urban development;
Healthy Housing, "Active Living", "Safety By Design" and "Energy Efficiency";
Assessment of "Healthiness" and sustainability of urban environments;

Environmental Planning and Assessment Act, Local Government Act, Public Health Act;
Building Code of Australia;
Development approval and control.

ENVL 3009 Air Quality and Climate Change

Credit Points 10

Legacy Code 301391

Coordinator Maggie Davidson (https://directory.westernsydney.edu.au/search/name/Maggie Davidson/)

Description Deteriorating air quality and climate change are two major challenges facing humanity and threatening environmental sustainability and human health. As such, air quality and climate change are of International, National, State and local community

concern. This subject critically analyses the many issues that relate to air pollution, including its nature, extent, impacts and monitoring. Students will examine an air pollution issue of their choice.

Level Undergraduate Level 3 subject

Equivalent Subjects PUBH 3001 - Air Quality and Climate Change LGYA 6192 - Air Quality Management

Restrictions

Successful completion of 60 credit points at Level 1 and 40 credit points at Level 2.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the major sources of air pollution and critically analyse associated impacts on human health and environmental sustainability.
2. Describe the impact of meteorology on air pollution in a local area.
3. Critically analyse the health effects of air pollution.
4. Evaluate and analyse the monitoring and assessment of air pollution.
5. Critically analyse the causes and the main methods of controlling point sources of air pollution.
6. Apply and evaluate basic air modelling techniques.
7. Evaluate indoor air problems.

Subject Content

Introduction to Air Pollution
Impact of legislation on Ambient Air Pollution
Sources of Air Pollution
Motor Vehicles and their impact on air pollution
Sources and human health effects of air pollution
Climatology
Air quality assessment and air modelling
What is a critical literature review relating to air pollution
Indoor Air Quality Odour Assessment
Global Issues - Climate Change

ENVL 3010 Environmental Planning, Policy & Regulation

Credit Points 10

Legacy Code 301403

Coordinator Ian Wright (https://directory.westernsydney.edu.au/search/name/Ian Wright/)

Description This subject is an introduction to environmental planning and environmental regulations in local and state governments. It covers the role of planning and enforcement of regulations in protecting the natural environment, enhancing public health and/or encouraging sustainable development practices. Students become familiar with the key legislation for environmental protection and then explore how planning and regulations can assist with achieving optimal environmental outcomes. Current planning and regulations are examined using urban development and planning in Sydney as the primary case study. The subject includes key environmental planning policies and important legislation used by state, local and Commonwealth governments to protect the natural and built environment and to protect public health.

Level Undergraduate Level 3 subject

Equivalent Subjects PUBH 2007 Environmental Planning and Climate Change
ENVL 2002 Environmental Regulations and Policy

Restrictions

Successful completion of 60 credit points

Assumed Knowledge

It is expected that the students will have completed some Level 1 subjects that have some environmental content.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the incorporation of environmental controls into development proposals and approvals;
2. Explain the implementation of environmental protection objectives and policies in development assessment regulations;
3. Relate environmental control principles and remedial strategies to NSW Government key legislation;
4. Investigate and develop sound environmental strategies to rectify or avoid environmental problems using either regulatory or non-regulatory approaches as appropriate;
5. Undertake sound research to inform recommendations to solve environmental problems.
6. Gather evidence and prepare for legal action on an environmental problem under relevant legislation;

7. Explain Commonwealth, state and local environmental planning law and policy;
8. Research and set appropriate environmental planning goals for environmental protection and conservation within the built and natural environment context;

Subject Content

1.Environmental planning practice in local, state and Commonwealth governm;
2.Current NSW environmental regulations for environmental protection and management
3.Current NSW legislation, with a key focus on: Local Government Act, Protection of the Environment Operations Act and Environmental Planning and Assessment Act.
4.Environmental regulations and planning approaches to enhance environmental sustainability;
5.Professional competencies relating to environmental regulation and environmental planning as required by graduate employers and as reflected in professional accreditation criteria;
6.Environmental management plans and policies such as:
a.Applicable State Environmental Planning Policies (SEPPs);
b.Metropolitan Strategy for Sydney;
c.Relevant regional strategies;
d.Local Environment Plans (LEPs)

Assessment

ENVL 7002 Planning and Environmental Regulation

Credit Points 10

Legacy Code 101634

Coordinator Anna Leditschke (https://directory.westernsydney.edu.au/search/name/Anna Leditschke/)

Description This subject provides students with an understanding of the planning process from both a state and local government perspective. The subject will cover concepts related to the planning process, focusing on development control and regulation issues, planning instruments and development applications. It will also address the areas of planning and environment law, with specific reference to the legal framework that regulates planning and development in NSW.

School Social Sciences

Discipline Environmental Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret and apply legislation and case law to state and local government planning practices.
2. Identify, analyse and explain the statutory processes of land-use regulation and development control.
3. Demonstrate the role of professional planners and advise governments, courts and communities in plan-making and development regulation, assessment and review.
4. Develop and evaluate planning policies, plans, regulations and development proposals.

Subject Content

1. Environmental protection and development
2. Making decision and taking action
3. Implementation issues
4. Planning and the legal framework
5. Development controls within a planning system
6. Development applications and assessment
7. Strategic planning; planning systems and property markets
8. Scope of environmental law
9. Planning and environmental dispute resolution

Assessment

ENVL 7003 Urban Research Report

Credit Points 10

Legacy Code 101637

Coordinator Nicky Morrison (https://directory.westernsydney.edu.au/search/name/Nicky Morrison/)

Description This capstone subject requires students to write a 5,000 word comprehensive research report on a local or international urban planning issue. Students will select a research topic of individual interest, and work to assemble a range of evidence to address the research question. This facilitates an opportunity for students to apply their skills and knowledge acquired in the Master's program, through a high level of work and quality engagement in an authentic and professional context.

School Social Sciences

Discipline Environmental Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 1299 - Urban Management Placement Thesis

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Formulate a successful research proposal for independent research
2. Demonstrate knowledge and critical analysis skills in the production of a literature review
3. Identify an appropriate research method to address the particular research question, and assemble a range of evidence to address it.
4. Apply their skills and knowledge in a sustained program of research writing
5. Produce a clear report of the outcomes of the research project, based on application of the skills and knowledge acquired

Subject Content

Write a Research Proposal that frames a research question and indicates an appropriate research method by which to address it. Undertake an independent research project under the supervision of an academic supervisor.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	1000 words	20	N	Individual
Report	5000 words	80	N	Individual

FINC 1001 Management Accounting Fundamentals

Credit Points 10

Legacy Code 200116

Coordinator Neelam Goela (https://directory.westernsydney.edu.au/search/name/Neelam Goela/)

Description This subject replaced by ACCT 1010 Management Accounting Fundamentals from Trimester 2, 2022. This subject provides an introduction to management accounting in an e-commerce environment. The interrelations of management accounting to other functional areas, to suppliers, to customers, and to other sources of external information relevant to planning and control are examined. Topics include the development and logic of routine and non-routine analysis performed to support management decision making.

School Business

Discipline Accounting

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) ACCT 1007

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop and describe costing techniques and their strengths and weaknesses;
2. Apply different decision models in the evaluation of product costing, product pricing and sales forecasting;
3. Prepare a master budget with all of the required supplementary schedules;
4. Assess what is relevant and irrelevant information in non-routine decision-making;
5. Explain ethical issues in management accounting;
6. Describe management accounting in an electronic environment;
7. Appraise basic concepts of control, and the behavioural impacts of control systems.

Subject Content

- introduction to management accounting
- Basic cost management concepts and cost behaviour
- cost volume profit analysis
- Product and service costing: job-order system
- Product and service costing: A process systems approach
- relevant decision making
- budgeting for planning and control
- Flexible budgeting, Standard costing and variance analysis
- Allocating costs of support departments and joint products

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

FINC 3001 Bank Management

Credit Points 10

Legacy Code 200818

Coordinator Sean Toohey (https://directory.westernsydney.edu.au/search/name/Sean Toohey/)

Description Bank Management provides students with an understanding of modern banking by identifying the main types of risk confronted by banks and applying relevant techniques to measure and manage those risks. Students will recognise that the risks faced, and the methods and markets through which these risks are managed, are similar for the managers of other types of financial institutions such as building societies, investment banks and insurance companies as well as, to some extent, non-financial corporates. Consequently, the subject will prepare students for careers throughout the financial services sector and will also be beneficial for other business professionals.

School Business

Discipline Banking and Finance

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Assumed Knowledge

Students who have completed the subject Corporate Financial Management or equivalent will find this subject more manageable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate critical understanding of the structures and functioning of banking and issues related to banking in a contemporary globalised economy, including the impact of government policy and regulation on banking.
2. Interpret the financial statements of banks and apply various tools and approaches for measuring and evaluating the performance of banks.
3. Evaluate various asset-liability management techniques and hedging against interest-rate risk and credit risk.
4. Analyse and evaluate lending choices in different business and personal lending contexts from the perspective of sources of fee income and other revenue producing services.
5. Evaluate important risk-management tools for banks.

Subject Content

1. Banks and the financial services industry
2. Risks of financial institutions
3. Interest rate risk measurement
4. Managing interest rate risk
5. Market risk
6. Credit risk
7. Liquidity risk
8. Liability and liquidity management
9. Capital management and adequacy

FINC 3002 Behavioural Finance

Credit Points 10

Legacy Code 200518

Coordinator Heath Spong (https://directory.westernsydney.edu.au/search/name/Heath Spong/)

Description Traditional theories of finance are based the assumption that investors are both rational and utility maximizing. The Efficient Markets Hypothesis in particular has assumptions about investor behaviour which underpin its key predictions. The tenants of behavioural finance disputes the validity of these assumptions. This subject challenges traditional theory by examining how decision making and investor behaviour may be driven by personal and market psychology.

School Business

Discipline Banking, Finance And Related Fields

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Assumed Knowledge

Students should have at least an introductory finance background before entering into this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. To understand traditional theories of financial asset pricing and investment decision making;
2. To understand the implications of different assumptions about investor rationality and market psychology for taxation systems for asset pricing and investment decision making;
3. To appreciate alternative theories of investor and market behaviour.

Subject Content

- theoretical and empirical critiques of The Efficient markets Hypothesis/capital Assets pricing model
- The Psychology of investors
- Risk versus uncertainty
- The behaviour of finance markets ? non-normal distributions
- implications of investor irrationality for economics and The analysis of money

FINC 3004 Financial Planning

Credit Points 10

Legacy Code 200627

Coordinator Penny Janson (https://directory.westernsydney.edu.au/search/name/Penny Janson/)

Description The subject endeavours to provide students with an understanding of the complex process and contextualisation of the Australian Financial Planning Industry. This subject aims to introduce students to the principles of personal financial planning and the provision of personal financial advice including the preparation of a Statement of Advice (SOA). Topics covered include the current Australian regulatory environment, strategies for the accumulation of wealth and risk protection, retirement planning, estate planning, taxation consequences, debt and credit management and home ownership. This subject meets ASIC requirements (PS146) in relation to both knowledge and skills.

FINC 3006 Insurance Advising - Theory and Practice

Credit Points 10

Legacy Code 200272

Coordinator Amanda Craft (https://directory.westernsydney.edu.au/search/name/Amanda Craft/)

Description This subject introduces students to the profession of Financial Planning and provides a substantial grounding in the theories and practices of the profession with a special focus on insurance and risk management. This subject aims to enable students to make knowledgeable and sound risk management decisions, to understand advisory functions and the role and legal obligations of the adviser in the financial planning and insurance advisory process. The subject is useful to students who wish to increase their knowledge generally of Financial Planning but also for students specifically interested in the insurance aspects of the financial planning process. The subject is designed to include an understanding and exploration of managing personal risk, the operation of insurance markets, regulation, insurance products including life, general, health and mandated policies and recommendations for using insurance products for individuals, their families and small business. This subject meets Financial Adviser Standards and Ethics Authority (FASEA) accreditation requirements and also introduces general Financial Planning concepts.

Legacy Code 200875

Coordinator Samuel Swanzy-Impraim (https://directory.westernsydney.edu.au/search/name/Samuel Swanzy-Impraim/)

Description The aim of this subject is to provide insight into property finance in Australia and overseas. Students critically review equity and debt financing and examine the financing alternatives available, as well as methods for evaluating these alternatives. Students also examine the impact of debt financing on a property and evaluate the taxation aspects of property transactions. In addition, students gain both a theoretical and an applied understanding of an after-tax cash flow projection in this subject. International property finance is also addressed.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYB 6469 Property Finance and Tax FINC 3010 Property Finance and Tax

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

It is assumed that students will have a sound knowledge of:
1. Valuation and financial mathematics
2. Concepts of discounted cash flow analysis and application
3. Statutory valuation legislation and procedures
4. Property portfolio analysis and property investment analysis and application

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the financial environment of Australia.
2. Assess and develop optimal financing strategies for property investments.
3. Outline the factors that determine the impact of leverage upon returns from property investments and developments.
4. Assess the impact of taxation on potential outcomes from investments in property.

Subject Content

1. Overview of property investment financing.
2. The Australian financial system.
3. Mortgage loans including fixed and variable interest rate.
4. Financing analysis of residential properties and income-producing properties.
5. Financial risk analysis.
6. Property taxation (taxes on income, capital, transaction taxes, land tax).
7. Taxation and property investment implications.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

Students undertaking this subject require the background knowledge achieved through prior study in the general principles of valuation.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate and apply economic and market data to analyse the property market.
2. Apply calculations of risk and returns for investment properties.
3. Utilise the discounted cash flow method in analysing investment properties.
4. Conduct an investment analysis for income producing properties.
5. Explain property investment decision process in a dynamic market environment.
6. Perform risk analysis for investment properties.
7. Explain the impacts of financing and taxation on property returns and the issues of investment in international property.
8. Apply verbal communication skills appropriate to property context.

Subject Content

1. Introduction to property investment.
2. Calculations for property investment.
3. Measuring investment returns.
4. Property market analysis.
5. DCF valuation method.
6. Leases, cashflow proformas and discount rates.
7. Property investment risk.
8. Sensitivity and scenario analysis.
9. Investment decision making.
10. International property investment.

FINC 3015 Security Analysis and Business Valuation

Credit Points 10

Legacy Code 200921

Coordinator Mohammad Tavakoli Baghdadabad (https://directory.westernsydney.edu.au/search/name/Mohammad Tavakoli Baghdadabad/)

Description This subject analyses companies from a fundamental perspective in order to derive an intrinsic value for securities. The focus is on the attempt by active investors to identify mispriced securities using publicly available information, company reports and financial market information. The analytical techniques of financial statement analysis (e.g. fundamental analysis, free cash flow analysis and pro-forma analysis) and the issue of the "reliability" and "quality" of publicly available information are discussed and explored. Those contemplating careers in investment banking, financial consulting, trust funds, superannuation funds, hedge funds, and brokerage firms will find this applied subject both useful and interesting.

Level Undergraduate Level 3 subject

Pre-requisite(s) ECON 2002

Assumed Knowledge

Knowledge acquired in the corporate financial management and fundamentals of accounting.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Collect and critically analyse financial and non-financial company and industry information.
2. Assess the implications of the macroeconomic environment, industry structure and operations and strategies of a business for its future prospects.
3. Construct and apply various valuation models to value security and the business.
4. Critically assess the valuations of a business and of its debt and equity based on discounted cash flow analysis.
5. Classify the concepts and limitations of traditional valuation approaches.

Subject Content

1. Overview of valuation.
2. Analysis of the industry structure and operational strategies of a particular business.
3. Forecasting and valuing cash flows.
4. Business and security risk analysis.
5. Estimating the required rates of return for a business.
6. Computation of the firm?fs cost of capital.
7. Apply various valuation models to assess and value a business.
8. Assess a company's future prospects.
9. Relative valuation using market comparables.
10. Strategic options: evaluating strategic opportunities.

FINC 7007 Financial Planning Research Project

Credit Points 10

Legacy Code 200959

Coordinator Peter Humphreys (https://directory.westernsydney.edu.au/search/name/Peter Humphreys/)

Description Financial Planning Research Project encompasses a major research project and presentation. This equips students with skills to address challenges through research and the ability to apply knowledge developed in earlier subjects of study. This student-centered subject provides supervision of research and analytical practices to enhance skill development and capacity to engage with the problems confronting the financial planning industry. Students will have scope to focus on issues that are of particular concern to the financial planning industry. As an integrating subject, it demands participants bringing their knowledge together and with curiosity to develop recommendations in a format that can showcase their achievements.

FINC 7010 Insurance and Risk Management

Credit Points 10

Legacy Code 200870

Coordinator Amanda Craft (https://directory.westernsydney.edu.au/search/name/Amanda Craft/)

Description This subject introduces students to the use of a range of insurance types and products to manage risk for individuals and small business. It aims to identify, evaluate and manage risk as part of the financial planning process to produce a compliant statement of advice. A number of risk management strategies are identified and the importance of life insurance, total and permanent disablement, trauma policies, property insurance, health cover, income protection and business insurance in managing risk is addressed. The subject provides an understanding of the various issues that can arise with respect to insurance policies and premiums and uses both the multiple and needs analysis approaches to calculate the level of cover required. A holistic approach to the risk management process is provided where a variety of insurance covers are considered in the context of a full financial plan that is adequate and affordable to the client and their specific needs as identified in the data collection process.

FINC 7019 Statement of Advice Research Project

Credit Points 10

Legacy Code 200960

Coordinator Amanda Craft (https://directory.westernsydney.edu.au/search/name/Amanda Craft/)

Description Statement of Advice Research Project encompasses a major research project, a Statement of Advice (SOA). This SOA equips students with knowledge and skills to address challenges through research and the ability to apply knowledge developed in earlier subjects of study. This student-centered subject provides skill development and capacity to engage with the requirements of the profession. Students will have scope to focus on issues relevant to a case study as a means of developing a comprehensive SOA for a client (in the case study). As an integrating subject, it demands participants bringing together their knowledge to develop recommendations based on learning from earlier subjects. This subject also ensures students meet the regulatory and accreditation education requirements to be a registered financial adviser.

School Business

Discipline Banking, Finance and Related Fields, Not Elsewhere Classified.

FINC 7022 Applied Project (Finance and Property)

Credit Points 10

Legacy Code 201100

Coordinator Hassan Gholipour Fereidouni (https://directory.westernsydney.edu.au/search/name/Hassan Gholipour Fereidouni/)

Description Applied Project (Finance and Property) is the integrating capstone subject, which brings together the skills that property students have developed during the course in preparing a high quality professional report in the finance or property industry. The subject encourages property students to demonstrate their ability to solve multi-disciplinary problems in relation to current and future issues that affect the finance or property sectors. The subject will also allow students to critically evaluate issues in their industry to determine and assess potential industry implications. The topics are determined from year to year by discussions between the individual student, the subject coordinator and the student's chosen supervisor.

FINC 7023 Introduction to Finance

Credit Points 10

Description This subject provides business leaders and managers with a contextualised and non-technical introduction and overview of key financial concepts. The subject covers the fundamental principles underlying finance and financial decision-making by individuals and organisations. Upon completion of this subject, learners will possess the analytical skills necessary to understand and assess basic financial data using a range of metrics relevant in a range of contexts including green and sustainable finance.

GEDU 0016 Employability and Graduate Success (WSTC Prep)

Coordinator Kylie Tyler (https://directory.westernsydney.edu.au/search/name/Kylie Tyler/)

Description This subject is designed to complement the first six months of study in a College Diploma program by developing the skills required to be successful at University and beyond. The subject is delivered online with students accessing learning modules and connecting with their learner community in their own time and at their own pace to allow maximum flexibility. At the beginning of the subject students use diagnostic tools to identify their specific strengths and areas for improvement, and develop an individualised learning journey through the content. This learning journey will help to address individual study skill needs, while also developing employability skills, facilitating connection with peers and with the University community, as well as the student's future career.

GEDU 0017 Transition Success (WSTC Prep)

Coordinator Kylie Tyler (https://directory.westernsydney.edu.au/search/name/Kylie Tyler/)

Description This subject is designed to assist students to take the next step in their academic development by helping them build higher level reflective skills that will allow them to critically consider their own learning and professional journey and make the adjustments required to achieve their goals. Students will begin to take ownership of their learning by developing proactive strategies that will allow them to study on their own terms. Students will begin engaging with their intended profession and reflect on the skills, attributes and qualifications that will be required to reach their goals. Students will also develop a transition plan to help them navigate the next steps in their academic journey so that they can identify the challenges they might encounter as they move forward, and develop the skills to overcome them.

GEDU 1001 Introduction to University Life (WSTC)

Credit Points 10

Coordinator Paul Rouillon (https://directory.westernsydney.edu.au/search/name/Paul Rouillon/)

Description This subject introduces students to university culture and life, and explores a range of skills, attributes and behaviours that will gear students for success in their first year of tertiary study. A range of topics will be covered to facilitate increased confidence in students as they embark upon their university journey, as well as enhance students' capacities to engaging critically and actively in their chosen field of study. This subject will equip students with a range of academic study skills, research techniques and multi-literacies, and support students

to develop their own individualised learning model, personal learning objectives and academic capacities. Academic integrity is further positioned as a critical component of university life and this subject will prepare students to engage effectively in their future professional fields and as active citizens.

School Western Sydney The College

Discipline Learning Skills Programs

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Diploma program at WSTC

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Reflect on your capabilities and personal learning objectives in relation to your field of interest.
2. Explain what it means to think critically and act with integrity at university & professional/ broader world view context.
3. Apply appropriate multiple literacies, to understand academic and professional communication common in your chosen field.
4. Demonstrate competency in a form of communication in your chosen field.
5. Work effectively in a small group learning environment.

Subject Content

- An overview of university life
- Understanding your strengths and identifying development areas to succeed at university
- What are the skills and behaviours that enhance success at university and in professional settings?
- Developing your individual learning model and objectives
- Critical thinking, reflection and analysis in today's world
- Being an effective researcher: locating, interpreting, referencing and synthesising information
- Effective communication across a range of literacies in your field of interest
- Efficient and effective teamwork
- Digital reputation, communication skills and competencies
- Integrity, ethics and citizenship for professional and academic life

GEDU 1002 Core Foundations and Key Ideas (WSTC)

Credit Points 10

Coordinator Mona Shrestha (https://directory.westernsydney.edu.au/search/name/Mona Shrestha/)

Description This subject will support students across a range of Diplomas in Humanities, Arts and Social Sciences to gain foundational knowledge and capacities relevant to their future studies. The subject will enable students to begin actively engaging with the foundation theories and contemporary issues and controversies from a selected discipline area for future professional application. Students will learn about the discipline and professional pathways that are specific to their diploma area, and be introduced to how these might intersect with other disciplines in a changing tertiary education and societal context. Students will also enhance and further demonstrate foundational university research and communication skills.

School Western Sydney The College

Discipline Learning Skills Programs

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Diploma program at WSTC.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Demonstrate understanding of the context of the field you are entering and its professional application.
2. Demonstrate understanding of the underpinning concepts and some relevant inter-disciplinary perspectives in your chosen field.
3. Identify contemporary issues or controversies relevant to your chosen field and justify a position.
4. Demonstrate proficiency in basic university research and communication skills.

Subject Content

1. Exploring the field of study and professional contexts;
2. Disciplinary backgrounds, lenses and contexts;
3. Introducing key concepts, processes, and theories relevant to the field of study;
4. Contemporary issues, controversies, ethics relevant to the field of study and profession;
5. Advanced study skills: Introducing critical analytical thinking, emotional intelligence, collaborative learning, and creativity
6. The importance of personal integrity within university and professional fields;
7. Critical application of digital technology and multimedia;
8. Researching and communicating effectively from perspective of the chosen discipline.

Assessment

HLTH 0001 Health Care Environments (WSTC Prep)

Credit Points 10

Legacy Code 700226

Coordinator Charlise Bennett (https://directory.westernsydney.edu.au/search/name/Charlise Bennett/)

Description Health care environments introduces students to foundation knowledge for health science level subjects in their degree. This includes supporting the independence and well being of clients, regardless of age or disability. Focus in this subject includes working legally and ethically, working with diverse people and following safe work practices. Effective communication is imperative, through written care plans, identifying what has been provided using client centred practice. This subject incorporates most core and elective subjects in the Certificate III in Individual Support. Students can pursue a qualification through the College RTO in one of three specialisations- Disabilities, Ageing, and Home & Community.

School Western Sydney The College

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects HLTH 0002 - Health Care Environments (WSTC)

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of providing individualised support in ageing, disability and home and community care (HACC) service provision
2. Propose methods to support the independence and wellbeing of individuals
3. Develop appropriate communication strategies to effectively work in health care settings
4. Strategise different methods to be inclusive of diversity
5. Evaluate legal and ethical dilemmas in health care settings
6. Recognise safe work practices for direct client care

Subject Content

1. Rationale and processes underpinning individual support, planning and delivery
2. Roles and responsibilities of different people providing individual support
3. Communicating for best client outcomes between professionals, carers, family members, other support workers and managers in health care
4. Legal and ethical considerations in the workplace
5. Safe work practices for client care
6. Supporting individuals and their wellbeing
7. Service delivery models, community practices and inclusion
8. Facilitating skills and practices to empower people with disabilities, in home care and ageing

HLTH 0003 Literacy in Health Science (WSTC Prep)

Credit Points 10

Legacy Code 700227

Coordinator Ryan Sidoti (https://directory.westernsydney.edu.au/search/name/Ryan Sidoti/)

Description This subject provides an introduction to the provision of health, services and fields associated with the provision of health in Australia. The subject covers a range of health science concepts, including what health literacy is and why it is important and other concepts such as acute care, chronic care, National Health Priority Areas (NHPAs) in Australia, and health education, The subject also introduces examples of terminology used for measuring the distribution and determinants of disease and illness in varied population groups (epidemiology). This includes terms such as health data, morbidity, co-morbidities, mortality, quality of life and disability adjusted life years. This subject aims to give students an understanding of health science practice in Australia both in city and rural settings and identifies minority group issues and challenges in accessing healthcare and services.

School Western Sydney The College

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define health literacy and understand its importance in making appropriate health decisions
2. Use common medical terminology as it relates to health Demonstrate a foundational understanding of the impact that health education can have on health behaviour
3. Examine and evaluate minority group issues and challenges, regarding National Health Priority Areas, in Australia
4. Describe the role and impact of health professionals in primary and secondary schools regarding health literacy

Subject Content

1.Health Literacy- developing the capacity to obtain, process and understand basic health information and services needed to make appropriate health decisions.
2.Healthcare settings- an introduction to what healthcare encompasses and where it can be practised
3.National Health Priority Areas in Australia (including mental health)
4.Acute and chronic care defining the differences and how it impacts on individual health
5.Minority group issues and challenges in Australia in accessing health services and maintaining health
6.Health in schools- health professionals in schools both primary and secondary education
7.Health education purpose and dimensions to enhance individuals, families, community and society
8.Medical terminology- an introduction to and application of common word roots, prefixes and suffixes used in health science.

HLTH 0004 Organisation for Tertiary Study (WSTC)

Credit Points 5

Legacy Code 900089

Coordinator Charlise Bennett (https://directory.westernsydney.edu.au/search/name/Charlise Bennett/)

Description This subject aims to familiarise students with some of the concepts and issues surrounding healthy living, particularly for young people in an environment far from parental support. It introduces students to academic skills and the expectations of learners in a tertiary environment while further developing their language skills. By the end of this subject, the goal is for students to have a better knowledge and understanding of how to improve their health, develop organisational skills and learn to manage their time. The subject also aims to develop their understanding of the effect of drug use on health and lifestyle. There will be a range of teaching and learning strategies used in this subject including working in groups. The aims of this subject are to develop an understanding of the concept of health and wellbeing; develop and maintain organisational skills for various areas of life; create a mindset and learn skills to manage time well.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects LGYB 1377 - Living Skills (UWSC)

Restrictions

Only students enrolled at The College in Foundation Studies programs can enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify key health issues which confront young people in particular.
2. Define and explain some key concepts related to good health.
3. Identify healthy and unhealthy choices.
4. Demonstrate an ability to organise their study, eating, exercise and leisure schedules.
5. Collect information from AV sources.
6. Undertake research using the skills of collecting, analysing and organising information from a variety of sources.
7. Read at a pre tertiary level.
8. Interpret data in the form of text, graphs, statistics and illustrations.
9. Write notes, summaries and extended responses.
10. Use technology in their studies

Subject Content

1. Introduction
Introduction to the Academic program.
2. Goals and Time Management.
Personal goals, weekly planner, monthly assessment planner.
Choices that we have to make with our time and how these affect our lives and, in particular, tertiary study.
3. Food Matters
Nutritional information about foods and the impact of food on physical and mental health and well being.
4. Drug use and its impact.
Legal and illegal drugs. Personal and societal effects of drug usage in Australia.
5. Customs/Protective Behaviours
Understanding some Australian customs and identifying risky behaviour.
Some basic survival techniques.

Assessment

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Initiate the compliance needs for appropriate key programs.
2. Identify the direct pathway through to the completion of studies with key programs in health science and consider ways to enhance opportunities for employability at graduation.
3. Identify and summarise the main points of arguments.
4. Demonstrate an ability to research, critically read, analyse and make meaning from academic texts.
5. Produce a well-structured, logical, coherent and cohesive response to writing tasks using appropriate academic language structures.
6. Understand the importance of Interprofessional Education (IPE) in the Health Sciences and develop reflective professional practices.
7. Demonstrate an understanding of the key policies and procedures relevant to students at The College and Western Sydney University, such as those around Academic Integrity, extensions and special consideration.

Subject Content

1.Unit and course introduction
2.Critical reading and conventions of academic writing
3.Inter-professional learning
4.The structure of academic argument
5.Health, growth and development
6.Working with children and families
7.Compliance for student placements
8.Becoming a reflective practitioner
9.Health science professions
10.Employability, soft skills and volunteering
11.Communication STEPPS & ISBAR
12.Making the most of fieldwork learning opportunities
13.Working in diverse settings
14.Compliance meeting and reflection

HLTH 1001 Foundations of Research and Evidence-Based Practice

Credit Points 10

Legacy Code 400863

Coordinator Nerida Klupp (https://directory.westernsydney.edu.au/search/name/Nerida Klupp/)

Description This subject considers the reasons and roles for evidence-based practice and research in healthcare, introducing students to core concepts and relevant terminology. Skills are developed for asking clinical or professional healthcare questions and translating these skills into search strategies for finding evidence. To make sense of that evidence, students are introduced to quantitative and qualitative

research methods, types of data, how data are described and how biostatistics is used to provide meaning to research data.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects HLTH 1002 - Foundations of Research and Evidence-Based Practice (UWSC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the background and reasons for evidence-based practice and health research
2. Design and perform an advanced search strategy for a PICO
3. Identify types and levels of evidence within the healthcare research continuum
4. Describe the ethical responsibilities for EBP and health research
5. Explain how data may be described and summarised in health research
6. Describe the core statistical concepts used to provide meaning from health research data
7. Integrate evidence into academic writing

Subject Content

1. Introduction to evidence-based practice
- Critical thinking: Type 1 and 2 system thinking
- The role of EBP. managing human bias, information and uncertainty
- Ethical and professional considerations in EBP
- 5 Step EBP process
- Steps 1/2: Formulating questions, Sources of evidence, Search strategies
- using evidence in academic writing
2. Introduction to research methods
- The role of research: enquiry and acquisition of knowledge
- Qualitative and quantitative research designs
- levels of evidence
- Core research concepts (e.g. bias, Validity, reliability)
- Ethical considerations for research
3. Introduction to biostatistics
- types of data
- summarising and describing data
- interpreting common inferential results
- clinical and statistical significance
1. Introduction to evidence-based practice (EBP)
- Steps 1-3: Formulating questions; Sources of evidence; Search strategies

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Examination- Finding Evidence	60 mins	25	N	Individual
Report - Using Evidence Assignment	1,000 words	35	N	Individual
Final Exam - Multiple Choice Questions	90 mins	40	N	Individual

Prescribed Texts

- Hoffman, T., Bennett, S., & Del Mar, C. (2017). Evidence-based practice across the health professions (3rd ed.). Chatswood, New South Wales, Australia: Churchill Livingstone.

HLTH 1002 Foundations of Research and Evidence-Based Practice (WSTC)

Credit Points 10

Legacy Code 700064

Coordinator Charlise Bennett (https://directory.westernsydney.edu.au/search/name/Charlise Bennett/)

Description This subject will consider the reasons and roles of evidence-based practice and research, and introduce students to their language and core concepts. Skills will be developed for asking clinical or professional healthcare questions and to translate these into search strategies for finding evidence. To make sense of that evidence, students will be introduced to quantitative and qualitative research methods, types of data, how data is described and how biostatistics is used to provide meaning to research data.

HLTH 1003 Introduction to Paramedicine

Credit Points 10

Legacy Code 401066

Coordinator Rachael Vella (https://directory.westernsydney.edu.au/search/name/Rachael Vella/)

Description This subject introduces students to the paramedic profession and its scope of practice in Australia. It includes exploration of the roles and responsibilities of paramedics in the context of the changing health environment. Ethical issues and relevant legal and regulatory requirements will also be discussed. Students will be introduced to the key concepts of paramedicine and to the complexity of normal development and its relationship to the processes of health science.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe paramedicine with respect to its purpose, role and contribution to health care
2. Apply basic communication skills to communicate effectively with the client, peers and academic staff and prepare reports
3. Employ critical reflection skills in paramedic contexts
4. Practice paramedicine in a safe and ethical manner
5. Describe the regulatory requirements for paramedicine in Australia and apply them to case scenarios
6. Analyse case scenarios for typical paramedic interventions

Subject Content

1. The scope and practice of pre-hospital care and paramedicine
2. The roles and responsibilities of paramedics
3. The history, culture, organisational structure, policies and procedures of Ambulance Services
4. Communication and reporting in paramedicine and related competencies
5. Critical reflection in paramedicine
6. Groups served by paramedics and their special needs
7. Ethics and regulatory requirements in paramedicine
8. Future directions for paramedicine

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Reflection	1 x 400 words (10%) 1 x 600 words (20%)	30	N	Individual
Presentation	10 mins	30	N	Individual
Final Exam	1 hour	40	N	Individual

HLTH 1006 Movement and Skill Development

Credit Points 10

Legacy Code 400891

Coordinator Kylie Steel (https://directory.westernsydney.edu.au/search/name/Kylie Steel/)

Description This subject examines the scientific basis for movement and sports skill development. An understanding of the principles of movement and motor skill and how they apply to performance is examined through a range of movement tasks required for track and field athletics and some team sports. Laboratory activities will focus upon the basic movement tasks of throwing, jumping, balancing, striking, running and rotary activities. An examination of the instruments used in efficient movement analysis is undertaken.

School Health Sciences

Discipline Physiotherapy

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Incompatible Subjects HLTH 1008 - PDHPE Exploring Movement Skills HLTH 3013 - PDHPE Efficient Movement Principles

Restrictions

Students must be enrolled in program 4659 Bachelor of Health Science (PDHPE), 4549 - Bachelor of Health Science (PDHPE), 4742 Bachelor of Health Science (Health and Physical Education)-Pathway to Teaching (Secondary), 4747 Bachelor of Health Science (Health and Physical Education) or 6001 Diploma in Health Science/Bachelor of Health Science (Health and Physical Education)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the basic anatomy and physiology of the body necessary as a base for efficient movement.
2. Explain basic movement and skill acquisition principles as applied to human movement, with reference to all sports.
3. Demonstrate video analysis skills in relation to sport skill and game analysis.
4. Apply scientific principles in the improvement of motor skill performance.
5. Evaluate the motor skill performance of athletes of varying levels.
6. Identify the basic physical and mechanical principles which underlie movement.

Subject Content

1. Revision of skeletal and muscular systems.
2. Movement principles: balance, force, levers, motion, momentum; associated with track and field athletics and some team sports.
3. Mechanical factors affecting motion in sport: friction, air, water resistance, gravity, impact, spin, elasticity.
4. Application of movement principles through practical sessions in a range of sports.
5. Evaluation of skill performance ? isolating specific motor patterns, determining and applying movement principles (coaching points), classifying skill to enhance performance, learning movement skills.
6. Cinematography ? use of videos for efficient movement analysis of sporting skills.
7. Practice and coaching considerations to enhance the acquisition and development of skills.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	2 hours	30	N	Individual
End-of-session Exam	2 hours	30	N	Individual
Log/ Workbook	1,500 words	40	N	Individual

HLTH 1009 Paramedic Practice 1

Credit Points 10

Legacy Code 401067

Coordinator Buck Reed (https://directory.westernsydney.edu.au/search/name/Buck Reed/)

Description This subject allows the student to develop professional and clinical skills and techniques in preparation for paramedic practice. Students will be exposed to manual handling techniques to enable safe lifting and movement of patients and equipment, and discuss principles of infection control and scene safety. Students will learn how to undertake a holistic patient assessment and perform basic diagnostic tests. Students will have the opportunity to practice new skills and become oriented to the prehospital setting during clinical placements on non-emergency transport ambulances, preparing them for an extended emergency ambulance clinical placement in the following semester.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) HLTH 1003

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply principles of safe practice including manual tasks, infection control, scene safety and scene management.
2. Demonstrate techniques for basic patient assessment and history taking.
3. Interpret basic findings arising from patient assessment, physical examination and history taking
4. Interpret basic and intermediate ECG data
5. Demonstrate clinical reasoning relating to ECG interpretation, dysrhythmia management, and pain assessment and management.
6. Demonstrate an effective patient handover.
7. Demonstrate communication, manual handing and patient interaction skills in a non-emergency transport setting.

Subject Content

1. Infection control & hand hygiene practices
2. Manual handling of equipment and patients
3. Principles of basic scene assessment and safety
4. Patient assessment and history taking
5. Assessment and Management of Pain
6. Interpretation and management of basic ECG dysrhythmias
7. Patient Handover
8. Applied mathematics and medical terminology for paramedicine
9. Placements (spread across the semester).Supervised, 3 days of placement with non-emergency patient transport ambulance crew

Special Requirements

Legislative pre-requisites

NOTE: Due to Covid Restrictions, the First Aid Requirement is currently not needed.

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://

www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

HLTH 1012 Evidence in Health

Credit Points 10

Legacy Code 401383

Coordinator Anna Spencer (https://directory.westernsydney.edu.au/search/name/Anna Spencer/)

Description This subject will introduce skills for finding and using the best available evidence in health. This begins with understanding thinking systems, biases and why we often don't accept, or respond, to facts, science and evidence. Students will learn the evidence-based practice process to formulate questions and find appropriate and relevant evidence from the unending amount of information available. The subject covers key concepts in how to read and understand a research paper. Students will develop skills for communicating evidence to strengthen arguments in academic writing and professional practice.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects HLTH 1001 - Foundations of Research and Evidence-Based Practice HLTH 1002 - Foundations of Research and Evidence-Based Practice (UWSC)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise personal thinking styles and associated biases;
2. Describe the reasons for the 5 steps of evidence-based practice;
3. Design a sensitive and specific PICO search strategy to find best available evidence;
4. Identify type, level and key research concepts in journal articles;
5. Integrate strength and relevance of evidence findings into academic writing.

Subject Content

1. Critical thinking
- introduction to epistemology
- System 1 and 2 thinking
- Heuristics, biases and certainty
- ?gWhy we don?ft believe The facts?h
- ethics and evidence
- reflective practice
2. Evidence-based Practice (EBP) Process
- 5-Step EBP process
- Step 1 Formulating questions
- Step 2 Sources of evidence
Search strategies
Information literacy
Reader bias
3. How to read a paper
- Article sections
- types of research
- levels of evidence
- key research concepts (e.g. measurement, reliability, Validity, causality, probability)
4. Communicating evidence
- Integrating evidence in writing
- evidence justification
- evidence summaries

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

HLTH 1013 Professional Competencies in Health

Credit Points 10

Legacy Code 401396

Coordinator Caterina Tannous (https://directory.westernsydney.edu.au/search/name/Caterina Tannous/)

Description This subject, taken in the first session for commencing students in health science courses, offers an introduction to foundation knowledge and skills required for future practice in the health workforce. Students will gain an understanding of their roles and will develop skills required for safe, responsible and ethical practice required as health professionals. There is a specific focus on developing students' understanding of the roles of others in the interprofessional health care team as a way of establishing - professional identity. The International Classification of Functioning provides a framework within which client centred and community focussed approaches to practice is discussed. The subject also uses a 'student capital' framework to facilitate reflection of academic capability and development of skills required for success at university.

Level Undergraduate Level 1 subject

Equivalent Subjects HLTH 1011 - Professional Health Competencies HLTH 1010 - Professional Health Competencies

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Reflect and identify academic and professional capacity needs;
2. Practice information and academic literacy skills for ensuring academic success in a health science degree;
3. Describe and apply principles to ensure ethical and responsible practice in the current academic and future health professional environment;
4. Use global models of health and well-being concepts to demonstrate a holistic understanding of health within the framework of person-centred practice;
5. Describe and apply principles of safe practice in the health sciences;
6. Describe and apply the legal responsibilities and obligations of health science professionals;
7. Explain and describe approaches used in inter-professional health science teams.

Subject Content

- 'Student Capital?f framework to promote reflection on academic and professional capacity needs
- transition support pods based on learning needs - information literacy, academic integrity, academic literacy
- Definition of profession and professionalism, special requirements of placements
- Ethical considerations and professional codes of conduct
- legal framework in The health sciences - duty of care, Negligence, Risk minimisation, informed consent and privacy. legal requirements of documentation
- mandatory responsibilities - child protection, Abuse and neglect
- professional Registration
- work health and safety - infection control/hand wash and manual handling
- international Classification of functioning (ICF) framework
- person-centred practice
- Interprofessional Roles and The health science team
- professional identity

Students must be enrolled at The College. Students in Extended programs (7142, 7143) need to have passed 40 CPs of preparatory subjects in order to enrol in this subject. Students in Integrated programs (6000, 7018, 6001, 7088) need to have passed or be enrolled in the preparatory subjects in these programs in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise personal thinking styles and associated biases
2. Describe the reasons for the 5 steps of evidence-based practice
3. Design a sensitive and specific PICO search strategy to find best available evidence
4. Identify type, level and key research concepts in journal articles
5. Integrate strength and relevance of evidence findings into academic writing

Subject Content

1.Critical thinking
a.Introduction to epistemology
b.System 1 and 2 thinking
c.Heuristics, biases and certainty
d.?gWhy we don?ft believe the facts?h
e.Ethics and evidence
f.Reflective practice
2.Evidence-based Practice (EBP) Process
a.5-step EBP process
b.Step 1 Formulating questions
c.Step 2 Sources of evidence
i.Search strategies
ii.Information literacy
iii.Reader bias
3.How to read a paper
a.Article sections
b.Types of research
c.Levels of evidence
d.Key research concepts (e.g. measurement, reliability, valid

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	20 questions/30 minutes each	10	N	Individual
Report	500 words plus search	20	N	Individual
Report	750 words	25	N	Individual
Final Exam	2 hours	35	N	Individual
Participation	10 weeks	10	N	Individual

Prescribed Texts

- Hoffman, T., Bennett, S., & Del Mar, C. (2017). Evidence-based practice across the health professions (3rd ed.). Sydney, New South Wales: Churchill Livingstone.

HLTH 1015 Professional Competencies in Health (WSTC)

Credit Points 10

Legacy Code 700313

Coordinator Charlise Bennett (https://directory.westernsydney.edu.au/search/name/Charlise Bennett/)

Description This subject, taken in the first session for commencing students in health science courses, offers an introduction to foundation knowledge and skills required for future practice in the health workforce. Students will gain an understanding of their roles and will develop skills required for safe, responsible and ethical practice required as health professionals. There is a specific focus on developing students' understanding of the roles of others in the inter-professional health care team as a way of establishing professional identity. The International Classification of Functioning provides a framework within which client centred and community focussed approaches to practice is discussed. The subject also uses a 'student capital' framework to facilitate reflection of academic capability and development of skills required for success at university.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Level Undergraduate Level 1 subject

Co-requisite(s) Students in programs 6000 or 6001 must
- have passed or be registered in 1 subject from HLTH 0005 or LANG 0003
- have passed or be registered in NATS 0006

Equivalent Subjects HLTH 1011 Professional Health Competencies (WSTC)
HLTH 1010 Professional Health Competencies
HLTH 1013 Professional Health Competencies in Health

Restrictions

Students must be enrolled at The College in one of the following programs: 7068, 7018, 7090, 6000, 6001, 7088 Students enrolled in Extended Diploma programs (7068, 7069, 7078, 7079, 7090, 7091) must have passed 40 credit points of the preparatory subjects in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Reflect and identify academic and professional capacity needs
2. Practice information and academic literacy skills for ensuring academic success in a health science degree
3. Describe and apply principles to ensure ethical and responsible practice in the current academic and future health professional environment
4. Use global models of health and well-being concepts to demonstrate a holistic understanding of health within the framework of person-centred practice
5. Describe and apply principles of safe practice in the health sciences
6. Describe and apply the legal responsibilities and obligations of health science professionals
7. Explain and describe approaches used in inter-professional health science teams

Subject Content

1.?eStudent Capital?f framework to promote reflection on academic and professional capacity needs
2.Transition support pods based on learning needs - Information Literacy, Academic Integrity, Academic Literacy
3.Definition of profession and professionalism, special requirements of placements
4.Ethical Considerations and professional codes of conduct
5.Legal Framework in the Health Sciences - Duty of care, negligence, risk minimisation, informed consent and privacy. Legal requirements of documentation
6.Mandatory responsibilities - Child protection, Abuse and neglect
7.Professional registration
8.Work Health and Safety - Infection control/hand wash and Manual handling
9.International Classification of Functioning (ICF) Fra

HLTH 1018 Paramedicine Foundations 1

Credit Points 10

Coordinator Rachael Vella (https://directory.westernsydney.edu.au/search/name/Rachael Vella/)

Description This subject introduces students to the theoretical and practical aspects of modern paramedicine throughout Australia and internationally. It includes exploration of the roles and responsibilities of paramedics within healthcare systems considering relevant regulatory, ethical, and legal issues. Students will gain foundational practical knowledge in key concepts of paramedicine, in line with standards such as the National Safety and Quality Health Services Standards (NSQHS). Students will also begin to analyse typical out of hospital case scenarios to introduce the application of theory to practical contexts.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine.

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Describe the evolving roles and responsibilities of paramedics within healthcare
2. Apply correct principles of safe practice consistent with the National Safety and Quality Health Services Standards (NSQHS)
3. Employ reflective practice in paramedic contexts
4. Consider and apply the ethical, legal, and regulatory requirements for Australian paramedicine
5. Demonstrate appropriate communication and cultural awareness
6. Describe and apply the components of patient assessment
7. Explain clinical decision making in paramedicine

Subject Content

1. The evolving roles and responsibilities of paramedics
2. Communication in paramedicine and the health system
3. Wellness strategies and reflection in paramedicine
4. Ethics, legal and regulatory requirements in paramedicine
5. Clinical decision making and shared decision making
6. Patient assessment
7. Work health and safety in paramedicine

Special Requirements

Essential equipment

Students must have the Western Sydney University student paramedic uniform (pants, long sleeve shirt, polo, safety glasses, safety helmet, non-steel cap black boots, stethoscope, reflective vest and rain jacket).

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 1019 Paramedicine Foundations 2

Credit Points 10

Coordinator Louis Shabella (https://directory.westernsydney.edu.au/search/name/Louis Shabella/)

Description In this Subject, students develop additional skills around patient assessment and the management of basic medical and trauma conditions. Students also learn to work in clinical teams in a range of environments and focus on the provision of person-centred care. Students continue to explore the role and context of paramedicine within the health system including existing and emerging paramedic practice environments. Students will have the opportunity to practice new and existing skills. Students become oriented to the out of hospital setting during clinical placements in the community preparing them for an emergency ambulance clinical placement in the following semester

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) 401481 Paramedicine Foundations 1

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine

Learning Outcomes

1.Apply basic clinical decision making to introductory paramedic scenarios.
2.Utilise effective communication skills with the client, peers, health and academic staff and demonstrate person-centred practice
3.Explain and apply basic principles of assessment and management of medical and trauma conditions.
4.Interpret basic findings arising from patient assessment, physical examination and history taking.
5.Describe the process of recognising, preparing and checking common paramedic medications.
6.Engage in a range of practice environments safely as part of a paramedic team
7.Employ appropriate communication, person-centred care and professional practice in a community healthcare setting.

Subject Content

1. Clinical assessment of the patient in an out of hospital environment
2. Basic management of medical and trauma conditions
3. Medication safety
4. Patient epidemiology
5. Introduction to paramedicine research
6. Basic applied decision making
7. Safe participation in a paramedic team in time-critical environments

Placements (spread across the semester) - Supervised, 3 days of placement with non-emergency patient transport ambulance crew

Work integrated learning

The Paramedicine Program is working with placement partners to implement a range of resources to assist preceptors in WIL supervision. A structured framework of activities is available to preceptors to assist them in achieving learning outcomes.

Special Requirements

Legislative pre-requisites

Prior to enrolling in this unit, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Students must hold a valid and current First Aid Certificate from a Registered Training Organisation. Use the link to the Special Requirements webpage below for more information.

Student Compliance Information for all Health-Related Placements
Students must meet Western Sydney University course requirements as well as any special, legislated, or policy-mandated requirements.

Western Course Requirements
Visit the Special Requirements webpage for details about your course.
Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements
To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your course, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.
NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you:
1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.
International students have additional requirements: the link to the booklet will inform you of these requirements.

School Requirements
Contact your School for further details regarding your School's requirements, if any, such as
- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire course.
- Current approved first aid certificate valid for your entire course - approved course providers can be found at the Government Training website
- http://training.gov.au
- Other non-health related requirements.
Student Compliance Resources are also available on the Placements Hub web page.

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Essential equipment

Students are expected to have uniform and equipment as per Paramedicine Program Uniform Guidelines. Uniform must be worn as directed by program and worn on placement.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 1020 Foundations of HPE

Credit Points 10

Coordinator Sarah Kennedy (https://directory.westernsydney.edu.au/search/name/Sarah Kennedy/)

Description This subject introduces foundational disciplinary knowledge and elementary principles of practice within sport, health, and physical education across a variety of contexts. It aims to commence the development of the key professional practices of the field, where students will learn the basic processes of design, implementation, and evaluation inherent in the teaching and learning cycle. This will require students to engage in a variety of practical activities such that they begin to understand the essential requirements for creating learning experiences in HPE and sport settings.

School Health Sciences

Discipline Human Movement

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in 4791 Bachelor of Health and Physical Education (Pathway to Teaching), 4792 Bachelor of Health and Physical Education, 6001 Diploma in Health Science/Bachelor of Health Science (Health and Physical Education), 4741 Bachelor of Sport Development, 4656 Bachelor of Health Science, 4742 Bachelor of Health Science (Health and Physical Education)-Pathway to Teaching (Secondary) or 4747 Bachelor of Health Science (Health and Physical Education)

Learning Outcomes

1. Identify how social justice principles can inform learning in, through and about health, physical education, and sport
2. Create positive, safe, and enjoyable learning climates for young people in health, physical education, and sport contexts
3. Demonstrate an understanding of the essential features of designing, implementing and evaluating learning in health, physical education, and sporting contexts

Subject Content

1. Health and physical education: Where has it come from and where is it going?
2. Models, styles, and principles of teaching and learning
3. Justice, fairness, and equity as a framework for teaching and learning
4. Creating positive and safe learning climates
5. Planning for, leading, and assessing learning in movement activities
6. Learning to be a scholar in the field
7. - Child Protection training and Working with Children Check completion

Special Requirements

Essential equipment

Attend practical sessions with appropriate clothing, footwear and sun protection.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 1021 Effective Communication in Health (WSTC)

Credit Points 10

Description Effective communication in health is fundamental to establishing professional connections, whether it involves one-on-one interactions with clients, educating the community about health-related topics, or collaborating with fellow health professionals within a multidisciplinary framework. This subject is designed to enhance communication competencies essential for future roles in the healthcare sector, spanning various contexts. These communication abilities encompass establishing therapeutic rapport with both individual clients and groups, as well as conveying health-related information to clients, groups, and the broader community. Moreover, students will cultivate the proficiency needed to establish suitable collaborative relationships with their professional peers.

School Health Sciences

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Destination College Diploma program listed below:

- 7188 Diploma in Culture, Society and Justice
- 7189 Diploma in Health Science
- 7190 Diploma in Business
- 7191 Diploma in Information and Communication Technologies
- 7192 Diploma in Building Design and Construction
- 7193 Diploma in Engineering Studies
- 7194 Diploma in Creative Industries and Communications
- 7195 Diploma in Arts
- 7196 Diploma in Science
- 7197 Diploma in Education Studies

Learning Outcomes

1. Reflect on the impact of personal attitudes, beliefs and values on communication.

2. Apply essential verbal and written communication skills in the interaction with individual clients, patients, significant others, colleagues and other health stakeholders.

3. Employ teamwork skills relevant to working in health care settings.

4. Analyse the characteristics of health professional relationships with clients, colleagues, and the wider community.

5. Evaluate and adapt communication processes to meet the varying health literacy or special needs of clients, family and significant others.

Subject Content

- What is communication and its role in healthcare
- Communication styles, Active listening, interpersonal dynamics and empathy
- Visual and written communication in health and education
- Interviewing skills
- Barriers and enablers
- Therapeutic relationships and teamwork
- Conflict and consequences of misunderstandings
- Challenging health communication context
- Communication with children and people with disabilities
- Tele-practice and social media

HLTH 1022 Evidence in Health Practice (WSTC)

Credit Points 10

Description This subject will introduce skills for finding and using the best available evidence in health. This begins with understanding thinking systems, biases and why we often don't accept, or respond to facts, science and evidence. Students will learn the evidence-based practice process to formulate questions and find appropriate and relevant evidence from the unending amount of information available. The subject covers key concepts in how to read and understand a research paper. Students will develop skills for communicating evidence to strengthen arguments in academic writing and professional practice.

School Health Sciences

Student Contribution Band

- 7192 Diploma in Building Design and Construction
- 7193 Diploma in Engineering Studies
- 7194 Diploma in Creative Industries and Communications
- 7195 Diploma in Arts
- 7196 Diploma in Science
- 7197 Diploma in Education Studies

Learning Outcomes

1. Recognise personal thinking styles and associated biases
2. Describe the reasons for the five steps of evidence-based practice!
3. Design a sensitive and specific PICO search strategy to find best available evidence
4. Identify type, level and key research concepts in journal articles, and
5. Integrate strength and relevance of evidence findings

Subject Content

Evidence-based Practice (EBP) Process

- Introduction to epistemology
- System 1 and 2 thinking
- Heuristics, biases and certainty
- "Why we don't believe the facts"
- Ethics and evidence
- Reflective practice

Evidence-based Practice (EBP) Process

- 5-step EBP process
- Step 1 Formulating questions
- Step 2 Sources of evidence –
  - Search strategies –
  - Information literacy
  - Reader bias

How to read a paper

- Article sections
- Types of research
- Levels of evidence
- Key research concepts (e.g. measurement, reliability, validity, causality, probability

Communicating evidence

- Integrating evidence in writing
- Evidence justification
- Evidence summaries

HLTH 1023 Diversity in Health (WSTC)

Credit Points 10

Description This subject prepares health science students with the foundational abilities to comprehend and interact proficiently within our culturally and socially varied society, both in our daily lives and professional endeavours. A significant emphasis will be placed on exploring Indigenous Australia, allowing students to develop a deep understanding of the accomplishments and requirements of Indigenous Australians. The subject will also delve into the concept of cultural safety on a broader scale, placing these topics within the framework of healthcare professionals operating in diverse cultural environments and managing distinct health beliefs and practices. An understanding of cultural diversity plays a crucial role in healthcare delivery and cultural competence significantly influences the health of Indigenous and other minority populations.

School Health Sciences

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Destination College Diploma program listed below:

- 7188 Diploma in Culture, Society and Justice
- 7189 Diploma in Health Science
- 7190 Diploma in Business
- 7191 Diploma in Information and Communication Technologies
- 7192 Diploma in Building Design and Construction
- 7193 Diploma in Engineering Studies
- 7194 Diploma in Creative Industries and Communications
- 7195 Diploma in Arts
- 7196 Diploma in Science
- 7197 Diploma in Education Studies

Learning Outcomes

1. Identify the role of social determinants of health across diverse populations
2. Describe the health needs of a range of marginalised Australians including; Indigenous Australians, Australians of a culturally or linguistically diverse backgrounds, sexually diverse Australians, ageing Australians and Australians living with disability
3. Examine the first nation peoples experience of health, wellness, health services and health outcomes from an indigenous perspective
4. Apply knowledge regarding equity, culture and diversity to their studies and professional behaviour as future health science practitioners
5. Examine approaches to cultural safety in health science practice

Subject Content

Introduction to the unit:

- What are culture, diversity and identity?
- Explore the cultural/social/ethnic diversity of the class
- How do health care professionals approach diversity?
- Introduce cultures of health and health care

The Australian context – Indigenous Australia:

- Overview of the history of Aboriginal and Torres Strait Islander Australia and the concept of Indigenous identities

The cultures of health and health care:

- Review of dominant health culture in Australia
- Understanding Western and Eastern health models

Australians of Culturally and Linguistically Diverse Backgrounds (CALD):

- Overview of the history of migration to Australia and the contemporary context of Australian 'multiculturalism'
- Health needs of CALD Australians
- Segregation as a fundamental cause of ethnic disparities in health:
- Discrimination and health: causes, consequences and potential solutions
- Religious difference in Australia

Human rights and health literacy:

- What are human rights?
- Human Rights in Australia
- What rights are covered to promote equity?
- How can human rights improve health literacy?

Cultural Competency:

- Introduction to cultural competence
- Cultural competency as a toolkit for cultural safety
- Guidelines and policies to improve cultural safety through cultural competency in health
- How to promote cultural safety in professional practice

Cultural Safety:

- What is cultural safety
- Why is it important?

Gender, Health and LGBTIQ populations:

- Intersecting identities
- Intersecting inequities
- What does LGBTIQ stand for?
- The experiences of LGBTIQ populations
- The role of health care professionals in the context of gender and sexual diversity

Disability & Ageing:

- What is disability?
- What does it mean to be disabled?
- Working with people with disability

Religious Diversity:

- Prevalence of religiosity
- The role of religiosity in health
- The experiences of major religious groups

HLTH 2001 A Field Study: Comparative Studies of Health Care Delivery

Credit Points 10

Legacy Code 400958

Coordinator Shyama Ratnayake (https://directory.westernsydney.edu.au/search/name/Shyama Ratnayake/)

Description Australia has strict border measures in place to protect the health of the Australian community. Travel restrictions between Australian states and territories and in some remote areas of Australia are in place to help prevent the spread of COVID-19. Further to this, there is a ban on overseas travel from Australia. You can't leave Australia unless you get an exemption from the Department of Home Affairs (source - https://covid19.homeaffairs.gov.au/leaving-australia). Due to this ban on international travel, this subject will not be offered 2021 Summer A. The focus of this subject is to provide nursing students with the problem-solving skills required in assessing and caring for people who are living in poverty in remote or rural areas in Australia and/or internationally. This subject is designed to enable students to develop cultural awareness and understanding of health care delivery and contemporary issues confronting health care for people who are living in remote or rural areas in Australia and/or internationally. Students will be eligible for up to 80 hours of approved clinical hours following successful completion of the clinical assessment tool by an accredited registered nurse.

School Nursing & Midwifery

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Restrictions

Students must be enrolled in 4691 Bachelor of Nursing or 4693 Bachelor of Nursing (Advanced) or 4780 Bachelor of Nursing - WSU Online program/s, and must have passed 80 credit points of the undergraduate Nursing degree at Western Sydney University. Permission required to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Compare the health care delivery in Western Sydney of regional/remote areas of Australia or Internationally
2. Identify major influences on, and common challenges to, health care delivery
3. Describe the relationship between the specific characteristics of health care delivery and health status outcomes for populations
4. Compare and contrast the health care delivery of Western Sydney and the country of study in this elective
5. Identify ethnic and cultural issues in the provision of culturally sensitive health care
6. Observe and/or participate in clinical activities of the health care delivery in the country of study
7. Demonstrate an awareness of their own culture and the culture of others

Subject Content

1. Health care delivery components: health care providers, health care consumers, health care institutions and organisations
2. Major influences: environmental conditions, demography of the population, cultural factors, social organisation, economic factors, political system
3. Common challenges: accessibility, affordability, ageing population, changing ethnic composition of populations, chronic diseases and increasing morbidity, commercialised health care, consumer demands, cost control, ethical limits (e.g. on technological growth and innovation), health care quality, health care workforce (e.g. training, regulation, shortage), overspecialisation and focus on tertiary care (? ghospit

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	1,000 words	50	N	Individual
Field Study Report	1,000 words	50	N	Individual
Participation	6 hours and Duration of field study	S/U	Y	Both (Individual & Group)
Professional Placement Performance	Up to 80 hours	S/U	Y	Individual

Level Undergraduate Level 2 subject

Equivalent Subjects BIOS 2004 - Biomehanics and Kinesiology HLTH 2008 - Introduction to Biomechanics

Restrictions

Students must be enrolled in 4656 Bachelor of Health Science, 4658 Bachelor of Health Science (Sport and Exercise Science), 4661 Bachelor of Health Science/Master of Podiatric Medicine, 4662 Bachelor of Health Science/Master of Physiotherapy, 4706 Bachelor of Physiotherapy, 4707 Bachelor of Physiotherapy (Honours), 4708 Bachelor of Podiatric Medicine, 4709 Bachelor of Podiatric Medicine (Honours) or 6000 Diploma in Health Science/Bachelor of Health Science

Assumed Knowledge

It is assumed that students have knowledge of structural and functional anatomy of the human body. Students also need to be able to apply basic concepts in maths and physics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define and explain terms, principles and units of measurement that apply to the biomechanics of motion, sport and exercise.
2. Apply biomechanical principles as they relate to the description and analysis of motion, sport and exercise.
3. Solve quantitative problems related to kinematic and kinematic concepts.
4. Describe and illustrate examples of linear and angular analogues of Newton﷯fs Laws of motion.
5. Identify and explain fluid mechanics principles as they apply to motion.
6. Illustrate and explain the biomechanical properties of human tissues, how these tissues respond to loading and how problems to the tissue may affect tissue functioning.
7. Recall and describe concepts relating to the biomechanical analysis human gait and locomotion

Subject Content

1. Introduction to Biomechanics
- terminology & definitions
- principles of Motion
- Qualitative Vs quantitative Motion
- SI units
2. Introduction to Physics
- Mass, inertia, laws of Motion, density, Force, torque, impulse
- mechanical loading
- contact and non-contact forces
- Friction
- introduction to levers
- levers in The human body
- centre of gravity, Balance and stability
3. Biomechanics of Human Tissue
- definitions
- plasticity and Elasticity
- stress and strain
- Shear-strain diagrams
- bone
- muscle and tendon
- Articular cartilage
- synovial joints
- effects of immobilisation
- effects of disease processes
4. Mechanics in action
- Moments, Moments of inertia, momentum
- conservation of momentum
- Rotatory Equilibrium
- Collisions, impact and impulse
- Projectile Motion: biomechanics of throwing and kicking

5. Fluid Mechanics
- fluid forces
- Buoyancy, lift and drag
- Air patterns and ball spin
6. Linear and angular Kinematics
- scalar, Vectors and tensors
- Force Vectors concept
- torque and moment Vectors concept
- normal and sheer stresses
- introduction to angular and linear kinematics
- collecting kinematic data
7. Linear and angular Kinetics
- levers
- axes of rotation
- Free body diagrams
- Calculating kinetics
8. The Gait Cycle
- events in The gait cycle
- muscle activation and sequencing
- joint range of Motion
- gait cycle in running
- Gait cycle in patient populations (eg amputees; rheumatoid arthritis, older population)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Up to 30 mins	20	N	Individual
Presentation	15 mins	30	N	Group
Final Exam	1 hour 45 minutes	50	N	Individual

HLTH 2004 Exercise Bioenergetics

Credit Points 10

Legacy Code 400883

Coordinator Shona Papalia (https://directory.westernsydney.edu.au/search/name/Shona Papalia/)

Description This subject investigates exercise metabolism and related genomics and proteomics in an integrated fashion. Covering: energy pathways; metabolic control; metabolism, oxygen consumption and respiratory quotient relationships; metabolic responses to acute and chronic exercise; pathway contributions to exercise; metabolic limitations to exercise; metabolic contributions to fatigue; metabolic acidosis, cellular and systemic implications of metabolic thresholds, conditions that can alter cellular metabolism. Whilst skeletal muscle metabolism is the primary focus, liver and adipose tissue metabolism are also considered as are anabolic pathways. Students will be exposed to basic biochemical assays of interest to the exercise physiologist.

School Health Sciences

Discipline Human Movement

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1009 AND
NATS 1010 AND
SPRT 1001 AND
HLTH 1001

Equivalent Subjects BIOS 2003 - Bioenergetics of Exercise

Restrictions Students must be enrolled in 4658 Bachelor of Health Science (Sport and Exercise Science).

Assumed Knowledge

The knowledge and skills covered in the pre-requisite subjects.
In addition students are expected to have a mathematical ability equal to a passing level in the BOSTES (NSW) numeracy test. See http://www.boardofstudies.nsw.edu.au/rosa/literacy-and-numeracy-tests.html . Students whose mathematical ability is not at this level or who have not used such mathematics recently are encouraged to seek assistance early through the Mathematics Educational resource Hub (MESH). http://www.westernsydney.edu.au/mesh/mesh

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret the information in chemical equations, formulae, structures, as well as understand the general concepts involved in biological applications of thermodynamics, genomics, proteomics and metabolomics.
2. Explain the mechanism of action of enzymes and factors that affect rate of enzyme-controlled reactions.
3. Describe the structure and functions of DNA and RNA, the processes of replication, translation and transcription along with how rates of these to processes can be altered by exercise.
4. Detail the major concepts of aerobic, alactic and lactic energy production including regulation and integration of the metabolic pathways, as well as understand the different terminology for these energy systems.
5. Detail the factors that influence the contribution of carbohydrate, lipid and protein metabolism to the supply of energy for a range of exercise and conditions.
6. Explain the relationships between metabolism, oxygen consumption and respiratory quotient, metabolic rate, blood lactate, pH and metabolic thresholds.
7. Explain the biochemistry of metabolic acidosis and its implication for exercise performance.
8. Proficiently use basic biochemical testing equipment and understand the basis for protocol, objectivity, reliability and validity.
9. Explain the relevance of and interpret an array of biochemical assays used as part of integrated exercise and fitness testing and physiological research.
10. Calibrate equipment used in exercise biochemistry including gas analysers, blood lactate analysers.

Subject Content

Note: For all areas mentioned below the following will be covered: gender differences and changes over the life span.
1. Introduction to Chemistry, Biochemistry and Molecular Biology
a. Chemical symbols, formulae, structure representation, bonding, formula mass, moles, pH, ions, solubility, reaction equations, equilibrium vs steady state vs completion.
b. Terminology in context metabolism, catabolic, anabolic, genomics, proteomics, metabolomics
c. High Energy phosphate and High Energy Carriers.
d. Chemical thermodynamics
- Free energy
- Enthalpy
- Entropy
- spontaneous reactions
- Catalysts effect on
- energy and bonds
e. Oxidation reduction reactions
f. Energy substrates, their structures and storage in humans: CHO, Fat, protein.
g. Enzyme structure function and factors influencing rate of enzyme controlled reactions.
h. Nucleic acids and gene expression
- structure and function
- replication, translation and transcription
- The basics of The processes
- Altering rates of
- Importance in energy metabolism
- impact of Exercise on current status of research
i. The work energy relationship at a cellular level
- mechanical work
- muscle contraction energy metabolism link
- Electrical work.
2. Skeletal Muscle Energy Production Pathways and exercise
a. ATP/PC (Alactic) system
b. Anaerobic Glycolysis
c. Aerobic pathways
- Aerobic glycolysis
- Tricarboxylic acid cycle
- Oxidative Phosphorylation and The Electron transport system
- Lipolysis and Beta-oxidation of Fats
- protein and Amino acid metabolism
d. Bioenergetic shuttle systems and the adenylate kinase & deaminase reactions
e. Measuring contributions of pathways to energy of exercise
- Oxygen Consumption, Respiratory quotient, metabolic rate, blood lactate, pH and metabolic thresholds (including calculations)
- Equipment calibration and protocols - Accuracy, Objectivity, reliability, validity; Limitations
- interpretation of results
f. Metabolic responses to exercise
- Acute Exercise - The sprinter, The marathon runner and ultra-marathon runner
- chronic Exercise - sprint and Endurance running training
- Factors influencing substrate usage in Exercise
- metabolic acidosis
- The fate of lactate
- Metabolisms Contributions to central and peripheral fatigue
g. Energy metabolism integration and control
3. Differences in energy metabolism between tissues and Overview of other processes related to energy metabolism and exercise.
a. Muscle and liver
- Gluconeogenesis
- glycogen Synthesis
b. Adipose tissue and Fatty Acid synthesis
c. Amino acid and pro

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	Varied - From 5 to 20 minutes each	S/U	Y	Individual
Quiz	30 minutes maximum allowed time each.	30	N	Individual
Report	minimum 3-4 pages, 10 point Arial font single spaced	20	N	Individual
Final Exam	3 hours	50	N	Individual

HLTH 2005 Exercise Prescription I

Credit Points 10

Legacy Code 401143

Coordinator Bobby Cheema (https://directory.westernsydney.edu.au/search/name/Bobby Cheema/)

Description This subject is designed to give students an understanding of and experience in exercise prescription and fitness program construction for the general population (apparently healthy) across all ages and genders. It will focus on the development of general health-related exercise programs, which improve aerobic and anaerobic fitness, muscular strength and endurance, flexibility and body composition. Students will design, implement, supervise and evaluate a self-prescribed exercise program, and instruct training sessions for fellow students.

School Health Sciences

Discipline Physiotherapy

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 2003 AND
SPRT 2002

Equivalent Subjects HLTH 2006 - Exercise Prescription for General Populations

Restrictions

Students must be enrolled in 4658 - Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate the principles of exercise prescription with particular emphasis on aerobic training, resistance training, and flexibility training methods
2. Describe how ageing and physical inactivity impact upon health-related physical fitness and how exercise can be used to mitigate these effects
3. Describe the absolute and relative contraindications to exercise participation and criteria to terminate fitness tests of all types
4. Administer and interpret a range of pre-exercise health screening tools to determine the risk for an individual and appropriate action
5. Select, implement, interpret, and modify standard health-related physical fitness tests for low risk individuals
6. Design, implement, supervise, and evaluate training programs in the primary areas of exercise prescription for low risk clients using in-person and telepractice service delivery methods

Subject Content

1. The health benefits and risks of exercise
2. Pre-exercise screening, testing and interpretation
3.. General principles of exercise prescription and exercise program development
a. aerobic training
b. flexibility training
c. high-intensity interval training
d. resistance training
e. circuit training and group-based exercise programming
4. Fundamentals of periodization
5. Exercise prescription across the lifespan
6. Exercise prescription for weight management
7. Resistance training prescription for children and adolescents
8. Exercise prescription during pregnancy
9. Alternative training methods, yoga
10. Design, implement, supervise and evaluate effective exercise prescriptions using in-person and telepractice service delivery methods

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 2006 Exercise Prescription for General Populations

Credit Points 10

Legacy Code 400326

Coordinator Chloe Taylor (https://directory.westernsydney.edu.au/search/name/Chloe Taylor/)

Description In 2016, this subject is replaced by 401143 - Exercise Prescription I. The exercise prescription area is designed to give students an understanding of and experience in exercise prescription and fitness program construction for the general population of all ages and both genders, including pre exercise screening and fitness testing. It will focus on the development of general health related fitness programs, which improve aerobic and anaerobic fitness, flexibility, muscular strength and endurance, including resistance training. Students will design, implement and evaluate a self-prescribed exercise program as well as provide one-to-one training sessions for fellow students.

School Health Sciences

Discipline Physiotherapy

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 2008 AND
BIOS 2011 AND
BIOS 2037

Restrictions

Students must be enrolled in 4658 Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply knowledge of the principles of exercise prescription with particular emphasis on aerobic training, resistance training, and flexibility training methods.
2. Describe how ageing and physical inactivity impact upon health-related physical fitness and how exercise can be used to mitigate these effects.
3. Describe the absolute and relative contraindications to exercise participation and criteria to terminate fitness tests of all types.

4. Administer and interpret a range of pre-exercise health screening tools to determine the risk for an individual and appropriate action.
5. Select, calibrate, implement and interpret (and modify) standard health-related physical fitness tests for low risk individuals.
6. Design, supervise, and evaluate training programs in the primary areas of exercise prescription (outlined in unit content) for low risk clients.

Subject Content

1. Review:
- Validity, reliability, accuracy
- Exercise measurement and Monitoring equipment set up use and calibration
- warm-up, cool-down, principles of training
- Progression, maintenance, overtraining, aspects of fitness
- Measuring BP, HR and RPE; and their relationships to work rate
- components of fitness
- types of Exercise
2. Organisational and legal aspects
- informed consent
- client information and record booklets
- OH&s - Inspections, Risk assessments, Risk reduction, Standard Operating procedures
- Prohibited persons
- Privacy acts ? PIPPA and HRIPA
3. Health Benefits and Risks of exercise
- Benefits of Exercise - health related fitness, performance related fitness (everyday life tasks, work, recreation), quality of life
- Absolute and relative contraindications
- criteria for terminating tests
- signs of excessive strain
4. Defining the term General Populations
5. Aerobic exercise intensity setting and monitoring ? advantages and limitations
- HR - Hrmax (measured vs predicted, formulas to calculate for different exercise modalities), Heart Rate Reserve
- RPE
6. Pre exercise screening
- A best practice model Vs PARQ Vs other commonly used tools
7. Fitness Testing
- common tests and their physiological basis
- Effect of environmental and subject (client) factors)
- fitness test selection, implementation and interpretation of results
- modifications based on Age, gender
- medical, environmental and procedural Risk Factors
8. Applying Biomechanics in exercise prescription
- identifying movement patterns
- common errors in body Alignment & technique
- identifying potential risks of injury associated with using common Exercise equipment and types
- prescribing appropriate substitutions for unsafe exercises
9. Guidelines for training apparently healthy individuals for health related improvements
- Endurance
- Anaerobic capacity
- resistance training - Muscular strength, Endurance, power and hypertrophy
- flexibility
- Coordination and motor control - Falls prevention
10. Structure of training sessions
- warm up, conditioning, cool down
- order within conditioning component
- group Vs individual
- formal Vs informal settings
11. Phases of training
- initial, improvement, maintenance
12. Exercise Program Evaluation
13. Exercise over the lifespan ? children, adolescents, young adults, older adults
- Acute responses to Exercise and adaptations to training
- implications for Exercise prescription
- Age related Musculoskeletal and cardiovascular problems ? implications for Exercise programs
14. Gender and Exercise Prescription
- Male female differences and similarities
15. Pregnancy
- Maternal changes
- effects on mother and foetus
- guidelines
16. Applying Psychosocial knowledge and skills in fitness testing and program implementation
- Motivating clients
- maximising adherence and compliance
- communication skills
- goal setting
17. Referring clients to other health professionals

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have:

1) submitted a Student Undertaking Form and have applied for a National Police Certificate;
2) submitted Working with Children Check Student Declaration;
3) possess a current WorkCover Authority approved First Aid Certificate.

HLTH 2007 Fundamentals of Medical Concepts and Terminology

Credit Points 10

Legacy Code 300950

Coordinator Jim Basilakis (https://directory.westernsydney.edu.au/search/name/Jim Basilakis/)

Description This subject is designed to provide the student with the knowledge necessary to understand the information contained in the health record, to function in a medical environment through an understanding of the fundamentals of medicine and to effectively use disease classification systems. Within each body system, the student will study anatomy and physiology, disease processes and their treatment, and medical terminology (disease titles, symptomatic terms, surgical terms and investigations). The subject will also focus on specialist topics such as mental health, obstetrics, paediatrics, infectious diseases, oncology, radiotherapy, nuclear medicine, diagnostic and surgical interventions.

School Computer, Data & Math Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) INFS 2004

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse clinical terms structurally into roots, suffixes, prefixes and combining forms;
2. Accurately spell and pronounce clinical terms;
3. Explain the basic structure, function, disease processes and treatment relating to the major body systems;
4. Identify commonly used drugs and understand how to utilise the Monthly Index of Medical Specialities (MIMS) as a pharmaceutical prescribing reference guide.
5. Use and interpret clinical terms documented in health records.

Subject Content

1. Introduction to medicine and medical terminology;
2. Terms and conditions relating to all the body systems;
3. Terms relating to interventions.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 2009 Mental Health and Substance Abuse

Credit Points 10

Legacy Code 401095

Coordinator Paul Simpson (https://directory.westernsydney.edu.au/search/name/Paul Simpson/)

Description This subject introduces students to mental health and behavioural presentations, and emergencies arising from legal and illegal substance use. Students will explore the epidemiology, pathophysiology, manifestation, recognition, assessment and management of common mental health problems, behavioural presentations, and cases involving legal and illegal drug use in the context of paramedicine. Students will practice techniques for managing these presentations from an interpersonal communication perspective and a clinical management perspective. Acute and sub-acute presentations will be discussed, with specific attention given to the role of the paramedic regarding risk assessment, counselling, and health promotion. Legalities associated with management of behaviourally disturbed or cognitively impaired patients will be discussed, and issues relating to multi-agency care, collaboration and co-operation will be examined.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 1009

Co-requisite(s) HLTH 2017

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss the role of paramedics with regard to health promotion and injury prevention for patients with mental health, drug or alcohol related presentations
2. Describe techniques for undertaking mental health and behavioural assessment and management in the prehospital environment
3. Describe the clinical presentations associated with commonly encountered substances
4. Apply patient assessment and clinical skills to cases involving mental health or substance affected patients
5. Discuss the role of paramedics in the inter-professional care of mental health patients
6. Discuss the prefessional, ethical and legal considerations surrounding management of a patient with a mental health or substance affected presentation

Subject Content

Mental health and behavioural (MH&B)
1. Epidemiology of MH and behavioural presentations and structure of MH care systems in Australia
2. Legal, cultural and social considerations associated with MH&B presentations
3. Communication with, and assessment of, MH&B patients
4. Anxiety Disorders, Mood Disorders, Psychotic Disorders, Personality Disorders, Dementia, delirium and confusion
Drug & substance use/abuse
1. Epidemiology of alcohol and drug use in Australia
2. Assessment, diagnosis and management of acute drug or substance use
3. Alcohol intoxication and alcoholism
4. Common illicit substances
5. Prescription and non-prescription medication abuse presentations
6. Mental health and drug use ? patients with dual presentations
7. Role of paramedic in health promotion and injury prevention

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Up to 30 questions in 30 minutes	10	N	Individual
Case Study	1,500 words	30	N	Individual
Simulation	30 minutes	40	Y	Individual

Quiz	Up to 60 questions in 60 minutes	20	N	Individual

HLTH 2012 Nutrition and Health 1

Credit Points 10

Legacy Code 300933

Coordinator Sunil Panchal (https://directory.westernsydney.edu.au/search/name/Sunil Panchal/)

Description Nutrition is the science that applies knowledge of the nutritional components of foods to ensure the wellbeing of the human body. This subject presents the basic principles and concepts of human nutrition including nutrient requirements, functions, deficiency symptoms and the effects of dietary excess as well as energy balance and weight control. Students will gain a general understanding of the macronutrients such as carbohydrates, proteins and lipids in human metabolism, energy release and common diseases and disorders such as obesity, malnutrition, diabetes etc. The role of water and electrolytes in cellular and tissue functions, as well as alcohol metabolism and its impact on human health will be covered. The micronutrients are also studied, including the properties, general requirements, functions and the effects of deficiency and excess consumption of vitamins and essential minerals.

School Science

Discipline Food Science and Biotechnology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects HLTH 2011 - Nutrition and Health 1

Assumed Knowledge

Sound understanding of undergraduate Level 1 chemistry and biology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand and evaluate the role of nutrition in human health.
2. Demonstrate an understanding of nutrient intake requirements and recommended dietary allowances.
3. Demonstrate an understanding of the human digestive system and the metabolism of macro and micro nutrients and effects of deficiency and excesses to human health.
4. Understand the health and social issues linked to alcohol intake in general population.
5. Understand the role of essential fatty acids, amino acids, water, electrolytes in the diet and their roles in human health.
6. Solve numerical problems e.g., Body Mass Index, energy content in foods, and interpret its impact on human health.
7. Apply the knowledge gained through lectures and tutorial discussions to address the contemporary health issues in Australian population.
8. Demonstrate the communication skills through group discussion, scientific literacy and essay writing.

Subject Content

- Basic concept of nutrition, food components and its relationships to health and disease
- understand food groups, dietary guidelines, nutrients requirements and Nutrient reference values
- physiology of digestion, absorption and metabolic pathways involving carbohydrates, proteins and lipids and their Roles in maintaining human health
- covers diet related health Issues such obesity and diabetes, protein calorie malnutrition, alcohol and health, electrolyte Balance in body etc
- energy Balance, underweight, obesity and weight management, energy Calculation, body Mass Index, Basel metabolic rate etc
- Roles of all of vitamins and Essential minerals in health and nutrition e.g., general properties, sources, Recommended Daily Allowance, functions, physiology and deficiency diseases
- Current issues such as health related foods neutraceuticals and functional foods, pre- and probiotics, Omega 3 fatty acids, food fortification etc

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Take-home mid-semester exam	1 week	30	N	Individual
Essay	3,000 words	30	N	Individual
Final Exam	2 hours	40	N	Individual

Prescribed Texts

HLTH 2013 Nutrition and Health 2

Credit Points 10

Legacy Code 300934

Coordinator Sunil Panchal (https://directory.westernsydney.edu.au/search/name/Sunil Panchal/)

Description This subject explores the basic concepts of human nutrition in relation to various stages of the lifespan from infants to late adulthood. It also explores nutrition in relation to chronic health conditions such as obesity, cardiovascular disease and eating disorders. Students will learn about the development of the Australian Dietary Guidelines and Nutrient Reference Values. Students will also learn to make informed decisions with regard to nutritionally critical moments of the life span, emerging nutrition opinions or contemporary uses of nutrition in physical activity, sports and chronic health conditions.

Level Undergraduate Level 2 subject

Pre-requisite(s) BIOS 2029 or NATS 2038

Co-requisite(s) HLTH 2018

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify patient presentations and select appropriate pre hospital treatment plans
2. Integrate patient history and pathophysiology of cardiovascular, respiratory and neurological emergencies into the pre hospital assessment and treatment
3. Discuss the epidemiology and consequences of acute cardiovascular, respiratory and neurological emergencies
4. Provide an evidence-based justification for guidelines relating to cardiovascular, respiratory and neurological emergencies
5. Demonstrate competency in interpretation of ECGs
6. Provide constructive feedback and integrate feedback into future performance.
7. Provide constructive feedback and integrate feedback into future performance

Subject Content

1.Pathophysiology of cardiovascular, respiratory and neurological emergencies
2.Australian Resuscitation Council guidelines for managing resuscitation at an advanced skill level
3.ECG monitoring, analysis and interpretation
4.Clinical decision-making related to termination of resuscitation
5.Assessment, treatment and evidence-based clinical decision-making in relation to adult respiratory medical emergencies
6.Assessment, treatment and evidence-based clinical decision-making in relation to adult neurological medical emergencies
7.Importance of providing and receiving feedback in a out-of-hospital setting
1. Pathophysiology of cardiovascular, respiratory and neurological emergencies
2. Australian Resuscitation Council guidelines for managing resuscitation at an advanced skill level
3. ECG monitoring, analysis and interpretation
4. Clinical decision-making related to termination of resuscitation
5. Assessment, treatment and evidence-based clinical decision-making in relation to adult respiratory medical emergencies
6. Assessment, treatment and evidence-based clinical decision-making in relation to adult neurological medical emergencies
7. Importance of providing and receiving feedback in a out-of-hospital setting

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 2017 Paramedic Practice 2

Credit Points 10

Legacy Code 401068

Coordinator Robin Pap (https://directory.westernsydney.edu.au/search/name/Robin Pap/)

Description This subject focuses on the core competencies for paramedic practice in real world situations. These competencies will be developed through on-campus simulation learning, clinical placements with an emergency ambulance crew over a period of 3 weeks, and through an evidence-based exploration of paramedic practice. The core competencies include communication, documentation, reflections and professional ethical behaviour. In addition, students will practice patient assessment and supervised procedures appropriate to their level.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 1009 AND
NATS 1010 AND
NATS 1009

Restrictions

Students must be enrolled in 4669 - Bachelor of Health Science (Paramedicine).

Assumed Knowledge

A fundamental understanding of paramedic patient assessment, including primary and secondary surveys (vital signs, history taking and physical examination).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display effective communication skills, ethics and professionalism
2. Demonstrate consistent safe work practices
3. Execute basic paramedic skills in a real-world environment
4. Link patient presentations with appropriate treatment or management plans
5. Reflect on the pre-hospital environment, the patient's experiences and their own learning needs
6. Evaluate appropriate, evidence-based pre-hospital management strategies
7. Identify and discuss current health issues
8. Demonstrate clinical reasoning relating to ECG interpretation, dysrhythmia management , parenteral drug administration, pain assessment and management, and spinal care.

Subject Content

Clinical placement in an emergency ambulance setting:
1. Inter-professional communication, ethics and professionalism
2. Safe work practices
3. Assessment and observation of real-world patients and health professionals
4. Basic skills and protocols associated with patient assessment and management
5. Supervised Interpretation of patient findings and Implementation of appropriate techniques

Post clinical placement:
1. Reflection on clinical placement experience
2. Evidence based pre-hospital practice
3. Awareness of the Australian health sector
4. Basic ECG interpretation and dysrhythmia management
5. Parenteral drug administration
6. Pain physiology, pain assessment and management
7. Assessment and management of spinal injuries
8. Diagnostics and clinical assessment

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 2017

Co-requisite(s) HLTH 2015

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate reasoning and decision making relating to safe performance of clinical procedures
2. Demonstrate structured physical examination of the cardiovascular, respiratory, and neurological systems
3. Analyse findings of diagnostic assessments and formulate care plans
4. Formulate referral-based care plans involving integration into community-based healthcare services
5. Perform advanced life support procedures in simulation contexts
6. Apply patient safety principles to simulation practice.

Subject Content

1. Physical examination of the cardiorespiratory and neurological systems
2. Advanced life support (ALS)
3. Diagnostics and clinical decision making
4. Parenteral drug administration
5. Advanced airway management

6. Safe drug administration
7. Medical documentation
8. Determination of disposition
9. Referral and integrated care
10. Paramedicine integration with community based healthcare

HLTH 2021 Research Methods (Quantitative and Qualitative)

Credit Points 10

Legacy Code 400864

Coordinator Anannya Singharay (https://directory.westernsydney.edu.au/search/name/Anannya Singharay/)

Description This subject further explores research methods used to acquire knowledge in healthcare. This includes research designs, international standards, key statistics, and interpretation of results. The range of health research methods will be presented, and studies about treatment effectiveness (clinical trials and systematic reviews), diagnostic effectiveness and qualitative approaches will be explored in detail. Pathways for early-career research are also introduced.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 1001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the main questions, types and levels of evidence
2. Interpret the STARD statement, including statistical results, for tests of diagnostic effectiveness
3. Interpret the CONSORT statement, including statistical results, for clinical trials
4. Interpret the PRISMA statement, including statistical results, for systematic reviews
5. Describe designs and key issues for conducting other quantitative research
6. Describe designs and key issues for conducting qualitative research
7. Identify strategies for presenting and describing data from qualitative research
8. Specify pathways, processes and resources for conducting beginner research
9. Specify requirements and resources for research proposal and ethics submission
10. Identify the main methodologies, research questions, types and levels of evidence for quantitative and qualitative research.
11. Describe structured approaches and methods for assessing quality of evidence.
12. Interpret the CONSORT statement for assessing reporting quality of clinical trials.
13. Interpret results in quantitative and qualitative research reports.
14. Specify requirements for research proposals and conducting ethical research.
15. Identify pathways and processes for commencing a career in research.

Subject Content

1.Quantitative Research
i.Overview of questions, types and levels for evidence.
ii.Randomised controlled trials
*RCT design and the CONSORT statement
*RCT statistical testing for continuous and categorical data
iii.Studies of diagnostic effectiveness
*Diagnostic study design and the STARD statement
*Statistical testing for diagnostic studies
iv.Cohort, case-control and other epidemiological studies
v.Systematic reviews
*SR design and the PRISMA statement
*Meta-analysis for continuous and categorical data
2.Qualitative research
i.Overview of qualitative paradigms, methodologies, research questions and study designs
ii.Strategies for presenting and describing qualitative data
iii.Applications, strengths and limitation of qualitative and quantitative research compared.
iv.Integrating or mixed methods
3.Beginning research
i.Formal study options
ii.Workplace research: action research, audits and quality assurance
iii.Research preparation, protocol writing and ethical approval

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes	10	N	Individual
Short-answer questions about an RCT	600 words total document text as counted by Turnitin	10	N	Individual
CONSORT appraisal of an RCT	1,200 words total document text as counted by Turnitin	20	N	Individual
Final Examination	2 hours	50	N	Individual
Participation in class activities	Weeks 3-14	10	N	Individual

HLTH 2022 Biostatistics in Health

Credit Points 10

Legacy Code 401381

Coordinator John Bidewell (https://directory.westernsydney.edu.au/search/name/John Bidewell/)

Description This subject introduces concepts and practice of biostatistics related to public health, healthcare policy and practice, and health science generally. Evidence-based health professionals must be able to interpret and act upon quantitative data from research about the health of individuals, communities and populations; and factors affecting health including determinants of health, and the effects of policies and interventions on the health of individuals and groups. The subject covers essential principles of statistical reasoning, assumptions and methods applied to health scenarios. Learning is achieved by students exploring available statistical information and through analysis of numerical data sets.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the importance and contribution of biostatistics to healthcare policy and practice.
2. Describe the structure of statistical software databases.
3. Explain the logic, assumptions and limitations of inferential statistics and hypothesis testing as they relate to health investigations.
4. Conduct valid descriptive and inferential analyses using statistical software.
5. Interpret and report the results of statistical analysis.

Subject Content

1.The importance and contribution of biostatistics to health policy and practice.
2.Structure of data sets in software used for statistical analysis.
3.Single-variable descriptive statistics for continuous and categorical data.
4.Descriptive statistics combining two or more categorical or continuous variables.
5.Descriptive measures of effect: differences, ratios and correlations.
6.Main effects and interactions in descriptive analyses with two or more variables.
7.Probability: normal and binomial distributions; standard scores and prediction.
8.From random sample to population: logic of statistical inference and hypothesis testing.
9.Sampling distributions, the standard error, z tests, t tests and confidence intervals.
10.Non-parametric inferential statistics: alternatives to t tests; chi-square for two categorical variables.
11.One-way analysis of variance.
12.Regression analysis.
13.Reporting statistical results: tables, graphs and expository prose; document preparation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 2023 Introduction to Physical Cultural Studies

Credit Points 10

Legacy Code 401413

Coordinator Nicki Taylor (https://directory.westernsydney.edu.au/search/name/Nicki Taylor/)

Description From 2020 this subject replaces 401239 - Introduction to Physical Cultural Studies. The subject explores the interconnection between physical movement, culture, and society. Students will investigate the relationships among physical culture in its various forms (including health, physical activity, sport, dance, leisure, and movement related practices) and broader contexts (pedagogical, social, cultural, political, economic, and technological). The subject will equip students with knowledge and skills in becoming active, reflective and critical learners in physical culture thereby enacting meaningful changes in sites of inequality.

School Health Sciences

Discipline Human Movement

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects PUBH 1005 - Foundations of Wellbeing PUBH 2014 - Introduction to Physical Cultural Studies

Restrictions

Students must be enrolled in 4659 Bachelor of Health Science (PDHPE), 4747 Bachelor of Health Science (HPE) or 6001 Diploma in Health Science/Bachelor of Health Science (Health and Physical Education)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain key tenets, methods and topics in physical cultural studies
2. Examine new ways of thinking about bodies, subjectivities and physical cultures
3. Identify sources of inequality in a range of physical cultural sites and address them to enable meaningful changes
4. Analyse problems regarding questions of gender, sexuality, class, ethnicity and subjectivity in relation to physical culture in the contemporary world

Subject Content

1. Introduction to physical cultural studies
2. Thinking like a sociocultural theorist
3. Historical development in sport
4. Cultural reproduction and taste in physical culture
5. Cultures and bodies in physical culture
6. Identity and difference
7. Gender and sexuality
8. Globalisation and postcolonialism
9. Consumer and Consumption in sport
10. Cultural diversity in physical activity

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Applied Project	2,500 words	50	N	Individual

HLTH 2024 Research Methods in Health

Credit Points 10

Legacy Code 401403

Coordinator John Bidewell (https://directory.westernsydney.edu.au/search/name/John Bidewell/)

Description This subject explores quantitative and qualitative research methods used to generate and expand knowledge in healthcare. The principal practice and policy questions in healthcare are identified, along with the research paradigms, methodologies, rationales, designs, sampling, data collection and measurement methods, analysis, controls over bias and validity, reporting methods and ethical standards applied to answer these questions and inform evidence-based practice. Practical experience is gained with tools for the appraisal of research evidence guiding practice. Workplace research and organisation research for quality assurance are included. Pathways to a professional career in research are explained.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 1012 OR
HLTH 1001

Equivalent Subjects HLTH 2021 Research Methods (Quantitative and Qualitative)

Assumed Knowledge

A basic understanding of research methods and levels of evidence.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the principal research questions applicable to evidence-based practice in health
2. Apply the major quantitative and qualitative paradigms, methodologies, designs, methods and ethical considerations for answering the principal research questions in health
3. Analyse criteria and processes for enhancing the generalisability and applicability of qualitative and quantitative research evidence in health
4. Interpret quantitative and qualitative results in research reports
5. Utilise structured appraisal tools for assessing reporting quality of research evidence in health
6. Critique methods for workplace research
7. Distinguish pathways and processes for commencing a career in health research

Subject Content

1.Contribution of empirical research to the advancement of evidence-based practice and policy in healthcare
2.Types of research questions in healthcare
3.Levels of evidence in quantitative research
4.Research paradigms and methodologies
5.Research designs
6.Sampling in quantitative and qualitative research
7.Data collection methods in quantitative and qualitative research
8.Ethics and privacy in human research and the management of data
9.Data analysis in quantitative and qualitative research
10.Appraisal tools and their use for quantitative and qualitative research
11.Study and career pathways for professional research in health; funding and research teams
12.Research in the workplace: Action research, quality assurance, audits and benchmarking

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	1,200 words	30	N	Individual
Report	1,200 words	30	N	Individual
Final Exam	2 hours	40	N	Individual

HLTH 2025 Exercise Nutrition

Credit Points 10

Legacy Code 401436

Coordinator Drew Keys (https://directory.westernsydney.edu.au/search/name/Drew Keys/)

Description This subject provides students with an understanding of the interdependent areas of nutrition within the context of sport, physical activity, and exercise. Nutritional needs and recommendations for all levels and types of physical activity are covered along with the links between nutrition and health, sport performance, body composition and control of body weight. Students will develop skills in nutritional analysis and program development, measurement of energy expenditure and body composition assessment. Students will use these skills and knowledge in the individualisation of advice on exercise nutrition for health and sport performance.

School Health Sciences

Discipline Nutrition and Dietetics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1009 AND
SPRT 1001

Equivalent Subjects BIOS 2010 - Exercise Nutrition BIOS 2011 - Exercise Nutrition Body Composition and Weight Control

Restrictions

Students must be enrolled in 4658 Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the dietary guidelines and the recommended servings of the core food groups recommended by the National Health and Medical Research Council and other internationally recognized governing bodies.
2. Describe the physiological functions of the macronutrients (carbohydrates, fats and protein) and micronutrients (vitamins, minerals and water).
3. Explain the digestive system and underpinning physiological mechanisms behind the breakdown and absorption of various food sources.
4. Analyse a diet for its energy, macronutrient and micronutrient content, as well as describe the strengths, weaknesses and limitations of the commonly used methods for measuring and analysing dietary intake.
5. Describe the assumptions and limitations of common methods body composition assessment including BMI, waist hip ratio, skinfolds, body composition estimates (from regression equations) and other indices, and demonstrate the knowledge and ability to use these measures to service athletes, apparently healthy and obese individuals.
6. Explain the relationship between energy balance and control of body composition.
7. Provide general nutrition advice to promote, achieve and maintain a healthy lifestyle and/or improve sport performance.
8. Explain the importance of behavioural modification and other strategies to help individuals to incorporate and adhere to appropriate dietary strategies that support achieving and maintaining a healthy body mass.
9. Explain the nutritional, health and psychological risks of common fad and popular diets.
10. Describe and discuss the role of nutrition and ergogenic supplements in optimising exercise performance.

Subject Content

1. Exercise Nutrition
- general dietary guidelines and recommendations for health and physical performance
- dietary analysis: methods, applications and limitations of methods
- Digestive processes and Nutrient absorption kinetics
- physiological function of macronutrients and micronutrients with An emphasis on their Roles related to energy metabolism and Exercise
- methods of Measuring, Estimating and interpreting body composition
- Estimating individual energy requirements and energy Expenditure
- sport-specific nutrition and hydration for optimising performance, recovery & physiologic adaptation
- Nutritional supplements and Ergogenic AIDS
- Nutritional disorders: Prevalence, signs, Symptoms and key physiological effects
2. Other
- discipline specific WHS ? related to practical tasks of The unit

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

HLTH 2026 Paramedicine Care 1

Credit Points 10

Coordinator Paul Simpson (https://directory.westernsydney.edu.au/search/name/Paul Simpson/)

Description This subject develops core competencies for paramedic practice in real-world situations by facilitation of an emergency ambulance placement. These core competencies include communication, documentation, reflections, and professional behaviour. In addition, this unit aims to build foundational skills and knowledge relating to the assessment and management of neurological, musculoskeletal, and integumentary patient presentations. The subject also deals with the assessment and management of pain in the out-of-hospital setting. The subject combines theoretical and practical aspects to develop knowledge, skills, interpretation, and application of diagnostics and clinical decision-making to implement appropriate patient care.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1009
NATS 1010

HLTH 1019

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine or 4669 Bachelor of Health Science (Paramedicine).

Assumed Knowledge

First-year knowledge of the Bachelor of Paramedicine

Learning Outcomes

1. Display a high level of professionalism, effective communication skills, ethics, and consistent safe work practices in a real-world environment.
2. Reflect on the out-of-hospital environment, the patient's experiences, and their own learning needs.
3. Evaluate appropriate, evidence-based out-of-hospital management strategies.
4. Describe the epidemiology, pathophysiology, pathogenesis and sequalae of select neurological, musculoskeletal, and integumentary patient presentations.
5. Describe the epidemiology, physiology, pathophysiology, and sequalae of pain
6. Integrate patient history and assessment to develop and apply evidence-based out-of-hospital treatment plans for patients across the lifespan with select neurological, musculoskeletal and integumentary disorders.
7. Integrate patient history and assessment to develop and apply evidence-based out-of-hospital treatment plans for patients experiencing pain.

Subject Content

1. Intra- and inter-professional communication, ethics and professionalism
2. Safe work practices
3. Observation and assessment of real-world patients under the supervision of health professionals
4. Basic skills and protocols associated with patient assessment and management
5. Supervised interpretation of patient findings, and implementation of appropriate interventions
6. Reflection on clinical placement experience and evidence-based out-of-hospital practice
7. Pathophysiology, pathogenesis and sequalae of neurological, musculoskeletal, and integumentary patient presentations
8. Assessment, treatment, and evidence-based clinical decision-making in relation to neurological, musculoskeletal and integumentary presentations throughout the lifespan
9. Assessment, treatment, and evidence-based clinical decision-making in relation to pain throughout the lifespan

Work integrated learning

There is a mandatory work component required for completion of this program. Please contact the Program Advisor listed above for information.

International students should also refer to the link below for more information and a link to the Commonwealth Register of Institutions and Courses for Overseas Students (CRICOS).

Work Integrated Learning (WIL) for international students (https://www.westernsydney.edu.au/currentstudents/current_students/services_and_facilities/international_student_support/working_in_australia/work_integrated_learning/)

Special Requirements

Legislative pre-requisites

Prior to enrolling in this unit, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Students must hold a valid and current First Aid Certificate from a Registered Training Organisation. Use the link to the Special Requirements webpage below for more information.

Student Compliance Information for all Health-Related Placements
Students must meet Western Sydney University course requirements as well as any special, legislated, or policy-mandated requirements.

Western Course Requirements
Visit the Special Requirements webpage for details about your course.
Special Requirements: https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements

Mandatory NSW Health student placement policy requirements
To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your course, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet: https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6

Please ensure that you
1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.
International students have additional requirements: the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as
If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
If you need to meet different state, territory or country compliance requirements.
NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire course.
Current approved first aid certificate valid for your entire course - approved course providers can be found at the Government Training website
http://training.gov.au
Other non-health related requirements.
Student Compliance Resources are also available on the Placements Hub web page.

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance

Assessment

HLTH 2027 Paramedicine Care of Diverse Patients 1

Credit Points 10

Coordinator Louis Shabella (https://directory.westernsydney.edu.au/search/name/Louis Shabella/)

Description This subject introduces students to diverse populations including those with mental illness, substance dependence issues including drugs and alcohol, and those who engage in recreational drug use. Students will explore health behaviour and contemporary models of care including recovery-focussed care, underpinned by a biopsychosocial framework. The nature of contemporary paramedicine will be examined, with a focus on concepts including motivational interviewing, opportunistic counselling, and brief interventions.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 1019

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine or 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Conduct systematic examination of vulnerable people presenting with behavioural disturbances, abnormal psychology or intoxication
2. Formulate and implement paramedic-facilitated care plans for people presenting with behavioural disturbances, abnormal psychology or intoxication across the lifespan
3. Apply the principles of recovery-based care to mental health and mental illness, including broad types of mental disorders
4. Demonstrate a risk-based approach to decision making relating to determination of patient disposition
5. Apply medico-legal and ethical principles to paramedic management of vulnerable populations
6. Reframe interactions with people of Aboriginal and/or Torres Strait Islander descent to design collaborative pathways in the context of mental healthcare and addiction.

Subject Content

1. Contemporary healthcare frameworks for vulnerable populations including recovery-based care and harm-minimisation
2. Abnormal psychology across the lifespan with a focus on anxiety, depression, schizophrenia, bipolar disorder and addiction
3. Acute behavioural disorders across the lifespan, including dementia, delirium and cognitive decline
4. Clinical reasoning, risk assessment and risk mitigation in paramedicine contexts
5. Stigma and its impact on healthcare provision and vulnerable patients
6. Paramedic management of mental health, behavioural and substance use presentations
7. Provision of mental health and substance addiction and dependence care to people of Indigenous or Torres Strait Islander origins
8. Medico-legal principles and considerations underpinning provision of care to diverse populations

Special Requirements

Essential equipment

Students are expected to have a complete WSU student paramedic uniform as described in the WSU Paramedicine uniform guide. Uniform must be worn for practical sessions within this unit.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Up to 40 questions	25	N	Individual
Short Answer	Up to 15 questions	25	N	Individual
Simulation	Up to 30 minutes	25	Y	Individual
Viva Voce	Up to 30 minutes	25	Y	Individual

HLTH 2028 Paramedicine Care 2

Credit Points 10

Coordinator Robin Pap (https://directory.westernsydney.edu.au/search/name/Robin Pap/)

Description The aim of this subject is to extend the foundational knowledge relating to the assessment and management of cardiovascular and respiratory patient presentations. The unit combines theoretical and practical aspects to develop knowledge, skills, interpretation and application of diagnostics and clinical decision-making to implement appropriate patient care.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 2026

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine or 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

After successful completion of this Unit, students will be able to:

1. Describe the epidemiology and consequences of select cardiovascular and respiratory pathologies across the lifespan and for diverse populations including Aboriginal & Torres Strait Islanders
2. Integrate patient history and assessment to develop evidence-based treatment plans for patients across the lifespan with select cardiovascular and respiratory disorders
3. Employ appropriate management skills and tools for patients across the lifespan with select cardiovascular and respiratory disorders
4. Demonstrate clinical reasoning relating to ECG acquisition, interpretation, and appropriate evidence-based management
5. Plan and manage evidence-based treatment of a patient in cardiac arrest

Subject Content

1. Pathophysiology of cardiovascular and respiratory patient presentations
2. Assessment, treatment, and evidence-based clinical decision-making in relation to cardiac patient presentations throughout the lifespan
3. Assessment, treatment, and evidence-based clinical decision-making in relation to respiratory patient presentations throughout the lifespan
4. Management of cardiac arrest patients
5. ECG monitoring, analysis, and interpretation
6. Clinical decision-making related to termination of resuscitation and end of life

Special Requirements

Essential equipment

Students are expected to have a complete WSU student paramedic uniform as described in the paramedicine student uniform guide. No uniform means the student is unable to participate in practical classes or undertake emergency ambulance placement. Students are expected to have their own stethoscope, safety googles, penlight torch and sphygmomanometer.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	60 minutes	20	N	Individual

HLTH 2029 Paramedicine Care 3

Credit Points 10

Coordinator Rachael Vella (https://directory.westernsydney.edu.au/search/name/Rachael Vella/)

Description The aim of this subject is to extend the foundational knowledge relating to the assessment and management of renal, urinary, gastrointestinal, and endocrinological presentations. The subject combines theoretical and practical aspects to develop knowledge, skills, interpretation and application of diagnostics and clinical decision-making to implement appropriate patient care. This subject will provide the opportunity to develop skills in interprofessional practice, through work-integrated learning in a variety of non-paramedic settings.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 2026

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine or 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

After successful completion of this Unit, students will be able to:

1. Describe the pathogenesis and pathophysiology of conditions arising from the urinary, renal, endocrine and gastrointestinal systems
2. Integrate knowledge of urinary, renal, endocrine and gastrointestinal systems into patient assessment and examination
3. Formulate care plans using effective clinical reasoning for patients across the spectrum of acuity
4. Analyse patient presentations to assess clinical risk and determine patient disposition
5. Demonstrate effective teamwork in a simulated clinical context
6. Apply principles of patient safety to clinical practice in a simulated practice setting
7. Demonstrate person-centred care in a non-ambulance placement environment

Subject Content

1. Pathogenesis, pathophysiology and clinical presentation of urinary, renal, gastrointestinal, endocrinological conditions
2. Clinical assessment and diagnostics relating to urinary, renal, gastrointestinal, endocrinological conditions
3. Clinical procedures relating to management of urinary, renal, gastrointestinal, endocrinological conditions
4. Clinical reasoning to formulate care plans for urinary, renal, gastrointestinal, endocrinological conditions

HLTH 2030 Paramedicine Care of Diverse Patients 2

Credit Points 10

Coordinator Liz Thyer (https://directory.westernsydney.edu.au/search/name/Liz Thyer/)

Description Paramedics encounter a diverse range of patients. Many of these patients are vulnerable because of their social, clinical or cultural situation. Vulnerable and diverse populations are often overrepresented in paramedic caseload. Paramedics also encounter patients with a wide range of physical and cognitive disabilities. Paramedics are increasingly a key profession in helping diverse and vulnerable patients navigate the health system. This subject explores how paramedics can provide culturally safe and appropriate patient-centred care to these populations.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) HLTH 2026

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine or 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Reflect on the role paramedics play in connecting diverse and vulnerable populations with the healthcare system and appropriate care.
2. Critique the provision of culturally safe, person-centered care to patients from diverse and vulnerable populations in a paramedicine context.
3. Contrast challenges and enablers for patients from diverse and vulnerable backgrounds who are using unscheduled or emergency health care.
4. Examine the factors paramedics need to take into consideration when providing care for patients experiencing abuse or neglect.
5. Justify the importance of intersectionality in high-quality paramedic care.

Subject Content

1. Paramedic epidemiology in rural and remote environments and care of geographically isolated patients
2. Paramedic care of Aboriginal and Torres Strait Islander communities
3. Paramedic care of patients with disabilities and their carers
4. Paramedic care and interaction with patients from culturally and linguistically diverse backgrounds
5. Paramedic care and interaction with homeless and Low Socioeconomic Status populations
6. Paramedic care of victims of intimate partner violence including interagency response models
7. Paramedic care of victims of abuse and neglect across the lifespan including interagency response models
8. LGBTQI+ health

HLTH 2031 Motor Behaviour

Credit Points 10

Coordinator Kylie Steel (https://directory.westernsydney.edu.au/search/name/Kylie Steel/)

Description Motor Behaviour is an investigation of the physiological and psychological processes involved in both the control and the learning of movement. As such, it considers the control mechanisms which are innate to the learner, how these mechanisms change by virtue of both maturation and experience, and how the latter type of changes may be facilitated by manipulation of the learning environment.

School Health Sciences

Discipline Human Movement

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects BEHV 3015 Motor Control and Skill Acquisition

Restrictions

Students must be enrolled in 4742 - Bachelor of Health Science (Health and Physical Education)-Pathway to Teaching (Secondary) or 4791 - Bachelor of Health and Physical Education (Pathway to Teaching Education) or 4792 Bachelor of Health and Physical Education or 6001 Diploma in Health Science/Bachelor of Health Science (Health and Physical Education), 4656 B Health Science. 4658 B Sport and Exercise Science

Learning Outcomes

After successful completion of this Unit, students will be able to:

1. Utilise the different levels of analysis from which movement control and learning is studied
2. Describe the biomechanical factors, behavioural changes, and neurophysiological bases which contribute to control of movement and learning
3. Analyse how cognitive processes influence learning

4. Evaluate the impact of individual differences on movement behaviour
5. Apply classification taxonomies of the neuromuscular and psychological involvement in skills training and development of specific movement skills
6. Critique experimental literature pertaining to Motor Learning and examine the applied principles which have been generated by this research
7. Explain the reasoning and perform discipline specific laboratory WH&S procedures and systems

Subject Content

- The field of study and levels of analysis
- The contribution of the skeletal system to movement control
- The contribution of the muscular system to movement control
- The proprioceptors and the spinal reflexes
- The vestibular system, posture and balance
- The visual system and movement control
- Motor control functions of the brain
- The closed-loop model
- The open-loop model
- The concept of motor learning and its measurement
- The learning process
- The principles of practice
- Feedback and motor learning.
- Individual differences and motor behaviour
- Motor development

HLTH 3001 Applied Nutrition

Credit Points 10

Legacy Code 300908

Coordinator Li Li (https://directory.westernsydney.edu.au/search/name/Li Li/)

Description This subject builds on basic concepts in human nutrition and facilitates the study of nutrition needs across the lifecycle and for specific lifestyle and nutrition related diseases. This study will incorporate how to assess nutritional status (incorporating anthropometric, biochemical, clinical, dietary and physical activity assessment) of individuals and groups, understand the strengths and limitations of various methods, how to manipulate diets to ensure nutritional sufficiency and how to provide nutrition education regarding lifestyle related diseases and sports nutrition.

School Science

Discipline Food Science and Biotechnology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects HLTH 3002 - Applied Nutrition

Restrictions

Successful completion of 120 credit points

Assumed Knowledge

An understanding of human nutrition, food, the metabolism of micro- and macro-nutrients, nutritional needs in various contexts, the relationship between dietary intake and disease/health, and computer literacy.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe, apply, and interpret results from, tools and methodologies (including anthropometric, biochemical, clinical and dietary) for assessing the nutritional status and level of physical activity of individuals and groups for various purposes
2. Explain the strengths, limitations (including measurement errors), validity and reliability of various nutritional status assessment techniques
3. Utilise nutritional analysis software to organise and present dietary data
4. Provide recommendations for meeting nutritional requirements for the prevention / treatment of lifestyle related chronic disease and for sports nutrition
5. Articulate food laws relating to the nutrition labelling of foods

6. Apply teaching and learning skills or styles for effective nutrition counselling and education

Subject Content

1. Assessment of nutritional status
2. Anthropometric, biochemical, clinical and dietary assessment methods
3. Introductory methods to measure energy expenditure and physical activity levels
4. Use of nutritional analysis software
5. Application of reference values to findings from nutritional assessment methods
6. Manipulating existing diets
7. Provision of nutrition education for the prevention / treatment of lifestyle related chronic disease and for sports nutrition

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	3,000 words	40	N	Individual
Practical	15 - 30 minutes	10	N	Individual
Presentation	Presentation 15 minutes, Reflection report 500 words	20	N	Both (Individual & Group)
Quiz	30 minutes each	30	N	Individual

HLTH 3003 Clinical Leadership and Patient Safety

Credit Points 10

Legacy Code 401097

Coordinator Navin Naidoo (https://directory.westernsydney.edu.au/search/name/Navin Naidoo/)

Description This subject introduces students to clinical leadership, supervision and patient safety in the context of paramedicine. Students will undertake a 4 week clinical placement block with an emergency ambulance crew, which will in part be used as a basis for reflective learning activities and critical analysis. Students will explore and discuss concepts of clinical leadership and supervision, drawing from their clinical placement experiences. Students will learn about leadership styles, principles of clinical education, mentoring and supervision in the field, clinical governance and patient safety.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 3014

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Display effective communication skills, ethics and professionalism
2. Demonstrate consistent safe work practices
3. Execute intermediate/advanced paramedic skills in a real world environment
4. Assess a patient, formulate a clinical impression, and implement a prioritised clinical management plan under supervision
5. Analyse their individual leadership style and identify personal strengths and weakness
6. Discuss the role paramedics play in contributing to clinical governance, patient safety and quality improvement
7. Analyse medical error incidents
8. Discuss strategies for managing paramedic health and resilience
9. Discuss preceptorship in an ambulance context

Subject Content

A). During clinical placement
1. A four week clinical placement involving application of skills and knowledge in scene management and patient examination and assessment, clinical decision making, and patient management.
B). Post-clinical placement
1. Clinical placement reflection and debrief
2. Leadership styles and approaches
3. Clinical leadership and professional leadership
4. Clinical supervision and preceptorship
5. Mentoring and preceptorship
6. Patient safety and clinical governance
7. Human factors, error and situational awareness

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative

Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Placement Performance	4 weeks	S/U	Y	Individual
Multiple Choice	Up to 60 minutes	20	N	Individual
Essay	3,000 words	30	N	Individual
Viva Voce	Up to 45 minutes	50	Y	Individual

HLTH 3004 Emergency Care for Special Populations

Credit Points 10

Legacy Code 401070

Coordinator Paul Simpson (https://directory.westernsydney.edu.au/search/name/Paul Simpson/)

Description This subject explores the issues in caring for special populations in the emergency situation - multicultural and Indigenous settings, the elderly, people with disabilities and people experiencing mental illness. Current trends underlying policies and services and determinants of wellbeing in these contexts are discussed. Particular attention is given to issues, principles and practices relating to ageing, and to the assessment, treatment, rehabilitation strategies and crisis counselling for people experiencing mental illness.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 3014

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the strategic environment and trends underlying policies and services in the aged care and disability contexts
2. Discuss the impact of culture, society and family on wellbeing and health care needs
3. Demonstrate understanding of the psychological and social factors influencing the health care of older people and people with disabilities
4. Examine the range of resources and facilities relevant to services for older people and people with disability
5. Apply knowledge, skills and experience to reflect on and analyse health care needs and emergency situations affecting special populations

Subject Content

1. Special populations and social attitudes
2. Legislation and policy relating to special populations
a. Funding
b. Rights
c. Discrimination
3. Health care contexts
a. Determinants of health and wellbeing
b. Settings for aged care and disability services
c. Carers
4. Ageing
a. Psychological, biological, social and psychosocial issues
b. Family structures
c. Family and community care
5. Mental health
a. Assessment, treatment and rehabilitations
b. Crisis counselling
6. Implications for pre-hospital and emergency care (this topic is integrated in each of the preceding areas)

HLTH 3005 Evidence-Based Practice

Credit Points 10

Legacy Code 400865

Coordinator Jessica Knox (https://directory.westernsydney.edu.au/search/name/Jessica Knox/)

Description In this subject, students incorporate previous research and biostatistics knowledge to develop new skills for using evidence to inform all aspects of their professional practice. Evidence-based practice uses an enquiry led approach to manage expanding and uncertain knowledge by formulating answerable questions, effectively searching literature, critically appraising evidence validity and results, and to assess its significance in clinical practice and healthcare decision-making. Students will incorporate evidence in communication and shared decision making processes for patient scenarios relevant to their program.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) Students need to have done HLTH2024 Research Methods in Health PLUS ONE clinical subject from their specific program This will be one of four possible subjects
Students enrolled in Program Code 4661 (Continuing) or 4708 (Current) must have completed REHA 2007
Students enrolled in Program Code 4663 (Continuing) or 4711 (Current) must have completed REHA 2004
Students enrolled in Program Code 4662 (Continuing) or 4706 (Current) must have completed REHA 3003 AND
REHA 3049 - Speech Pathology Practice 3 for students enrolled in 4763 - Bachelor of Speech Pathology (First clinical practice subject)

Restrictions

Students must be enrolled in program Codes 4660,4661, 4662, 4663, 4706, 4708, 4710, 4711. 4763, 4788

Assumed Knowledge

Knowledge and skills of Foundations of Research & Evidence-based Practice 400863 and Research Methods (Qualitative and Quantitative) 400864 and at least one clinical subject of the student's program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conduct sensitive and specific PICO search strategies
2. Identify key classification, design and result information from research studies
3. Critically appraise validity and clinical significance of research
4. Justify value of evidence according to its level, quality and applicability
5. Incorporate evidence into clinical reasoning and decision making
6. Negotiate evidence-informed shared decision-making

Subject Content

1. Exploring reasons for EBP
- history of EBP development in health care
- management of professional disagreement, situation effects and bias

- management of information overload
- management of uncertainty
2. Appraising evidence
- for studies of interventions, diagnostic tests, prognosis, experiences and systematic reviews and guidelines
- level of evidence
- Internal Validity
- statistical and clinical significance
- Generalisability, Applicability and Usefulness
3. Implementing evidence into practice
- incorporating evidence with expertise, values and situations
- limitations of EBP paradigm
- using evidence in clinical reasoning and decision-making
- communicating evidence to clients
- evidence-informed shared decision-making
- evaluation of EBP

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	600 words plus search strategy	25	N	Individual
Viva Voce	Approx. 20 minutes	35	Y	Individual
Final Exam	90 mins	40	N	Individual

Prescribed Texts

HLTH 3007 Global Nutrition, Food and Community

Credit Points 10

Legacy Code 300917

Coordinator Li Li (https://directory.westernsydney.edu.au/search/name/Li Li/)

Description This subject aims to develop an understanding of the inter relationship between nutrition and health in Australian and Global contexts. The aim is to provide the student with a sound foundation in nutritional anthropology, public health nutrition and health promotion in order that they can systematically analyse nutritional problems associated with world food issues; including those affecting minority and culturally and linguistically diverse groups within Australia; diseases of affluence and current health and nutrition issues in the community. An important objective of the subject is that students learn the principles of health promotion and how to apply effective nutrition promotion strategies in community and population settings in order to reduce the burdens of various nutritional and lifestyle related disorders and diseases like: obesity, some cancers, diabetes and cardiovascular disease and malnourishment.

School Science

Discipline Food Science and Biotechnology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2012

Equivalent Subjects HLTH 3010 - Nutrition and Community Health HLTH 3006 - Global Nutrition Food and Community

Assumed Knowledge

Understanding of human nutrition and associated health issues.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	1500	30	N	Individual
Oral presentation and written report	15 minutes, 2000 words	30	N	Group
Quiz	15 Mins	5	N	Individual
Final exam	2 hours	35	N	Individual

HLTH 3008 Gymnastics and Dance

Credit Points 10

Legacy Code 400896

Coordinator Rhiannon White (https://directory.westernsydney.edu.au/search/name/Rhiannon White/)

Description Students actively engage in a variety of gymnastics activities to develop skill competencies on vault, bars, beam, and floor. Students will also learn about a variety of dance styles and apply movement composition principles. Students will consider safety principles and learn teaching strategies that will enable them to teach gymnastics and dance accurately and safely in line with the Health and Physical Education curriculum. Students will also design their own original teaching and learning ideas that are active, enjoyable, and educational, to ensure they can implement quality gymnastics and dance learning experiences in PE.

School Health Sciences

Discipline Performing Arts, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Incompatible Subjects LGYA 0700 - Human Movement 5 PERF 3008 - Introduction to Dance

Restrictions

Students must be enrolled in 4742 Bachelor of Health Science (Health and Physical Education)-Pathway to Teaching (Secondary), 4747 Bachelor of Health Science (HPE) or 6001 Diploma in Health Science/ Bachelor of Health Science (Health and Physical Education)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret content from the Australian Health and Physical Education (HPE) curriculum in the contexts of gymnastics and dance
2. Demonstrate understanding of safety principles and teaching points relevant to gymnastics and dance activities
3. Demonstrate a range of movement skills in the gymnastics and dance context
4. Design enjoyable and active games and activities that integrate gymnastics skills into Physical Education lessons.
5. Critically analyse the inclusion of gymnastics and dance in physical education.

Subject Content

1.Learning gymnastics skills and dance styles

2.Teaching, planning, and creating gymnastics activities and dance routines
3.Understanding gymnastics and dance in school physical education
4.Cultural interpretations of dance
5.Biomechanics of gymnastics
6.Movement composition to music
7.Safety considerations when teaching sport activities
8.Health and physical education curriculum

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Task	5-10 minutes	30	N	Individual
Professional Task	8 minutes maximum	40	N	Individual

HLTH 3009 Major Incident Management

Credit Points 10

Legacy Code 401075

Coordinator Nicole Peel (https://directory.westernsydney.edu.au/search/name/Nicole Peel/)

Description This subject examines the tactical and strategic issues facing a health response team in a major incident. Students will practice team responses to critical incidents and evaluate the effectiveness of different approaches to response and recovery.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 3014

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Research and formulate strategic and tactical responses to major incidents as part of a health response team
2. Demonstrate understanding of the principles and techniques of major incident prevention, response and recovery
3. Demonstrate leadership and decision-making in the context of a health response team

Subject Content

1. Health service and emergency service structure and roles
2. Planning for major incident response
3. The Ambulance Service Management Plan
a. Command and control
b. Communications
c. Safety
d. Recovery
4. Medical support
a. Triage
b. Transport
c. Treatment
5. Scene control and management
a. Children
b. Casualties
c. Media
d. Psychosocial support
6. Hazardous materials
7. Mass gatherings
8. Natural disasters

HLTH 3011 Obstetrics and Paediatrics

Credit Points 10

Legacy Code 401072

Coordinator Liz Thyer (https://directory.westernsydney.edu.au/search/name/Liz Thyer/)

Description The aim of this subject is to prepare the student for out-of-hospital care and management of obstetric, neo-natal and paediatric emergencies. It focuses on understanding human birth and development, normal and complicated delivery and the changes that occur in the pregnant woman. Developmental changes throughout childhood and the skills required to manage a broad range of clinical paediatric emergencies are explored.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2018 AND
HLTH 2015

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and categorise typical and atypical growth and development from birth to adolescence
2. Describe and categorise typical and atypical growth and development of the pregnant woman
3. Demonstrate out-of-hospital assessment and management of select obstetric, neo-natal and paediatric emergencies
4. Apply clinical reasoning to manage obstetric, neo-natal and paediatric clinical problems in out-of-hospital settings
5. Justify a plan of management for an obstetric, neo-natal or paediatric problem that demonstrates professional and ethical behaviour and recognises the role of family and other health practitioners

Subject Content

Theory and practice, within the out-of-hospital setting, for:
1. Basic understanding of normal pregnancy and parturition
2. Common complications in pregnancy and obstetric emergencies
3. Assessment and management of the neonate
4. Basic understanding of typical and atypical growth and development from birth to adolescence
5. Relevant paediatric illnesses and trauma
6. Identifying relevant methods used to assess and monitor infants, children and adolescents, as appropriate to their needs
7. Management of paediatric cases using sound clinical reasoning and understanding the response of the child and the family
8. Relevant signs of child abuse and neglect

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes	20	N	Individual
Practical Exam	up to 30 minutes	40	N	Individual
Intra-session Exam	1 hour	40	N	Individual

HLTH 3012 Out-of-hospital Medical Care 2

Credit Points 10

Legacy Code 401096

Coordinator Navin Naidoo (https://directory.westernsydney.edu.au/search/name/Navin Naidoo/)

Description The aim of this subject is to extend the foundational knowledge relating to the assessment and management of medical presentations across the spectrum of acuity, including, gastrointestinal, renal, genitourinary, gynaecological and endocrine medical emergencies, sepsis, ear/nose/throat presentations and complex co-morbid conditions. The unit combines pathophysiological principles with development of skills in the use and interpretation of diagnostic technology with clinical decision-making to implement advanced life support. Students will investigate fundamental elements of paramedic practice relating to medicolegal documentation, risk assessment and clinical reasoning relating to determination of patient disposition.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) NATS 1009 AND
NATS 1010 AND
HLTH 2015

Co-requisite(s) HLTH 3014

Restrictions

Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify patient presentations and select appropriate prehospital treatment plans.
2. Integrate patient history and pathophysiology of gastrointestinal, renal, gynaecological, genitourinary and endocrine emergencies into the prehospital assessment and treatment.
3. Discuss the epidemiology and consequences of gastrointestinal, renal, gynaecological, genitourinary, sepsis and endocrine emergencies.
4. Provide an evidence-based justification for guidelines relating to gastrointestinal, renal, gynaecological, genitourinary, sepsis and endocrine emergencies.
5. Demonstrate safe and appropriate assessment and management skills for gastrointestinal, renal, gynaecological, genitourinary, sepsis and endocrine emergencies.

Subject Content

Pathophysiology, patient assessment and out-of-hospital management of:
1. Gastrointestinal emergencies
2. Renal emergencies
3. Gynaecological and genitourinary emergencies
4. Endocrine emergencies
5. Sepsis, Complex and co-morbid Patient presentations

HLTH 3014 Paramedic Practice 4

Credit Points 10

Legacy Code 401069

Coordinator James Braude (https://directory.westernsydney.edu.au/search/name/James Braude/)

Description This subject focuses on the core competencies for paramedic practice in real world situations. Students will review high fidelity simulation scenarios to facilitate simulation debrief sessions exploring scene management, interpersonal communication, decision making, inter-professional cooperation and clinical management, Students will then consolidate and extend these skills through supervised clinical placements with an emergency ambulance crew over a period of 5 weeks. Experiences and exposure gained during the placement will form the basis for analysis of case studies and reflective learning.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2018

Co-requisite(s) HLTH 3012

Restrictions

Students must be enrolled in the Bachelor of Health Science (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan and assess personal professional goals and performance
2. Display effective situational awareness, operational safety, communication skills, ethics, and professionalism in a paramedic work environment
3. Analyse contemporary paramedic practice in a regulated professional environment
4. Demonstrate holistic paramedic care for patients from vulnerable populations.
5. Execute intermediate level paramedicine skills in a real-world environment
6. Apply a systematic approach to patient assessment, history taking and clinical management in a paramedic work environment to an intermediate level
7. Critique decision making in cases involving patients with moderately complex presentations in a paramedic work environment
8. Analyse scene, professional and clinical management displayed in simulated case scenarios

Subject Content

Prior to clinical placement
- Paramedic practice in intermediate-level simulated scenarios
- Placement planning
- Professional practice, professionalisation and the application of critical non-technical skills and knowledge
- Care and management of vulnerable populations
- Referral, patient disposition and integrated care

During clinical placement
- Paramedicine skills associated with assessment and history taking in a real-world paramedic work environment
- Decision making and judgement in complex real-world patient presentations
- Supervised management of patient disposition and referral decisions
- Supervised formulation of a clinical impression and management plan
- Supervised performance of clinical interventions utilised by registered paramedics
- Clinical documentation and interprofessional communication

After clinical placement
- Self-evaluation of learning and performance
- Evaluation and reporting of clinical experiences

Credit Points 10

Legacy Code 400890

Coordinator Paul Marshall (https://directory.westernsydney.edu.au/search/name/Paul Marshall/)

Description In 2016, this subject is replaced by 401148 - Strength and Conditioning. Resistance Training and Physiology presents the growing body of research evidence supporting specific methods of resistance exercise and training, as well as the role of resistance exercise in disease prevention and health promotion. Students gain an increased understanding of the energetics and physiology of resistance exercise by also completing laboratories focussed on the research of important applied concepts in resistance exercise and training. Students also experience resistance training.

School Health Sciences

Discipline Human Movement

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2004 AND
BIOS 2037 AND
BIOS 3003

Restrictions

Students must be enrolled in program 4658 - Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. a detailed understanding of the energetics of muscle contractions during different intensities of resistance exercise;
2. a detailed understanding of the molecular biology of muscular strength and hypertrophy;
3. knowledge of the systemic physiological responses to different intensities of resistance exercise;
4. knowledge of the differences in force and power development between different types of muscle contractions: isometric, isotonic, isokinetic;

5. understanding of the changes to repetitions and sets performed in resistance exercise, and how specific changes in either component can change the training stimuli for either of muscular strength, power or endurance;
6. knowledge of the roles of resistance exercise and training to sports performance, as well as disease prevention and rehabilitation;
7. developed skills for developing and supervising quality resistance training programs specific to certain desired outcomes;
8. mastered techniques required for safe and optimal resistance training of specific muscles and/or muscle groups using free weights and weight machines;
9. Explain the reasoning behind discipline specific OH&S procedures and systems;
10. Perform all practical skills and activities safely and in compliance with standard operating procedures and laboratory rules.

Subject Content

1. The research-based evidence for specific types of resistance training for specific outcomes; such as strength, power and endurance.
2. The cellular response mechanisms to resistance training for stimulation of muscle anabolism and hypertrophy.
3. The neural components of increased muscular strength.
4. Gender differences in strength and responses to resistance training.
5. Different equipment used in resistance training, and how they differ in promoting specific resistance training outcomes.
6. Training paradigms used in resistance training.
7. Potential abuse of pharmacological and nutritional ergogenic aids in resistance training, as well as their performance and health consequences.
8. The roles of resistance exercise and training in sports and athletics.
9. The roles of resistance exercise and training in disease prevention and rehabilitation.
10. Designing resistance exercise training programs.
11. Experiencing resistance exercise training.

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have:

1) submitted a Student Undertaking Form and have applied for a National Police Certificate;
2) submitted Working with Children Check Student Declaration;
3) possess a current WorkCover Authority approved First Aid Certificate.

HLTH 3016 Strength and Conditioning

Credit Points 10

Legacy Code 401148

Coordinator Dean Norris (https://directory.westernsydney.edu.au/search/name/Dean Norris/)

Description Strength and Conditioning presents the growing body of research evidence supporting specific methods of resistance exercise and training, as well as the role of resistance exercise in disease prevention and health promotion. Students gain an understanding of the energetics and physiology of resistance exercise by also completing and experiencing laboratories focussed on the important applied concepts in resistance exercise and training.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2003 AND
BIOS 2012 AND
SPRT 2002

Equivalent Subjects HLTH 3015 - Resistance Training and Physiology

Restrictions

Students must be enrolled in 4658 - Bachelor of Health Science (Sport and Exercise Science).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain skeletal muscle anatomy and identify the key structures involved with muscle contraction
2. Evaluate contributions to muscle contraction from the nervous system and within the muscle
3. Identify the biological mechanisms that explain different types of training adaptation following resistance exercise
4. Prescribe an evidence based resistance exercise program for a healthy, untrained individual
5. Examine contributing factors to performance of an exercise movement
6. Construct a basic nutritional plan that effectively complements typical resistance exercise prescription
7. Critique the scientific basis and be able to review evidence for modern trends in resistance exercise prescription

Subject Content

- The Anatomy and physiology of muscle contraction
- The research-based evidence for specific types of resistance training for specific outcomes; such as strength, power and endurance
- exposure to different equipment used in resistance training, and how The equipment differs in promoting specific resistance training outcomes
- training paradigms used in resistance training
- potential Abuse of Pharmacological and Nutritional Ergogenic AIDS in resistance training, as well as their performance and health consequences
- The Roles of resistance Exercise and training in Sports and athletics
- The Roles of resistance Exercise and training in disease prevention and rehabilitation
- designing resistance Exercise training programs
- experiencing resistance Exercise training

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Final Exam	2 hours	40	Y	Individual
Applied Project	Up to 8 pages	20	N	Individual

Essay	Up to 2 pages each	20	N	Individual
Professional Task	Up to 6 pages	20	N	Individual

HLTH 3017 Traumatic and Environmental Emergencies

Credit Points 10

Legacy Code 401071

Coordinator Robin Pap (https://directory.westernsydney.edu.au/search/name/Robin Pap/)

Description This subject deals with pathophysiology and pathogenesis of traumatic injuries and environmental emergencies as well as safe and effective out-of-hospital management of these patients. Best patient outcomes are achieved when out-of-hospital care forms part of a trauma system. Paramedics are required to make decisions to achieve the provision of the right care and transfer to the right hospital in the right time. This applies to both, the single-patient incident and the mass casualty situation. This subject aims to develop the knowledge and skills to safely and effectively manage the patient(s) suffering traumatic injury or an environmental emergency. Furthermore, the subject aims to prepare the paramedic student to be part of a major incident response.

School Health Sciences

Discipline Paramedical Studies

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 3014

Restrictions Students must be enrolled in 4669 Bachelor of Health Science (Paramedicine).

Assumed Knowledge

First and second year of the BHSc (Paramedicine).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the incidence and mechanism of injury of a range of major traumatic injuries.
2. Integrate patient presentation to underlying pathophysiology of traumatic injuries and environmental conditions.
3. Describe, defend, demonstrate and analyse evidence-based out-of-hospital management of major trauma and environmental emergencies including effective integration into a trauma system.
4. Apply clinical reasoning and problem-solving in complex single- and multiple-patient situations.
5. Explain and apply principles of major incident management.
6. Evaluate the roles and responsibilities of ambulance services and individual paramedics during major incident management including CBRN (chemical, biological, radioactive and nuclear) events.

Subject Content

The subject covers the paramedic response to a range of critical environmental, physiological and traumatic emergencies, including:
1. Mechanisms of injury
2. Head, brain and facial injuries
3. Spinal injury
4. Thoracic injury
5. Abdominal and genitourinary injury
6. Musculoskeletal and soft tissue injury
7. Burns
8. Crush, blast and ballistic injuries
9. Environmental Emergencies
10. Toxicology, poisoning and envenomation
11. Principles of major incident management
12. Roles and responsibilities at major incidents including Chemical, Biological, Radiological and Nuclear (CBRN) events

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 3018 Ethical and Legal Issues in Health Care

Credit Points 10

Legacy Code 401408

Coordinator Caterina Tannous (https://directory.westernsydney.edu.au/search/name/Caterina Tannous/)

Description From 2020 this subject replaces 400249 - Ethical and Legal Issues in Health Care. This subject enables students to explore and develop an understanding of the ethical and legal issues important within contemporary health care. Through the use of case studies students will analyse profound ethical and legal challenges facing current health care that are equally important to health professionals, patients/clients and society generally. Critical thinking about these issues will be encouraged. Students will also be encouraged to consider differing theoretical perspectives in their examination of ethical issues. Additionally, students studying to work within health care, including complementary medicine, will develop a comprehensive understanding of the requirements for ensuring that their practice conforms to legal doctrines and ethical standards.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects JUST 3005 - Ethical and Legal Issues in Health Care

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate the relationship between ethics and law and describe the key components of each.
2. Critically analyse the legal and ethical context in which health care occurs and its importance in relation to risk management.
3. Debate the inter-connection between the rights and responsibilities of patients/clients, health practitioners and the wider community within a health care systems.
4. Debate and appraise legal principles and doctrines relevant to health care.
5. Outline the process by which legal rules are determined and changed.
6. Critically evaluate ethical decision-making frameworks in order to evaluate their effectiveness in justifying a response to ethical dilemmas.
7. Critique and apply differing theoretical perspectives and legal principles in relation to ethical issues.
8. Analyse the social and political context of health care and identify the differences between policy and practice in health care implementation.
9. Appraise ethical and legal issues in relation to the practice of complementary and alternative medicine and its relationship with conventional medicine.

Subject Content

1. Ethics:
- The relationship between ethics and Law
- A Definition of ethics and Ethical behaviour
- professional codes of ethics
- historical perspectives on The relationship between complementary and alternative medicine (CAM) and conventional medicine
- Ethics and morality: moral reasoning; morality and the law; the role of emotion
- Ethical theories/approaches and decision-making frameworks
- Ethical principles: autonomy; non-maleficence; beneficence; justice; and their applicability within health care
- Veracity in health care
- The ethics of medical expert testimony
- The ethics of child protection work in health care: mandatory reporting/difficulty of false accusations
- The contradictions between public health and individual rights
- Ethical Issues in current health debates: Vaccination, pesticides and fluoride
- globalisation, profit motives and The pharmaceutical industry
- Current issues in ethics and law: quality of life and sanctity of life issues; health care as a right; ethical aspects of health resource allocation; ethical research and experimentation
- Understanding evidence based medicine, its advantages and disadvantages, in mainstream medicine and complementary/alternative medicine

2. Law:
- The relationship of ethics to Law
- how laws are made: statute Law and common Law
- Classifications of Law: substantive and procedural law; criminal and civil law and their relevance to health care
- Consent: legal requirements; potential actions in law; ethical underpinnings
- Negligence: Duty of care; Standard of Care; Damage and Litigation
- Professional and client relationships: foundational principles and characteristics; rights and responsibilities; privacy and confidentiality; complaints mechanisms
- Workplace issues: vicarious liability; OH&S requirements, privacy and freedom of information; EEO; New Industrial Relations Laws
- Specific legal requirements of professional practice: including poisons act and administration of drugs, including complementary medicines; Quarantine and Customs requirements and the Therapeutic Goods Administration; Registration and disciplinary proce
- The Importance of ensuring that practice conforms to legal Doctrine and Ethical Standards and its relationship to Risk management

HLTH 3019 Nutrition, Health and Disease

Credit Points 10

Legacy Code 301457

Coordinator Sunil Panchal (https://directory.westernsydney.edu.au/search/name/Sunil Panchal/)

Description In this subject you will explore the basic concepts of human nutrition in relation to various stages of the lifespan from infants to late adulthood. It also explores nutrition in relation to chronic health conditions such as obesity, cardiovascular disease and eating disorders. You will learn about the development of the Australian Dietary Guidelines and Nutrient Reference Values. You will also learn to make informed decisions with regard to nutritionally critical moments of the life span, emerging nutrition opinions or contemporary uses of nutrition in physical activity, sports and chronic health conditions.

School Science

Discipline Nutrition and Dietetics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects HLTH 2014 - Nutrition and Health 2 HLTH 2013 - Nutrition and Health 2

Restrictions

Successful completion of 120 credit points

Assumed Knowledge

An understanding of human nutrition, food and the metabolism of micro- and macro-nutrients and computer literacy.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the principles of epidemiology and health trends within Australia and worldwide
2. Explain how the Australian Dietary Guidelines and Nutrient Reference Values are determined and used to assess nutritional adequacy at both an individual and population level
3. Evaluate the impact of nutrition on health across the life span
4. Synthesise scholarly evidence on topics related to nutrition and health
5. Critically analyse the role of nutrition in relation to a range of chronic health conditions
6. Critically analyse the role of nutrition in relation to physical activity, sports nutrition issues, diet choices such as veganism and vegetarianism, and controversial fad diets

Subject Content

1. Principles of nutritional epidemiology
2. Health trends in Australia and worldwide
3. Concept, formulation and uses of the Australian Dietary Guidelines, Australian Guide to Healthy Eating, and Nutrient Reference Values (NRV)
4. Methods for assessing body composition and diet.
5. Nutritional requirements and food habits throughout key stages of the lifespan.
6. Relationship between nutrition and chronic metabolic and related diseases.
7. Relationship between nutrition and physical activity and sports nutrition issues.
8. Controversial issues in nutrition such as fad diets, and emerging opinions and misinformation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	4 x 20 minutes	20	N	Individual
Literature Review	1,200 words	35	N	Individual
Critical Review	4,000 words	30	N	Group
Presentation	5 minutes	15	N	Individual

Prescribed Texts

HLTH 3020 Global Nutrition and Food

Credit Points 10

Legacy Code 301458

Coordinator Li Li (https://directory.westernsydney.edu.au/search/name/Li Li/)

Description This subject aims to develop an understanding of the inter relationship between nutrition and health in Australian and Global contexts. The aim is to provide you with a sound foundation in nutritional anthropology, public health nutrition and health promotion in order that they can systematically analyse nutritional problems associated with world food issues; including those affecting minority and culturally and linguistically diverse groups within Australia; diseases of affluence and current health and nutrition issues in the community. An important objective of the subject is that you will learn the principles of health promotion and how to apply effective nutrition promotion strategies in community and population settings in order to reduce the burdens of various nutritional and lifestyle related disorders and diseases like: obesity, some cancers, diabetes and cardiovascular disease and malnourishment.

School Science

Discipline Nutrition and Dietetics

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects HLTH 3007 Global Nutrition Food and Community HLTH 3006 Global Nutrition Food and Community HLTH 3010 Nutrition and Community Health

Restrictions

Successful completion of 120 credit points

Assumed Knowledge

An understanding of human nutrition and associated health issues.

Learning Outcomes

On successful completion of this subject, students should be able to:

1.Analyse and profile demographic data of a select community.
2.Critique contributing factors and current issues that affect nutrition related health and wellbeing across a range of populations, including Indigenous/First nations communities.
3.Evaluate the nutritional status of a select community, using current research and published data.
4.Design a nutrition promotion program and program evaluation plan based on key principles and models in public health and health promotion
5.Identify national and international food and nutrition trends and critique the influence of food politics on the nutritional status of local and international communities
6.Evaluate factors contributing to Australian and global disease burdens pinpointing risk factors.

Subject Content

1.Community Nutrition Needs Assessment
2.Community profiling and demographic analysis
3.Environmental determinants of health
4.Obesogenic environments and nutritional status
5.Community food mapping
6.Australian food systems
7.Social determinants of health
8.Socio-ecological model of health, food and nutrition
9.Nutrition and Health issues in Indigenous populations
10.Health Promotion and public health nutrition
11.Principles and application of nutritional anthropology
12.International nutrition and food politics
13.Nutritional Epidemiology including non-communicable diseases and risk factors

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Simulation	2000 words	40	N	Individual
Proposal	2500 words	30	N	Group
Presentation	5 minutes each person	10	N	Individual
Quiz	2 x Online quizzes, 1 hour each	20	N	Individual

HLTH 3021 Obstetrics and Gynaecology

Credit Points 10

Description The aim of this subject is to prepare the student for out-of-hospital care of gynaecological, obstetric, and neonatal patient presentations. It focuses on understanding the theoretical and practical requirements to assess and manage female patients throughout the lifespan including management of the foetus and neonate.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2028 AND
HLTH 2029

Learning Outcomes

After successful completion of this Subject, students will be able to

1. Describe the epidemiology of obstetric, gynaecological, and neonatal out-of-hospital management
2. Apply knowledge of typical and atypical growth and development of the mother and foetus during pregnancy
3. Demonstrate out-of-hospital assessment and management of gynaecological, obstetric, and neonatal presentations
4. Employ professional and ethical behaviour that recognises other health practitioners in the management of select gynaecological, obstetric, and neonatal presentations
5. Distinguish appropriate assessment and management of the individual who has been subject to intimate partner violence

Subject Content

Theoretical and practical knowledge and management within the out-of-hospital setting for:

1. Normal pregnancy and parturition
2. Common complications in pregnancy and obstetric emergencies
3. Obstetric and gynaecological disorders
4. The neonate
5. Intimate partner violence

HLTH 3022 Paramedicine Leadership

Credit Points 10

Description This subject introduces students to Paramedicine leadership in the context of an emerging profession. Students will undertake a 4-week clinical placement block with an emergency ambulance crew, which will, in part, be used as a basis for reflective learning activities and critical analysis. Students will explore and discuss concepts of organisational and clinical leadership and supervision, drawing from their clinical placement and other experiences. Students will learn about leadership styles, principles of clinical education, mentoring and supervision strategy, as well as risk assessment, mass casualty and organisational behaviour. Staff wellness, organisational efficiency and sustainable practices will be common goals to aspire to. This ground-up leadership is intended to contribute to organisational success and mitigates the risk of victimology among new entrants to the field.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Learning Outcomes

The new proposed Subject Learning Outcomes are:

1. Apply effective communication skills, ethics, professionalism and consistent safe work practices in a real-world environment
2. Assess patients, formulate a clinical impression, and implement a prioritised clinical management plan under supervision
3. Analyse their individual leadership style and identify personal strengths and weakness
4. Integrate leadership theory into paramedic practice by considering leadership typology, theoretical application and implications
5. Justify use of community-based disaster risk assessment and Mass Casualty Incident Management.
6. Conceptualise and articulate one's role in contemporary leadership functions such as visioning, leading through teams, human capital leadership, coaching and workplace health and safety.

Subject Content

- During clinical placement

1. A 4-week clinical placement involving application of skills and knowledge in scene management and patient examination and assessment, clinical decision making, and patient management. Students will complete a reflective practice exercise that will be used to frame the post-clinical placement learning around leadership as it relates to patient safety and organisational efficiency.

- Mentoring
- Preceptor roles and responsibilities
- Understanding self as a leader
- Workplace dynamics
- Leadership types:
    - o Organisational
    - o Operational
    - o Professional
    - o Clinical
- Within the organisation and operation leadership we include the paramedicine's role in Mass Casualty Incidents and community-based risk assessment.
- Leadership through staff support:
    - o Staff welfare and support

HLTH 3023 Integrated Paramedicine

Credit Points 20

Description In this capstone subject students will extend their learning to include knowledge production and translation to practice. Students will investigate clinical questions through engagement in collaborative processes such as peer to peer teaching and critical observation. Students will develop the capacity to analyse practice and provide

constructive feedback to improve clinical quality and enable translation and dissemination of knowledge into practice.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 2028 AND
HLTH 2029

Restrictions

Must be enrolled in 4790 Bachelor of Paramedicine.
Must have completed 160 Credit Points.

Learning Outcomes

1. Analyse self-practice to identify gaps in knowledge, skills or behaviours specific to paramedicine practice
2. Synthesise evidence in order to answer self-formed questions
3. Work collaboratively to formulate education strategies
4. Apply evidence transfer and translation
5. Create educational strategies to promote evidence transfer and translation
6. Facilitate effective peer to peer teaching in a medical simulation context
7. Critically analyse clinical practice and provide quality improvement feedback

Subject Content

1. Evidence synthesis and critical appraisal
2. Simulation education facilitation
3. Preceptorship and mentoring
4. Critical observation and analysis
5. Peer to peer debriefing and feedback
6. Translation of evidence into practice
7. Transition to professional practice

Special Requirements

Essential equipment

Must have appropriate paramedicine uniform and equipment as per the Paramedicine Uniform Policy.

HLTH 3024 Safety and Quality in Paramedicine

Credit Points 10

Description This subject develops core competencies for paramedic practice in real-world situations by facilitation of an emergency ambulance placement. This unit introduces students to patient safety and quality in paramedicine. Students are taught about the principles of patient safety and how these are applied in the out-of-hospital setting and paramedicine context. Besides ensuring patient safety, healthcare organisations need to monitor, analyse, and improve the care they provide. This unit will teach students about quality in healthcare and more specifically in paramedicine. Students will learn about the science of improvement and how it can be applied to continuously improve the care for patients. The role and responsibilities of the individual frontline paramedic within an organisation's patient safety and quality framework will be explored.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) HLTH 3022

Restrictions

Must be enrolled in 4790 Bachelor of Paramedicine

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Demonstrate a high level of professionalism, effective communication skills, ethics, and consistent safe work practices in a real-world environment.
2. Argue the importance of patient safety in healthcare and in paramedicine.
3. Analyse the relationship between error and harm, and the causation of harm from unsafe acts.
4. Analyse issues of human factors in healthcare and specifically in paramedicine, and apply human factors principles to create safer systems of care.
5. Apply principles of patient safety and frameworks for designing safer and more reliable systems of out-of-hospital care.
6. Critically appraise models and frameworks for quality improvement by applying principles of improvement science.
7. Debate the development of meaningful measures to evaluate the quality of care and their application in the context of improvement science.

Subject Content

The subject covers patient safety, quality, and quality improvement in the context of paramedicine. To achieve this the subject will cover the following topics:

1. Patient Safety in Healthcare and in Paramedicine
2. Errors in Healthcare and Patient Harm
3. Human Factors and Crew Resource Management (CRM) in Paramedicine
4. Responding to Adverse Events
5. Quality and Quality Improvement in Healthcare and in Paramedicine
6. Improvement as a Science
7. Measurement for Improvement
8. Data Analysis in Improvement Science

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Students must hold a valid and current First Aid Certificate from a Registered Training Organisation. Use the link to the Special Requirements webpage below for more information.

Student Compliance Information for all Health-Related Placements

Students must meet Western Sydney University course requirements as well as any special, legislated, or policy-mandated requirements.

Western Course Requirements
Visit the Special Requirements webpage for details about your course.
Special Requirements: https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements
To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your course, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet: https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6 (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements: the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as
If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
If you need to meet different state, territory or country compliance requirements.
NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire course.
Current approved first aid certificate valid for your entire course - approved course providers can be found at the Government Training website
http://training.gov.au
Other non-health related requirements.
Student Compliance Resources are also available on the Placements Hub web page.

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Essential equipment

Students are expected to have a complete WSU Paramedicine Student uniform as described in the paramedicine student uniform guide. No uniform means the student is unable to complete in practical classes or undertake emergency ambulance placement. Students are expected to have their own stethoscope, safety googles, penlight torch and sphygmomanometer.

HLTH 3025 Paramedicine Trauma Care

Credit Points 10

Description This subject deals with pathophysiology and pathogenesis of traumatic injuries, conditions arising from uncompensated environmental exposures, and toxicological emergencies. Students are taught how to care for these patients in the out-of-hospital setting. Best patient outcomes are achieved when out-of-hospital care forms part of a trauma system. Therefore, paramedics are required to make decisions to achieve the provision of the right care and transfer to the right hospital in the right time. This unit aims to develop the knowledge and skills to safely and effectively care, treat and manage adult and paediatric patients who have sustained traumatic injury or injuries, conditions arising from uncompensated environmental exposures, and toxicological emergencies.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Students must be enrolled in 4790 Bachelor of Paramedicine.

Assumed Knowledge

First and second year of the Bachelor of Paramedicine

Learning Outcomes

1. Examine and appreciate the domestic and international incidence of a range of major traumatic injuries.
2. Link patient presentation to underlying pathophysiology and pathogenesis of traumatic injuries and environmental conditions.
3. Demonstrate and analyse evidence-based out-of-hospital management of major trauma, environmental emergencies and toxicological emergencies.
4. Describe effective integration or out-of-hospital care into a trauma system.
5. Apply clinical reasoning and problem-solving in complex patient presentations and situations.
6. Explain and apply principles of out-of-hospital trauma care to the paediatric population.
7. Apply relevant NSQHS standards to out-of-hospital trauma care provision.

Subject Content

The subject covers the paramedic response to a range of major traumatic, environmental and toxicological emergencies. To achieve this the subject will cover the following topics:

- Human Factors, Non-Technical Skills and CRM in Out-of-Hospital Trauma Care
- Trauma Management Overview, including Trauma Systems
- Airway Management in the Trauma Patient
- Shock (advanced pathophysiology with focus on trauma-related types, i.e. haemorrhagic, neurogenic, obstructive, traumatic)
- Specific traumatic injuries to various body regions
- Burns

- Paediatric Trauma
- Environmental Emergencies
- Toxicological Emergencies
- Anaphylaxis

HLTH 3026 Movement and Skill Analysis

Credit Points 10

Coordinator Kylie Steel (https://directory.westernsydney.edu.au/search/name/Kylie Steel/)

Description This subject examines the scientific basis for movement and sports skill development. An understanding of the principles of movement and motor skill and how they apply to performance is examined through a range of movement tasks required for track and field athletics and some team sports. Laboratory activities will focus upon the basic movement tasks of throwing, jumping, balancing, striking, running and rotary activities. An examination of the instruments used in efficient movement analysis is undertaken.

School Health Sciences

Discipline Human Movement

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Learning Outcomes

After successful completion of this Unit, students will be able to:

1. Examine the anatomical, physical and mechanical principles which underlie movement
2. Demonstrate video analysis techniques to evaluate the motor skill performance of athletes
3. Apply scientific principles to improve motor skill performance in a variety of sporting contexts

Subject Content

1. Revision of skeletal and muscular systems.
2. Movement principles: balance, force, levers, motion, momentum; associated with track and field athletics and some team sports.
3. Mechanical factors affecting motion in sport: friction, air, water resistance, gravity, impact, spin, elasticity.
4. Application of movement principles through practical sessions in a range of sports.
5. Evaluation of skill performance – isolating specific motor patterns, determining and applying movement principles (coaching points), classifying skill to enhance performance, learning movement skills.
6. Cinematography – use of videos for efficient movement analysis of sporting skills.
7. Practice and coaching considerations to enhance the acquisition and development of skills.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Poster	500 words	20	N	Individual
Presentation	15 minutes + 500 words	30	N	Individual
Portfolio	1000 words + content	50	N

HLTH 4001 Professional Reasoning

Credit Points 10

Legacy Code 401125

Coordinator Ali Gebhardt (https://directory.westernsydney.edu.au/search/name/Ali Gebhardt/)

Description This final year subject focuses on the transition from student to practitioner. The aim of this subject is to provide students with learning opportunities that will consolidate and enhance their competence in professional practice throughout their career. Professional competencies of central concern include advanced professional reasoning skills, evidence based-practice, reflective practice, personal and career management strategies, self-directed and life-long learning. These competencies contribute positively to the effective management of graduates' professional practice in various work contexts, and their future career paths. Acquisition of such skills will allow the graduate to direct and adapt to change in these areas.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Incompatible Subjects HLTH 7013 - Professional Reasoning

Restrictions

1. Students must be enrolled in 4711 Bachelor of Occupational Therapy or 4712 Bachelor of Occupational Therapy (Honours).

This is a specialty subject offered as a compulsory core subject of the occupational therapy program. It is profession specific, preparing students to practice as an occupational therapist and not relevant as an elective for non-occupational therapy students.

2. Students must have completed 240 credit points within 4711 Bachelor or Occupational Therapy or 4712 Bachelor of Occupational Therapy (Honours)

This is a capstone subject designed to prepare students for transition into their final practice placement(s) and future practice. The subject is

scheduled prior to students completing their final practice placement(s) to optimise application of theory, skills, and competencies. Completion of compulsory core subjects is required to facilitate this transition.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify various models and classifications of professional reasoning and analyse their use in practice
2. Apply occupational therapy theories and conceptual models to guide professional reasoning in practice scenarios
3. Apply the occupational therapy problem solving process to practice scenarios and reflect on professional reasoning during the different stages of problem solving
4. Reflect on their own professional reasoning skills and identify strategies to move from a novice to expert reasoning
5. Apply principles of ethical reasoning to various practice scenarios

Subject Content

1. Models and theories of professional reasoning
2. Use of professional reasoning to guide client management
3. Models and theories of occupational therapy practice and process
4. Using evidence based practice to guide client management and the role of evidence-based practice in professional reasoning
5. Strategies to move from novice to expert in professional reasoning
6. Principles of ethical reasoning

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	2,000 words	40	N	Individual
Reflection	1,500 words	30	N	Individual
Learning Contract	1,500 words	30	N	Individual

HLTH 4002 Evidence-Based Practice (Advanced)

Credit Points 10

Legacy Code 400944

Coordinator Rosalind Bye (https://directory.westernsydney.edu.au/search/name/Rosalind Bye/)

Description In this subject, students incorporate previous research and biostatistics knowledge to develop new skills for using evidence to inform all aspects of their professional practice. Evidence-based practice uses an enquiry led approach to manage expanding and uncertain knowledge by formulating answerable questions, effectively searching literature, critically appraising evidence validity and results, and to assess its significance in clinical practice and healthcare decision-making. Students will incorporate evidence in communication and shared decision-making processes for patient scenarios relevant to their program. Students will embark on research training through studying the theory and application of research methods to honours research in their chosen field and practising the skills to analyse evidence in the health sciences.

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) Students need to have done HLTH2024 Research Methods in Health PLUS students in Occupational Therapy Physiotherapy and Podiatric Medicine must have done ONE clinical subject from their specific program These are outlined below
Students enrolled in Program Code 4663 (Continuing) or 4711 (Current) must have completed REHA 2007
Students enrolled in Program Code 4663 (Continuing) or 4711 (Current) must have completed REHA 2004
Students enrolled in Program Code 4663 (Continuing) or 4711 (Current) must have completed REHA 3004 AND
HLTH 2024 - Research Methods in Health AND
REHA 3049 - Speech Pathology Practice 3 for students enrolled in 4788 - Bachelor of Speech Pathology (Honours)

Incompatible Subjects HLTH 3005 - Evidence-Based Practice

Restrictions

Students must be eligible to enrol in honours in the nominated programs. This subject is only relevant to honours students in clinical health sciences and is specifically tailored to accommodate the program and progression requirements of such students. It is not appropriate as a general elective.

Assumed Knowledge

Knowledge and skills of Foundations of Research & Evidence-based Practice 400863 and Research Methods (Qualitative and Quantitative) 400864 AND at least one clinical subject of the student's program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conduct sensitive and specific PICO search strategies
2. Identify key classification, design and result information from research studies
3. Critically appraise validity and clinical significance of research
4. Justify value of evidence according to its level, quality and applicability
5. Incorporate evidence into clinical reasoning and decision making
6. Negotiate evidence-informed shared decision-making
7. Formulate an appropriate design and research protocol for the honours investigation in conjunction with the honours supervisor

8. Analyse the organisational and ethical issues of research in health practice settings, and practically apply this to the honours research topic
9. Justify the selection of specific data analysis techniques for use in the student fs research question

Subject Content

1. Exploring reasons for EBP
- history of EBP development in health care
- management of professional disagreement, situation effects and bias

- management of information overload
- management of uncertainty
2. Appraising evidence
- for studies of interventions, diagnostic tests, prognosis, experiences and systematic reviews and guidelines
- level of evidence
- Internal Validity
- statistical and clinical significance
- Generalisability, Applicability and Usefulness
3. Implementing evidence into practice
- incorporating evidence with expertise, values and situations
- limitations of EBP paradigm
- using evidence in clinical reasoning and decision-making
- communicating evidence to clients
- evidence-informed shared decision-making
- evaluation of EBP
4. Honours research development knowledge and skills
- transition Issues: Becoming A clinical health science Honours researcher and Understanding The Honours research training process
- Working with your supervisor and developing good research practice skills
- Scholarly writing and using library resources
- research design of Honours Projects
- ethics of research in The health sciences
- developing, writing and Presenting An Honours research proposal
- data analysis techniques and managing data in Honours Projects

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Critical Review	600 words plus search strategy	15	N	Individual
Viva Voce	20 minutes	25	Y	Individual
Final Exam	90 minutes	35	N	Individual
Proposal	2,000 words	25	N	Individual

HLTH 7001 A Global Perspective on Social Determinants of Health

Credit Points 10

Legacy Code 400841

Coordinator Evan Atlantis (https://directory.westernsydney.edu.au/search/name/Evan Atlantis/)

Description Evidence is mounting that the health of individuals, groups and whole populations is significantly determined by social factors - the social determinants. The related research has its origins in concern for the growing inequalities in health both within and between countries. This subject examines the framework of the social determinants of health in a global perspective and includes a reflection on the phenomenon of globalisation and its impact, both positive and negative on people's health. Students will critically reflect on this relatively new and emerging body of knowledge and research which clearly situates the maintenance of health and healthy societies within their socioeconomic and socio-cultural contexts. They will also examine implications for policy, health systems and different groups within society.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the social determinants of health in their global and local manifestations
2. Critically evaluate the evidence supporting the social determinants thesis and causal pathways offered to describe the link between social factors and inequitable health outcomes;
3. Critically analyse the impact of globalisation and social structure and processes on health inequalities within Australia and internationally;
4. Critically appraise the link between social stratification, differential exposure, differential susceptibility and differential consequences in generating health inequities
5. Critically assess the capacity of national health systems to reduce health inequities and have a better balance between acute care and prevention/health maintenance.

Subject Content

1. Social Determinants of Health and Illness
- The social health gradient ? international evidence; Health equity, equality and inequality
- Proximal and distal Determinants of health inequities
- The Global marketplace
2. Impacts of Globalization, on:
- policy making (World bank and WHO); political and economic structures and processes
- health professional training, manpower and Migration

- environments for health: local and Global, including climate change
3. Responses:
- frameworks for policy development using The social Determinants perspective
- frameworks for Analysing The links between globalization and health
- Reorienting health services
- inter-sectoral partnerships and collaboration

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Task	2,000 words	40	N	Individual
Professional Task	3,000 words	50	N	Individual
Professional Task	300 words	10	N	Individual

HLTH 7002 Building Organisational Capacity in Health Care

Credit Points 10

Legacy Code 400846

Coordinator Olayide Ogunsiji (https://directory.westernsydney.edu.au/search/name/Olayide Ogunsiji/)

Description The concept, form and structure of health care organisations are explored. Organisational theory is used to analyse contemporary health care structures. Factors which influence organisational design, function and effectiveness are discussed including: organisational behaviour, strategy, culture, power and politics, technology, sustainability and effectiveness. A major focus is planning for strategic organisational development to meet the challenges of rapid change and the need for performance improvements in patient care delivery. Concepts related to the strategic development of workforce capacity in the health care arena considered through the application of theories including the learning organisation. Leadership is examined with emphasis on change management.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects PUBH 7017 - Leadership and the Development of Organisational Capacity in Health Care

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess the impact of organisational culture, power, politics and technology on readiness for change in health care organisations.
2. Critically analyse organisational strategy, design and structure of health care organisations by applying organisational theory.
3. Investigate how effective change leadership can lead to improved organisational capacity and performance.
4. Critically reflect on and critique health care organisational capacity building in a rapidly changing environment.
5. Recommend strategies for workforce capacity development within a contemporary health care setting.

Subject Content

Module 1 - Introduction to organisational theory, design and structure, and its application to the health care environment
- organisational theory and structure - organisational structures, function, formal systems of power and authority, how they are affected by the internal and external environment in the health care sector
- factors influencing organisational design and function in health care including organisational behaviour, strategy, culture, power and politics, technology, sustainability and effectiveness
- organisational culture and subcultures in health care
Module 2 - Organisational capacity building, workforce development and change management in the health care environment
- leadership, adaptive organisational cultures and change
- theories and frameworks for organisational capacity building
- Models and strategies for workforce development
- managing conflict, pandemic, power and politics in health care organisations
Module 3 - Improving organisational performance
- theories and concepts underpinning organisational performance improvement in health care
- Measuring organisational performance and effectiveness
- leading organisational capacity building and improving organisational performance in the health care arena

HLTH 7003 Community and Public Health Nutrition

Credit Points 10

Legacy Code 301186

Coordinator Li Li (https://directory.westernsydney.edu.au/search/name/Li Li/)

Description This subject examines the principles of public health nutrition and a systems approach, and enables students to use them to identify and analyse nutrition issues and outcomes. Students will learn about the food and nutrition system and its drivers, and examine their impact on current food, nutrition and nutrition-related health issues. They will explore public health nutrition priorities in Australia and 'at risk' groups such as Aboriginal and Torres Strait Islander peoples, culturally and linguistically diverse groups, and other vulnerable groups. They will learn to interrogate nutrition-related policies in relation to public health nutrition priorities and contemporary topics in Australia and similar contexts. Students will learn about the role of advocacy in promoting a sustainable and equitable food supply system, and improving food and nutrition outcomes for populations.

School Science

Discipline Nutrition and Dietetics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Must be enrolled in postgraduate program

Assumed Knowledge

Undergraduate knowledge of human nutrition, including nutrition science, life cycle nutrition, and the relationship between diet and disease.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply principles of public health nutrition and a ?esystems approach?f to analyse population-level food and nutrition issues and outcomes.
2. Analyse the food and nutrition system in Australia and evaluate the impact of relevant drivers on the components as well as the whole of the system.
3. Critique current policies, strategies and advocacy practices in Australia and similar contexts, in relation to public health nutriton and the food system.
4. Identify public health nutrition issues and priorities in Australia and similar contexts, and in their populations and ?eat risk?f subgroups, and examine how these issues and priorites have been addressed and the outcomes.
5. Communicate professionally and effectively to a range of audiences, in written and oral formats.

Subject Content

1. The principles of public health nutrition and a ?esystems approach?f, and its relationship with population food, nutrition and health outcomes.
2. An introduction of food and nutrition system and its drivers, such as the social, economical, political, and environmental drivers.
3. Public health nutrition issues and priorities in Australia and in ?eat risk?f groups such as Aboriginal and Torres Strait Islander peoples, culturally and linguistically diverse groups, and other vulnerable, minority groups.
4. Policies and strategies, such as nutrition and food monitoring and surveliance, to examine current nutrition and nutritionally-related health issues, and promote population-level nutrition outcomes.

5. The purpose and ?ehow to?f of strategic and effective advocacy in influencing nutrition, food and health policy and legislation, and the food and nutrition system, in order to promote a sustainable and equitable food supply, and adequate population-level nutrition.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 7004 Dissertation

Credit Points 40

Legacy Code 401079

Coordinator Amit Arora (https://directory.westernsydney.edu.au/search/name/Amit Arora/)

Description This subject requires students to complete a substantial piece of independent research. Dissertations will involve the in-depth examination of a particular topic/question, and should demonstrate evidence of ability to undertake sustained critical analysis. The dissertation provides an opportunity for students to demonstrate that they can consolidate knowledge acquired throughout their course of study, understand how existing evidence/information relates to research topics, and how their own work adds to this body of knowledge. Independent thinking is required, including the ability to critique one's own work and that of others, as well as articulating the implications of their own research and support their findings through their written dissertation. Students will have the opportunity to participate in workshops where they will gain skills in defining a clear research question, preparing a formal research proposal, conducting a literature review, ethics and research, and formal writing at a professional standard. Findings of student work with be presented at an end of semester research seminar. This subject can also be taken over two semesters (see 401282 Dissertation (Part-Time)).

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 40cp

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) For students enrolled in 4702 Master of Public Health or 4698 Master of Health Science courses only
AGEN 7005 Research Protocol Design and Practice
and
HLTH 7008 Introduction to Biostatistics
OR
HLTH 7025 Healthcare Data for Decision making
OR
HLTH 7015 Qualitative Research Methodology in Health
For students enrolled in 3749 Master of Science and 4738 Master of Epidemiology courses only
HLTH 7008 Introduction to Biostatistics
For all students
PUBH 7016 Introduction to Epidemiology

Equivalent Subjects The two units below are equivalent to each other

HLTH 7004 Dissertation (Full-time)
HLTH 7020 Dissertation (Part-time)

Restrictions

To enrol in this unit, students must be enrolled in a post-graduate program and have a GPA of 5.5 or greater. Students must have an approved Masters Dissertation Proposal before enrolling. Students must submit prior to enrolment a proposal no longer than 3 pages comprising the following: 1. Proposed title 2. Background and rationale 3. Research objectives 4. Research plan (including study design, data sources, and analytic strategy) 5. Expected outcomes and benefits 6. Risk identification and mitigation plan 7. Ethical implications 8. Budget and how research costs are to be met (if required) 9. Timeline 10. Supervisor endorsement. 11. References Approval of the Dissertation Proposal must be provided by the subject Coordinator to ensure that the project meets the expected scale and scope of a 40 credit point Dissertation. For students enrolled in the Master of Public Health, Master of Health Science or Master of Epidemiology, they are also required to have completed 80cp before they can enrol in this subject.

Assumed Knowledge

It is assumed that the student would have completed core (or foundational) subjects associated with their Masters program, ideally in relevant research design and practice related disciplines.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Argue for the significance of research and their impact on society
2. Systemically and critically analyse literature and information sources that are related to the identified research question / hypothesis
3. Justify a research proposal in relation to its significance in the literature, its anticipated impact and the ethical considerations involved
4. Apply appropriate research methods and evaluation processes to collate and critically analyse/interpret data
5. Compose a scientific research report that synthesises research findings.
6. Effectively communicate/disseminate findings of a research project to a variety of audiences

Subject Content

Research proposal development in consultation with supervisor(s)
Data collection, collation, and analysis

Interpretation and dissemination of research findings in the form of a professionally-written research report
1. Research proposal development in consultation with supervisor(s) and subject co-ordinator feedback
2. Data collection, collation, and analysis
3. Interpretation and dissemination of research findings in the form of a professionally-written dissertation or a draft journal article
4. Dissemination of research findings in the form of a seminar presentation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	3-4 pages	S/U	Y	Individual
Thesis	up to 20,000 words for Dissertation/ up to 8,000 words for draft Journal article	90	Y	Individual
Presentation	15 minutes	10	N	Individual

HLTH 7005 Health Financial Management

Credit Points 10

Legacy Code 400845

Coordinator Evan Atlantis (https://directory.westernsydney.edu.au/search/name/Evan Atlantis/)

Description This subject provides health leaders with an introduction to financial management in health and aged care settings as a basis for understanding the impact of leadership decision-making on financial outcomes and how financial decision-making impacts on clinical service delivery. Content includes an overview of health economics and economic evaluation, health care funding models, the principles, practices and tools for financial planning and management, basic accounting principles and financial terminology and using financial information and reporting for negotiating financial plans, tracking and evaluating financial performance and using financial information in decision-making within the clinical environment.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 7322 - Health Economics and Comparative Health Systems LGYA 7489 - Resources management in Aged Care

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Be able to ccritically examine different funding arrangements used internationally, and/or between the Commonwealth and the States in Australia for heath and aged care services.
2. Be aware of recent reforms in funding, including government funding, non-government funding, user pays, and current and future issues in financing.
3. Understand basic accounting principles and the language of financial reporting.
4. Understand financial management issues, such as accounting for overheads, capital assets, short and long-term liabilities and depreciation.
5. Critically analyse the reporting systems used by health and aged care organisations, including budget statements.
6. Prepare budgets and economic appraisals of funding options.
7. Understand how health information is used to develop performance indicators for management of cost centres, be able to analyse budget variances and evaluate options eg in response to gbudget blowouts h.
8. Prepare an application for funding, with consideration of offsets and alternative funding strategies.

Subject Content

- national and Regional funding responsibilities, budget determination and Distribution of funds.
- state government role, resource Distribution formula and episode funding.
- Recent policy Initiatives and opportunities for reform.
- Alternative funding strategies to government (e g, sponsorships, privatization, competitive tendering and fee-for-service arrangements).
- other Models and Initiatives for funding of different health care systems, eg, Hong Kong.
- external and Internal environments which influence financial performance of organisations.
- principles of health and aged care services sector financial management and accounting.
- management accounting and how financial events are reported.
- key performance indicators and cost centre report interpretation.
- how to Evaluate financial position eg with performance ratios, Contract services or purchase, profit, loss and return on investments.
- development and use of health information for eg, casemix funding and performance indicators.
- accounting for capital Assets eg capital charging.
- how to conduct An economic appraisal of A new development.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	500 words	20	N	Individual
Report	1,500 words	30	N	Individual
Professional Task	200 words	10	N	Individual
Report	2,000 words	40	N	Individual

HLTH 7006 Health Services and Facilities Planning

Credit Points 10

Legacy Code 400844

Coordinator Evan Atlantis (https://directory.westernsydney.edu.au/search/name/Evan Atlantis/)

Description Planning occurs at all levels within all health organisations, government, non-government and in the private sector. There is a hierarchy in planning health services with some global overarching policy documents, national agreed priorities which affect corporate and regional plans as well as local services and projects. Planning focuses on future directions for health, is value based and resource allocation driven. The process of health planning will be outlined including how to conduct a needs analysis, develop an evidence based approach, consult with stakeholders including the community, document an implementation plan and evaluate outcomes.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects BUSM 7104 - Strategic Analysis and Decision Making

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss the concept of planning, the planning process and the need for planning by health managers
2. Demonstrate knowledge of the differences between strategic management, strategic planning, business planning and health service planning and their application in the public and private sectors
3. Demonstrate the capability to prepare key planning documents, including corporate and strategic plans, business plans and health service plans
4. Describe the differences between mission statements, goals, strategic objectives, operational objectives and balanced scorecard approaches to planning and their application in developing planning documents
5. Conduct a needs analysis including stakeholder consultation, analysis of relevant qualitative and quantitative data based on appropriate data sets and the capacity to collect relevant information
6. Develop planning competencies in the preparation of a strategic plan for a service of choice; using external and internal environmental scanning and population based planning approaches
7. Develop planning competencies in the preparation of a health service plan; including application of planning methodologies such as role delineation, data analysis of relevant data sets, clinical stream planning approaches including models of care, situational analysis and links with facility planning and asset management
8. Develop critical analysis skills in defining key issues for the planning process and strategies to address the issues
9. Develop and complete an implementation plan including risk mitigation strategies and identify and apply criteria to evaluate a plan

Subject Content

1) Strategic Planning in Health
2) Developing and implementing Strategic plans in the health sector
3) Developing service plans in the health sector
4) Conducting a needs analysis
5) Conducting community consultations
6) Evaluating health system performance (balanced scorecard)
7) Using evidence in health service delivery and evaluation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Summary of presentation	250 words	20	N	Individual
Presentation	15 minutes	20	N	Group
Report	2,000 words	60	N	Individual

HLTH 7007 Health Workforce Planning

Credit Points 10

Legacy Code 400843

Coordinator Stewart Alford (https://directory.westernsydney.edu.au/search/name/Stewart Alford/)

Description This is a flexible learning subject looking at Human Resource Management as a strategic activity of health organisations especially as workforce shortages pose significant challenges to the health, welfare and aged care sectors. The workforce, with appropriate knowledge and expertise, is essential to the efficient and effective delivery of quality health services. Successful organisations shape their workforce to anticipate current and future business directions and goals. Workforce planning is a crucial element of this approach and its success.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 8572 - Human Resources Management LGYA 7490 - Workforce Planning and HR Issues in Aged Care LGYA 4898 - Human Resource Management

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyze the health industry workforce profile based on appraisal of national and international workforce data.

2. Evaluate human resources management and information management systems used in health care organisations to develop and manage critical workforce data.
3. Identify future workforce needs within the health care industry and apply principles of strategic human resource planning to address workforce issues.
4. Manage an organisational workforce, including recruitment and selection, performance management, training, development and employee relations, for the health and aged care industry

Subject Content

1. The health industry workforce profile based on an analysis of rigorous workforce data.
2. Human resources management and information systems used in health care service organisations to develop and manage critical workforce data.
3. Identification of future workforce needs within the health care industry and apply principles of strategic human resource planning to address workforce issues.
4. Development of skills in workforce management, including recruitment and selection, performance management, training, development and employee relations, for the health and aged care industry
5. Conducting staff appraisals.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Workforce planning report	1500 words	40	N	Individual
Workforce performance report	2500 words	60	N	Individual

HLTH 7008 Introduction to Biostatistics

Credit Points 10

Legacy Code 401077

Coordinator Paul Fahey (https://directory.westernsydney.edu.au/search/name/Paul Fahey/)

Description Most professions in the health sciences need to read and interpret statistics relating to individual health status, interpret health risks in communities, and engage in the evaluation of interventions, or impact of health policies or programs. Many public health practitioners are actively involved in surveillance, quantitative research and/or evaluation. This subject provides students with the fundamental skills they need to analyse and interpret results from quantitative data collections. Content includes descriptive statistics, undertaking comparisons between groups, quantifying associations between variables, and statistical power. The subject is highly applied with the main focus being on interpretation and appraisal of statistical results and conducting analyses using statistical software.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

High school mathematics (arithmetic, formulas and algebra, reading graphs).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Select appropriate descriptive statistics and graphs for different data types and produce these from a data set using statistical software.
2. Explain key concepts such as statistical inference, the central limit theorem, sampling distributions, probability distributions, confidence intervals, hypothesis tests, etc
3. List the key steps required to produce a confidence interval and to conduct a hypothesis test
4. Use statistical terms and symbols correctly when reviewing and interpreting statistical material
5. Compute statistical power or required sample size for a confidence interval or hypothesis test
6. Select appropriate statistical analyses to address a given research question and implement these analyses on a data set using statistical software
7. Interpret the output of statistical analyses clearly and correctly in a written report
8. Appraise the appropriateness of statistical results relative to all relevant considerations: including the research question, data types, shape of distribution, statistical power and other, procedure specific, assumptions.

Subject Content

1. Data and data types (categorical, ordinal, quantitative, etc)
2. Descriptive statistics (mean, standard deviation, median, quartiles, frequency, relative frequency) and graphs (bar chart, histogram, scatterplot, boxplots, run charts, etc)
3. Using statistical software
4. Statistical inference (populations, random samples and the probability relationship between them)
5. Probability distributions (binomial and normal), what they represent and how they are used
6. Confidence intervals as a method of statistical inference and the role of the central limit theorem
7. Hypothesis tests as a method of statistical inference, the 5 steps in hypothesis testing
8. t-procedures for statistical inference on means and mean differences
9. Chi-square procedures for statistical inference on associations between categorical variables
10. Statistical power and sample size in relation to one sample and difference between two sample confidence intervals and hypothesis tests only
11. Correlation and multiple regression models and associated confidence intervals and hypothesis tests

12. Nonparametric alternatives to t-procedures

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 7009 Leadership and Change

Credit Points 10

Legacy Code 400414

Coordinator Rachel Gregory-Wilson (https://directory.westernsydney.edu.au/search/name/Rachel Gregory-Wilson/)

Description Within the context of a society where change is ongoing, leadership is required in order to achieve optimum outcomes. Students in this subject will be encouraged to critically explore leadership styles, leadership and change theories, leadership in learning organisations and the community within a primary health care framework. This subject will enable students to assess both the internal and external environments of organisations, communities and individuals as the need for change is identified, planned and implemented. The subject identifies the central strategies necessary for the development of leaders who are able to achieve sustainable change outcomes.

School Nursing & Midwifery

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYC 0566 - Processes of Change

Restrictions

Students must be enrolled in 4569 Master of Primary Health Care or 4694 Master of Primary Health Care.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically apply the principles of leadership theory to the development of effective individual and organisational leadership strategies for practice within a primary health care approach;
2. Reflect on the relationship between leadership and management;
3. Understand and incorporate the importance of emotional intelligence as a factor in leading sustainable change processes;
4. Critically examine the empowering role of education in facilitating change outcomes;
5. Critically examine the relationship between leadership, organisational culture and sustainable change;
6. Critically explore the effects of internal and external environmental factors on organisations as they move through change processes.

Subject Content

Theories and styles of leadership.
Empowerment, motivation and sustainable change.
Critical reflection and change outcomes.
Learning organisations and leadership.
Mentorship in leadership development.
Internal and external environmental influences on change processes.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 7010 Nutrition Promotion

Credit Points 10

Legacy Code 301185

Coordinator Li Li (https://directory.westernsydney.edu.au/search/name/Li Li/)

Description This subject aims to introduce students to the principles and practices of nutrition and health promotion, for use in primary and secondary prevention. Students will learn and critically appraise all aspects of the program planning cycle, from needs assessment to evaluation. Students will develop their capabilities to design initiatives that are responsive to, and contribute to, the community and public health nutrition evidence base. Students will acquire knowledge related to communication, food and social marketing, nutrition education, and nutrition and behaviour change theories; and learn how to translate this into effective nutrition promotion initiatives that aim to influence food choice, intake, supply and/or access. Lastly, students will learn to work in, and/or manage, multi-disciplinary teams and work with key stakeholders. Negotiation and influencing skills, together with capacity building skills, to guide and upskill individuals and groups, will be developed for the purpose of improving the nutritional status of groups.

School Science

Discipline Nutrition and Dietetics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Must be enrolled in a postgraduate program.

Assumed Knowledge

Undergraduate knowledge of human nutrition, including nutrition science, life cycle nutrition, and the relationship between diet and disease.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply behaviour change theories to promote nutrition for individuals and populations.
2. Critique nutrition promotion initiatives, and food and social marketing techniques, in Australia and globally, that aim to influence food choice, intake, supply and/or access.
3. Apply program planning skills, models and principles to develop nutrition promotion programs addressing community and public health nutrition priorities.
4. Apply suitable frameworks and education skills to engage communities and build capacity for individuals and groups.
5. Demonstrate professional skills required to conduct successful nutrition promotion practices, such as interpersonal and counselling skills, negotiation and influencing skills, project management, and the ability to develop and maintain effective working relationships within multi-disciplinary teams and with key stakeholders.
6. Communicate professionally and effectively in verbal and written formats in a culturally sensitive manner.

Subject Content

1. Theories and evidence relevant to nutrition promotion, including:
i. Behaviour change theories
ii. Social and food marketing techniques
iii. Other theories and evidence related to the drivers of food choice
iv. Communication styles and modes
v. Nutrition education
2. The principles, models, and practices for planning successful programs, services and/or strategies:
i. Key stages, for example, conducting a needs assessment, designing and planning a program/strategy/intervention/service, identifying implementation challenges and solutions, and conducting process and outcome evaluation
ii. Logistical considerations
iii. Negotiating, influencing, and developing/maintaining effective working relationships with(in), multi-disciplinary teams and key stakeholders
iv. Capacity building
3. The design of effective nutrition promotion programs and strategies that aim to influence food choice, intake, supply and/or access, and are responsive to, and/or contribute to, the community and public health nutrition evidence base.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

HLTH 7011 Nutritional Assessment Methods

Credit Points 10

Legacy Code 301184

Coordinator Li Li (https://directory.westernsydney.edu.au/search/name/Li Li/)

Description This subject aims to introduce students to methodologies that incorporate anthropometric, biochemical, clinical, dietary and physical activity assessment to assess the nutritional status of individuals and groups. Students will critically explore the strengths and limitations of various methods. Students will also learn to make professional judgement regarding when and how to use methods, including validating nutritional status assessment methods to achieve valid and reliable nutritional assessment outcomes.

School Science

Discipline Nutrition and Dietetics

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Must be enrolled in a postgraduate program.

Assumed Knowledge

Undergraduate knowledge of human nutrition, including nutrition science, life cycle nutrition, and the relationship between diet and disease.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Select, justify, implement, and interpret data from, tools and methodologies for assessing the nutritional status of individuals or groups, for various purposes and assess data/results against various guidelines/references.
2. Critique the strengths and limitations (including measurement errors) of various nutritional status assessment techniques, tools and methodologies.
3. Obtain, organise, analyse, and present dietary data and interpret results, utilising suitable nutritional analysis software, databases, techniques and procedures.
4. Describe, critique, apply, and interpret results from, various methods used to determine the comparative validity and reliability of specific tools and methods used to assess nutritional status.
5. Communicate professionally and effectively in verbal and written formats.

Subject Content

1. Methods, including their strengths, weaknesses, and when and how to use, that can be used to assess the nutritional status of groups and individuals. This includes:
i. Anthropometry (for example, body composition)
ii. Biochemical (for example, iron deficiency anaemia)
iii. Clinical (for example, sarcopenia)
iv. Dietary methods (for example, diet diversity or energy intake)
v. Physical activity level
vi. Energy expenditure
2. Results of various nutritional assessment methods to evaluate nutritionally related issues or assess progress against guidelines/references/standards to assess nutritional status (for example, nutrient reference values).
3. Comparative validity and reliability of methods that are used to assess nutritional status (for those that have not been already validated) and the results from validation studies.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

HLTH 7013 Professional Reasoning

Credit Points 10

Legacy Code 400925

Coordinator Rosalind Bye (https://directory.westernsydney.edu.au/search/name/Rosalind Bye/)

Description This final year subject focuses on the transition from student to practitioner. The aim of this subject is to provide students with learning opportunities that will consolidate and enhance their competence in professional practice throughout their career. Professional competencies of central concern include advanced clinical reasoning skills, evidence based-practice, reflective practice, personal and career management strategies, self-directed and life long learning.

These competencies contribute positively to the effective management of graduates clinical practice in various work contexts, and their future career paths. Acquisition of such skills will allow the graduate to direct and adapt to change in these areas.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) REHA 7011 OR
REHA 7013

Restrictions

Students must be enrolled in 4663 Bachelor of Health Science/Master of Occupational Therapy, 4664 Master of Occupational Therapy, 4711 Bachelor of Occupational Therapy or 4712 Bachelor of Occupational Therapy (Honours). This is a specialty subject offered as a compulsory core subject of the occupational therapy program. It is profession specific, preparing students to practice as an occupational therapist and not relevant as an elective for non-occupational therapy students.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify various models and classifications of clinical reasoning and analyse their use in practice
2. Apply occupational therapy theories and conceptual models to guide clinical reasoning in practice scenarios
3. Apply the occupational therapy problem solving process to practice scenarios and reflect on clinical reasoning during the different stages of problem solving
4. Critically reflect on their own clinical reasoning skills and identify strategies to move from a novice to expert reasoning
5. Apply principles of ethical reasoning to various practice scenarios

Subject Content

1. Models and theories of clinical reasoning
2. Use of clinical reasoning to guide client management
3. Models and theories of occupational therapy practice and process
4. Using evidence based practice to guide client management and the role of evidence-based practice in clinical reasoning
5. Strategies to move from novice to expert in clinical reasoning
6. Principles of ethical reasoning

HLTH 7014 Professional Topic

Credit Points 10

Legacy Code 400850

Coordinator Stewart Alford (https://directory.westernsydney.edu.au/search/name/Stewart Alford/)

Description This subject is designed to allow high achieving students to comprehensively explore a relevant topic of interest to them, either through a minor supervised research project or industry-based project. This unit's flexible delivery offers a unique experience specific to each project and student. Students in this subject will develop extensive skills through project-based learning essential for employment and/or higher degree studies.

School Health Sciences

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must have permission from subject Coordinator to enrol in this subject. Students must have GPA of 5.0 or above. Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Propose and investigate a topic area relevant to professional practice.
2. Critique peer-reviewed literature pertinent to the proposed topic and identify gaps in knowledge.
3. Design and Implement a relevant professional project.
4. Justify possible areas of inquiry for future research or development.

Subject Content

The design of this subject is flexible so that it can respond to the special needs of the student and their topic chosen for exploration. The learning activities and resources required will be individually negotiated between the student and their project supervisor. Unit content will include:
1. Project-based learning relevant to individual professional goals and available expertise within industry, academia or other relevant body.
2. Critical literature appraisal on topics relevant to the student?fs project
3. Project management skills
4. Report writing in the form of a scoping paper or research paper or industry project report.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Literature Review	2,500 words	40	N	Individual
Scoping Report OR Applied Research Project OR Industrial Project Performance	3,000 words	60	N	Individual

HLTH 7015 Qualitative Research Methodology in Health

Credit Points 10

Legacy Code 401238

Coordinator Tony Rossi (https://directory.westernsydney.edu.au/search/name/Tony Rossi/)

Description This subject prepares students to conduct qualitative research. The subject covers ontologies, epistemologies, methodologies, and research methods, particularly those that involve the collection, management and analysis of qualitative data, and how findings are communicated. It also addresses the ethics of research.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appraise qualitative research projects and literature
2. Design quality research projects, connecting ontology, epistemology, methodology, and research methods
3. Judiciously select appropriate methodologies and methods to conduct research
4. Examine qualitative research proposals for their methodological quality and ethical sensitivities

Subject Content

1. Introduction to qualitative research
2. Ontology, epistemology, methodology, and qualitative research methods
3. Research design
4. Quality and ethical qualitative research
5. The use of qualitative research methods and communicating the associated findings for different audiences

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	500 words	30	N	Individual
Critical Review	1,000 words	20	N	Individual
Proposal	2,500 words	50	N	Individual

HLTH 7016 Quality and Safety in Health Care

Credit Points 10

Legacy Code 400842

Coordinator Bruce Barraclough (https://directory.westernsydney.edu.au/search/name/Bruce Barraclough/)

Description Health care managers and clinicians are responsible for the quality and safety of patient care within their subjects. To introduce a culture of safety they must understand and work within current policy, surveillance and governance strategies. In this subject students will study the cultural and governance environments within which quality and safety systems are introduced in health care. Students will also develop skills required to effectively use the tools available for managing and monitoring quality and safety issues within their workplace.

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects PUBH 7018 - Leadership in Quality and Safety in Health Care

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically appraise the human and cultural factors which impact on quality and safety
2. Understand the importance of surveillance, analysis and communication in developing quality and safety systems in health care
3. Develop and manage strategies for crisis management of unfolding quality and safety issues

Subject Content

- Health care standards in Australia; What are they? Who sets them? How are they monitored? Audits? Legislative requirements?

- Policy and organisational structure for the management of quality and safety issues in Australia; (Australian Commission on Safety and Quality and Health Care, NSW Clinical Excellence Commission and so forth)
- Risk management and patient safety
- Crisis management
- Reporting and Legislative requirements
- developing A culture of quality and safety
- clinical Governance
- information systems and quality management systems
- contemporary case studies

HLTH 7020 Dissertation (Part Time)

Credit Points 40

Legacy Code 401282

Coordinator Amit Arora (https://directory.westernsydney.edu.au/search/name/Amit Arora/)

Description This is a 40 credit point year-long subject taken over two terms (20 credit points in each term). This subject requires students to complete a substantial piece of independent research. Dissertations will involve the in-depth examination of a particular topic/question, and should demonstrate evidence of ability to undertake sustained critical analysis. The dissertation provides an opportunity for students to demonstrate that they can consolidate knowledge acquired throughout their program of study and understand how existing evidence/information relates to research topics, and how their own work adds to this body of knowledge. Independent thinking is required, including the ability to critique one's own work and that of others, as well as articulating the implications of their own research and support their findings through their written dissertation. Students will have the opportunity to participate in workshops where they will gain skills in defining a clear research question, preparing a formal research proposal, conducting a literature review, ethics and research, and formal writing at a professional standard. Findings of student work with be presented at an end of semester research seminar. This subject can also be taken over one semester (see HLTH 7004 Dissertation (Full Time)).

School Health Sciences

Discipline Health, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 20cp

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) For students enrolled in the 4702 Master of Public Health or 4698 Master of Health Science courses only
AGEN 7005 Research Protocol Design and Practice
and
HLTH 7008 Introduction to Biostatistics
OR
HLTH 7025 Healthcare Data for Decision making
OR
HLTH 7015 Qualitative Research Methodology in Health
For students enrolled in 3749 Master of Science and 4738 Master of Epidemiology courses only
HLTH 7008 Introduction to Biostatistics
For all students
PUBH 7016 Introduction to Epidemiology

Equivalent Subjects The two units below are equivalent to each other
HLTH 7004 Dissertation (Full-time)
HLTH 7020 Dissertation (Part-time)

Restrictions

To enrol in this unit, students must be enrolled in a post-graduate program and have a GPA of 5.5 or greater. Students must have an approved Masters Dissertation Proposal before enrolling. Students must submit prior to enrolment a proposal no longer than 3 pages comprising the following: 1. Proposed title 2. Background and rationale 3. Research objectives 4. Research plan (including study design, data sources, and analytic strategy) 5. Expected outcomes and benefits 6. Risk identification and mitigation plan 7. Ethical implications 8. Budget and how research costs are to be met (if required) 9. Timeline 10. Supervisor endorsement. 11. References Approval of the Dissertation Proposal must be provided by the subject Coordinator to ensure that the project meets the expected scale and scope of a 40 credit point Dissertation. For students enrolled in the Master of Public Health, Master of Health Science or Master of Epidemiology, they are also required to have completed 80cp before they can enrol in this subject.

Assumed Knowledge

It is assumed that the student would have completed core (or foundational) subjects associated with their Masters program, ideally in relevant research design and practice related disciplines.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Argue for the significance of research and their impact on society
2. Systemically and critically analyse literature and information sources that are related to the identified research question / hypothesis
3. Justify a research proposal in relation to its significance in the literature, its anticipated impact and the ethical considerations involved
4. Apply appropriate research methods and evaluation processes to collate and critically analyse/interpret data
5. Compose a scientific research report that synthesises research findings.
6. Effectively communicate/disseminate findings of a research project to a variety of audiences

Subject Content

Research proposal development in consultation with supervisor(s)
Data collection, collation, and analysis
Interpretation and dissemination of research findings in the form of a professionally-written research report
1. Research proposal development in consultation with supervisor(s) and subject co-ordinator feedback
2. Data collection, collation, and analysis
3. Interpretation and dissemination of research findings in the form of a professionally-written dissertation or a draft journal article
4. Dissemination of research findings in the form of a seminar presentation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Proposal	3-4 pages	S/U	Y	Individual
Thesis	Up to 20,000 words for Dissertation/ Up to 8,000 words for draft Journal article	90	Y	Individual
Presentation	15 minutes	10	N	Individual
