LANG 7008 Conference Interpreting

Credit Points 10

Legacy Code 102167

Coordinator Margot Seligmann (https://directory.westernsydney.edu.au/search/name/Margot Seligmann/)

Description Conference Interpreting is a highly complex activity which requires a high level of bilingualism, expertise in a variety of interpreting skills and knowledge of specialised discourse and contextual issues that relate to international fora. This subject aims to introduce students to the theory and practice of Conference Interpreting. The theoretical concepts that underpin Interpreting will be taught and become the basis for all practical work.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 3386 - Conference Interpreting LGYA 0965 - Conference Interpreting LGYA 1423 - Conference Interpreting 1

Restrictions

Students must be enrolled in 1780 Master of Arts Translation and Interpreting Studies, 1602 Graduate Certificate in Interpreting and Translation, 1777 Master of Interpreting and Translation or, if a non award student, must be a practicing Interpreter.

Assumed Knowledge

Bilingual competence.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. demonstrate knowledge of different theories that can be applied to the practice of conference interpreting
2. explain the latest research into conference interpreting and its applications to the practice
3. use public speaking skills relevant to the work of conference interpreters
4. demonstrate knowledge of the history, role and structures of international fora such as the UN, NATO, WHO and their committees
5. use essential vocabulary relating to international conferences
6. demonstrate practical knowledge about conference interpreting equipment, working conditions, professional associations, preparation for assignments and team work
7. apply basic conference interpreting skills

Subject Content

The language of speeches, reports, debates, financial statements
A range of oral texts in topics commonly discussed at international conferences
The skills and techniques necessary to interpret in simulated conference situations in the consecutive mode
The skills and techniques necessary to sight translate conference documents accurately
The skills and techniques necessary to interpret in a simulated conference situation in the simultaneous mode
Theories of conference interpreting
Prepare for a professional conference interpreting assignment

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	10-15 minutes/ approximately 1,000 word equivalent	20	N	Individual
Practical	Practical in-class exercises	20	N	Individual
Report	500 word report plus conference preparation portfolio	30	N	Individual
Essay	1,500-2,000 word essay	30	N	Individual

LANG 7009 Contexts of TESOL

Credit Points 10

Legacy Code 102335

Coordinator E'Taf Alkhlaifat (https://directory.westernsydney.edu.au/search/name/ETaf Alkhlaifat/)

Description This subject introduces students to the field of TESOL and to some of the historical, socio-cultural and academic contexts which influence it - adult education, linguistics, intercultural and migration factors, bilingualism studies and new technologies. It provides students with some insight into the key issues in these fields which impact on the teaching and learning of English as a second/foreign language.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects TEAC 7021 - Contexts of TESOL

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the influences of various branches of linguistics on English language teaching and learning
2. Apply knowledge of contemporary approaches to adult education to the field of adult language teaching and learning in local and international contexts
3. Evaluate policies and programs associated with migration and employment in Australia
4. Critique the politics of English and English language teaching in the current local and global contexts

5. Evaluate pedagogical and linguistic influences on approaches to English language and teaching and learning.

Subject Content

- linguistics and TESOL
Language and culture-linguistic relativity, sociolinguistics-language variation, register and dialect, creoles and pidgins, language groups, bilingualism, first and second language acquisition theory, aspects of theories of language in use - pragmatics, discourse analysis, systemic functional grammar, translation and interpreting, and intercultural education
- Adult learning
Theories of adult learning, factors affecting adult learners, learning styles, strategies and preferences, motivation, learner-centredness and self-directed learning, experiential learning, diversity and the notion of the 'other'
- Global contexts of TESOL
A brief history of the English language, English as an international language, English as a foreign language, lingua franca and the politics of English, cultural diversity and the imperialist view of English, the spread of English and growth of world Englishes, language planning and policy, and the roles and 'future' of English
- local contexts of TESOL
Migration and English language education in Australia - Australian citizenship test, Understanding major adult ESL programs including English Language Intensive Courses for Overseas Students (ELICOS), Adult Migrant English Program, Skills for Employment and Education, English for Specific Purposes, General English Program, teaching and learning basic ESL skills, internationalisation of education and English language teaching industry in Australia
- TESOL methodologies
Overview of approaches to English language teaching, issues in the post-methods era - communicative language teaching, addressing the grammar gap, content-based, text-based, and task-based language teaching and learning
- technologies
Applications of various technologies in TESOL, Computer Assisted Language Learning (CALL) (e.g. using iPAD, Internet) and new media (e.g. blogs) in ESL/EFL teaching and learning, distance learning, form-focused instruction enhanced by technology, digital storytelling, video games and multimedia projects.

Assessment

LANG 7010 Critical Literature Review

Credit Points 20

Legacy Code 200744

Coordinator Terry Sloan (https://directory.westernsydney.edu.au/search/name/Terry Sloan/)

Description The aim of this subject is to develop skills in applying rigorous analysis and critical assessment to research-based literature in general, through an examination of literature in a particular field. This subject is intended to provide candidates with the basic skills needed to do critical analysis of literature while also enabling them to gain more familiarity with theories, issues, and problems in a particular research area. Literature will be analysed through a balanced and constructive critique of its strengths and weaknesses, providing suggestions for how the work might have been improved.

School Business

Discipline Language And Literature

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 8710 - Critical Literature Review

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Present an overview of literature sources about their selected topic from scholarly journals and texts.
2. Examine authors�f perspectives on their topic and the arguments that they present.
3. Critically analyse the style, structure, and content of the literature.
4. Critically analyse the philosophical, theoretical and methodological approaches of the research outlined in the literature.
5. Employ scholarly conventions used in summarising and analysing literature, compiling research reports and articles and in dissertation construction.
6. Develop clear questions and propositions as guides for research investigations.

Subject Content

- The first content strand runs vertically: The subject content, formed by The subject matter of The research literature found in The readings.

- The second content strand runs horizontally: The research content, formed by knowledge and Understanding from The philosophy and methodology of The social sciences.
- The analysis methodology is A process approach that The course takes to The subject and content, through The techniques of analysis and critique of The literature.

LANG 7011 Formal and Functional Grammar

Credit Points 10

Legacy Code 102621

Coordinator Dariush Izadi (https://directory.westernsydney.edu.au/search/name/Dariush Izadi/)

Description This subject invites students to study the grammar of English from two related perspectives, formal grammar and functional grammar. The subject provides students with skills in the use of grammar in application to the analysis of a diverse range of texts. Students will develop an understanding of the structures and the functions of English across contexts. This skilled application will enhance their capacities as teachers of English, understanding how English varies in its use and allowing them to support their own students' skilled use of English across contexts.

School Humanities & Comm Arts

Discipline Linguistics

Student Contribution Band HECS Band 1 10cp

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LANG 7012 - Functional Grammar LANG 7013 - Functional Grammar

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a working use of formal grammatical analyses of word structure and word classes, lexical semantics, phrasal structures, clausal and sentence structures in English.
2. Demonstrate a working use the ideas of register and genre in application to the analysis of spoken and written language, and experiential and textual analyses of clauses in English.
3. Apply grammatical analysis to texts and consider the pedagogical implications and uses of what the analysis reveals.

Subject Content

1. Comparative introduction to formal and functional approaches to English Grammar.
2. Formal grammatical analysis including, word structure and word classes, lexical semantics, phrasal structures, clause and sentence structures.
3. Functional grammatical analysis including register and genre, spoken and written language experiential and textual analysis of clauses.
4. Pedagogical applications and uses of grammatical analyses including an exploration of a range of text types.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LANG 7014 Gender and Genre

Credit Points 10

Legacy Code 102602

Coordinator Helen Basides (https://directory.westernsydney.edu.au/search/name/Helen Basides/)

Description This subject considers the intersection of gender and genre in various narrative forms. Through a variety of texts that may include polemic, conduct literature, plays, novels, poetry and film, students will examine the construction of masculinity and femininity within various genres, and consider the ways in which genres themselves may be gendered. Beginning in the seventeenth century, the subject also considers the strategies that women writers, in particular, have used to participate in literary production by adopting and adapting particular generic conventions. A consideration of the ways in which gender and genre may be connected also allows students to consider questions of literary production and circulation, literary value and reputation.

School Humanities & Comm Arts

Discipline Literature

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the connection between gender and genre in various narrative modes.
2. Analyse the construction of masculinity and femininity in various genres.
3. Evaluate ideas about the ways in which genres might be gendered.
4. Identify and analyse the ways in which writers have responded to assumptions about the gendered nature of particular narrative forms, authorship and readership.
5. Identify and analyse the ways in which writers, particularly women writers, have adopted and adapted generic conventions in order to reflect their experiences.
6. Explain and analyse the relationship between gender, literary production, literary circulation and reputation.

Subject Content

Debates about the connections between genre and gender.
Representations of masculinity and femininity in various narrative forms.
Women?fs writing and the woman writer, from the seventeenth century onwards.
Considerations of gender as they relate to: theme, character, voice and form.
Women?fs place in literary production.
The ideal reader, especially in discourses about the rise of the novel.
Fictional and non-fictional forms.
Examination of different text types: polemic, conduct literature, plays, novels, poetry, short story, essay, and film.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Short Answer: Written Analytical Response	1,500 words	30	N	Individual
Essay: Research Essay	3,000 words	55	N	Individual

LANG 7015 Intercultural Communication (PG)

Credit Points 10

Legacy Code 102338

Coordinator Mustapha Taibi (https://directory.westernsydney.edu.au/search/name/Mustapha Taibi/)

Description This subject aims to develop the students' communicative competence in intercultural contexts, raise their awareness of issues in language use and socio-cultural dimensions, and equip them with the knowledge and skills necessary for intercultural communication. It also prepares students to critically analyse linguistic and cultural differences around them, appreciate linguistic and cultural diversity, and integrate the subject contents into their future careers (e.g. further studies or employment). It highlights the impact of intercultural communication in a range of real-life sectors, such as second language teaching and learning, translation and interpreting services, international business, tourism, community services, and organisational communication.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify links between language and culture
2. Demonstrate awareness of linguistic and cultural factors that contribute to (un)successful intercultural communication
3. Examine cross-linguistic and cross-cultural differences in verbal and nonverbal communication
4. Conduct linguistic analysis of authentic spoken and written discourses from an intercultural perspective
5. Analyse linguistic and cultural diversities critically by examining linguistic and cultural differences
6. Identify effective cross-communicative strategies in various contexts
7. Demonstrate intercultural competence to discuss and apply intercultural communication knowledge and skills to professions (e.g. ESL/EFL teaching, translation and interpreting services, multicultural education, international business, tourism, social services, etc.)
8. Develop appropriate intercultural attitudes towards different languages and cultures

Subject Content

- intercultural adaptation model
- relationships between language and culture
- Differences in language use (e.g. lexical non-equivalence and gaps) and culture (e.g. self-orientation vs other-orientation)
- cross-cultural variability (e.g. Individualism Vs collectivism)
- intercultural relationship management (e.g. horizontal Vs vertical)
- face Issues and face-work across cultures
- intercultural nonverbal communication competence
- Culture-specific manifestations in spoken (e.g. politeness vs impoliteness) and written discourses (e.g. linear vs non-linear)
- speech acts across cultures (e.g. requests and apologies)
- Hidden dimensions across cultures (e.g. low-contact vs high-contact)
- intercultural communication challenges and strategies (e.g. stereotyping, miscommunication and pragmatic failure)

- Intercultural sensitivities (e.g. cultural practices and values, address terms, taboos and solidarity-focused or power-focused communication)

- intercultural communication research Topics, methods, and tools.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	10 minutes for each student	20	N	Individual
Portfolio	2 hours (45 mins for online discussion, approx 1,500 words); 30 mins for multiple choice questions; 45 mins for open-ended questions, approx 1,000 words	40	N	Individual
Essay	3000 words	40	N	Individual

LANG 7016 Interpreting Skills (PG)

Credit Points 10

Legacy Code 102015

Coordinator Chong Han (https://directory.westernsydney.edu.au/search/name/Chong Han/)

Description This is a pool subject in some postgraduate interpreting and translation courses. The subject is aimed at developing essential skills in interpreting and deals with the specialised technical skills necessary for the different modes of interpreting: dialogue, consecutive, simultaneous, and sight translation. Given the large amount of independent practice needed to develop competence in interpreting, it pays special attention to the teaching of techniques for autonomous learning. Lectures are held in English for students of all the languages available. The tutorials are language specific in Arabic, Japanese, Mandarin or Spanish.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. demonstrate understanding of interpreting theories and their relevance to research and practice;
2. apply knowledge about different speech styles, registers and social dialects to accurately render different discourses in the target language;
3. demonstrate an understanding of context-specific interpreting techniques used in dialogue, consecutive, simultaneous interpreting and sight translation;
4. apply listening skills and techniques in a variety of settings such as business, immigration, tourism and motor transport, and develop techniques for autonomous learning of these skills;
5. use the memory skills required for dialogue interpreting and consecutive interpreting;
6. use note taking skills effectively to interpret accurately in the long consecutive interpreting mode,
7. demonstrate effective public speaking skills, including techniques for autonomous learning of these skills.

Subject Content

. Variables of spoken language; content, speed, text type, number of interlocutors, accent, speaker's gender; techniques for improving listening comprehension.
. Cognitive processes behind interpreting
. Different speech styles, registers and social dialects and interpreting exercises to develop the skill to accurately render such variables in the Target Language.
. Characteristics of dialogue, consecutive, simultaneous interpreting and sight translation; participants and their roles; typical contexts and content and role implications for each mode; differing cognitive demands of each mode.
. Memory and interpreting: exercises and techniques for developing short-term memory
. Standard systems for note taking; individual adaptation; techniques for note taking practice
. Public speaking skills; voice work, audience contact, discourse organisation; techniques for autonomous development of public speaking skills.

Assessment

LANG 7017 Interpreting and Translation Professional Practicum (PG)

Credit Points 10

Legacy Code A7456

Coordinator Anita Byrnes (https://directory.westernsydney.edu.au/search/name/Anita Byrnes/)

Description This subject is a capstone subject for the relevant Interpreting and Translation award and is aimed at assisting students in their transition from interpreting and translation trainees to successful professional interpreters and translators. It provides students with the opportunity to participate in practical aspects of the Interpreting and/or Translation professions and related fields, as well as to undertake supervised practice in the workplace. Students will complete the practical work relevant to their field of specialisation, i.e., Interpreting, Translation or both. Together with LANG7030 Preparation for NAATI Certification (PG) it helps students prepare for the NAATI Certification test to be undertaken when they finish their course.

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

In order to do the professional practice, students need to have demonstrated a minimum ability to interpret and/or translate, as they will be dealing with real life situations.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply interpreting and/or translation-specific skills and knowledge to the workplace
2. Identify the characteristics and structures of different interpreting and translation settings
3. Articulate and operate with the complexities of professional translation and interpreting

Subject Content

1. Placement at an appropriate industry venue.
2. Court attendance and observation.
3. Group interpreting and translation practice within a simulated industry environment.
4. Self-directed program involving the development of interpreting and translation skills.
5. Submission of an observation journal.

Special Requirements

Legislative pre-requisites

Students enrolled in 1775 Graduate Diploma in Interpreting ONLY:
To be eligible to enrol in a subject and attend a health-related placement in your program, students must meet Western Sydney University program requirements AND Special Legislative Requirements to be assessed in their first year of study against the following

1. National Criminal History Check: Students must have a current (expiring 3 years from date of issue) check valid for their entire program. A valid National Criminal history check must be an Australia wide check, include the student's full name matching their Student ID card and date of birth and not have any offences listed. If a student has a criminal history identified on their check, they must provide a Clinical Placement Authority Card (CPAC) or conditional letter from the NSW HealthShare Employment Screening and Review Subject

https://www.health.nsw.gov.au/careers/student_clearance/Documents/appendix-10-student-application.pdf

International students must additionally have a translated International Police Check or statutory declaration.

Contact your School for further details. Resources are also available on the Placement Hub website

www.westernsydney.edu.au/compliancehub (https://www.westernsydney.edu.au/placements_hub/placements_hub/student_compliance/)

Special Requirements - NSW Health Legislative

Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 2089 - Interpreting 1 LGYB 2090 - Interpreting 2 LGYB 2851 - Introduction to Interpreting

Incompatible Subjects LANG 7019 - Interpreting and Translation Theory

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Proficiency in English and other language (LOTE) at native or near-native level.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. demonstrate understanding of linguistic and interpreting theories and apply them to interpreting practice and research;
2. resolve issues of accuracy and equivalence, including register equivalence and the difficulties and controversies surrounding it;
3. recognise cross-cultural differences that influence and are reflected in the use of language;
4. explain the different roles of the interpreter according to type of interpreting;
5. demonstrate proficiency in dialogue interpreting, chuchotage, consecutive interpreting and sight translation at an introductory level in different settings.
6. demonstrate effective note-taking skills for dialogue and consecutive interpreting; and
7. identify significant aspects of the interpreting profession in Australia, NAATI qualifications, and ethics of the profession.

Subject Content

1. General overview of the theories of pragmatics and discourse analysis as they relate to interpreting,
2. The meaning of accuracy of interpretation and equivalence at the different levels of the language hierarchy and according to different types of interpreting,
3. The meaning of register, the importance of maintaining the source language register in interpretation and the implications of not maintaining it,
4. The different roles of the interpreter according to the type of interpreting,
5. Introduction to the techniques of dialogue interpreting, chuchotage, consecutive interpreting and sight translation,
6. Practice of the different interpreting techniques in education, housing and welfare settings,
7. Introduction to and practice of note taking skills for liaison and consecutive interpreting,
8. Familiarisation with available dictionaries, thesauruses, and other useful resources and guidance on how to use them effectively in the preparation of interpreting assignments,
9. The Interpreting profession in Australia and its codes of ethics.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	5-10 minutes per student per task	35	N	Individual
Practical Exam	30 minutes per student	35	N	Individual
End-of-session Exam	1 hour in class	15	N	Individual
Annotated Bibliography	1000 words	15	N	Individual

LANG 7021 Introduction to Translation PG

Credit Points 10

Legacy Code 101696

Coordinator Chong Han (https://directory.westernsydney.edu.au/search/name/Chong Han/)

Description This is a core subject for students in postgraduate coursework programs in Interpreting and Translation. It introduces students to the theory and practice of Translation. Lectures are held in English for students of all languages. The tutorials are language specific in Arabic, Japanese, Mandarin, Spanish, Korean and Vietnamese.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects LANG 7018 - Interpreting and Translation Skills

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Proficiency in English and other language (LOTE) at native or near-native level.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. demonstrate advanced knowledge of theories of translation including those advanced by Catford, Nida, Newmark and Steiner;
2. differentiate between translation approaches such as literal versus free, semantic versus communicative;
3. demonstrate understanding of the difficulties of achieving cross-linguistic equivalence at the morphemic, lexical, syntactic and textual levels;
4. demonstrate advanced critical understanding of cross-cultural differences as they influence language;
5. analyse the different notions of accuracy and equivalence from a syntactic, semantic and pragmatic perspective;
6. apply advanced level linguistic proficiency in translating a variety of text genres; and
7. demonstrate advanced knowledge of the Translation profession in Australia, NAATI qualifications, and ethics of the profession.

Subject Content

- general Overview of translation theories
- translation approaches that Respond to genre and purpose
- language hierarchy from The lexical to The textual and discourse including typological difference found across languages
- cross-cultural differences that influence language use and language choice
- challenges of accuracy and find cross-linguistic and cross-cultural equivalence at The difference levels of language hierarchy
- The translation profession in Australia and its codes of ethics
- Semantic versus pragmatic equivalence
- The application of theory to Problem solving and decision making in The process of translation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Translation	500 words (250 words into English and 250 words into LOTE)	40	N	Individual
Translation	2 hours (1 hour test for translation into English and 1 hour test for translation into LOTE)	40	N	Individual
Quiz	1 hour	20	N	Individual

LANG 7022 Investigating Second Language Acquisition

Credit Points 10

Legacy Code 100919

Coordinator Stacey Sherwood (https://directory.westernsydney.edu.au/search/name/Stacey Sherwood/)

Description This subject is intended for Linguistics Honours students as well as TESOL and Interpreting and Translation Postgraduate students aiming to provide a focused theoretical and research framework in the area of second language acquisition (SLA) from a psycholinguistic viewpoint. This subject widens the theoretical and methodological basis of students intending to undertake further studies and/or research in the Linguistics and SLA area and also serves the TESOL and languages teachers interested in applying SLA-based knowledge to language learning, pedagogy and classroom research.

School Humanities & Comm Arts

Discipline Linguistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 3375 - Investigating Second Language Acquisition

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge of a LOTE and/or some Linguistics and/or some language teaching experience.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provide an overview of the recent history of second language acquisition as shaped by early studies based on contrastive analysis, error analysis and the concept of interlanguage
2. Critically appraise current studies, theoretical models and methodologies adopted in the investigation of second language acquisition.
3. Identify individual and social factors purported to have a role in the successful acquisition of a second language in both natural and classroom settings.
4. Demonstrate the developmental and variational dimensions of language acquisition as envisaged, for instance, by Processability Theory and apply this knowledge to profiling of learner language.
5. Critically appraise the “Teachability Hypothesis” and current L2 pedagogy including communicative language teaching and 'focus on form'.
6. Design and conduct a small-scale project investigating some aspect of second language acquisition or L2 instruction, or Interpreting and Translation skills learning and pedagogy.
7. Use computer-aided linguistic corpus analysis as a research tool.

Subject Content

- Overview of The historical development of language acquisition as A field of Study including interlanguage studies and findings.
- Overview of main theories and explanatory frameworks used to account for second language acquisition, including current frameworks such as Universal Grammar and Processability Theory.
- The question of linguistic environment and individual Factors including key characteristics of natural and Instructional settings for second language acquisition.
- Key developmental and variational features in second language learners including The learning of discourse-pragmatic functions.
- Possible effects of instruction and The Teachability Hypothesis.
- Methodological and technical Issues in second language acquisition research
- Profiling and corpus analysis as an empirical basis for research and language assessment;
- Elements of computer-aided language analysis.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	45 mins each	40	N	Individual
Report	report: 2000-3000 words research proposal: 1500 - 2000 words	60	N	Individual

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LANG 7024 - Language and Linguistics Research Methods

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. undertake the basic steps to conducting research;
2. examine the main research methodologies, analytical techniques, and research and writing strategies relevant to the field of languages and linguistics;
3. read critically and review research papers in the field of languages and linguistics;
4. employ, where applicable, basic techniques in descriptive and inferential statistics; and
5. produce a design for a research project, and conduct a small research project.

Subject Content

Familiarity with and understanding of UWS Ethics in Postgraduate Research (Principles of Ethical Conduct, Approval Process of Research Involving Human Participants, etc.)
Research models used in the field of Language and Linguistics, including qualitative and quantitative approaches
Critical reading and comments of a representative sample of research papers in the field of Languages and Linguistics
Basic descriptive statistical concepts and techniques
Basic inferential statistical concepts and techniques
Data collection and analysis in the field of Language and Linguistics
Transcription of oral data
An appreciation of, and the ability to use, the prescribed academic register of English appropriate to research

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 0749 - TESOL Dissertation LGYA 0754 - TESOL Internship LGYB 3439 - Languages and Linguistics Dissertation

Restrictions

Students must be enrolled in program 1640 Master of Arts Translation and Interpreting Studies, 1687 Master of Arts (Research Studies)/ PhD, 2724 Graduate Certificate in Research Studies, 1777 Master of Interpreting and Translation or 1780 Master of Arts Interpreting and Translation Studies.

Assumed Knowledge

The student should be familiar with research design and procedures, as taught in subjects such as 101854 Language and Linguistics Research methods or be concurrently undertaking a research method subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop and present a research project proposal;
2. Demonstrate understanding of the leading research in their chosen field of investigation;
3. Put forward an hypothesis or set of testable propositions;
4. Collect and analyse suitable data to test the hypothesis;
5. Draw inferences about the importance of the findings.
6. Students undertaking a research project will be able to collect and analyse suitable data to test the hypothesis.
7. Students undertaking a research project will be able to draw inferences about the importance of the findings.

Subject Content

The Internship requires:
1. Observation of classes in a range of different English language teaching settings;
2. A service learning component where student participates in many aspects of the work in TESOL organisations eg undertakes team-teaching or works as teachers aid;
3. Optional supervised TESOL practice teaching or its equivalent.

The content of this subject will vary according to the field and topic of the special project.
Content will be dictated by the individual project topic and design, and undertaken under the guidance and supervision of a full time member of staff with the appropriate academic background.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LANG 7026 Legal Interpreting

Credit Points 10

Legacy Code 100916

Coordinator Kenny Wang (https://directory.westernsydney.edu.au/search/name/Kenny Wang/)

Description Legal interpreting is a highly complex process that requires specialised training in interpreting techniques, litigation tactics, legal language and the legal system. This subject is a compulsory subject for students in key postgraduate courses in Interpreting and Translation course. It can also be offered to practising interpreters who wish to improve and perfect their knowledge and skills in legal interpreting. It aims to provide students with the theoretical background and the opportunity to develop the interpreting skills necessary to operate at the NAATI professional level as a court interpreter. Lectures are held in English for students of all languages. The tutorials are language specific in Arabic, Japanese, Mandarin, Spanish, Korean and Vietnamese.

School Humanities & Comm Arts

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 3384 - Legal Interpreting

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Bilingual competence in English and one of the languages offered by the School for the interpreting and translation programs.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. interpret accurately in simulated court hearing situations in the consecutive mode
2. interpret accurately over the phone or via video-link in legal settings
3. sight translate court documents and interpret simultaneously in a simulated court situation in the whispering mode and in a simulated triangular situation in a legal conference in the dialogue mode.
4. demonstrate essential background knowledge of the Australian legal system.
5. understand and use essential legal vocabulary.
6. demonstrate full awareness of cross cultural and cross linguistic differences and their relevance in the context of court interpreting.
7. demonstrate understanding of the complexity of the courtroom language, including question tactics and the importance of testimony style.
8. integrate theory into practice.

Subject Content

1. Theory and practice of dialogue interpreting in the legal setting.
2. Theory and practice of consecutive interpreting in the legal setting.
3. Theory and practice of sight translation of legal documents.
4. Theory and practice of simultaneous whispering interpreting in the courtroom.
5. Theory and practice of telephone and video-link interpreting in the legal setting.
6. Essential background concepts and vocabulary of the Australian legal system.
7. The language and strategic use of courtroom questions and their significance to interpreting.
8. The language of courtroom testimony and its significance to interpreting.
9. Essential concepts concerned with cross cultural and cross linguistic communication.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	1) 5 minutes each; 2) 800 words; 3) 10 minutes presentation plus 5 minutes questions	20	N	Individual
Quiz	15 minutes each	20	N	Individual

LANG 7027 Literary Theory

Credit Points 10

Legacy Code 102581

Coordinator Dennis Schmidt (https://directory.westernsydney.edu.au/search/name/Dennis Schmidt/)

Description This subject examines a range of theoretical approaches to literature, the majority of which have proliferated since the beginning of the 20th century. These may include: structuralism, poststructuralism, feminism, postcolonialism, psychoanalysis and posthumanism. In presenting this 'contemporary' mode of engaging with literary texts, 'Literary Theory' asks how we might theorise our approach to reading, and how individual texts allow us to theorise the literary in general.

School Humanities & Comm Arts

Discipline Literature

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine a range of literary theoretical texts from one or a number of disciplinary approaches;
2. Demonstrate an understanding of literary theory and its relation to reading and the category of the literary;
3. Apply literary theoretical principles to literary texts.

Subject Content

Content will draw from, or elaborate upon, a selection of the following topics:
Formalism
Structuralism
Post-structuralism
Feminism
Psychoanalysis
Postcolonialism
Posthumanism

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Reflection	4 x 500 words	40	N	Individual
Essay	3000 words	60	N	Individual

LANG 7028 Literary Translation

Credit Points 10

Legacy Code 100925

Coordinator Vera Xu (https://directory.westernsydney.edu.au/search/name/Vera Xu/)

Description This subject aims to develop in students an appreciation of different literary genres in English and in their other language (LOTE) with an emphasis on stylistic and cultural issues to provide a basis for literary translation. The subject will cover literary translation theory and introduce relevant strategies to be applied in practice. The class will be non-language specific, but students will be expected to work from and into their language other than English.

School Humanities & Comm Arts

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 3388 - Literary Translation

Restrictions

Students must be bilingual in the language combinations offered by the school. Students must be enrolled in a postgraduate program.

Assumed Knowledge

Proficiency in English and one other language (LOTE) at native or near-native level.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. develop an analytical frame for different literary genres in English and in their LOTE as well as appreciate the stylistic and cultural issues involved
2. interpret and exemplify major issues in literary translation theory; and
3. apply the relevant literary translation strategies in practical translation tasks.

Subject Content

1. Presentation of different literary genres including poetry, fiction, drama, film scripts.
2. Introduction of literary translation theory.
3. Application of relevant literary translation strategies.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

Equivalent Subjects LGYB 3385 - Medical Interpreting

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Bilingual competence in English and one of the languages offered by the School for the interpreting and translation programs.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. interpret a dialogue with segments of up to 60 words in length, in simulated triangular medical situations
2. interpret accurately over the phone or via video-link in medical/health settings
3. sight-translate documents such as medical papers, consent forms, information sheets, into both languages
4. interpret consecutively into both languages, passages of up to 300 words in length
5. interpret simultaneously into both languages, medical conference material as well as doctor's consultations with mental health patients
6. acquire an understanding of doctor-patient communication in the Australian context
7. apply essential knowledge of medical language, its history and etymology, and use the vocabulary relating to advanced medical matters
8. explain the ethical and cultural considerations of Health Care Interpreters
9. apply knowledge of the Australian medical system and of the medical system in the country/ies where the student's other language is spoken
10. demonstrate the skills to recognise prefixes, suffixes and root words, identify their meanings and build words, and identify words used with pathological conditions.

Subject Content

1. Theory and practice of dialogue interpreting in medical settings.
2. Theory and practice of consecutive interpreting in medical settings.
3. Theory and practice of sight translation of medical documents.
4. Theory and practice of simultaneous interpreting in medical settings.
5. Theory and practice of telephone and video-link interpreting in medical/health settings.
6. The history and main features of medical language.
7. Basic concepts and vocabulary relating to advanced medical matters.
8. Knowledge relating to working as a Health Care Interpreter.
9. Knowledge relating to the role and ethics of a Health Care Interpreter.
10. Knowledge relating to the Health Care systems of Australia.
11. Medical Terminology: prefixes, suffixes, and root words

Assessment

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) LANG 7017

Equivalent Subjects LANG 7001 - Accreditation Studies

Restrictions

Students must be enrolled in 1777 Master of Interpreting and Translation, 1776 Graduate Diploma in Translation, 1775 Graduate Diploma in Interpreting or 1816 Master of Translation and TESOL. Students in the following programs must have successfully completed 40 credit points: 1816 Master of Translation and TESOL, 1775 Graduate Diploma in Interpreting, 1776 Graduate Diploma in Translation.

Students in program 1777 Master of Interpreting and Translation must have successfully completed 120 credit points.

Assumed Knowledge

Proficiency in English and one other language (LOTE) at native or near-native level.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of the format, standards and requirement of NAATI certification examinations.
2. Apply the translation and/or interpreting techniques necessary to sit the certification examinations.
3. Produce accurate and idiomatic translations and/or interpreting.
4. Critique interpreting and translation quality through implementing principles of translation/interpreting quality assessment.

Subject Content

Dialogue, consecutive and simultaneous interpreting in simulated settings such as medical consultations, public meetings, courtrooms.
Simulated dialogue interpreting over the telephone.
Sight translation of written texts (190-210 words in length).
Translation to and from English of 250-word passages in a variety of formal genres under timed conditions.
Revise translations.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

LANG 7031 Second Language Assessment and Testing

Credit Points 10

Legacy Code 101824

Coordinator Julie Lim (https://directory.westernsydney.edu.au/search/name/Julie Lim/)

Description This subject introduces students to fields of language assessment and testing in TESOL. It provides students with some insight into the key language components for assessment, assessment design and development. It also equips students with updated knowledge about different assessment approaches which impact on the teaching and learning of English as a second or other language in local and global contexts.

School Humanities & Comm Arts

Discipline Language And Literature

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) TEAC 7140

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge of Language teaching methodology and curriculum development.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of key terms in language assessment and testing
2. Identify and discuss various issues in language skills assessment and testing
3. Use different and appropriate techniques and methods in language assessment and testing
4. Design and develop valid and reliable language skills tests
5. Demonstrate understanding of language assessment feedback and improve testing methods
6. Apply language assessment and skills testing in specific educational contexts

Subject Content

Purposes of language assessment and testing
Properties of language assessment (validity and reliability)
Current second language proficiency assessment and issues
Methods for language assessment and skills testing with reference to learner profiling and curriculum design
Language assessment and test design and development with consideration of diverse education systems
Language assessment feedback and analysis for improving teaching and learning outcomes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LANG 7032 Specialised Translation (PG)

Credit Points 10

Legacy Code 100917

Coordinator Kenny Wang (https://directory.westernsydney.edu.au/search/name/Kenny Wang/)

Description This subject explores the functional, discursive, rhetorical, syntactic, semantic and lexical features of texts in the following specialised fields: tourism, news media, legal texts, technical & scientific materials. Knowledge of the functions and textual features of specialised texts will provide a basis for translating these specialised texts from and into English. Students will analyse the texts in both languages, and discuss ways in which the texts are to be translated. The subject will be available, depending on sufficient demand, for Arabic, Japanese, Mandarin and Spanish.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 3389 - Specialised Translation

Restrictions

Students must be enrolled in a postgraduate program. Students need to be bilingual in the language combinations offered by the School.

Assumed Knowledge

Sufficient proficiency in English plus one other language. This is a language-specific subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. identify and analyse the functional, discursive, rhetorical, syntactic, semantic and lexical features of English texts in the specialised fields of tourism, law, journalism and science and technology;
2. identify and analyse the functional, discursive, rhetorical, syntactic, semantic and lexical features of LOTE texts in the specialised fields of tourism, law, journalism and science and technology; and
3. deploy translation strategies appropriate to the specific text types.

Subject Content

1. Development of general translation skills to and from English
2. Introduction of different specialised genres.
3. Translation of texts to and from English from specialised fields such as information booklets at museums, news articles of various types, prescriptive and non-prescriptive legal texts, technical manuals.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	15 minutes	30	N	Individual
Reflection	200 words each	20	N	Individual
Essay	Translate a specialised text of 600 words in length, then write a 1200 words essay on the translation process with reference to linguistics and/or translation theory	50	N	Individual

LANG 7033 TESOL Internship

Credit Points 20

Legacy Code 101698

Coordinator Ping Yang (https://directory.westernsydney.edu.au/search/name/Ping Yang/)

Description This is a professional practice subject which consists of an internship in an English language teaching organisation for students of TESOL. It involves participation in the various aspects of the work of the teaching organisation, including a supervised English language teaching practice component for local students. Assessment items facilitate students' self-reflection on their teaching practice and critical evaluation of teaching methods and needs assessment in practice.

School Humanities & Comm Arts

Discipline Language And Literature

Student Contribution Band HECS Band 1 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) TEAC 7140

Incompatible Subjects LGYA 0754 - TESOL Internship

Restrictions

Students must be enrolled in 1800 Master of Arts in TESOL, 1801 Graduate Diploma in TESOL, 1802 Graduate Certificate in TESOL or 1816 Master of Translation and TESOL

Assumed Knowledge

Knowledge of TESOL field and methodology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. identify through observation various TESOL approaches in different teaching situations;
2. demonstrate an understanding of successful TESOL teaching through observation of teaching and consultation with experienced teachers regarding their practice;
3. adapt for use a variety of TESOL teaching materials and resources;
4. plan, deliver and evaluate TESOL teaching and learning activities; and
5. demonstrate understanding of important non-teaching elements in language teaching and learning settings such as planning, teacher collaboration, reflection of teaching materials design.

Subject Content

The internship builds on the knowledge and skills students gain in TESOL Methodology and Curricula by situating it in differing TESOL settings such as ELICOS, AMEP, English for Specific Purposes. The main components of the internship are:

1. Observation of classes in A range of different English language Teaching settings, consultation with Teaching staff, team-Teaching, and Teaching of small withdrawal groups as appropriate in English language Teaching Organisations, and participation in all aspects of work in these organisations.
2. Examination of commercial and teacher- produced Teaching resources and materials, including computer assisted language learning resources, current curriculum approaches, and language assessment materials in The range of TESOL settings.
3. Supervised practice Teaching for local students in The centre in which they are undertaking their internship or through An

English language centre. Practicum may be undertaken in The partner universities overseas depending on funding and placement availability.

4. Teaching practice which does not require formal supervision for external students.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Portfolio	2,000 words	30	N	Individual
Report	3,000 words	40	N	Individual
Professional Placement Performance	20 hrs class observation; 20 hrs of service learning of a mixed range of teaching tasks; 10 hrs supervised and 10 hrs unsupervised teaching practise.	30	N	Individual

LANG 7034 TESOL Project

Credit Points 40

Legacy Code 102337

Coordinator Dariush Izadi (https://directory.westernsydney.edu.au/search/name/Dariush Izadi/)

Description This subject is the final component in the Master of Arts in TESOL course. Equipped with knowledge and research skills developed in previous course components, students undertake independent and guided research activities and propose pedagogical solutions to specific TESOL classroom situations. Students will demonstrate the practical application of this research by undertaking a TESOL project which culminates in a 12,000-15,000 word research report or teaching proposal. Students have the opportunity to research specific TESOL interests in depth. These include, but are not limited to, generic Applied Linguistics, Task-Based Language Teaching, English as a Foreign Language (EFL), Second Language Acquisition, Second or Other Language Maintenance, English for Academic Purposes (EAP), or discrete elements of Pedagogy.

LANG 7031 AND
TEAC 7044 AND
LANG 7023 AND
TEAC 7076 AND

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Knowledge gained in 10 previous subjects in the Master of Arts in TESOL.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically read and review research literature in the field of their research
2. Compile a literature review of the field of their research
3. Apply independent research skills
4. Analyse, compile and evaluate findings
5. Prepare and present a research report
6. Select and implement relevant research methods in a practical teaching project.

Subject Content

This will vary according to the field of practice and topic of research. All students will prepare a proposal and a final research-based report.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

LANG 7035 Text Analysis for Translation (PG)

Credit Points 10

Legacy Code 102524

Coordinator Chong Han (https://directory.westernsydney.edu.au/search/name/Chong Han/)

Description The subject provides support for students in the postgraduate Interpreting and Translation programs to develop their analysis skills of the texts they will confront in their translation work. It is a bilingual subject, that is texts in both English and the respective Language Other Than English (i.e. Spanish, Chinese, Arabic, Japanese, Vietnamese, Korean) will be analysed to reveal the structures of meaning and linguistic and contextual features of the texts. It encourages close readings of source texts, understanding where extra-textual knowledge is relevant, and identifying essential meaning components underlying surface linguistic features.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 1777 Master of Interpreting and Translation or 1780 Master of Arts Translation and Interpreting Studies

Assumed Knowledge

Practice in translation and learning of translation strategies at introductory level subjects of Master of Interpreting and Translation, or equivalent knowledge.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate understanding of linguistic and textual structures of English and LOTE passages;
2. Identify differences and similarities between English and LOTE;
3. Conduct textual analysis of English and LOTE passages;
4. Apply text analysis techniques to translation tasks; and
5. Evaluate and critique the quality of their own translations and the translations done by their peers.

Subject Content

Theories of text analysis as they relate to the translation task.
Identifying different types of source texts
Conducting comparative and contrastive analysis of English and LOTE
Identifying of intra-linguistic factors in source texts in both English and LOTE
Identifying where extra-textual knowledge is required for full comprehension of source texts
Defining translation problems in source texts
Evaluating translation quality

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	2 Text analysis exercises (each exercise include both English and LOTE tasks)	30	N	Individual
Practical	150 words x 2 (1 x English + 1 x LOTE)	20	N	Individual
Peer Review	1 x English + 1 x LOTE	20	N	Individual
End-of-session Exam	150 words x 2 (1 x English + 1 x LOTE)	30	N	Individual

LANG 7036 Translation Technologies (PG)

Credit Points 10

Legacy Code 101750

Coordinator Anita Byrnes (https://directory.westernsydney.edu.au/search/name/Anita Byrnes/)

Description This subject aims to equip students with the theoretical and practical knowledge needed to effectively apply information and communication technologies to translation and other language related tasks. It focuses on translation memory and terminology management systems, and on the workflow involved in the handling of multilingual content. Emphasis is also put on uses of the Internet as a resource tool, and to the principles of controlled language for text to be processed by machine translation (MT). Tutorials will be conducted in a computer lab where students will familiarize themselves with leading computer-assisted translation (CAT) software applications.

School Humanities & Comm Arts

Discipline Translating and Interpreting

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine in some depth the fields of translation memory (TM) and terminology management, showing the skills required to compare applications and make informed judgments.
2. Describe the workings of one of the leading TM software packages and develop transferable troubleshooting strategies.
3. Explore the possibilities and limitations of machine translation (MT) by looking at the relevant literature and by analysing the outcome of some of the freely available engines on the internet.
4. Apply the principles of controlled language to the writing of source text to be processed by TM or MT.
5. Consolidate your expertise in internet mining, in particular for parallel corpora, terminological data and subject matter information.
6. Outline the workflows involved in multilingual content management, and explore the big-picture concepts of globalisation, internationalisation and localisation.

Subject Content

1. Overview of the principles of language engineering, and computer-assisted translation
2. Basic 'generalist' computing skills of particular relevance to translators, in particular those related to data digitalisation, exchange and protection
3. Desktop TM: components, workflow, and useful troubleshooting strategies
4. Server TM: open standards for database content exchange, interface with multilingual content management
5. Capabilities and limitations of MT (machine translation) engines and AI tools
6. The principles and practice of writing in controlled language for TM and MT
7. Internet mining for parallel corpus, terminology data and specific subject matter

Assessment

LAWS 1001 Enterprise Law

Credit Points 10

Legacy Code 200909

Coordinator Pamela Devery (https://directory.westernsydney.edu.au/search/name/Pamela Devery/)

Description This is an introductory law subject designed to introduce the fundamentals of law in a commercial context. The subject introduces students to the basic principles of law and the legal system as well as examining some of the major areas of law that impact on commercial dealings. This subject examines the legal system, the way law is made and the main areas of law relevant to starting and running a business including contracts, negligence and consumer protection.

LAWS 1002 Enterprise Law (WSTC)

Credit Points 10

Legacy Code 700254

Coordinator Bader Unnisa Mehdi (https://directory.westernsydney.edu.au/search/name/Bader Unnisa Mehdi/)

Description This is an introductory law subject designed to introduce the fundamentals of law in a commercial context. The subject introduces students to the basic principles of law and the legal system as well as examining some of the major areas of law that impact on commercial dealings. This subject examines the structure of the legal system, the way law is made, and the main areas of law relevant to starting and running a business including contracts, torts and consumer protection.

School Law

Discipline Business and Commercial Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) JUST 0003

Equivalent Subjects LAWS 1004 - Introduction to Business Law LAWS 1001 - Enterprise Law LAWS 1005 - Introduction to Business Law (UWSC)

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in extended diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College preparatory subjects listed in the program structure before progressing to the Year 2 subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of the features of the Australian legal system including the impact of this system upon Aboriginal and Torres Strait Islander peoples
2. Demonstrate an understanding of legal concepts in business.
3. Apply understanding of legal concepts to analysing and solving practical problems.
4. Demonstrate effective and appropriate written communication skills.

Subject Content

1. The Legal System
2. Contracts - with emphasis on employment contracts, leases etc
3. Negligence and negligent misstatement, Occupational Health and Safety
4. Australian Consumer Law
5. Business structures - partnerships, sole traders, trusts and companies

Assessment

LAWS 1007 Introduction to Law (WSTC)

Credit Points 10

Legacy Code 700157

Coordinator Bader Unnisa Mehdi (https://directory.westernsydney.edu.au/search/name/Bader Unnisa Mehdi/)

Description This subject introduces students to the Australian legal system. It considers the historical and legal factors which influenced its development and the key institutions and processes which have resulted. It considers the impact of Australian law and legal system on Indigenous Australians and their laws. The subject introduces students to legal method: legal reasoning and statutory interpretation. Students will also develop academic literacies, including study management, writing and referencing in a legal context.

LAWS 1009 Legal Analysis and Critique

Credit Points 10

Legacy Code 200978

Coordinator Jacinta Sassine (https://directory.westernsydney.edu.au/search/name/Jacinta Sassine/)

Description The subject exposes students to the contexts that affect how law is made, some of the institutional limitations on law and justice and the impact of globalisation on law. It introduces theories about the nature and function of law in historical, political, social, economic, cultural, ethical and international contexts. The connection between race, gender, culture and law is examined within the context of the Australian legal tradition, legal history, and the impact of the Australian legal system on Australian First Peoples. The subject introduces students to the processes of critical evaluation of arguments, legal communication and logical and critical problem solving.

Level Undergraduate Level 1 subject

Co-requisite(s) LAWS 1003 OR
LAWS 1006

Equivalent Subjects LAWS 1008 - Law Foundation

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the development of Australian law, considering English legal history, reception of English law, independence and the impact of these developments on Australian First Peoples.
2. Apply theories about the nature and function of law in local and global contemporary contexts from different perspectives, including society, politics, economics, culture, gender and race.
3. Develop basic logic and critical skills to analyse legal texts.
4. Apply legal research skills in relation to primary and secondary sources to support legal analysis and critique, focusing on case analysis.
5. Articulate legal thought effectively for diverse audiences.

Subject Content

1. The Australian legal tradition
2. English legal history
3. Doctrine of reception and repugnancy
4. Australian constitutional independence
5. The impact of the Australian legal system on Australian First Peoples
6. Critical evaluation of arguments
7. The nature of function of law
8. Legal formalism and the rule of law
9. Gender, race, culture and the law
10. Law in an economic context
11. Legal communication
12. Case analysis, statutory interpretation and legal research.

LAWS 2001 Alternative Dispute Resolution

Credit Points 10

Legacy Code 200811

Coordinator June Wang (https://directory.westernsydney.edu.au/search/name/June Wang/)

Description Alternative Dispute Resolution (ADR) processes are no longer 'alternative' but a major part of the contemporary justice system. Modern legal practice requires lawyers to negotiate settlements on behalf of clients and advise clients how to resolve disputes without litigation. Non-adversarial processes offer many benefits to parties, professionals and the community. This subject will introduce you to the theory and practice of alternative dispute resolution processes and provide you with the opportunity to develop key ADR practice.

School Law

Discipline Legal Practice

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Co-requisite(s) LAWS 1003 OR
LAWS 1006

Incompatible Subjects JUST 2001 - Alternative Dispute Resolution
JUST 2019 Conflict Resolution

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate contemporary issues and key processes in Australian dispute resolution systems;
2. Analyse and evaluate disputes to identify appropriate and effective processes for attempting resolution;
3. Identify and apply legal and ethical principles and processes for the appropriate resolution of disputes;
4. Conduct and evaluate appropriate processes for the resolution of disputes;
5. Demonstrate capacity to respond professionally to and engage with Aboriginal and Torres Strait Islander peoples in dispute resolution contexts.

Subject Content

Introduction to the Course & Understanding Dispute Resolution
Shaping Australia Dispute Resolution
Negotiation
Mediation
Conciliation
Expert Determination & Arbitration
Litigation & Alternative Dispute Resolution
Competence & Ethics in Dispute Resolution
International Dispute Resolution
Dispute Resolution in the Workplace
Family Dispute Resolution
Culture and Dispute Resolution: Aboriginal and Torres Strait Islander peoples

LAWS 2005 Financial Services Law

Credit Points 10

Legacy Code 200271

Coordinator John Chellew (https://directory.westernsydney.edu.au/search/name/John Chellew/)

Description Financial services is one of the fastest growing sectors of the Australian economy. This is an essential subject to understand legal, compliance and regulatory issues relating to the financial services sector in Australia. Students will be introduced to the licensing requirements for entering the financial services sector and the obligations for marketing and offering financial products and financial services to retail and wholesale clients. Students are then introduced to the main techniques of financial services regulation: disclosure, licensing, prohibitions or insider trading and market manipulation, self-regulation and powers of investigation and enforcement.

School Law

Discipline Business and Commercial Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) LAWS 3045 OR
LAWS 2010

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Communicate effectively, persuasively and appropriately in legal context.
2. Demonstrate an understanding of the basic principles of financial services law.
3. Apply the student's understanding of financial services law concepts to analysing and solving practical problems.
4. Appraise some of the criticisms of current financial services law in the different contexts.

Subject Content

Theories of regulation
Financial services regulatory history
Instruments and agencies
Financial Products
Fundraising
Managed Investment Schemes
Retail and wholesale clients
Australian Financial Services Licence
Financial Services Regulation
General conduct and obligations of financial services licensees and market licensees
Insider Trading
Market Manipulation
Continuous disclosure
Regulation of derivatives
Market Misconduct
ASIC's powers and remedies: criminal, civil penalties and enforceable undertakings
Compliance issues
Plaintiff's remedies

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	10% Oral Component, 10% written component	20	N	Individual
Final Exam	2 hours	60	N	Individual
Quiz	15 minutes per quiz; 4 quizzes in total; the best 3 of 4 quizzes will form the final mark.	10	N	Individual
Participation	Ongoing	10	N	Individual

LAWS 2010 Law of Business Organisations

Credit Points 10

Legacy Code 200183

Coordinator Sam Hossain (https://directory.westernsydney.edu.au/search/name/Sam Hossain/)

Description This subject deals with legal issues concerning the creation and control of companies and compares this structure with other forms of business organisations, such as joint venture, partnership, trusts and sole traders. This subject will provide students with an appreciation of partnership, and companies and a practical operation of a scheme of corporate regulation in the Australian federal system.

School Law

Discipline Business and Commercial Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) LAWS 1004 OR
LAWS 1001

Restrictions

Students enrolled in 2502 Bachelor of Laws (Non graduate entry) are required to seek permission from their program Advisor prior to enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise the various forms of business organisations.
2. Explain the concept and principles of partnerships and trusts, including the liabilities of partners under contract, tort, and criminal law, and the duties and liabilities of trustees..
3. Describe the practical operation of a scheme of corporate regulation in the Australian federal system.
4. Apply company law concepts and principles to analysing and solving key contemporary legal issues concerning the creation and control of companies.

Subject Content

- Various forms of business organisations
- Partnerships
- Registration of a company, pre-registration activities
- Dealings with outsiders and liability
- Internal management rules, management of a company - board of directors and general meeting
- Duties of directors and consequences of breach of directors duty
- Shareholder remedies
- Capital and fundraising
- Record keeping, disclosures and audit
- External administration - receivership, administration and winding up.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Three quizzes, 5% each, the best two will be considered for the final grade.	10	N	Individual
Short Answer	1,500 words	30	N	Individual
Final Exam	2 hours	50	Y	Individual
Participation	ongoing throughout semester	10	N	Individual

LAWS 2015 Professional Responsibility and Legal Ethics

Credit Points 10

Coordinator Michael Brogan (https://directory.westernsydney.edu.au/search/name/Michael Brogan/)

Description This subject examines the nature of the legal profession and its role in society. It deals with the professional, legal and ethical responsibilities legal practitioners owe to the law, the courts, their clients and to fellow practitioners, as well as the state and society at large. Students will be able to explain and evaluate the law and practice of legal practitioners, by reference to key topics, such as: professionalism; legal ethics; the history, structure and regulation of the legal profession; and the interpersonal, psychological and cultural factors affecting lawyers. Guided by an ethical decision-making model, students will demonstrate their ability to use primary legal materials to answer legal ethical problems.

LAWS 2017 Indonesia: Law, Governance and Culture

Credit Points 10

Coordinator Jeremy Kingsley (https://directory.westernsydney.edu.au/search/name/Jeremy Kingsley/)

Description This subject provides students with the opportunity to visit and learn about the legal cultures and systems applied in Australia's nearest northern neighbour and a gateway to Asia – Indonesia. The Study Tour provides students with an introduction to Indonesia's rich tapestry of cultural, religious, legal and political issues. This subject is taught intensively, and students will visit an array of law and governance sites from transnational law firms in Jakarta to religious boarding schools in Yogyakarta and sultan's palaces in Surakarta, which are all pivotal to governance arrangements in Indonesia but in very different ways.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) LAWS 1003

Restrictions

The subject will not be available for self-select enrolment. Intake in the subject will be restricted to expressions of interest. GPA and progression in the program will be considered, and the pre-requisite must be met. Students must be able to travel to the offshore destination for a specified period of 2 weeks (The dates for the term of offer will be made available to students through the School of Law's regular communication channels).

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Explain the structure and nature of the Indonesian legal system and legal cultures.
2. Reflect on the differences in common law and civil law as practiced in Asia.
3. Analyse the roles of state and non-state actors and institutions in Indonesian local governance arrangements.
4. Evaluate the operations of transnational corporate lawyers and businesses in Indonesia, including their impact on the country's legal, economic, and social systems.

Subject Content

- Introduction to Indonesian history and culture.
- Overview of Indonesian business systems, corporate governance, and cultures.
- Comparative law in practice: Common Law and Civil Law.
- Indonesian law and legal practice.
- Transnational corporate law and the impact on Indonesian society, legal and business practices.

Special Requirements

Legislative pre-requisites

Students must meet any visa and medical requirements to visit Indonesia.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	Ongoing	10	N	Individual

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 3023

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Develop legal skills for family law proceedings, including analysing client instructions and drafting Court documents related to both property and children's matters.
2. Advise as to appropriate Family Law Orders.
3. Prepare the client and their case for expert evidence and hearings.
4. Present written and oral submissions in relation to complex family law issues, including matters involving allegations of family violence and risk.
5. Prepare and conduct a mock Hearing, demonstrating effective advocacy skills.

Subject Content

1. Interviewing Clients - Obtaining Client Instructions
2. Drafting Family Law Orders and Court Documents
3. Drafting and Running Urgent Applications
4. Providing Advice to Clients Regarding Complex Family Law Children's Matters
5. Magellan Matters
6. Family Reports
7. Relocation Cases
8. Hague Convention Cases
9. Contravention
10. Pre-Action Procedures (Property)
11. Contributions - s79 and s75(2)
12. Conciliation Conferences
13. Asset Values and Expert Evidence
14. Enforcement Proceedings
15. Child Support
16. Undefended Hearings
17. Specialist Indigenous Lists

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Task	(1) Case Outline (s 60CC Considerations - Children) - 1,000 words (15 marks); and (2) Prepare Notice of Risk (15 marks).	30	N	Individual
Professional Task	(1) Written Submissions (s79 and 75(2) Factors (Property) - 1,000 words (15 marks); (2) Prepare Draft Balance Sheet (format length) (15 marks).	30	N	Individual
Professional Task	(1) Written submissions - 1,000 words; (2) Oral Submissions regarding Undefended Hearing - 15 minutes.	40	N	Individual

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2013

Equivalent Subjects LGYB 8513 - Advanced Torts and Civil Wrongs

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Construct and critically evaluate arguments by reference to appropriate evidence, authority and alternative perspectives.
2. Apply understanding of tortious concepts to analysing and solving practical problems, theoretical legal issues and contemporary debates.
3. Construct and present a critical and persuasive oral argument for law reform based upon a contemporary tortious issue.
4. Communicate effectively and appropriately
5. Use quality, current and relevant information from primary and secondary sources.
6. Ethically and accurately reference (using the Australian Guide to Legal Citation) legal information from a range of primary and secondary sources

Subject Content

1. Strict liability and the tort of breach of statutory duty.
2. Intentional economic torts including deceit, intimidation and civil conspiracy.
3. Abuse of process torts including malicious prosecution and misfeasance in a public office.
4. Policy consideration and critiques underpinning the duty of care in negligence with specific focus on government agencies, police, parents and children and schools.
5. Actions for stress-related mental harm outside the Civil Liability Act.
6. Section 3B(1)(a) of the Civil Liability Act and the meaning of “an intentional act that is done … with intent to cause injury or death or that is sexual assault or other sexual misconduct

Assessment

Level Undergraduate Level 3 subject

Co-requisite(s) LAWS 4004

Equivalent Subjects LGYB 0403 - Advocacy

Restrictions Successful completeion of 80 credit points of Bachelor of Laws core subjects. Enrolment in the subject is by invitation only following a call for expressions of interest and a merit selection process. Classes are kept small due to the practical nature of the subject.

Assumed Knowledge

Good communication skills; including the ability to construct a coherent argument and write in a manner that is grammatically correct.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a clear understanding of: legal professional ethics; proper legal professional practice; and correct legal professional behaviour.
2. Demonstrate the essential requirements of good advocacy in general, and in particular and differing contexts: eg. the difference between conducting bail pending hearing and conducting an appeal in an appellate court.
3. Take up any case and analyse it succinctly, logically and accurately: the relevant facts; the relevant legal principles; and the intelligent application of the principles to the facts.
4. Present the oral distillation of a case analysis in a polite, polished and persuasive fashion.
5. Think quickly and adapt flexibly according to changing circumstances while engaged in presenting an oral argument.
6. Be aware of any relevant aspect of legal professional ethics and be at once able to mould any desired submission so as to accord strictly with that ethical aspect.
7. Present written submissions and analyses in a logically structured and grammatically correct manner.
8. Demonstrate a ready understanding and an intelligent acceptance of the nature of advocacy skills.

Subject Content

1. Introduction to Advocacy
2. Interlocutory Advocacy: Civil
3. Interlocutory Advocacy: Criminal
4. Some Special Types of Criminal Advocacy
5. Trial Advocacy: Opening and Examination in Chief
6. Trial Advocacy: Cross-examination
7. Appellate Advocacy

Assessment

LAWS 3004 Anti-Discrimination Law

Credit Points 10

Legacy Code 200654

Coordinator Luke Maroney (https://directory.westernsydney.edu.au/search/name/Luke Maroney/)

Description This subject provides students with a practical understanding of Australian anti-discrimination and equality law, including relevant state and federal legislation, and significant cases. It encourages the development of critical perspectives on the operation and effectiveness of existing regulatory responses to discrimination, including responses to discrimination experienced by First Nations people. Starting with a conceptual and historical overview, this subject considers the key grounds/attributes, types of conduct, and activities (areas of public life) that are protected under current Australian anti-discrimination law. Relevant defences, exceptions and exemptions are also considered, along with procedural requirements for bringing a discrimination complaint, remedies and costs.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and analyse legislation and case law relevant to discrimination law and practice.
2. Apply law to factual scenarios to provide advice about strengths and weaknesses of actions and defences, likely outcomes of litigation and the merits of litigating.
3. Communicate effectively, displaying clear and logical structure.
4. Ethically and accurately reference legal information from a range of primary and secondary sources using the Australian Guide to Legal Citation.
5. Construct arguments by reference to appropriate evidence, authority and alternative perspectives.

Subject Content

1. Introduction
2. Historical Context
3. Definition of Discrimination
4. Grounds or Attributes
5. Areas of Unlawful Discriminatory Activity
6. General Exemptions
7. Harassment
8. Incitement
9. Racial, Homosexual and HIV or AIDS Vilification
10. Victimisation
11. Advertisements
12. Machinery, Procedure and Remedies

Assessment

LAWS 3011 Comparative Law: Legal Systems of the World

Credit Points 10

Legacy Code 200529

Coordinator Rehan Abeyratne (https://directory.westernsydney.edu.au/search/name/Rehan Abeyratne/)

Description The subject introduces students to the different legal systems of the world and to the study of comparative law. It covers the common law and civil law traditions, taxonomies of comparison, major political systems, modes of judicial review, and the protection of human rights. The course will draw on a range of case studies including Australia, major Western democracies (like the United States, France, and United Kingdom), as well as several countries in the Global South, including India, South Africa, and Mexico. It aims to provide an understanding of legal systems have developed in particular legal and cultural contexts. We will study the systems of both at the general level and in relation to specific laws, with an emphasis on comparative constitutional law. The subject is also concerned with the nature and function of comparative law as a discipline. Students will be encouraged to undertake individual research and to evaluate legal information derived from a variety of different sources and perspectives.

LAWS 3013 Conflict of Laws

Credit Points 10

Legacy Code 200656

Coordinator Timothy Mcgrath (https://directory.westernsydney.edu.au/search/name/Timothy Mcgrath/)

Description Conflict of Laws (also known as Private International Law) is about resolving legal questions involving more than one jurisdiction. Conflict of Laws issues may arise between the Australian States and Territories or between nations. The globalisation of economic activity, and ease and affordability of travel and telecommunications have contributed to the recent dramatic increase of trans-national dimensions in personal and commercial litigation. This subject provides an introduction to the sources of conflict of laws, the international jurisdiction of domestic courts, the recognition and enforcement of foreign judgements and decrees, and the problem of choice of law as it arises in various situations.

School Law

Discipline International Law

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2013 AND
LAWS 2003 AND
LAWS 3082

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and discuss key substantive issues in conflict of laws including: the private dimensions of international law and forum issues that domestic courts face.
2. Compare key aspects of the way in which Australian courts approach conflict of laws situations with procedures in other jurisdictions;
3. Identify and discuss the complexities of enforcement of judgments;
4. Critically examine the issues presented in the readings;
5. Analyse problems concerning conflict of laws, develop options, including applying legal principles, to resolve the problems;
6. Research an issue concerning conflict of law and present your analysis in a logically argued clearly written, well structured, appropriately referenced paper.

Subject Content

- introduction
- Jurisdiction
- choice of Law
- Discretionary non-Exercise of choice
- limits on Jurisdiction
- aspects of trans-national Litigation
- enforcement of foreign judgements
- Defences to enforcement of foreign judgements
- choice of Law-substance and procedure
- Conflict of laws within Australia-constitutional dimensions of choice of Law
- Conflict of laws within Australia-Federal and cross-vested Jurisdiction

- particular applications: choice of Law in Contract, Tort, property Law, family Law

LAWS 3015 Cyber Law and Justice

Credit Points 10

Legacy Code 201018

Coordinator David Tait (https://directory.westernsydney.edu.au/search/name/David Tait/)

Description The world is being transformed by digital technologies. The same technologies that make life more comfortable for some can unleash violence and destruction for others. Cyber war and cyber terrorism offer new risks for the international community. Bullying, identity theft and bank fraud, on a more local level, are given a new

life in the cyber world. Cyber technologies also provide enhanced opportunities for detecting and apprehending criminals, resolving disputes and modernising justice processes. New social spaces are opened up (social media networks, the 'dark web'), and new identities made possible (online grooming profile, avatars). How does the law keep up with the emergence of new crimes and technology-enhanced versions of old ones, and how do the cultural worlds of hackers, crackers and trackers work? The subject examines how justice processes and spaces, as well as criminal networks and strategies, are being reimagined to take advantage of the new technologies.

School Law

Student Contribution Band HECS Band 4 10cp

LAWS 3016 Elder Law

Credit Points 10

Legacy Code 200632

Coordinator Richard Mccullagh (https://directory.westernsydney.edu.au/search/name/Richard Mccullagh/)

Description This subject examines law relevant to an aging community. The legal issues are examined in a broad social, cultural and ethical context. Issues of legal capacity relevant not only to the law of contracts but also to delegated decision making, medical treatment and end of life decisions are considered. Similarly the law relating to areas of special importance to the elder community such as, pensions, retirement villages, wills and estate planning and equitable remedies for financial elder abuse are also discussed.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2013 AND
LAWS 2003

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate the legal, policy, moral and practical issues concerning Substitute Decision Making for older persons.
2. Analyse the legal, policy, moral and practical issues related to accommodation, retirement finances, and estate planning for older persons, considering equitable remedies for financial elder abuse.
3. Communicate clearly, accurately, logically and persuasively in relation to matters concerning elder law.

Subject Content

1. Introduction to Elder Law
2. Financial decision-making agents
3. Health decision-making agents
4. Fiduciary duties
5. Unconscionable conduct, undue influence and proprietary estoppel
6. Equitable remedies for financial elder abuse, including elder abuse of Indigenous people
7. Resulting trusts and constructive trusts
8. Inter vivos statutory property adjustment orders
9. Deceased estate statutory property adjustment orders
10. Staying home: Income support payments and subsidised care costs
11. Retirement villages and manufactured home parks
12. Granny flat arrangements
13. Residential aged care facilities

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1006 OR
LAWS 1003

Co-requisite(s) LAWS 3082

Equivalent Subjects LAWS 3019 - Equity Trusts and Remedies 1

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse the principles and theoretical foundations of equity and trusts in a culturally diverse society;
2. Examine complex policy and practical debates surrounding equity and trusts;
3. Apply the principles of equity and trusts to analysing and solving hypothetical problems and theoretical legal issues particularly in relation to First Nations People
4. Construct arguments and perspectives that address issues relevant to equity and trusts.

Subject Content

- Historical overview of Equity
- Substantive principles of Equity
- The nature and application of equitable principles, especially in relation to First Nations People
- Concept of the trust and an introduction to express trusts
- Powers and duties of trustees
- The Beneficiary Principle, Non-Charitable Trusts and Aboriginal Land Trusts
- The Constitution of Express Trusts
- The Requirement of Writing for Express Trusts
- Informal Testamentary Arrangements
- Express Trusts - Vitiating Elements
- Charitable Trusts
- Implied/Resulting Trusts
- Capital and Income
- Rights and Liabilities of Trustees
- Rights of the Beneficiary
- Variation and termination of trusts
- Fiduciary Relationships
- Breach of Confidence

LAWS 3022 Family Dispute Resolution

Credit Points 10

Legacy Code 200772

Coordinator Brett Mcgrath (https://directory.westernsydney.edu.au/search/name/Brett Mcgrath/)

Description This subject develops mediation skills and understanding of family dispute resolution. It builds on LAWS 3023 (200633) Family Law to deepen student knowledge of and capacity to assist separated parents to resolve disputes about their children and property. Particular attention is given to processes concerning children and processes to assist families who present with highly complex family dynamics, including the presence of family violence. This subject develops students' skills to recognise and understand the drivers of conflict for separating couples, and how to conduct family dispute resolution in both the court and non-court context.

School Law

Discipline Family Law

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 3023

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conduct assessment of clients with family relationship issues to assess their suitability for family dispute resolution processes
2. Analyse the impact of family domestic violence on families and children and take appropriate measures to ensure the safety of family members who are subjected to violence
3. Manage casework in a family law context
4. Apply the Family Law Act and other relevant legislation and principles to assist clients with post separation problems
5. Conduct family dispute resolution and outcomes that promote the best interests of the children
6. Reflect on development of professional competence in family dispute resolution
7. Critically evaluate family dispute resolution

Subject Content

1. Introduction and Family Dispute Resolution - the context
2. Approaches to Family Mediation & Role of the Mediator
3. Issues for Separating Couples and Parents & Children
4. Understanding Family & Domestic Violence
5. Children's Voice
6. Issues for Couples: New and Established Relationships
7. Mediating Property & Financial Issues
8. Mediating other family disputes
9. Practice Considerations: the process
10. Additional practice considerations
11. Principles of Practice
12. Language of Mediation – Language & Culture
13. Reflective Practice in Family Law dispute resolution

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

LAWS 3023 Family Law

Credit Points 10

Legacy Code 200633

Coordinator Angelo Bistolaridis (https://directory.westernsydney.edu.au/search/name/Angelo Bistolaridis/)

Description This subject aims to graduate students who will become reflective, ethical and effective family lawyers and/or family dispute resolution practitioners. This subject adopts a range of perspectives to critically evaluate developments in theory, laws, policies and practices concerned with the legal regulation of intimate relationships, particularly after separation. Family law balances the competing rights, obligations and interests of partners, children and others following separation, often in the context of complex family dynamics. In addition to having a sound grasp of family law, family lawyers must also appreciate the social, political, psychological and economic contexts that influence separating families.

LAWS 3027 Human Rights Law

Credit Points 10

Legacy Code 200635

Coordinator Robert Mezyk (https://directory.westernsydney.edu.au/search/name/Robert Mezyk/)

Description This subject examines the theory and practice of international human rights law through the framework of specific, current human rights issues. The Subject examines the moral and political justification for human rights; the foundations and historical development of key human rights instruments and institutions; the domestic, regional and global organisations that contribute to the promotion and protection of human rights; and challenges to realising human rights in different economic, cultural and religious contexts. Through a focus on contemporary issues and debates (which might include for example, the scope of the right to privacy; the effectiveness of measures to prevent genocide; the vulnerability of women and children in conflict situations) the Subject encourages a critical examination of the interconnectedness of rights and the way international human rights law is deployed to expand (or constrain) possibilities for social change and justice. The subject integrates the experience of the teachers as active human rights practitioners and academics in a range of institutions such as with National Human Rights Institutions, Human Rights NGOs, and Subjected Nations bodies to interrogate the range of ways in which human rights can be used to advance the equality and dignity of humanity.

School Law

Discipline International Law

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1003 OR
LAWS 1006

Restrictions

Students must have completed 80 credit points of study in Law subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Conduct research into human rights issues, including location of reported cases, treaties, government and civil society reports and academic commentary;
2. Evaluate and apply knowledge of domestic and international human rights law to a range of practical situations;
3. Explain the interrelated nature of human rights challenges across a range of issue areas;
4. Communicate appropriately and effectively, both orally and in writing, critical judgements on the merits of a range of human rights arguments in legal and academic texts;
5. Develop arguments based in human rights analysis to support social change and justice.

Subject Content

1. Historical and philosophical foundations of human rights
2. Challenges to traditional conceptions of human rights
3. International human rights norms and institutions
4. Regional human rights systems
5. Human rights protection at the national level
6. The human rights treaty monitoring system
7. Case studies of human rights interventions on specific issues, which might include: asylum seekers; indigenous peoples; human trafficking; children?fs rights; rights of women; peace and security
8. Case studies of human rights interventions in specific countries, which might include Australia, New Zealand, Afghanistan, South Sudan, Timor Leste, Myanmar, Russia

Assessment

LAWS 3028 Human Rights and the Asia Pacific

Credit Points 10

Legacy Code 200908

Coordinator Catherine Renshaw (https://directory.westernsydney.edu.au/search/name/Catherine Renshaw/)

Description This subject examines the place of regional human rights systems in the global architecture of human rights. Concepts of universalism, relativism and the 'Asian values' debate are examined. The record of human rights treaty ratification and compliance in Asia and the Pacific is examined within the context of the international treaty system as well as the ASEAN regional human rights regime. The development and implementation of international and domestic human rights protections in criminal law, constitutional law and institutional construction are examined across the region. The role of civil society,

non-governmental organisations and networks, and middle powers in impacting the politics, law and institutions of human rights protections across the Asia-Pacific region is examined.

School Law

Discipline Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1006 OR
LAWS 1003

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of how human rights are protected at the domestic, regional and international levels in the countries of Asia and the Pacific.
2. Integrate knowledge from a range of disciplines to evaluate how different philosophical, religious and cultural traditions in Asia and the Pacific relate to the international law of human rights.
3. Critically evaluate the effectiveness of different mechanisms and institutions for the protection and promotion of human rights in Asia and the Pacific.
4. Develop and present coherent arguments about complex human rights issues.
5. Possess a highly developed ability to communicate analysis effectively in a variety of appropriate scholarly and professional formats.
6. Ethically and accurately reference (using the Australian Guide to Legal Citation) legal information from a range of domestic and international primary and secondary sources.

Subject Content

- The place of Regional human rights systems in The Global architecture of human rights
- Universalism, relativism and the "Asian values" debate
- Asia and The Pacific in The international system (human rights Treaty ratification record, compliance)
- ASEANs new Regional human rights regime (The Commission, The Declaration)
- The Pacific: sub-Regional human rights Developments
- Asia and international criminal Law: The arc of justice from Tokyo to Phnom Penh
- implementation of human rights at The state level in Asia and The Pacific: constitutional protection of rights
- implementation of human rights at The state level in Asia and The Pacific: national human rights institutions in Asia
- Regional behemoths and their different approaches to rights: India and China
- promotion and protection of human rights in Communist States: focus on Vietnam
- human rights under Military dictatorships: Myanmar (Southeast Asia) Fiji (The Pacific) North Korea (North Asia)
- The role of Civil society and non-governmental organisation and their networks in The Asia Pacific
- Australia and new Zealand: middle powers and The politics of human rights persuasion

LAWS 3030 Information and Data Governance Law and Regulation

Credit Points 10

Legacy Code 200955

Coordinator Jacinta Sassine (https://directory.westernsydney.edu.au/search/name/Jacinta Sassine/)

Description This subject examines the operation of information technology for online data collection, information privacy and data governance laws and regulation. The subject focuses on the right to privacy, the protection of individuals with regard to the processing of personal data and the free movement of such data and the legal framework for information protection. The framework for information privacy and data governance is established by both international and domestic law and regulation. The subject introduces the basic legal framework for information privacy protection and governance under the European Union's Commission, the OECD Guidelines for the Protection of Privacy and Trans-Border Flows of Personal data and under the Australian Privacy protection framework. The subject compares the information governance policy and framework in the European Union and the United States with that in Australia.

LAWS 3032 Intellectual Property

Credit Points 10

Legacy Code 200637

Coordinator Sarah Hook (https://directory.westernsydney.edu.au/search/name/Sarah Hook/)

Description This subject provides an introduction and overview of the legal principles of intellectual property law, and traces the development of this law in Australia. It is designed as an introductory survey subject for undergraduate law students. Students will be considering the nature of intellectual property, the legal framework which contains it, the ways in which it can be protected and the reasons why it might seem important to our society to uphold intellectual property rights. The modules will cover the four major intellectual property regimes of trademarks, copyright, designs, and patents as well as issues relating to traditional knowledge of Aboriginal and Torres Strait Islander Peoples.

LAWS 3039 Islam, International Law and Human Rights

Credit Points 10

Legacy Code 200956

Coordinator Maria Bhatti (https://directory.westernsydney.edu.au/search/name/Maria Bhatti/)

Description This subject explores the intersection between Islamic law, international law and human rights. The subject begins with providing a theoretical framework introducing international law and human rights from a secular and Islamic perspective, providing an overview of how classical and contemporary Muslim scholars engage with the human rights discourse. The second part of the subject will discuss human rights from the perspective of nation states, examining the legal framework (in the context of Islamic and secular law) of key nation states, as well as that of some international organisations (including the Organisation of Islamic Cooperation and the Arab League). Students will examine whether there is an ideal governance framework to protect human rights and discuss core international human rights treaties including Islamic Human Rights instruments (i.e. the Universal Islamic Declaration of Human Rights, the Cairo Declaration on Human Rights in Islam and the Arab Charter on Human Rights). Students will discuss specific human rights issues including Islam and gender, Islam and freedom of expression, Islam and freedom of religion and Islamic criminal law. When examining these topics, students will be encouraged to engage with various interpretations of Islamic law, as well as critically examine the human rights framework.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the intersection between Islamic law, international law and human rights and its applications in contemporary times;
2. Examine human rights from the perspective of nation states, focusing on the legal framework (in the context of Islamic and secular law) of key nation states, as well as that of some international organisations;
3. Propose solutions to specific human rights issues, including Islam and gender, Islam and freedom of expression, Islam and freedom of religion and Islamic criminal law, to protect human rights;
4. Construct principled and ethical argument and perspectives in addressing issues relevant to Islamic law, international law and human rights, both orally and in writing

Subject Content

1. Basic principles of Islamic law, its different schools of thought and tools of interpretation
2. History and framework of international law
3. Human rights and human rights schemes
4. Comparison of Islamic human right schemes with international human rights
5. Intersections between Islam, democracy and the nation-state
6. The interactions between secularism and Islam
7. The role and rights of women under Islamic law
8. The rights and limitations of freedom of expression under Islamic law
9. The right to freedom of religion under Islamic law
10. The principles of Islamic criminal law and the extent to which it applies in contemporary times

LAWS 3040 Islamic Law in a Changing World

Credit Points 10

Legacy Code 101465

Coordinator Jan Ali (https://directory.westernsydney.edu.au/search/name/Jan Ali/)

Description This subject introduces students to Islamic legal theory, its sources and principles, and its application by different schools and scholars to derive religious verdicts. Students will study efforts to 'streamline' Islamic law through a number of Sunni and Shiite schools, various conceptions of shari'ah, and modern attempts at law reform through dynamic scholarship and ijtihad (independent judgment). Upon completion, students should be able to explain developments in Islamic legal thought within their socio-historical contexts, and identify key debates among Muslim scholars. Using current case studies, students will also study Islamic law issues affecting Muslims today, especially Muslim minorities.

LAWS 3042 Jurisprudence

Credit Points 10

Legacy Code 200649

Coordinator Bradley Gooding (https://directory.westernsydney.edu.au/search/name/Bradley Gooding/)

Description This subject engages students in the critical analysis of modern law through reflection on the major traditions and contemporary practices of legal theory. The subject encourages students to examine and question key legal concepts that inform the law, such as power, morality and truth. Students will interpret, analyse, justify and critique issues and ideas using tools of critical reflection drawn from texts in legal philosophy, ancient to modern. In this way, they will develop tools that allow them to understand and uncover the foundational ideas and assumptions on which we base our view of the law and its consequences, leaving students well-placed to embark upon systematic inquiries in legal reform and further studies in legal theory.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1006 OR
LAWS 1003 AND
LAWS 1008 OR
LAWS 1009

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate theoretical perspectives on the conceptualisation of law and its institutions.
2. Critique constructs of legal philosophy regarding the nature and role of law and legislation.
3. Use the tools of jurisprudential legal theory to cultivate theoretical appreciations, and expressive critiques, of concepts of law as they manifest in practical and academic discourses.
4. Propose solutions to problems in the philosophy of law through the interpretation, justification and critique of theoretical propositions.

Subject Content

- The Contestible Nature of the Relationship of Law to Morality, Politics and Justice
- The Autonomy of Legal Thought and the Professionalization of Legal Service
- The History of Jurisprudence
- The Positivism versus Natural Law Dichotomy, and its Evolution in Contemporary Jurisprudence
- The Role of Interpretation in Legal Reasoning and Adjudication
- Theoretical Challenges to the Colonial/Anglophone Legal Tradition, in the Context of Contemporary Social Justice Concerns
- An Introduction to Postmodern Critiques of Western Law and Liberalism
- The Premises and Functions of Critical Feminist Theory and Critical Race Theory
- The Normative Obligations of the Legal System to Diverse Communities, emphasizing Indigenous, Eco- and Pluralist Jurisprudence as Contemporary Ethical Frontiers
- Case Studies in the Transformation of Fundamental Legal Concepts (Rights, Jurisdiction, the Liberal Individual)
- Law's Treatment of 'Otherness', and the Need to Understand and Overcome the Theoretical Alterity of, for example, Marxist, Feminist and Indigenous Theories of Justice

LAWS 3047 Law of International Organisations

Credit Points 10

Legacy Code 200803

Coordinator John Juriansz (https://directory.westernsydney.edu.au/search/name/John Juriansz/)

Description This subject examines the structure and functions of the world's major transnational organisations. The subject extends students' understanding provided by Public International Law by examining the reality of international action and cooperation. Given that the European Union is the most highly evolved transnational organisation in the world today, the course will be centred around this organisation, while comparing it with other major international organisations such as the UN, the WTO and regional transnational organisations such as the African Union and the Organisation of American States. The Brexit process currently taking place in the EU will be analysed as a disruption to the trend of transnationalism.

LAWS 3048 Law of the Sea

Credit Points 10

Legacy Code 200804

Coordinator Daud Sm Hassan (https://directory.westernsydney.edu.au/search/name/Daud Sm Hassan/)

Description This subject will introduce students to the rules regulating the principle uses of the world's oceans. It will highlight historical development of the law of the sea, the sources of the contemporary law of the sea and the adoption of the 1982 Convention on the Law of the Sea (UNCLOS). Legal regime of various maritime zones including territorial sea and contiguous zone, continental shelf, the exclusive economic zone and the high seas will be studied. Various sources of marine pollution, fisheries, marine scientific research, maritime spatial planning, deep sea bed mining and dispute settlement will also be explored in this subject.

LAWS 3049 Media Law

Credit Points 10

Legacy Code 200661

Coordinator Sarah Hook (https://directory.westernsydney.edu.au/search/name/Sarah Hook/)

Description This subject examines various aspects of the laws that regulate the media. The central content of the subject consists of defamation, contempt, privacy and surveillance and a selection of other laws impacting upon this industry. Throughout the subject we will also explore two key themes. The first is whether, as a question of policy, current legal restrictions to media freedom appropriately balance the protection of free speech with various other interests, including protection of reputation, personal privacy and the effective administration of justice. The second theme asks whether media laws that were developed to regulate traditional mass-media organisations apply to individuals who publish their own content online, particularly via social media, and, if so, whether this application is appropriately balanced. Analysis of the application of existing media law principles to a range of new technologies will be featured throughout the subject.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2013 AND
LAWS 2008

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Accurately explain the principles, statutes, case law and selected policy aspects in each of the main areas of study, being defamation, contempt, privacy and prohibited publications
2. Analyse the impact of new technologies on traditional concepts of media law and policy
3. Demonstrate enhanced legal writing and reasoning skills, effective research strategies and an appreciation of current issues in media law
4. Apply media law concepts covered in the subject to analysing and solving practical problems
5. Use oral persuasion and legal reasoning skills as well as drafting skills for court documents and courtroom etiquette.

Subject Content

1. Defamation
2. Contempt of Court
3. Privacy
4. Offensive publications
5. Media and National Security
6. Regulation and Media
7. Bla(c)k Lives Matter- the role of the media in race relations

LAWS 3050 Medical Law

Credit Points 10

Legacy Code 200856

Coordinator Emma Bartley (https://directory.westernsydney.edu.au/search/name/Emma Bartley/)

Description This subject aims to provide knowledge and understanding of Australian medical law, including some cutting edge legal and policy issues that arise in this field. The legal issues are examined in broad social, cultural and ethical contexts, including critical perspectives on medical law and policy relating to Indigenous people. Medical law is an exceptionally vibrant and challenging field, underpinned by the rapid pace of scientific and social developments that generate new issues for medicine and for the law. Many of the more challenging issues for the law are at the core of policy — birth and reproduction, choice and responsibility, life and death.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2013 AND
LAWS 2004

Restrictions

Students must have completed 80 credit points of law subjects before enrolling in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define key terminology and identify legal, social, and human rights issues relevant to mental illness and mental health
2. Identify the key features of international human rights documents relevant to people who have mental health issues and discuss the extent to which human rights law has influenced domestic law and policy
3. Critically reflect upon Australian national policy, provisions within several NSW statutes and the common law as applicable to mental illness and mental health in a variety of contexts.
4. Explain and critique the operation and purpose of the Mental Health Tribunal (NSW) and other Courts and Tribunals regarding matters relevant to people with mental health conditions
5. Evaluate the role the law may play in preventing mental illness and promoting mental health
6. Present clear logical solutions to mental health legal problem questions
7. Examine and apply mental health law to solve problems related to mental health matters;
8. Analyse Mental Health Review Tribunal procedure;
9. Use legal research and analytical skills to present clear and logical solutions to mental health legal problems;
10. Analyse the language of psychiatric and psychological diagnosis as relevant to legal evidence presented before the Mental Health Review Tribunal.

Subject Content

1. Introduction to key concepts relevant to mental health and illness
2. Examination of legal, social and human rights issues raised for people with mental illness
3. Introduction to relevant international law
4. Introduction to Commonwealth policies, guidelines, plans, and strategies
5. Introduction to mental health related legislation
6. Role of health practitioners and key stakeholders in merits review and judicial review processes
7. Role of legal practitioners and key stakeholders in merits review and judicial review processes
8. Law, practice and procedure, and review mechanisms in NSW relevant to forensic patients
9. Law and justice in mental health case studies
10. Law reform ? public health and human rights approaches to prevention of illness, health promotion, treatment, and care
- Introduction to Mental Health Act 2007 (NSW)
- Psychiatrist and Psychologist expert testimony in court and tribunal
- legal status of An involuntary patient in A mental health facility
- legal rights of A mentally ill patient before A tribunal
- Jurisdiction of The mental health Review tribunal ? Civil
- authority: includes The making involuntary patient order, financial management order, community treatment orders, electro convulsive therapy and appeal rights
- The role of An advocate before The tribunal: includes reading all reports, research on least alternative form of care criteria and reading previous MHRT decisions to provide The best outcome for The client
- to cross examine The treating team on The psychiatric evidence including medication prescribed as to whether there is A better form of care available for The client
- to explain, in simple words to The client, The process involved and Possible outcomes of The hearing
- Jurisdiction of The tribunal with respect to forensic patients in The criminal justice system
- Explaining the pathway and review of forensic patients pursuant to the Mental Health (Forensic Provisions) Act 1990
- authority includes making Continued Detention in A forensic hospital, conditional and unconditional discharge
- to explain A client?fs appeal rights from The tribunal to The Supreme court
- The role of NSW Civil and administrative tribunal with respect to guardianship, financial management and capacity Issues
- The supervision of A client?fs finance by The office of trustee and guardian
- legal rights to vary and revoke A financial management order before The NSW Civil and administrative tribunal
- mental Harm Litigation: post-Traumatic stress Disorder in Law
- Judicial scepticism in mental Harm Litigation in The District and Supreme court for compensation
- Detention Centres: mental illness; observance of basic human rights

LAWS 3053 Moot Court

Credit Points 10

Legacy Code 200773

Coordinator Tim Fuller (https://directory.westernsydney.edu.au/search/name/Tim Fuller/)

Description This subject aims to train students in mooting conducted before an appellate court or tribunal. Students will be provided with a grounding in issues including jurisdiction, admissibility, and remedies. The subject will focus on one or more areas of domestic substantive law and will include a research component. The subject will also have a practical component aimed at enhancing the advocacy skills of participants and applying the theory to the practical aspects of the conduct of appellate advocacy. Students will be involved in the preparation and presentation of a hypothetical case before an appellate court or tribunal and will be given the opportunity to develop their

advocacy skills, including the preparation of written submissions and delivery of oral submissions, in a non-competitive context. Undertaking this subject would be useful for students seeking to participate in one or more law mooting competitions, representing Western Sydney University such as the Sir Harry Gibbs Constitutional Law Moot, Sir John Peden Contracts Moot, Shine Lawyers Torts Moot, AAT Moot, and the Law Council of Australia Family Law Moot.

LAWS 3061 Public Health Law

Credit Points 10

Legacy Code 200702

Coordinator Liesel Spencer (https://directory.westernsydney.edu.au/search/name/Liesel Spencer/)

Description This subject considers various legal issues related to population health. This area of law is relatively new and continually developing and expanding. This subject is primarily concerned with how law has and should respond to various health dilemmas at the population level. These include State protection of the community from death (for example requiring road users to wear a seatbelt or helmet) and disease including both communicable disease (for example immunisation, quarantine and managing disease outbreaks) and non-communicable disease (for example smoking, alcohol, obesity, diabetes and cardiovascular disease). This subject also considers frameworks for evaluating whether public health laws are justifiable regulation, taking into account the balance between public good and the autonomy of individuals.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a comprehensive grasp of the fundamental norms of public international law, including the provisions of the subjected Nations Charter, Statute of the International Court of Justice, and Vienna Convention on the Law of Treaties, as well as significant customary international law principles and jurisprudence of relevant international Courts.
2. Critically evaluate the principal institutions of the international legal system and explain their procedures at the international level and the principle 'sources' of law that they apply in resolving disputes.
3. Describe the major differences between international and national law.
4. Assess the major challenges/weaknesses/effectiveness to/of public international law.
5. Apply principles of public international law to contemporary issues and in problem solving.
6. Research develop, refine and produce written essays that demonstrate clear, well structured, appropriately referenced, critical analysis and arguments about salient points of international law.

Subject Content

- Welcome and introduction
- The nature and development of international Law
- The structure of The international legal system
- The sources of international Law
- The Law of Treaties
- international Law and Municipal Law
- personality, Statehood and Recognition
- title to territory
- state Jurisdiction
- Immunity from Jurisdiction
- state responsibility
- legal regulation of The use of Force by States
- specific areas of international Law (time permitting)
- Peaceful Settlement of international disputes (time permitting)

LAWS 3068 Space Law - Commercial Aspects

Credit Points 10

Legacy Code 200652

Coordinator Steven Freeland (https://directory.westernsydney.edu.au/search/name/Steven Freeland/)

Description This subject examines the underlying legal principles that regulate the use, exploration and exploitation of space, and how International Law can and should be applied to the many different State and private commercial uses of outer space. It examines the existing international legal regime - the five United Nations Space Treaties and key Declarations of Principles related to space activities - as well as a number of domestic regulatory systems, including the Australian legal regime. The subject also concentrates on the (many) uses and proposed uses of space for which the legal framework may not be particularly well suited.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand the historical evolution of the existing legal regime regulating the use and exploration of space.
2. Engage in critical discussion of specific problems arising from the readings and present oral arguments persuasively.
3. Develop, refine and produce a research paper which demonstrates clear, well structured, appropriately referenced, critical and original analysis and arguments.
4. Analyse and examine the details of the five international treaties and the various United Nations Principles which regulate certain activities in space.
5. Understand the Australian legal framework regarding space activities.
6. Critically consider the problems and ambiguities within the existing legal regime.
7. Determine and analyse the legal issues raised by new uses of space for which the existing legal regime is ill-suited.
8. Assess ways in which these unanswered legal issues should be addressed.

Subject Content

- what is The legal Definition of space?
- why do we need A legal regime for space?
- The role of UNCOPUOS (United Nations Committee on Peaceful Uses of Outer Space).
- space Law and Air Law compared.
- The Space Treaties: Outer Space Treaty 1967; Rescue Agreement 1968; Liability Convention 1972; Registration Convention 1975; Moon Agreement 1979.
- United Nations Principles: Direct Broadcasting Principles 1982; Remote Sensing Principles 1986; Nuclear Power Principles 1992.
- Intergovernmental Organisations ? INTELSAT, INMARSAT, ITU, ESA.
- Telecommunications and The Geostationary Orbit.
- national regulation of launching activities.
- Space Activities Act 1998 (Cth).
- environment of space and The Problem of space Debris.
- The international space Station and space Tourism.
- Traffic control Issues and Coordination with The regulation of Air Travel.
- The Commercialisation and privatisation of Outer Space.
- financing and Insurance aspects of space activities.
- Exploitation of space Resources.
- The needs of developing countries.
- Military uses of Outer Space.
- Resolution of disputes in relation to Activities in Outer Space.
- future legal regulation of space Activities ? what needs to be done?

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1004

Restrictions

Students enrolled in 2502 Bachelor of Laws (Non graduate entry) must obtain permission to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the key elements of the States Taxes and GST systems
2. Recognise the economic, social justice and ethical considerations involved in the formulation of State Taxes and Federal indirect taxation law and policy.
3. Analyse and discuss selected aspects of: GST Law, such as the concepts of registration, supply and acquisition, classification, reporting, thresholds and special rules
4. Analyse and discuss selected aspects of NSW State Taxes, such as payroll tax, land tax and duties and how these relate to similar tax regimes in other Australian States.

5. Apply their knowledge of State Taxes and GST Law obligations and potential liabilities by analysing and solving practical problems.
6. Write and express effectively and concisely, displaying clear and logical structure and using accurate citation, grammar and punctuation,
7. Communicate and respond in a professional context in relation to States Taxes and GST law, by explaining the law.
8. Consider and hypothesise upon the application State Taxes and GST law in relation to a given set of facts.

Subject Content

How GST works
Special rules applying to individual circumstances in relation to GST
Administration and anti-avoidance issues in relation to GST
Planning for GST
General liability in relation to payroll tax
Payroll tax and group employers
Practical aspects of payroll tax
Land tax and general liability
Special matters in relation to land tax
Assessment of stamp duty
Consequences of non stamping
Conveyances and transfers in relation to stamp duty
Stamp duty and interests in land owning companies and trusts
Loan securities and stamp duty

LAWS 3071 Wills and Succession

Credit Points 10

Legacy Code 200641

Coordinator Stephen Janes (https://directory.westernsydney.edu.au/search/name/Stephen Janes/)

Description Wills and Succession is that body of law that deals with the devolution of property upon death. The legal issues relating to wills and succession are examined in their social, cultural, and ethical contexts The subject includes an examination of law relating to intestacy, the making of a valid will, the administration of the estate and what is known as testator's family maintenance. This subject is of particular importance to those students who intend to practice either as a solicitor or barrister as Wills and Succession forms a significant part of private practice.

School Law

Discipline Legal Practice

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 3082

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand the major doctrines of Succession Law and the particular contexts in which they are applied.
2. Assess the interaction of legal doctrines which operate in succession law, considering social, cultural and ethical contexts.
3. Understand the jurisdiction of the probate court and the types of application for probate and grants of administration which might be made.
4. Apply knowledge of the law of wills in particular contexts.
5. Explain aspects of the administration of estates.
6. Develop written and/or oral communication skills.

Subject Content

1. Death
2. Intestate Succession, including intestacy laws relating to Indigenous people
3. Family Provision
4. The Nature of a Will
5. Formal Requirements
6. Capacity
7. Revocation, Republication and Revival
8. Obliterations, Interlineations and Alterations

9. Construction-General
10. Construction-Specific
11. Grants of Representation
12. Administration and Distribution of the Estate

LAWS 3072 Work Health and Safety Law

Credit Points 10

Legacy Code 200799

Coordinator Jonathan Adamopoulos (https://directory.westernsydney.edu.au/search/name/Jonathan Adamopoulos/)

Description This subject examines the different means in which the law protects workplace safety in Australia. The primary focus will be on the work health and safety regulatory framework and its underlying policy. The arbitrary nature of standard setting in the early systems of safety regulation is compared with later legislative models. The workings of these legislative strategies are illustrated by a series of selected issues relating to contemporary health risks in workplaces. Students will also examine issues surrounding enforcement and compliance and corporate governance in the safety context. Other topics include workers compensation and employment law.

School Law

Discipline Business and Commercial Law

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2013

Equivalent Subjects LGYB 0395 - Occupational Health and Safety Law LAWS 3054 Occupational Health and Safety Law

Learning Outcomes

On successful completion of this subject, students should be able to:

1. explain the regulatory framework of work health and safety (WHS) in Australia;
2. distinguish between the various means in which the law ensures workplace safety;
3. explain the duties of employers, employees, directors and managers and identify the availability of defences in the event of a breach;
4. consider WHS issues in a commercial context and provide clear and accurate legal advice to clients;
5. explain the relationship between workplace safety and terms of employment;
6. explain the consequences of contravening WHS duties and distinguish various penalty options;
7. critically evaluate the effectiveness of WHS regulation in Australia from different employers' and employees' perspectives.

Subject Content

- Contextual Background and historical development of WHS Law
- workplace safety and The common Law
- workplace safety and employment Law
- duties of employers to employees and other persons in The workplace

- Other statutory duties under the Work Health and Safety Act 2011 (NSW)
- The Commonwealth WHS Scheme
- Defences
- Obligations under the Work Health and Safety Regulation 2011 (NSW)

- workplace consultation and codes of practice
- enforcement
- Penalties and Remedies
- Workers' compensation and rehabilitation

LAWS 3073 Elder Law Industry Placement

Credit Points 10

Legacy Code 201020

Coordinator Elen Seymour (https://directory.westernsydney.edu.au/search/name/Elen Seymour/)

Description This elective work integrated learning subject builds on the knowledge base of 200632 Elder Law to provide work experience for later year Law students. Students who have successfully completed 200632 Elder Law will be eligible to apply for this industry experience. The placement will consist of a full time ten day placement at selected industry workplaces with supervision by experienced legal practitioners. The subject will provide students with real-life work experiences in the legal issues associated with the practice of elder law and with an appreciation of the professional responsibilities essential for a 21st Century legal practitioner.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 3016

Restrictions

Places in this subject are limited. Students will be selected based on the following: 1. Submission of a 500 word statement of interest in seeking to undertake the unit; and 2. Completion of a satisfactory joint interview process with the subject Coordinator and representative of Industry Partner. Note: the School of Law will manually enrol a list of approved students following an Expression of Interest process.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the operation of Elder Law in practical contexts.
2. Propose solutions to Elder Law related client problems and issues in practical contexts.
3. Perform legal writing tasks within a practical legal and Elder Law context
4. Reflect on professional development experiences and needs.

Subject Content

1. Elder law in practical contexts.
2. Elder law related client problems, issues and solutions.
3. Practical legal writing tasks in the Elder law operational context.
4. Researching practical issues and solutions
5. Professional development: reflection on experiences and needs.

Students will undertake a ten-day placement in an Elder Law industry practice during which students will be engaged in the evaluation and production of Elder Law legal service tasks that may include the preparation of an application to the Guardianship Division of the New South Wales Civil and Administrative Tribunal (NCAT) for a financial management order, guardianship orders or reviews of powers of attorney within a practical legal and Elder Law context.

Assessment

LAWS 3074 Judicial Internship

Credit Points 10

Legacy Code 201028

Coordinator Anna Cody (https://directory.westernsydney.edu.au/search/name/Anna Cody/)

Description This subject provides an internship opportunity for later year law students. Students will spend twelve days throughout the semester at selected courts and tribunals under the supervision of magistrates, judges or tribunal members. The subject will provide students with an opportunity to observe the courts and tribunals first hand, to be mentored by a judicial officer, to engage in practical assistance to the relevant court or tribunal, and to appreciate the professional responsibilities essential for a 21st Century legal practitioner and judicial officer. Entry is competitive and will include a written application and interview. The subject includes a class schedule with the requirement of regular reflection in order to learn deeply from the experience and teach students how to engage in ongoing lifelong learning.

School Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2015 AND
LAWS 2004 AND
LAWS 1008 OR

LAWS 1009

Restrictions

Places in this subject are limited. Students will be selected on merit based on the following: Submission of an expression of interest, including relevant documents, in seeking to undertake the subject (either submitted to an external body or to the subject coordinator); and completion of a satisfactory joint interview process with the subject coordinator and/or a representative of a professional body, court or tribunal.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Reflect on the professional and judicial ethical issues and protocols of courts and tribunals.
2. Examine the operation of a court or tribunal.
3. Perform legal tasks within a practical legal and judicial context.
4. Research professional legal and judicial ethical and practical issues that arise in professional practice.
5. Reflect on their future role as a lawyer.
6. Discuss internship experiences with peers and supervisors.
7. Critique the practice of law as practised in a lower level court or tribunal

Subject Content

1. Professional and judicial ethics;
2. Court and Tribunal operational protocols;
3. Paralegal tasks within practical and judicial contexts; and
4. Issues in professional practice.
5. Issues in legal system and law practice

Students will undertake a twelve-day attendance (internship) in a court or tribunal during which students will be mentored by a judicial officer and have an opportunity to develop a deeper understanding of the practice and procedure of the court or tribunal as well as the functioning of law within a lower tier court of tribunal.

Special Requirements

Legislative pre-requisites

Students must have completed a Student Undertaking Form and have applied for a National Police Certificate.

Assessment

LAWS 3075 Law's Self-Understanding

Credit Points 10

Legacy Code 201027

Coordinator Bradley Gooding (https://directory.westernsydney.edu.au/search/name/Bradley Gooding/)

Description This subject of study explores the central organising ideas for our present understanding of law. What do these ideas amount to? What, according to these ideas, is significant about us from the legal standpoint? Can the proponents of these ideas deal with their critics? What are the similarities and differences between the legal subject and other ways of thinking about ourselves, such as from a moral or political standpoint? How should we understand the connections between these three separate realms? What is the character of the legal sphere in comparison with these other spheres? What is the character of legal, moral and political reasoning?

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1008 OR
LAWS 1009 AND
LAWS 2008

Incompatible Subjects LAWS 3042 - Jurisprudence

Assumed Knowledge

A basic familiarity with legal reasoning and the ‘separation of powers’ context in which they judiciary operates, and a basic understanding of the precepts of contemporary Western liberal political culture.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the key concepts which theoretically constitute our contemporary appreciation of the Australian legal system and its functions, to better understand their interaction in rivalrous theorizing about law, morality, and politics.
2. Develop the metatheoretical grounding appropriate for examining and critiquing relevant conceptualizations as they are applied in professional legal and political practice.

3. Integrate conceptual toolsets for pursuing responsible, defensible professional practices with the broader perspectives afforded by increased theoretization.
4. Utilise critical reasoning skills to analyse philosophical/normative legal texts, and participate constructively in the critical discourses which permeate legal thought, both from internal and external perspectives.
5. Apply professional (legal) research and communication skills in the construction and expression of critical perspectives on legal practice.

Subject Content

Module 1. Law and Practical Reasoning
- Critical Thinking and Reflective Equilibrium
- Hart on Human Nature and the Separation of Law and Morality
Module 2. Law and Adjudication
- Dworkin and Interpretation as Integration
- Objectivity, Interpretation and Opinion
- The Internal and External Perspectives in Legal Consciousness
Module 3. Law and the Subject
- The Role of the Legal Subject in Legal Reasoning
- Law and Literature
- Tropes, Cases, and Paradigms: Reasoning by Analogy
Module 4. Legal Methods
- Formalism vs Realism
- Originalism and Literalism in Common Law Constitutionalism
- Applied Methods in Statutory Interpretation
Module 5. The Role of Reasonableness in Law
- Practical Reasoning and Reasonable Disagreement
- The Reasonable in Judicial Reasoning
- The Reasonable in Statutory Interpretation
Module 6. Law and Critical Theory
- The Critique of Rights-Discourse
- Paradox and Other Critical Challenges for Legal Functionality
- Feminism and the Law
Module 7. Course Summary

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LAWS 3077 Legal Internship

Credit Points 10

Legacy Code 201080

Coordinator Rebecca Dominguez (https://directory.westernsydney.edu.au/search/name/Rebecca Dominguez/)

Description This subject provides an internship opportunity for later year law students in host organisations (including NGOs and public interest organisations, community legal centres, government departments, corporations, barristers' chambers or private law firms). Internships provide students with invaluable access to opportunities to understand the law in context, to apply their formal learning about legal principles, to develop essential professional skills and to gain exposure to different career pathways. Students who successfully complete orientation requirements will spend twelve days throughout the semester at a host organisation. This will usually be done on a one-day (7 hours) per week basis. An intern's duties will generally consist of a combination of substantive tasks relating to law, policy and practice. Depending on the host organisation, these may include a combination of research, preparing background materials, briefing papers or research reports, liaising with other organisations, assisting in the provision of legal assistance and advice, observing interviews with clients, conferences with Counsel or in court proceedings, undertaking project and advocacy work, preparing/ giving presentations and assisting with administrative and editing work. The School will seek expressions of interest for the number of placements available with the School's partner host organisations each semester. Students are also able to arrange their own internships at organisations that are not currently host organisations, subject to the approval of the Clinical Director and the agreement of the host organisation to complete the attendance and assessment requirements of the subject.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2015 AND
LAWS 2004 AND
LAWS 2013 AND
LAWS 2003 AND
LAWS 1009

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse the nature, function and principles of Australian law in a specific legal practice context.
2. Effectively apply the principles and processes of legal reasoning.
3. Perform tasks within a practical legal context.
4. Apply the law to solve legal, professional and ethical legal issues that arise in legal practice.
5. Critically reflect on the values, ethical standards and conduct that underpin professional responsibility in legal practice.

Subject Content

12 days of practicum learning exposing interns to the internal workings of legal practice.
Ethical client- centred practice.
Reflective legal practice.
Professional communication and interpersonal skills for the client-centred lawyer.
Critical analysis of the operation of the law, policy and the legal system.

Special Requirements

Legislative pre-requisites

Depending on the host organisation, students may be required to obtain a Working With Children or Criminal Record Check. This will be advised by the relevant host organisation.

LAWS 3078 Legal, Economic and Social Transformation in Taiwan

Credit Points 10

Legacy Code 201089

Coordinator Grace Borsellino (https://directory.westernsydney.edu.au/search/name/Grace Borsellino/)

Description This subject introduces students to the foundational structures of Taiwan's legal system, its economy, and its socio-legal culture and practices. Students will participate in an exchange experience and will be intensively taught at selected Taiwanese university partners. Through engagement with Taiwanese academics, legal professionals (both in Australia at pre-departure programs and in Taiwan through engagements with leading Taiwanese law firms, courts and economic organisations), students will develop commercially relevant knowledge and contemporary practical legal skills to develop as global citizens. Students will examine diverse content areas including Taiwan's Constitutional Court, leading human rights cases, intellectual property protections, the Taiwanese electoral system, and Taiwan's innovative approaches to corporate social responsibility, big data analytics, and new technologies. Where travel to Taiwan is not possible, the subject will be offered online with the program of study to be offered 3-hours a week over a semester and supported online by university and industry partners in Taiwan. Where travel is possible, this online program will be supplemented by a week-long excursion to Taiwan. Interested students should contact the Subject Coordinator to confirm expected costs to the student (e.g. airfare, accommodation, meals, et cetera) and travel dates and requirements.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Students must have successfully completed 80 credit points of law subjects.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the foundational features and structures of Taiwan's legal system, its economy, and its socio-legal culture and practices.
2. Reflect on key contemporary legal issues arising in political, economic, and social contexts in which the Taiwanese legal system operates.
3. Communicate principled and ethical arguments and perspectives that address issues relevant to the legal, economic and social transformation of Taiwan.

Subject Content

1. Taiwanese Law and Legal System.
2. Corporate Governance and Corporate Social Responsibility in Taiwan.
3. Democratic Development in Taiwan and its Electoral System.
4. Big Data and New Technology in Taiwan.
5. Taiwanese Business, Regulatory, and Taxation System.
6. Taiwanese Indigenous history.
7. Introduction to Taiwanese languages.
8. Excursions to Taiwanese law firms, courts, stock exchange and other cultural destinations.

Assessment

LAWS 3079 Law, Economics, Ethics and Change

Credit Points 10

Coordinator Emily Lucas (https://directory.westernsydney.edu.au/search/name/Emily Lucas/)

Description In this subject, students engage with and propose solutions for complex legal, industrial, ethical and societal problems. Students are required to work individually and as teams to identify and analyse contemporary transdisciplinary problems. The subject follows an innovation process including the processes of ideation, conceptualisation and the development and evaluation of solutions towards implementation, preparing students for the future of work. Students will be mentored by external partners. At the end of the subject, students will propose solutions and reflect advantages and disadvantages of different responses.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

To enrol in this subject, students must have successfully completed 120 credit points.

Learning Outcomes

1. Analyse the legal, economic and ethical duties of local and global citizens in achieving change.

2. Synthesise information from a range of disciplines to identify problems and propose solutions.
3. Collaborate with others within and across disciplines in undertaking an innovation change process.

Subject Content

1. Identifying problems and transdisciplinary thinking
2. The ethics and duties of a citizen – local and global contexts
3. Theories and case studies of change
4. Understanding the legal environment and implications of action
5. Political-economic structures and the possibilities of change
6. The innovation process (e.g. – ideation, testing, marketing)

Assessment

LAWS 3080 Street Law Clinic

Credit Points 10

Coordinator Jennifer Whelan (https://directory.westernsydney.edu.au/search/name/Jennifer Whelan/)

Description Street Law Clinic provides students with the opportunity to work with peers under the supervision of a Street Law solicitor to research, prepare, and deliver community legal education to partners including secondary schools and/or community organisations on legal topics chosen by these external stakeholders. Students will generate innovative resources to be added to the Street Law digital repository of resources available to the community. Community legal education is a core skill for all lawyers wanting to improve access to legal information for all members of the community. Students will collaborate with the Street Law solicitor and external stakeholders to identify the mode of delivery and content that best meets the stakeholder needs and context. Students will consolidate existing technical legal knowledge, learn new areas of law, develop advanced interpersonal and collaborative communication skills, and enhance their ability to explain complex legal information to diverse audiences.

School Law

Discipline Legal Practice

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2015

Restrictions

To enrol in this subject, students must have successfully passed 160 Law subject credit points.

Learning Outcomes

1. Explore the challenges faced by people of diverse backgrounds accessing legal advice in the Australian legal system and the importance of legal literacy to empower people.
2. Examine foundational theories of teaching and lesson delivery of complex legal concepts and ideas to a non-specialist audience.
3. Design accessible digital community legal education resources on discrete legal issues to a non-specialist audience.
4. Deliver appropriately targeted and accessible community legal education to non-legal audiences.
5. Collaborate with others in delivering community legal education.

Subject Content

1. The role of Street Law: critical perspectives.
2. Reflective practice as a legal professional skill.
3. Street Law and Community Legal Teaching theory and practice: lessons from the field.
4. Case studies of access to justice issues in Australia and in Greater Western Sydney.
5. Designing and developing community education resources.
6. Delivering community legal education to non-specialist audiences.

Work integrated learning

Street Law Clinic provides students with the opportunity to work with peers under the supervision of a Street Law solicitor to research, prepare, and deliver community legal education to partners including secondary schools and/or community organisations.

Special Requirements

Legislative pre-requisites

Students will need a Working With Children Check consent declaration if working with minors during their placement.

LAWS 3081 Administrative Law

Credit Points 10

Coordinator Michael Head (https://directory.westernsydney.edu.au/search/name/Michael Head/)

Description This subject examines the legal principles regulating the exercise of power by the executive arm of government in its various manifestations; ministers, government departments and officials, regulatory bodies, tribunals, inferior courts and local councils. This is examined in the context of Australian constitutional arrangements and it is taught in the context of constitutional themes and principles that underpin the law in this area. The exercise of power examined includes decision making, the exercise of discretion, delegated legislation and the decision making procedure of the major administrative tribunals. The focus is on the principles of judicial review developed by the courts, standing and remedies. There is also an examination of major non-judicial avenues of review by the major tribunals such as the Commonwealth Administrative Appeals Tribunal, and the Ombudsman. The subject will also examine Freedom of Information legislation. This subject examines a number of key cases relating to Indigenous land and political rights, including the dismissal of indigenous representatives.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008 Government and Public Law OR 200814 Commercial Transactions Law

Equivalent Subjects 200013 Administrative Law

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Identify and evaluate the key concepts and principles of administrative law
2. Interpret and apply relevant law and policy to analyse legal problems and provide advice to resolve them
3. Evaluate the role of administrative law in maintaining a just and civilized society
4. Locate and evaluate relevant case law and legislation using a range of legal research tools
5. Demonstrate effective and appropriate communication skills in a professional context, including accurate citation according to AGLC style

Subject Content

1. Introduction and Overview of Administrative Law in its constitutional context.
2. Access to Government (Freedom of Information and Reasons for Decisions).
3. Non-judicial Review of Administrative Action
4. Judicial Review, including the grounds of judicial review, primarily ultra vires, natural justice, jurisdictional error.
5. Judicial review of delegated legislation.
6. Standing.
7. Judicial Remedies.
8. Investigating Administrative Activity (Corruption and Ombudsman).
9. Key cases relating to Indigenous land and political rights.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1003 Fundamentals of Australian Law AND LAWS 2003 Contracts

Equivalent Subjects 200012 Property Law

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Identify legal issues relating to property and explain and analyse concepts and principles of Australian property law.
2. Apply legislation and legal principles of Australian property law to provide advice in relation to proprietary interests and disputes.
3. Explain the development of property law, including Australian Native Title law, and critically evaluate its significance in a social justice framework.
4. Demonstrate an understanding of the operation of, and assumptions that underlie Australian property law in historical, political, social, economic, cultural and ethical contexts.
5. Display clear and logical structure, using accurate citation, grammar and punctuation in written work

Subject Content

1. The concept of property
2. The boundaries between different types of property
3. Personal Property and Securities
4. Possession and limitations of actions
5. Leases
6. Mortgages
7. Native Title
8. The acquisition and transfer of interests in land
9. Torrens title indefeasibility and exceptions
10. Priority ordering for the resolution of disputes between competing proprietary interests
11. Co-ownership

LAWS 3083, Gender and the Law

Credit Points 10

Coordinator Amira Aftab (https://directory.westernsydney.edu.au/search/name/Amira Aftab/)

Description This subject examines the way in which law and gender interact to produce gendered outcomes. The subject draws on feminist and queer theories to challenge traditional concepts of gender and notions of law as gender neutral. The subject will consider the way in which gender constructs influence the development and application of law. Students will study historical and contemporary legal issues to examine the way that gendered norms emerge and operate within the legal system, reproducing and reinforcing socially and politically constructed understandings of gender and sexuality. Students will be encouraged to think about the potential for law as a site of change and a means to promote gender equality.

School Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

To enrol in this subject, students must have successfully completed 120 credit points of Law subjects

Learning Outcomes

1. Analyse a range of feminist and queer theories in the context of current and historical issues.
2. Assess the role of law in producing gendered outcomes.
3. Conduct research to develop clear, logical and persuasive arguments, orally and in writing.
4. Examine the impact of the law and gendered harms on Aboriginal and Torres Strait Islander peoples, CALD women, and LGBTI groups.

Subject Content

1. Feminist Legal Theory
2. Queer Theory and Sexual Orientation and Gender Identity rights
3. Historical and contemporary issues of sex, gender, and the law
4. Gendered harms and intersectionality

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LAWS 3084 Law and Literature

Credit Points 10

Coordinator Jacinta Sassine (https://directory.westernsydney.edu.au/search/name/Jacinta Sassine/)

Description This subject will explore the relationship between law and literature. Students will examine how works of literature reflect the law and its social context, with the objective of developing a facility with research and critical and analytical skills, as well as fostering a broader appreciation of the role of law within our society. It will also involve textual analysis of legal documents, judgments and literary writings to encourage students to develop both a greater understanding of the language of the law and the ability to communicate persuasively and effectively in legal contexts.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1009

Restrictions

Students must have successfully complete 40 credit points of Laws subjects before enrolling in this subject.

Learning Outcomes

After successful completion of this Subject, students will be able to:
1. Analyse the interaction between law and literature in the social context of a culturally diverse society.
2. Discuss the depiction in literature of the legal issues affecting Aboriginal and Torres Strait Islander peoples and how far these are relevant today.
3. Examine various underlying legal concepts and the application of the law within both historical and contemporary social, cultural, political and economic contexts.
4. Communicate persuasively and effectively within legal and non-law situations
5. Evaluate and ethically use information from both legal and non-law sources in order to develop and support a sustained and persuasive argument.

Subject Content

• A study of the interaction between law and literature.
• Legal concepts, imagery and myths in literature.
• How literature and its social and historical contexts reflects the legal system of its time.
• The effect of literature on law reform.
• Aboriginal and Torres Strait Islander peoples' legal issues in Australian literature.
• Utopias, dystopias and the law.
• Plain English legal writing, the language of the law, semantics and drafting legal documents.
• Deciphering the language of judgments.

Assessment

LAWS 3085 Law of War

Credit Points 10

Coordinator Manuel Ventura (https://directory.westernsydney.edu.au/search/name/Manuel Ventura/)

Description This subject will consider the full spectrum of the international law that governs armed conflict involving States and

non-State (rebel) armed groups. The subject will first explore the international law that governs the initiation of armed conflict (jus ad bellum), including the prohibition of the use of force under customary international law and the UN Charter (1945), self-defence, use of force authorised by the UN Security Council, humanitarian intervention, peacekeeping and the maintenance of international peace and security. The subject will then explore the international law that governs how armed conflict is conducted (jus in bello), namely, international humanitarian law/law of armed conflict in international and non-international armed conflicts.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008 Government and Public Law

Learning Outcomes

1. Apply the principles that govern the initiation of armed conflict under international law
2. Evaluate the principal international institutions responsible for the maintenance of international peace and security
3. Assess the principles that govern how armed conflict is conducted under international law, when international humanitarian law/law of armed conflict is being violated and their effectiveness
4. Analyse the principles of jus ad bellum and jus in bello and their application and limitations to contemporary and emerging issues in international law and global conflicts.

Subject Content

Jus ad bellum

1. Historical attempts to regulate the use of force
2. Modern approaches to the regulation of the use of force
3. Exceptions to the prohibition on the use of force
4. Challenges posed by state and non-state actors to the regulation of force and institutional limitations.

Jus in bello

1. Sources, scope and principles of international humanitarian law
2. Separation of jus ad bellum and jus in bello
3. Challenges to international humanitarian law, its implementation and enforcement
4. Protective regimes for individuals, institutions, cultural heritage and the environment during conflict
5. Laws governing the conduct of hostilities
6. The role of Private, Public and NGO organisations in armed conflicts

LAWS 3086 Managing Legal Risk in Construction Law

Credit Points 10

Coordinator Joshua Saunders (https://directory.westernsydney.edu.au/search/name/Joshua Saunders/)

Description This subject introduces students to legal risks related to construction processes and processes for risk mitigation. Students will examine the liabilities and responsibilities of various parties in construction contracts and different types of dispute avoidance, management and resolution mechanisms. Students will engage with subject-matter specialists to enhance their learning experiences in this subject.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Co-requisite(s) LAWS 3088 Construction Law

Learning Outcomes

1. Explain legal risks and legal issues relating to construction projects.
2. Identify different strategies and measures to manage and advise on legal risks in the construction industry.
3. Propose solutions to manage legal risks in minor construction projects.
4. Develop research skills to identify and manage legal risks in construction projects.
5. Reflect on own needs, ethical positions and values to enhance professional practice.

Subject Content

1. Legal risk identification, management, and mitigation in construction and building projects
2. Project planning: feasibility and financing
3. Procurement model selection and alternate contracting models
4. Pre-tender documentation, Expressions of Interest, Tendering
5. Consortium Agreements and Joint Venture Agreements
6. Negotiating construction contracts

7. Ethical dilemmas in legal risk management
8. Claims Administration for time and cost under Construction Contracts
9. Managing sub-contract and interface risks
10. Privilege, Communication and Negotiation
11. Defects - Completion and Post-Completion issues
12. Technology and managing legal risk in construction
13. Practicalities of construction dispute resolution

LAWS 3087 Sports Law

Credit Points 10

Coordinator Tim Fuller (https://directory.westernsydney.edu.au/search/name/Tim Fuller/)

Description This subject focuses on the general principles of law that play a significant role in sport. 'Sport law' is considered to be an emerging and developing subject area of law. This has been recognised in Europe where the 'specificity of sport' refers to the inherent characteristics of sport that set it apart from other economic and social activities. Sport is a global industry and one of the most popular pastimes and activities in Australia. Students will learn about world sports law or lex sportiva, which is regarded as an autonomous body of rules having a specific character. Students will engage in activities that develop their understanding of this body of law in practice. This subject will foster critical perspectives on discrimination in sport and the contribution of Indigenous people to sports law and policy in Australia.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2003 Contracts and LAWS 2013 Tort Law

Learning Outcomes

1. Describe the development of sports law as a distinctive body of law.
2. Explain the jurisdiction of the Court of Arbitration for Sport and the adherence to lex sportiva.
3. Explain the relationship between general legal principles and the regulatory framework in which sport operates
4. Apply legal research and/or advocacy skills to solve legal issues concerning sport.
5. Examine the contribution of Indigenous people to sports law and policy in Australia.

Subject Content

1. Sports law jurisprudence
2. Governance in sport
3. Tort and Sport
4. Integrity in sport
5. Anti-doping in sport
6. Sporting tribunals
7. Discrimination in sport
8. The contribution of Indigenous people to sport law and policy in Australia
9. Athlete well-being
10. Sport agents
11. Sport sponsorship and athlete marketing
12. Children in sport
13. Broadcasting, media rights and social media
14. E-sports and cyber security
15. Employment and athlete Associations

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2003 Contracts

Learning Outcomes

1. Explain key legal concepts and theories used on construction projects.
2. Examine key technical principles relevant to the drafting of construction contracts.
3. Apply an evidence-based approach to explore key contractual processes and administrative challenges typical of a construction contract.
4. Communicate practical, well-informed solutions to emerging legal issues relevant to construction contracts.
5. Engage in independent investigations to enhance academic and professional development.

Subject Content

1. Revision of legal concepts from Contract and Tort law
2. Interpreting Construction Contracts and Incorporating terms
3. Regulation of the construction industry
4. Participants in the construction industry.
5. Construction contracts: types and methodologies.
6. Security of performance
7. Contract administration.
8. Time, delay and liquidated damages.
9. Completion and Defects.
10. Dispute avoidance, management and resolution.

LAWS 3089 Children's Rights: Local and International

Credit Points 10

Coordinator Meda Couzens (https://directory.westernsydney.edu.au/search/name/Meda Couzens/)

Description Children's Rights: Local and International introduces students to the rights of children at domestic and international level. Students are introduced to the rationale and the development of children's rights as well as the international and the Australian legal framework for their protection. Amongst the selected topics discussed in more detail are juvenile justice; families and child protection; First Nations children and the law; the exploitation of children; access to justice and governance (domestic and international) and the rights of children. The subject exposes students to multidisciplinary approaches to socio-legal issues and develops their analytical skills to help them conduct research that involves international and comparative legal materials. This subject can be taught either in a combination of onshore in Australia and offshore in a host country, or solely onshore in Australia. Students enrolled in the subject with an offshore component must be available to travel for two weeks to the host country. When no host country is available, this subject may be delivered wholly onshore (in Australia) only. Students will be advised whether there is an offshore component of study and the availability of a host country in advance of opportunities to enrol. When delivered offshore in a host country the teaching materials and tutorial activities will incorporate host country-specific issues and activities relevant to the topics covered in the subject. Offshore delivery integrated with host country specific delivery provides the students with an immersive international and comparative experience, which will enhance their ability critically to engage with Australian and international law relevant to the rights of children.

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2004 Criminal Law AND
LAWS 2008 Government and Public Law

Restrictions

When the subject is delivered onshore (in Australia, at WSU campuses), no enrolment restrictions apply, but the students must have completed the pre-requisite subjects.

When the subject is delivered offshore, the subject is not available for self-select enrolment. Intake in the subject will be restricted to expressions of interest. GPA and progression in the program will be considered, and the pre-requisites must be met. Students must be able to travel to the offshore destination for a specified period of 2 weeks (The dates for the term of offer will be made available to students through the School of Law's regular communication channels).

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Examine the historical, moral and legal foundation of children's rights
2. Examine the domestic and international legal and institutional frameworks for the protection of the rights of children
3. Explain the multifaceted nature of children's rights, their connections with other areas of law and the importance of multidisciplinarity for their protection
4. Analyse law and policy as it applies to children, including First Nations children
5. Integrate relevant international and comparative legal material on children's rights

Subject Content

1. Development and theoretical aspects in relation to children's rights
2. Introduction to the international framework for the protection of children's rights (UN, regional systems, non-Western approaches)
3. Introduction to children's rights protection in Australia (sources of children's rights, the Convention on the Rights of the Child and the Australian law; main children's rights challenges in Australia)
4. Children and criminal justice
5. Children, family and the state
6. The exploitation of children
7. Children and information technology
8. First Nations children and the law
9. Children and access to justice (domestic and international)
10. Governance (domestic and international) and the rights of children

LAWS 3090 Animal Law

Credit Points 10

Coordinator Francine Feld (https://directory.westernsydney.edu.au/search/name/Francine Feld/)

Description This subject examines the legal and ethical relations between humans and non-human animals in Australia. It provides students with theoretical perspectives from which to develop their own stance regarding human/animal relations. Students will be encouraged to evaluate the legal framework which governs those relations. The subject will examine a range of topic such as the moral and legal status of animals, animal rights versus animal welfare, farming and husbandry practices, animals in scientific research, animals in the entertainment industry, wildlife protection and endangered species, companion animals and Indigenous approaches to animal welfare.

School Law

Discipline Law, Not Elsewhere Classified.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1003 AND LAWS 1009

Restrictions

Students must have successfully complete 80 credit points of Laws subjects before enrolling in this subject.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Explain key philosophical approaches to the status of non-human animals.
2. Demonstrate knowledge of animal laws in Australia.
3. Identify legal issues and apply relevant legal principles to problems involving the use of animals and assess proposals for reform.
4. Apply research skills to assess legal frameworks for the regulation of relations between humans and non-human animals

Subject Content

- Historical development of animal Law
- Philosophical approaches to the moral status of animals
- Legal status of animals
- Overview of Animal Law in Australia
- Regulation companion animals
- Regulation of farm animals
- Regulation of wild animals
- Regulation of animals in research
- Regulation of animals in entertainment and sport
- Indigenous approaches to animal welfare

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1009

Restrictions

To enrol in this subject, students must have successfully completed 80 credit points of law subjects.

The subject will not be available for self-select enrolment. Intake in the subject will be restricted to expressions of interest. GPA and progression in the program will be considered, and the pre-requisites must be met.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Analyse the complexities global dynamics and their interactions with legal systems, governance practices, and cultural norms.
2. Apply critical thinking and analytical skills to address complex global legal issues.
3. Reflect on the role of diverse cultures, legal traditions, and governance models in shaping inclusive and just societies.
4. Demonstrate an understanding of the significance of promoting peaceful and inclusive societies, access to justice for all, and effective and accountable institutions.

Subject Content

- Understanding Global Dynamics and Their Impact on the Law:
  - Exploring the impact of globalisation on law, governance, and culture.
  - Investigating the interconnectedness of global systems and their influence on legal frameworks.
- Transnational Law and Governance:
  - Examining the complexities of transnational laws and their implications for global governance.
  - Analyse the role of international organisations and treaties in shaping legal frameworks across borders.
- Comparative Legal Systems:
  - Comparing different legal systems in a global context.
  - Assessing the strengths and weaknesses of various legal traditions and their impact on global legal frameworks.
- Cultural Influences on Law and Governance:
  - Understanding how culture shapes legal and governance practices.
  - Exploring the role of cultural norms, values, and customs in legal decision-making processes.
- • Impact of Globalisation on Law and Society:
  - Investigating the social and justice implications of globalisation.
  - Examining the challenges and opportunities presented by globalised legal systems.
- Intercultural Competency and Professional Skills:
  - Developing intercultural competency skills to effectively engage with diverse individuals and communities and their legal systems.
  - Enhancing professional skills required to navigate a globalised legal profession.

Special Requirements

Legislative pre-requisites

When the subject is delivered offshore, students must meet any visa and medical requirements to visit relevant location of subject

LAWS 3096 Drug Policy and Law

Credit Points 10

Coordinator Robert Mezyk (https://directory.westernsydney.edu.au/search/name/Robert Mezyk/)

Description Humans have always used psychoactive substances, and this interdisciplinary subject critically examines the evolving landscape of regulating this practice. It examines the historical aspects of drug use and prohibition, analyses the characteristics of different psychoactive substances, and explains and evaluates international

and domestic drug laws and their effects. The subject also addresses contemporary issues such as harm reduction, pill testing, safe supply, safe consumption rooms and drug decriminalisation and legalisation. The subject examines the dynamic domestic and international legal frameworks surrounding cannabis and psychedelics, reflecting on the future trajectory of drug laws. Drawing upon various disciplines, including legal theory, sociology, psychology, and public health, this subject prepares students for advanced research, policy analysis, and roles in law-making, law enforcement, and drug-policy NGOs.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 1003 LAWS 2004 LAWS 1009 LAWS 2008

Incompatible Subjects LAWS 3044

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Critically analyse Australian and international drug policies and laws within the framework of the history of drug regulation, drug pharmacology, drug use, addiction theory and social effects of drug regulation
2. Compare contemporary drug policy and law approaches.
3. Evaluate the impact of contemporary drug laws on the Australian population, including diverse communities, Indigenous people and alternative solutions

Subject Content

- Foundational questions of drug policy including what is a drug, what is drug policy
- Drugs' categorisation, history, pharmacology and effects
- Theory of drug use and addiction
- The history of American, global and Australian drug policy and law
- The international system of drug control
- Drug use in Australia
- • Criminal law and drug policy in Australia
- • Impact of drug policy in diverse communities

LAWS 3097 Refugee Law

Credit Points 10

Coordinator Jason Donnelly (https://directory.westernsydney.edu.au/search/name/Jason Donnelly/)

Description Refugee Law is a critical and dynamic subject that focuses on the legal frameworks and policies that govern the protection of refugees globally. This subject delves into the principles of international refugee law, including the definition of refugees, their rights, and the obligations of states under the 1951 Refugee Convention and its 1967 Protocol. Students will explore contemporary challenges in refugee protection, such as cross-border movements, statelessness, and non-refoulement. The subject also examines Australia's refugee policies in the context of international standards, fostering a deep understanding of the legal, ethical, and humanitarian issues surrounding refugees and asylum seekers.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) LAWS 2008

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Interpret the foundational principles of international refugee law (incl. refugee definition, rights, state obligations under the 1951 Convention & 1967 Protocol)
2. Analyse current challenges in refugee protection, including issues related to cross-border movements, statelessness, and the principle of non-refoulement.
3. Evaluate the validity of protection visa applications, including criteria for assessment and the legal framework governing these applications.
4. Critically analyse the five grounds for refugee protection and the legal interpretation of 'persecution', including how these are applied in various contexts.

5. Critically examine Australia's refugee policies, comparing them with international standards and discussing their legal, ethical, and humanitarian implications.
6. Analyse the legal complexities involved in specific aspects of refugee law, including sur place claims, the obligation to disregard certain conduct in Australia, exclusionary provisions, complementary protection, and the concept of modifying behaviour for protection.

Subject Content

- Introduction.
- Protection visa application validity.
- Country.
- The five refugee protection reasons for persecution.
- 'Persecution'.
- Available effective protection measures.
- Modifying behaviour.
- Sur place claims.
- Obligation to disregard certain conduct in Australia.
- Exclusionary Provisions.
- Complementary Protection.

LAWS 4002 Advanced Constitutional Law

Credit Points 10

Legacy Code 200755

Coordinator Elizabeth Handsley (https://directory.westernsydney.edu.au/search/name/Elizabeth Handsley/)

Description This subject builds upon the compulsory subject Constitutional Law, and provides a deeper and broader understanding of Australian constitutional law. It examines the constitutional aspects of Australian parliamentary democracy and citizenship, the constitutional powers of the Commonwealth Executive Government, constitutional issues relating to the raising and spending of government revenues and the complexities of the relationship between the Commonwealth and State as independent polities. The subject also examines the limited way in which the Australian Constitution operates to protect particular rights, liberties and freedoms.

School Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) LAWS 4015

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an advanced understanding of, and ability to apply, techniques of constitutional interpretation and reasoning.
2. Apply an understanding of constitutional law concepts to analysing and solving practical problems.
3. Critically evaluate how the Australian Constitution can be said to protect rights, liberties and freedoms.
4. Develop and present coherent legal arguments about complex constitutional issues.
5. Write effectively and appropriately, displaying clear and logical structure and using accurate grammar and punctuation.
6. Ethically and accurately reference (using the Australian Guide to Legal Citation) legal information from a range of primary and secondary sources.

Subject Content

1. Federal Parliament.
2. The High Court.
3. Detention.
4. Appropriation and Grants.
5. Taxation and Excise.
6. Intergovernmental Immunities.
7. Immigration and Aliens Powers.
8. Freedom of Interstate Trade.
9. Rights of Out of State Residents.
10. Acquisition of Property on Just Terms.
11. Freedom of Religion.

LAWS 4007 International Environmental Law

Credit Points 10

Legacy Code 200801

Coordinator Maria Gurlica (https://directory.westernsydney.edu.au/search/name/Maria Gurlica/)

Description This course provides a general introduction to international environmental law and policy. We will begin by exploring the economic, political, and legal concepts relevant to international environmental treaty regimes. We will then apply these concepts to concrete regimes designed to deal with specific international environmental problems, such as ozone depletion, transboundary air pollution, freshwater resources, marine pollution, world heritage, human rights, biodiversity and habitat loss. The course focuses principally on the dynamic of treaties, negotiations, and state and non-state actors in the international arena. Comparative approaches to national implementation, on selected issues, will also be covered.

School Law

Discipline International Law

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) LAWS 2008

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a grasp of the fundamental concepts and principles of International Environmental Law.

2. Critically evaluate the principal institutions and operation of the international legal system and demonstrate an understanding of the key actors, sources of law and dispute resolution processes.
3. Apply concepts and principles of International Environmental Law to contemporary environmental issues and to problem solving.
4. Undertake independent research and analysis to produce a written essay that demonstrates an understanding of application of International Environmental Law in a defined context that is clear, analytical, appropriately structured and referenced.

Subject Content

1. Development of International Environmental Law
2. Treaty Regimes
3. Oceans and Seas
4. Freshwater Resources
5. Biodiversity and Wildlife Conservation
6. Human Rights and Environment
7. World Heritage

LAWS 4009 Transactional Law

Credit Points 10

Legacy Code 200758

Coordinator William Higgs (https://directory.westernsydney.edu.au/search/name/William Higgs/)

Description This subject is designed to equip students for professional practice by providing them with an understanding of what it means (and takes) to be and think like a transactional lawyer in practice and how to 'add value to the deal' and think like a deal lawyer. Students will also be introduced to a range of structured financing transactions including lending arrangements, securitisation (RMBS, CMBS and CDOs), straight vanilla bonds, convertible bonds, covered bonds, asset based financing, managed investment schemes and swaps and derivatives (ISDA). Students will then be introduced to the legal building blocks of those transactions, including the law relating to representations and warranties, covenants, guarantees, subordination, set-off, commingling, trusts, security interests and insolvency. Students will work in teams to analyse and dissect a range of structured financing transactions. Real-life examples from international and domestic practice are discussed.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) LAWS 3045

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Communicate effectively, persuasively and appropriately through reading and writing.
2. Demonstrate an understanding of the responsibilities and ethical obligations of transactional lawyers.
3. Demonstrate and apply an understanding of the legal elements and commercial characteristics of key structured finance transactions to analysing and solving practical problems.
4. Demonstrate and apply an understanding of the legal elements and commercial characteristics of key structured financing transactions by dissecting and analysing transaction and legal structures for a range of structured finance transactions.

Subject Content

1. Transactional Practice
2. Structured Finance Transactions (including lending arrangements, securitisation, straight vanilla bonds, convertible bonds, covered bonds, master trusts, asset based financing, managed investment schemes, swaps and derivatives)
3. Representations and Warranties
4. Covenants
5. Guarantees
6. Transfer of Assets and Recharacterisation
7. Subordination
8. Set-off
9. Commingling
10. Declarations of Trust and Advanced Trust Issues
11. Security Interests (including the PPSA)
12. Insolvency

LAWS 4010 Designing Law Apps for Access to Justice

Credit Points 10

Legacy Code 201040

Coordinator Grace Borsellino (https://directory.westernsydney.edu.au/search/name/Grace Borsellino/)

Description This subject will teach students how to design and build an application using expert system software. This subject will provide students with a clinical legal experience by providing access to a community based client to ascertain their needs and undertake collaborative work to provide a solution that requires applied legal research, teamwork, innovative and creative design thinking, and the capacity to manage a project. This subject will teach students how to identify, design and build appropriate legal information systems for use in generating legal documents from precedents and assisting users to navigate solutions to legal problems. Students will be exposed to a variety of automated legal tasks and various legal and practical issues associated with their use, including issues of professional regulation. This will include guest lectures from those working on legal expert systems and related technologies. After learning the necessary skills, students will work in small groups to design and build a legal information system. This subject does not require students to have any pre-existing skills or experience in expert systems or computer programming. Instead, the subject itself includes instruction on how to use an expert system software.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Restrictions

Successful completion of 120 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appraise the limitations and implications of automated legal services in enhancing community access to legal information and services.

2. Collaborate with community partners to obtain instructions, isolate legal problems, and design creative and innovative solutions.
3. Design and build a basic automated legal information system to solve a real world problem.
4. Work constructively as a member of a self-managed team on an extended automated legal service project.
5. Present the automated legal solution clearly and persuasively. .

Subject Content

- Working with community partners
- Overview of legal service applications
- how to build and use A legal application
- principles of programming ? including precision, modularity, efficiency, maintainability, scalability, provability, user engagement, effectiveness, testing, debugging
- design thinking for The new future: case-by-case analysis, aggregated data, data visualization, insights
- teamwork and Project collaboration
- work-based Project management
- Presenting Project solutions to clients

Assessment

LAWS 4012 First Nations Peoples' Access to Justice Clinic

Credit Points 10

Coordinator Rebecca Dominguez (https://directory.westernsydney.edu.au/search/name/Rebecca Dominguez/)

Description In the First Nations Peoples' Access to Justice Clinic you will gain real life lawyering experience, working under the supervision of the Clinic solicitor one day a week for the semester. You will work collaboratively with students from other disciplines on advice, casework, policy or project work shaped by community stakeholders and you will critically reflect on the role of law, and of lawyers, in advancing social justice for First Nations Peoples. You will work with individual clients on their legal and non legal issues to provide assistance to resolve these issues. You will consolidate your existing legal knowledge, learn new areas of law, develop key professional and interpersonal skills, and the ability to work in inter-disciplinary collaborative teams. You will gain an understanding of your ethical and professional responsibilities as a lawyer in legal practice. You will learn practical legal skills through the seminar program and assessment items as well as your participation in direct legal service delivery. As a condition of enrolment, students must be available to attend a twelve day placement.

Level Undergraduate Level 4 subject

Pre-requisite(s) LAWS 2015 AND
LAWS 2004

Restrictions

To enrol in this subject, students must have successfully passed 180 Law subject credit points. This subject is not available for self-select enrolment. In-take will be by EOI to ensure students are aware of the cultural competencies expected and required to undertake the subject.

Learning Outcomes

1. Analyse issues faced by First Nations' Peoples accessing justice in the Australian legal system.
2. Examine legal and non-legal problems within prescribed areas of law including family law, care and protection, housing, criminal and civil law relating to Indigenous Peoples to enhance Indigenous access to justice.
3. Engage with cultural sensitivity in interdisciplinary therapeutic initiatives identified by stakeholder partners to facilitate access to justice of First Nations Peoples.
4. Reflect on, and propose solutions, strategies and/or initiatives to promote First Nations' Peoples access to justice and equality before the law.
5. Collaborate professionally with others within and across disciplines in addressing legal and non-legal problems faced by Indigenous Peoples including therapeutic approaches identified by stakeholder partners
6. Demonstrate professional skills to a level of competency expected of a junior legal professional
7. Demonstrate their understanding of their ethical and professional responsibility to individual clients in their client work.

Subject Content

1. Cultural competency and cultural safety
2. Reflective skills and practice
3. Legal Professional skills
4. Therapeutic and wholehearted lawyering jurisprudence
5. Access to justice issues impacting First Nations' Peoples
6. Intersectional impact
7. Case studies
8. Pathways to promote First Nations Peoples' access to justice and equality

Note: Subject content will be taught by First Nations persons except for specific law related content.

Work integrated learning

Students gain real life lawyering experience, working under the supervision of the Clinic solicitor one day a week for the semester. Students work collaboratively with students from other disciplines on advice, casework, policy or project work shaped by community stakeholders

Special Requirements

Legislative pre-requisites

Students will need a Working With Children Check consent declaration if working with minors during their placement.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LAWS 4017 Access to Justice Clinic

Credit Points 10

Coordinator Rebecca Dominguez (https://directory.westernsydney.edu.au/search/name/Rebecca Dominguez/)

Description Access to Justice Clinic is an experiential learning program in which students work for 12 days a semester at the Western Sydney University Justice Clinic (WSUJC), which is the university's community legal service. Students work under the supervision of the Director / Principal Solicitor and Clinic lawyers / clinical supervisors to gain practical lawyering experience and develop crucial professional skills, while critically reflecting on the role of law and of lawyers in advancing social justice. This subject provides students with an invaluable opportunity to use and reflect on their study of law in an interactive, legal service environment working on advice, casework, policy and / or project work. The specific placement activities and opportunities will align with clinic projects each semester and therefore cannot be advised in advance. Places are limited and enrolment is based on proximity to graduation.

Pre-requisite(s) LAWS 2015 AND
LAWS 2004 AND
LAWS 2013 AND
LAWS 2003

Equivalent Subjects JUST 4001 - Clinical Legal Placement

Restrictions

Students must have successfully complete 160 credit points of Laws subjects before enrolling in this subject.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Develop an understanding of law, the Australian legal system, and perspectives of Aboriginal and Torres Strait Islander Peoples through direct experience in a legal practice serving disadvantaged clients.
2. Analyse the impact of the legal system on individuals and communities through direct engagement with client cases.
3. Create evidence-based legal information resources to support the activities and research impact of the Justice Clinic and its community partners.
4. Examine the role of lawyers in practice, including professional self-regulation, legal ethics and legal responsibility.

5. Demonstrate professional communication skills in relation to work performed for the Justice Clinic.

Subject Content

1. Observe and participate in various aspects of legal practice, legal research, and solving real legal problems.
2. The practical application of law and ethics to facts
3. Critical analysis of the operation of the law, policy and the legal system, including the operation of the law in relation to Aboriginal and Torres Strait Islander Peoples.
4. Domestic legal mechanisms for law reform
5. Professional communication and interpersonal skills
6. Social justice lawyering in practice, including reflective and client-centred legal practice.
7. Social justice lawyering and the role of the lawyer: critical perspectives
8. Social justice lawyering and the role of the lawyer: lessons from the field.

Special Requirements

Legislative pre-requisites

Students will need a working with children's check if working with minors during their placement

Level Postgraduate Coursework Level 5 subject

Pre-requisite(s) LAWS 7047 Contracts or LAWS 7078 Principles of Private Law

Incompatible Subjects LAWS 3046 Law of Employment

Restrictions

Must be enrolled in a postgraduate law program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Examine the institutional and regulatory framework that govern the employment relationship in Australia.
2. Critically analyse the law of employment from contemporary and historical perspectives within an economic and social context, including the specific experience of First Nations workers.
3. Identify and negotiate solutions to legal employment problems.
4. Develop critically informed analysis of employment related management strategies.

Subject Content

1. The way law governs individual relationships in the labour market, including the specific experience of First Nations workers
2. The different forms of employment relationships and how to distinguish them
3. The content of the contract of employment including the duties implied at common law
4. Termination and remedies at common law
5. Termination and remedies under statute, including unfair dismissal
6. Some selected aspects of statutory regulation of employment

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Weekly across semester-online, plus one in-class quiz of 30 minutes duration	40	N	Individual
Presentation	2 hours (expert panel presentation in seminar)	20	N	Individual
Final Exam	3000 words	40	N	Individual

LAWS 5002 Planning and Environment Law

Credit Points 10

Coordinator Sandy Noakes (https://directory.westernsydney.edu.au/search/name/Sandy Noakes/)

Description This subject examines the planning laws in the state of New South Wales and at the Commonwealth level that have a bearing in NSW. Topics covered include an analysis of the functions of the relevant ministers, State government departments, and local councils; the role of public authorities; the effect of environmental planning instruments; and the impact of the planning system, legal processes of plans and planning controls within the development context. This subject has the balance among theory, policy and practical issues in its approach and a strong interdisciplinary component in the introductory phase.

Level Postgraduate Coursework Level 5 subject

Pre-requisite(s) LAWS 7056 Fundamentals of Australian Law

Restrictions

Students must be enrolled in program Juris Doctor (2826) to register in this subject.

Learning Outcomes

1. Critically examine statutory and common law environmental and planning legal principles and concepts
2. Propose strategies addressing practical problems and theoretical legal issues in the area of Planning and Environment Law
3. Review research and evidence to support theoretical and practical understanding of built environment law and procedures in a variety of property-related contexts
4. Analyse the role of First Nations people within planning and environmental law

Subject Content

1. Introduction to planning and environmental law
2. The role of land use in planning and zoning
3. Analysis of the functions of the Minister for Planning, Department of Planning and Environment, and local councils
4. Role of public authorities, environmental planning instruments and environmental impact assessment
5. Issues of enforcement, standing and environmental dispute resolution
6. Environmental ethics, environmental principles and the formulation of environmental policy
7. Development Control including the role of the National Construction Code
8. Environment protection legislation (Enforcement and Pollution Control)
9. The role and purpose of Land and Environment Court
10. Biodiversity conservation at the NSW and Commonwealth level
11. Heritage conservation
12. Building Certification and the role of the NSW Building Commissioner
13. The role of First Nations people within planning and environmental law

LAWS 5003 International Commercial Conflicts

Credit Points 10

Coordinator John Juriansz (https://directory.westernsydney.edu.au/search/name/John Juriansz/)

Description Students will explore real-world scenarios where international commercial disputes arise under the guidance of experts in the fields of building and construction practice. This subject is primarily concerned with how commercial disputes which have connections with more than one country are dealt with by Australian and international courts. Much of the law which provides the framework for the resolution of such disputes is derived from international instruments, including recent Conventions and Regulations which have significantly re-shaped the law in the European

Union. This subject considers the jurisdiction of the Australian courts and the recognition and enforcement in Australia of judgments granted by the courts of other countries. Students will analyse both the Brussels I Regulation and the so-called traditional rules, jurisdiction in personam and in rem, anti-suit injunctions and provisional measures. The subject also examines the rules which determine whether Australian law or the law of another country is applicable to a given situation. This examination includes a discussion of choice of law in contract and tort, with particular attention being devoted to the recent Rome I and Rome II Regulations. The subject also includes consideration of international aspects of insolvency and an analysis of the legal aspects of international commercial arbitration. In particular, students will consider the powers of the Australian courts to support or supervise an arbitration; the effect of an arbitration agreement on the jurisdiction of the Australian courts; the law which governs an arbitration agreement and the parties' dispute; and the recognition and enforcement of foreign arbitration awards.

School Law

Level Postgraduate Coursework Level 5 subject

Restrictions

Must be enrolled in a Post Graduate program

Learning Outcomes

1. Examine the role and functions in relation to construction projects involving international parties in differing jurisdictions.
2. Apply specialised cognitive and technical skills required to practise as interdisciplinary professionals in the construction industry in Australia and overseas.
3. Analyse the interaction between the technical, commercial and legal aspect of construction procurement in Australia and overseas,
4. Examine existing and emerging legal issues relating to construction projects in Australian and overseas.

Subject Content

1. Construction law in common law and civil law jurisdictions
2. Statute law and the construction site: mechanics' lien legislation, security for payment
3. Financing and delivery of international construction projects including alternative financing such as PPP
4. Procurement of projects
5. Standard form international contracts
6. Contracting models and standard-form contracts for international construction projects
7. International Federation of Consulting Engineers (FIDIC)
8. Contractual risk allocation including project security (bonds, letters of credit, guarantees), insurance, regulatory risks, political risks
9. Determination or resolution of international construction disputes
10. Enforcement of construction disputes through international arbitration
11. Contractual and extra-contractual alternative dispute resolution
12. Dispute avoidance procedures in the context of international construction

Assessment

Pre-requisite(s) LAWS 7072 Torts Law or LAWS 7078 Principles of Private Law

Incompatible Subjects LAWS 3072 Work Health and Safety Law

Restrictions

Must be enrolled in a postgraduate laws program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Critically evaluate the regulatory framework of work health and safety (WHS) and the effectiveness of WHS regulation in Australia from different employers' and employees' perspectives, including First Nations peoples.
2. Distinguish between the various means in which the law ensures workplace safety, the relationship between workplace safety and terms of employment.
3. Analyse the duties of employers, employees, directors and managers, the availability of defences in the event of a breach, consequences of contravening WHS duties and distinguish various penalty options.

4. Provide legal advice to clients on WHS issues in a commercial context.

Subject Content

1. Contextual background and historical development of WHS law, including the specific experience of First Nations workers
2. Workplace safety and the common law
3. Workplace safety and employment law
4. Duties of employers to employees and other persons in the workplace
5. Other statutory duties under the Work Health and Safety Act 2011 (NSW)
6. The Commonwealth WHS scheme
7. Defences
8. Obligations under the Work Health and Safety Regulation 2011 (NSW)
9. Workplace consultation and codes of practice
10. Enforcement
11. Penalties and remedies
12. Workers' compensation and rehabilitation

LAWS 5006 Law and Literature

Credit Points 10

Coordinator Jacinta Sassine (https://directory.westernsydney.edu.au/search/name/Jacinta Sassine/)

Description This subject will examine the relationship between law and literature. Students will critically analyse works of literature that reflect the law and its social context, with the objective of developing research and analytical skills, as well as fostering a broader appreciation of the role of law within our society. In addition to providing students with an understanding of the historical development of the legal system through literary studies, it will also involve textual analysis of legal documents, judgments and literary writings to encourage students to engage with the language of the law and the ability to communicate persuasively and effectively in legal contexts.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 5 subject

Pre-requisite(s) LAWS 7061

Incompatible Subjects LAWS 3084

Restrictions

Students must have successfully complete 40 credit points of postgraduate Laws subjects before enrolling in this subject.

Learning Outcomes

After successful completion of this Subject students will be able to:
1. Critically analyse the interaction between law and literature in the social context of a culturally diverse society to develop an understanding of the nature and effects of the Australian legal system.
2 Develop a critical awareness of the interaction between legal and non-legal writing, the legal system and the impact of the written word upon the experiences of law by cultural minorities, particularly Aboriginal and Torres Strait Islander peoples.
3. Complete a research project involving the critical analysis of the law and legal concepts as demonstrated in a specific work of literature.
4. Communicate persuasively and effectively within legal and non-law situations
5. Develop a self-directed approach to learning that will enable the student to adopt and embrace change in both legal practice and the wider society.

Subject Content

• A study of the interaction between law and literature.
• Legal concepts, imagery and myths in literature.
• How literature and its social and historical contexts reflects the legal system of its time.
• The effect of literature on law reform.
• Aboriginal and Torres Strait Islander peoples' legal issues in Australian literature.
• Utopias, dystopias and the law.
• Plain English legal writing, the language of the law, semantics and drafting legal documents.
• Deciphering the language of judgments.

LAWS 5007 Children's Rights: Local and International

Credit Points 10

Coordinator Meda Couzens (https://directory.westernsydney.edu.au/search/name/Meda Couzens/)

Description Children's Rights: Local and International provides students with the opportunity to critically analyse the rights of children at domestic and international level. Students will examine the rationale and the development of children's rights as well as the international and the Australian legal framework for their protection. Selected topics discussed in more detail are juvenile justice; families and child protection; First Nations children and the law; the exploitation of

children; access to justice and governance (domestic and international) and the rights of children. The subject develops multidisciplinary approaches to socio-legal issues and provides opportunities to apply analytical and research skills to special interest projects involving international and comparative legal materials.

LAWS 6002 Remedies in the Construction Context

Credit Points 10

Coordinator Jonathan Adamopoulos (https://directory.westernsydney.edu.au/search/name/Jonathan Adamopoulos/)

Description The subject aims to deepen student understanding of the nature utility of remedies in construction projects. The subject will explore the interaction between the technical, commercial and legal aspects of remedies in construction and procurement disputes. Practitioners in the field of construction require a working understanding of the remedies available in response to different claims that might arise in disputes. The nature and scope of remedies is a matter of constant development and refinement in Australia and abroad. This unit will explore a diverse range of remedies including damages in contract and in tort, the rule against penalties, quantum meruit, injunctive relief and remedies under the Australian Consumer Law.

LAWS 6004 Sports Law

Credit Points 10

Coordinator Tim Fuller (https://directory.westernsydney.edu.au/search/name/Tim Fuller/)

Description The subject will provide students the opportunity to synthesise a number of areas of law in a practical way that enhances their employability and professionalism. It focuses on an emerging and developing subject area of law. This has been recognised internationally where the 'specificity of sport' refers to the inherent characteristics of sport that set it apart from other economic and social activities. Sport is a global industry. Students will master an understanding of world sports law or lex sportiva, which is regarded as an autonomous body of rules having a specific character. Students will engage in professional learning activities to demonstrate their application of this body of law in practice. This subject will foster critical perspectives on discrimination in sport and the contribution of Indigenous people to sports law and policy in Australia.

School Law

Level Postgraduate Coursework Level 6 subject

Pre-requisite(s) LAWS 7047 Contracts and LAWS 7072 Tort Law

Incompatible Subjects LAWS 3087 Sports Law

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

1. Explain the development of sports law into its own distinctive body of law.
2. Analyse the jurisdiction of the Court of Arbitration for Sport and the adherence to lex sportiva.
3. Analyse the relationship between general legal principles and the regulatory framework in which sport operates
4. Apply professional legal research and/or advocacy skills to analyse legal issues concerning sport.
5. Evaluate the contribution of Indigenous people to sports law and policy in Australia.

Subject Content

1. Sports law jurisprudence
2. Governance in sport
3. Tort and Sport
4. Integrity in sport
5. Anti-doping in sport
6. Sporting tribunals
7. Discrimination in sport

LAWS 6006 Medical Law

Credit Points 10

Coordinator Emma Bartley (https://directory.westernsydney.edu.au/search/name/Emma Bartley/)

Description This subject analyses Australian medical law. The legal issues are examined in broad social, cultural and ethical contexts, including critical perspectives on medical law and policy relating to Indigenous people. Medical law is underpinned by the rapid pace of scientific and social developments that generate new issues for medicine and for the law, many of which are at the core of policy— birth and reproduction, choice and responsibility, life and death. Students will engage in professional learning activities to demonstrate their application of this body of law in practice.

LAWS 7072
LAWS 7057 and
LAWS 7048

Incompatible Subjects LAWS 3050

Restrictions

Must be enrolled in the 2826 Juris Doctor program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Critically evaluate medico-legal principles from primary and secondary legal sources.
2. Apply knowledge of medical law to practical issues.
3. Analyse the relationship between law, medicine, and ethics, incorporating different social and cultural perspectives.
4. Evaluate recent and potential areas appropriate for medical law reform.
5. Develop advanced communication and reflection skills.

Subject Content

- Civil liability legislation
- Privacy, confidence and medical record access
- Insurance
- Consent / trespass; consent / incapacity
- Medical law and policy relating to Indigenous people
- Negligence - Duty and breach, conflicting duties
- Vicarious liability and non-delegable duties
- Contract and Australian Consumer Law claims
- Information cases / failure to warn
- Mental harm claims
- Duties to third parties
- Causation / apportionment
- Assessment of damages
- Limitation periods
- Alternative dispute resolution
- Beginning of life
- Wrongful life and birth

- End of life
- Expert evidence and immunity
- Discipline, mandatory reporting and crime
- Coronial jurisdiction

LAWS 6008 Wills and Succession

Credit Points 10

Coordinator Stephen Janes (https://directory.westernsydney.edu.au/search/name/Stephen Janes/)

Description This subject analyses law and policy relevant to the devolution of property upon death. The legal issues relating to wills and succession are examined in their social, cultural, and ethical contexts. The subject encompasses topics such as the law relating to intestacy, the making of a valid will, the administration of the estate and testator's family maintenance. This subject is of particular importance to those students who intend to practice either as a solicitor or barrister as Wills and Succession forms a significant part of private practice. Students will engage in professional learning activities to demonstrate their application of this body of law in practice.

LAWS 7001 Advanced Clinical Legal Placement

Credit Points 40

Legacy Code 201006

Coordinator Jennifer Whelan (https://directory.westernsydney.edu.au/search/name/Jennifer Whelan/)

Description This 40 credit point subject consists of twenty days of clinical work within a legal practice environment. Students are mentored by experienced legal practitioners to develop and apply knowledge and skills in legal practice. Students are responsible for organising their placements with legal services or practices working in areas of interest to the student and the proposed placement must be approved by the School of Law. Students are required to perform professional tasks in the legal service or practice setting and to undertake self-directed study including completing a self- directed research report on a work- related project and workplace reflections. These together with a Professional Performance Report from their workplace supervisor/mentor, will comprise assessment for the subject on a satisfactory/unsatisfactory basis. Students are supported in this through the provision of supporting materials. Advanced Clinical Legal Placement may be undertaken in any study period and may, by agreement, be organised in ways which suit the workplace supervisor/mentor and the student and as agreed with the Subject Coordinator. This may include, for example, undertaking the 20 day clinical work placement as a four week block or distributed over the session parallel to their program of study.

School Law

Discipline Business and Commercial Law

Student Contribution Band HECS Band 4 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 2824 Master of Laws in the Master of Laws (Law Graduate) - 120cp pathway. Students must have a Bachelor of Laws or Juris Doctor degree, or equivalent to be eligible to complete Advanced Clinical Legal Placement.

Assumed Knowledge

Bachelor of Laws degree or Juris Doctorate or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Reflect on own learning and professional development needs.
2. Design and complete a research project based on issues emerging from the real-time practice.
3. Communicate relevant information about legal issues to legal and non-legal audiences.
4. Perform legal assistance services in a practical context

Subject Content

This subject consist of the following legal and project practical experiences:
- 20 days work placement in a legal service or practice setting
- performance of professional tasks in The everyday legal service or practice setting
- self- directed research report.
- reflective practice (online resources)

LAWS 7011 Contemporary Issues in Taxation

Credit Points 10

Legacy Code 200872

Coordinator Tenille Buttigieg (https://directory.westernsydney.edu.au/search/name/Tenille Buttigieg/)

Description This advanced tax law course expands on foundational Australian taxation law studies, delving into new topics and a deeper exploration of core principles. Key topics include the taxation of non-profits and the professional legal and ethical obligations of tax practitioners. Students will apply tax law to real-life situations like end-of-life events, relationship breakdowns, and small business management. It prompts critical engagement with current tax issues, encouraging reflection on tax policy's role in advancing societal objectives such as education, housing, and social equality.

School Law

Discipline Taxation Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7031 or LAWS 7069

Restrictions

Students must be enrolled in 2793 Master of Financial Planning, 2794 Graduate Diploma in Financial Planning, 2807 Master of Stockbroking and Financial Advising, 2824 Master of Laws or 2826 Juris Doctor

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply ethical standards and professional responsibilities to tax practice including relevant legislative requirements.
2. Apply relevant tax laws to complex problem scenarios including different entity structures and life scenarios.
3. Critically examine tax issues in contemporary issues affecting tax policy, economic behaviour, and social equity.
4. Communicate complex tax concepts effectively to diverse audiences including clients, tax professionals and regulatory bodies.

Subject Content

1. Tax policy and tax reform in contemporary Australia.
2. Advanced issues of assessability of income under the ITAAs including compensation and crypto.
3. Capital gains tax concessions selected topics including small businesses and end of relationships.
4. Selected contemporary issues in deductions and deductibility.
5. Advanced employment and tax issues, including gig work, ESS, and end of work.
6. End of life tax planning.
7. Ethical and professional responsibilities of tax agents including obligations under the Tax Agent Services Act 2009 and the Tax Agent Services Regulations 2009
8. Tax avoidance and evasion: legal and ethical perspectives.
9. Not-for-profits and tax law

LAWS 7014 Human Rights in Practice and Theory

Credit Points 10

Legacy Code 200953

Coordinator Catherine Renshaw (https://directory.westernsydney.edu.au/search/name/Catherine Renshaw/)

Description This subject examines the place of regional human rights systems in the global architecture of human rights. Concepts of universalism, relativism and the 'Asian values' debate are examined. The record of human rights treaty ratification and compliance in Asia and the Pacific is examined within the context of the international treaty system as well as the ASEAN regional human rights regime. The development and implementation of international and domestic human rights protections in criminal law, constitutional law and institutional construction are examined across the region.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 2824 Master of Laws, 2784 or 2810 Master of Laws (International Governance), 8083 Bachelor of Research Studies, 8084 Master of Research - HC or 8085 Master of Research - LC.

Assumed Knowledge

Knowledge such as is gained through completion of a law degree (Bachelor of Laws or Juris Doctor) or equivalent in any jurisdiction.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate mastery of theoretical knowledge of how human rights are protected at the domestic, regional and international levels in the countries of Asia and the Pacific.
2. Demonstrate an advanced and integrated understanding from a range of disciplines to evaluate how different philosophical,

religious and cultural traditions in Asia and the Pacific relate to the international law of human rights.
3. Demonstrate mastery of knowledge to critically evaluate and analyse the effectiveness of different mechanisms and institutions for the protection and promotion of human rights in Asia and the Pacific.
4. Integrate theoretical and practical knowledge to develop and present coherent arguments about complex human rights issues.
5. Demonstrate a highly developed ability to communicate analysis effectively in a variety of appropriate scholarly and professional formats.
6. Ethically and accurately reference (using the Australian Guide to Legal Citation) legal information from a range of domestic and international primary and secondary sources.

Subject Content

1. The global architecture of human rights.
2. Universalism, relativism and the "Asian values" debate.
3. Regional human rights systems in the global order.
4. Human rights and international criminal law: the arc of justice from Tokyo to Phnom Penh.
5. Implementation of international human rights at the state level.
6. National Human Rights Institutions - Protectors or Pretenders?
7. Protection of Human Rights in Communist states: China and Vietnam.
8. Human rights under military dictatorships: Myanmar (Southeast Asia) Fiji (the Pacific) North Korea (North Asia).
9. The role of civil society in the promotion and protection of human rights.
10. Australia and New Zealand: Middle Powers and the politics of human rights persuasion.

LAWS 7015 Information and Data Governance Law and Policy

Credit Points 10

Legacy Code 200958

Coordinator Jacinta Sassine (https://directory.westernsydney.edu.au/search/name/Jacinta Sassine/)

Description This subject focuses on the right to privacy and examines the legal framework for information privacy protection and data governance that are established by both international and domestic law and regulation. This subject introduces students to the theoretical approaches to information privacy and data governance law and policy. In particular, the subject focuses on the European Union Directives and Regulation; the OECD Guidelines for the Protection of Privacy and Trans Border Flows of Personal data and the impact of international laws and regulation on information privacy and data governance regulation and policy in Australia. The subject explores some of the challenges in providing effective information privacy protection and data governance in cyberspace as existing laws adapt to new and advanced information technological developments and their use.

LAWS 7018 International Corporate Governance

Credit Points 10

Legacy Code 200902

Coordinator Rangika Palliyaarachchi (https://directory.westernsydney.edu.au/search/name/Rangika Palliyaarachchi/)

Description The subject studies the evolution and transformation of the concept of corporate governance over the last five decades. Its focus is on the role of the large modern corporation in its economic and social setting, and it will in this context examine the challenges of ensuring the economic efficiency of the corporation while being responsive to the needs of the social environment it operates in. Examined will be issues of accountability, responsibility, and transparency of the corporation and its managers, to its investors, employees, consumers and society generally, the role of corporate social responsibility, enlightened shareholder value, and the notion of Accountable Capitalism. Also examined will be the role and responsibility of institutional investors, block holders, and other arbitrageurs of corporate control. While the primary focus of the study will be on the Australian, UK, and US models, comparisons will also be made with the German, Japanese, and Chinese systems of corporate governance.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) LAWS 7027 or LAWS 7057

Restrictions

Students must be enrolled in 2824 Master of Laws or 2826 Juris Doctor.

Students in program 4700 Graduate Diploma in Health Science or 4698 Master of Health Science in the T019 Health Services Management major should seek permission from the law school via a rule waiver to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse domestic and international laws with respect to corporate governance.
2. Interpret and communicate knowledge to present a coherent and sustained argument in relation to an issue of contemporary corporate governance.
3. Critically evaluate theoretical and practical corporate governance issues to solve complex legal problems using legal and non-legal sources.
4. Analyse and evaluate contemporary issues affecting the governance of the modern corporation in a globalised financial market and regulatory system.

Subject Content

1. The economic theory of the firm: Australian, US and UK approaches compared and contrasted with the German and Japanese models.
2. The legal theory of the firm: Australian, US, UK approaches compared to the German and Japanese models.
3. The received legal theory of the firm.
4. The role of Audit, Risk Management and Remuneration committees.
5. The role of Institutional shareholders and Institutional shareholder committees.
6. The impact of codes of corporate governance and ethical conduct.
7. Markets (Australia, US and UK) versus Managed (German and Japanese) governance.
8. Stakeholders and shareholders and the political economy of corporations law.
9. The struggle for control and dominance of the modern corporation within and outside of the board in the context of the globalised financial market.
10. Global financial markets and regulatory system.

LAWS 7019 International Criminal Law and Justice

Credit Points 10

Legacy Code 200962

Coordinator Manuel Ventura (https://directory.westernsydney.edu.au/search/name/Manuel Ventura/)

Description This subject analyses the state of international criminal law and its place in the modern international legal system in light of important recent developments. It discusses why a State's national criminal laws should accord with international developments. It focuses on substantive and procedural law and examines relevant international legal concepts, general principles of international criminal law, and how international criminal tribunals function. It considers particular international crimes, participation in such crimes, defences, and important recent cases such as those of Augusto Pinochet and Slobodan Milosevic.

LAWS 7020 International Environmental Law and Policy

Credit Points 10

Legacy Code 200907

Coordinator Maria Gurlica (https://directory.westernsydney.edu.au/search/name/Maria Gurlica/)

Description This subject provides an overview of international environmental law and policy. It investigates legal and policy measures for managing and protecting the environment in a sustainable manner. The subject will begin by exploring the economic, political, and legal concepts relevant to international environmental legal regimes. It will then apply these concepts to concrete regimes designed to deal with specific international environmental problems, such as climate change, ozone depletion, air pollution, hazardous waste, freshwater resources, marine pollution, world heritage, human rights, biodiversity and habitat loss. The subject focuses principally on the dynamic of treaties, negotiations, and state and non-state actors in the international arena. Special attention will be given to 21st Century environmental problems. Appropriateness of the present environmental legal regimes and challenges for the future will also be mooted in the subject.

LAWS 7021 International Governance Dissertation

Credit Points 10

Legacy Code 200904

Coordinator June Wang (https://directory.westernsydney.edu.au/search/name/June Wang/)

Description This subject comprises the preparation of a research dissertation, of between 6,000 to 8,000 words, on a novel and/or in-depth study related to International Governance. The subject provides an opportunity for Master of Laws students to further develop and refine their legal research and writing skills and to explore and analyse a legal topic of international governance. It also requires the student to undertake a literature review, submission of a research proposal, upon acceptance of which the dissertation is written under supervision. The dissertation should be of sufficient quality for acceptance for publication in the online Journal of International Governance, hosted by WSU School of Law.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7027

Co-requisite(s) LAWS 7018 AND
LAWS 7013

Restrictions

Students must be enrolled in 2824 Master of Laws, 2784 Master of Laws (International Governance) or 2810 Master of Laws (International Governance).

Assumed Knowledge

Completed a law degree (Bachelor of Laws or Juris Doctor) or equivalent in any jurisdiction.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of domestic and international laws in respect to corporate governance.
2. Demonstrate an understanding of recent developments in governance from more than one international legal jurisdiction.
3. Interpret and communicate knowledge to present a coherent and sustained argument to their area of specialty, the legal profession and broader society.
4. Use cognitive, technical and legal skills to investigate complex legal problems and apply established concepts and theories to different bodies of knowledge.
5. Demonstrate mastery of knowledge to critically reflect and analyse relevant theory within the legal profession from a broad range of legal and non-legal sources.
6. Demonstrate creativity and initiative to new situations in professional practice and for further learning in different jurisdictions (different legal systems).
7. Integrate theoretical and practical knowledge to critically analyse and solve complex legal problems, which can be inter-disciplinary in professional practice.
8. Demonstrate a high level of awareness of practices that lead to autonomy and accountability as a public or private lawyer working for government, NGO, or corporation or private practice.

Subject Content

1. Selection of a specific topic of study on international governance, as agreed by the subject coordinator, the student and the supervisor.
2. A unique problem, involving a literature review, appropriate methodology and submission to potentially change the law or frameworks of international governance, in respect of a particular jurisdiction.
3. Preparation for publication. The dissertation, of between 6,000 and 8,000 words should be publishable in the online Journal of International Governance, hosted by the WSU, School of Law.

Assessment

LAWS 7022 International Human Rights Law

Credit Points 10

Legacy Code 200961

Coordinator Robert Mezyk (https://directory.westernsydney.edu.au/search/name/Robert Mezyk/)

Description This subject examines the foundations of the concept of human rights under international law, how international law became concerned with the rights of individuals and the development of international measures for the protection of human rights. It examines the extent of compromise of international human rights where sovereignty, cultural relativism and political resistance preclude comprehensive incorporation of some fundamental human rights principles in domestic law. Instruments such as The Charter of the United Nations, The Universal Declaration of Human Rights, The International Covenant on Civil and Political Rights and International Covenant on Economic, Social and Cultural Rights are also examined.

LAWS 7025 International Law of Ocean Governance

Credit Points 10

Legacy Code 200951

Coordinator Daud Sm Hassan (https://directory.westernsydney.edu.au/search/name/Daud Sm Hassan/)

Description This subject examines the rules regulating the principle uses of the world's oceans. It explores the historical development and sources of contemporary law of the sea and the adoption of the 1982 Convention on the Law of the Sea (UNCLOS). Legal regimes of various maritime zones including territorial sea and contiguous zone, continental shelf, the exclusive economic zone and the high seas will be studied. Various sources of marine pollution, fisheries, marine scientific research, maritime spatial planning, maritime safety and security, mining of deep sea beds and dispute settlement will also be explored in this subject.

School Law

Discipline International Law

LAWS 7026 International Space Law - Commercial Aspects

Credit Points 10

Legacy Code 200963

Coordinator Steven Freeland (https://directory.westernsydney.edu.au/search/name/Steven Freeland/)

Description This subject examines the underlying legal principles that regulate the use, exploration and exploitation of space, and how International Law can and should be applied to the many different State and private commercial uses of outer space. It examines the existing international legal regime - the five United Nations Space Treaties and key Declarations of Principles related to space activities - as well as a number of domestic regulatory systems, including the Australian legal regime. The subject also concentrates on the (many) uses and proposed uses of space for which the legal framework may not be particularly well suited.

LAWS 7031 Principles of Taxation

Credit Points 10

Legacy Code 200869

Coordinator James Paterson (https://directory.westernsydney.edu.au/search/name/James Paterson/)

Description This subject provides an overview of the Australian taxation system as it affects the financial planning environment. Many financial planning decisions have a tax impact. Further, some financial products and much financial advice derive at least some of their value from their taxation consequences. Key topics covered include aspects of tax administration, tax planning concepts, the constitutional basis of taxation, assessable income concepts, international tax issues, the taxation of capital, allowable deductions and offsets, and taxation of such entities as partnerships, trusts, companies and shareholders. The course will also address other taxes that impact the financial advice environment including the FBT and the GST.

School Law

Discipline Taxation Law

LAWS 7033 Intellectual Property

Credit Points 10

Legacy Code 200980

Coordinator Sarah Hook (https://directory.westernsydney.edu.au/search/name/Sarah Hook/)

Description This subject provides an introduction and overview of the legal principles of intellectual property law in Australia. Students will consider the nature of intellectual property, the legal framework which contains it, and the ways in which it can be protected. The modules will cover the four major intellectual property regimes of trademarks, copyright, designs, and patents as well as issues relating to traditional knowledge of Aboriginal and Torres Strait Islander Peoples. Students will research the theoretical underpinnings of Intellectual Property Rights and whether they are fit for purpose in contemporary society.

Legacy Code 201041

Coordinator William Higgs (https://directory.westernsydney.edu.au/search/name/William Higgs/)

Description This subject examines the regulation of provision of financial advice within the Australian financial services sector - including the regulatory and legal obligations relating to financial advice that arise under Chapter 7 ("Financial Services and Markets") of the Corporations Act 2001 (Cth) and the reporting and notification requirements under the Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth) (AML/CTF Act) and the Anti-Money Laundering and Counter-Terrorism Financing Rules (AML/CTF Rules). The main object of Chapter 7 is to promote: confident and informed decision making by consumers of financial products and services while facilitating efficiency, flexibility and innovation in

the provision of those products and services; fairness, honesty and professionalism by those who provide financial services; fair, orderly and transparent markets for financial products; and the reduction of systemic risk and the provision of fair and effective services by clearing and settlement facilities. Businesses that are required to comply with the AML/CTF Act are also required to comply with the Privacy Act 1988 (Cth) when handling personal information collected for the purposes of compliance with their AML/CTF Act obligations. The subject examines the role of the Australian Transaction Reports and Analysis Centre (AUSTRAC) which is the Australian Government agency responsible for ensuring compliance with the AML/CTF Act. The subject critically evaluates the reasons for regulation in the context of contemporary and evolving events which affect the financial services sector including the overarching Australian Privacy Principles (APPs) set out by the Privacy Act 1988 (Cth). The subject also examines the Tax Agent Services Act 2009 (Cth) (TASA) requirements for tax (financial) advisors and the role of the Tax Practitioners Board (TPB) in enforcing the requirements under TASA. The subject examines the professional and ethical obligations in providing financial advice and the consequences of failing to comply with these obligations with a particular focus upon the critical importance of professional ethical conduct, the consequences understanding the need to put the clients interest first, the importance of identifying and resolving conflict of interest, and the need to identify and avoid instances of professional misconduct and unsatisfactory conduct. This subject is available as a standalone bridging subject which is accredited by the Financial Adviser Standards and Ethics Authority (FASEA) having met the FASEA curriculum and standards requirements.

Discipline Business and Commercial Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7010 or LAWS 7060

Restrictions

Students must be enrolled in 2824 Master of Laws or 2826 Juris Doctor to enrol in this subject.

Students in program 2825 Graduate Certificate in Financial Advising should seek permission from the law school via a rule waiver to enrol in this subject.

Assumed Knowledge

Students are expected to have practical experience working in the financial planning industry and be on the Financial Adviser Register. For LLM and JD students an understanding of corporate law is needed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine how the Australian legal and regulatory compliance requirements frame the provision of financial advice and the financial services sector.
2. Critically evaluate the policy rationale behind the regulation of the provision of financial advice within the Australian financial services sector.
3. Apply relevant regulatory provisions to case studies.
4. Critically appraise professional and ethical obligations, and the consequences of failing to comply with these obligations, in providing financial advice.

Subject Content

• Overview of current financial services environment and purpose of regulation
• Introduction to Australian regulatory framework of financial advice and advisors and regulators: Australian Investments and Securities Commission (ASIC), Tax Practitioners Board (TPB), Financial Adviser Standards and Ethics Authority (FASEA), Office of the Australian Information Commissioner (OAIC), and the Australian Transaction Reports and Analysis Centre (AUSTRAC)
• Obligations arising under Chapter 7 (“Financial Services and Markets”) of the Corporations Act 2001 (Cth)
• Reporting and notification requirements under the Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth) (AML/CTF Act) and the Anti-Money Laundering and Counter-Terrorism Financing Rules (AML/CTF Rules).
• Requirements for use and handling of personal information arising under the Privacy Act 1988 (Cth).
• Compliance with Tax Agent Services Act 2009 (Cth) (TASA) requirements for tax (financial) advisors.
• Overview of the professional and ethical obligations in the provision of financial advice and the consequences of failing to comply with these regulatory and legal obligations.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Essay	2,000 Words	30	N	Individual
Quiz	6 Quizzes (marked online) of 30 minutes each, the best 5/6 used to make mark of 10.	10	N	Individual
Final Exam	3 Hours	60	Y	Individual

LAWS 7041 Administrative Law

Credit Points 10

Legacy Code 201056

Coordinator Michael Head (https://directory.westernsydney.edu.au/search/name/Michael Head/)

Description This subject examines the legal principles regulating the exercise of power by the executive arm of government in its various manifestations; ministers, government departments and officials, regulatory bodies, tribunals, inferior courts and local councils. This is examined in the context of Australian constitutional arrangements and it is taught in the context of constitutional themes and principles that

underpin the law in this area. The exercise of power examined includes decision making, the exercise of discretion, delegated legislation and the decision making procedure of the major administrative tribunals. The focus is on the principles of judicial review developed by the courts, standing and remedies. There is also an examination of major non-judicial avenues of review by the major tribunals such as the Commonwealth Administrative Appeals Tribunal, and the Ombudsman. The subject will also examine Freedom of Information legislation.

Pre-requisite(s) LAWS 7057 Government and Public Law

Incompatible Subjects LAWS 3081 Administrative Law

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse principles of administrative law, procedure and policy, and their relationship to broader social, economic and political contexts;
2. Provide advice to resolve problems that indicate a deep comprehension of administrative law;
3. Evaluate relevant case law and legislation using a range of legal research tools and methods;
4. Evaluate ethical issues arising in administrative law practice and the professional responsibilities of lawyers in maintaining a just and civilised society.

Subject Content

- Introduction and Overview of administrative Law in its constitutional context
- Access to government (freedom of information and Reasons for decisions)
- Non-Judicial Review of administrative action
- Judicial Review, including The grounds of Judicial Review, primarily ultra vires, natural justice, jurisdictional error
- Judicial Review of delegated Legislation
- Standing
- Judicial Remedies
- Investigating administrative Activity (Corruption and Ombudsman)
- Key cases relating to Indigenous land and political rights.

LAWS 7042 Advanced Legal Negotiation

Credit Points 10

Legacy Code 201062

Coordinator John Juriansz (https://directory.westernsydney.edu.au/search/name/John Juriansz/)

Description This subject examines how conflict arises and engages students to apply the main theories related to conflict and its resolution within diverse practical environments. Students will analyse and synthesise negotiation theories, skill-sets and studies, and will evaluate their respective usefulness as future legal professionals. Students will develop a value-laden negotiation toolbox and will grow in confidence in negotiations within a broad array of environments essential to the legal profession. Students will examine written scholarship, engage in negotiation simulations involving role- scenarios, case hypotheticals, experimental games, and will become intricately involved in other negotiation-related scenarios. Classes will include presentation of conceptual and strategic theories, simulations and role-playing

scenarios applying these theories, and de-briefing of the theoretical and practical components of legal negotiation.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7044

Restrictions

Students must be enrolled in program 2826 Juris Doctor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply competitive and collaborative negotiation skill-sets most appropriate to the particular dispute as future legal professionals;
2. Develop an advanced understanding of the nature of disputes, including ethical, cultural, and economic factors of disputes, in one or more legal jurisdictions;
3. Demonstate a critical awareness of the emotional and psychological encouragements and barriers to consensus building as well as those involving rational choice theory;
4. Critically analyse the main theories of influence, sway, and negotiation and their application in the field of law and other related fields;
5. Work effectively as a team member to resolve dispute resolution challenges as future legal professionals.

Subject Content

1. Elements of negotiations
2. Positional Bargaining and Interest-Based Bargaining
3. Power and weakness
4. Nature of disputes - the ethical, cultural and economic dimensions
5. Consensus - the emotional and psychological encouragements and barriers
6. Core tasks in reaching agreement: Information exchange, solution-seeking, concession management
7. Ways to manage a negotiation
8. Tactics: People and Processes
9. Deal design: Value and Substance
10. Setup: Scope and Sequence
11. Common Barriers to Agreement
12. Game Theory
13. Bargaining Strategies
14. Distributive Negotiation
15. Personality and persuasion
16. Seven Elements of Effective Negotiations: Relationship, Communication, Interests, Options, Alternatives, Legitimacy, Commitment
17. Best Alternative to Negotiated Agreement (BATNA)
18. Coalitions
19. Multiparty Negotiations
20. Strategic Management and resolution of deadlocked negotiations

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) LAWS 7049

Restrictions

Students must be enrolled in program 2826 Juris Doctor and successful completion of 80 credit points of Juris Doctor core subjects. Enrolment in the subject is by invitation only following a call for expressions of interest and a merit selection process. Classes are kept small due to the practical nature of the subject. Students must be enrolled in a postgraduate program.

Assumed Knowledge

Good communication skills; including the ability to construct a coherent argument and write in a manner that is grammatically correct.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Exhibit legal professional ethics and behaviour;
2. Exhibit the essential requirements of good advocacy in multiple contexts;
3. Analyse case studies succinctly, logically and accurately;
4. Critically reflect on the conceptual, ethical and practical aspects of advocacy;
5. Present the oral distillation of a case analysis in a polite, polished and persuasive fashion;
6. Present written submissions which professionally articulate legal argumentation.

Subject Content

- introduction to Advocacy
- Interlocutory Advocacy: Civil
- Interlocutory Advocacy: criminal
- some special types of criminal Advocacy
- case theory
- Evidentiary and procedural Issues in practice
- Trial Advocacy: Opening and Examination-in-Chief
- Trial Advocacy: cross-Examination
- Appellate Advocacy

LAWS 7044 Alternative Dispute Resolution

Credit Points 10

Legacy Code 201052

Coordinator June Wang (https://directory.westernsydney.edu.au/search/name/June Wang/)

Description Alternative Dispute Resolution (ADR) processes are no longer 'alternative' but a major part of the contemporary justice system. Modern legal practice requires lawyers to negotiate settlements on behalf of clients and advise clients how to resolve disputes without litigation. Non-adversarial processes offer many benefits to parties, professionals and the community. This subject introduces students to the theory and practices of alternative dispute resolution processes and provide students with the opportunity to develop key ADR practice. Students will employ cultural awareness and appropriate communication strategies required for professional practice in dispute resolution, particularly in relation to Aboriginal and Torres Strait Islander peoples.

LAWS 7048 Criminal Law

Credit Points 10

Legacy Code 201047

Coordinator Meda Couzens (https://directory.westernsydney.edu.au/search/name/Meda Couzens/)

Description This subject examines the principles and aims of criminal law and criminal procedure. Students will engage with the definition, elements and application of crimes in the context of fatal and non-fatal offences against the person, the major sexual offences, property offences, and relevant defences. Students will analyse the elements of offences and apply the principles of statutory interpretation of offence provisions. Concepts of criminal responsibility and strict liability, the roles of principal agencies in the criminal justice system, and the central elements of the criminal process and sentencing are examined. Students will be introduced to the institutional arrangements of criminal procedure and their respective legislative and policy rationales. Students will engage with contemporary and historical considerations of criminal law, criminal responsibility and the impact of the criminal justice process in a broad social, political and economic context with a particular focus on issues including domestic violence and the impact of the criminal justice system on Aboriginal and Torres Strait Islander peoples. Students will be engaged with a range of practice-oriented exercises including Bail Applications.

LAWS 7049 Criminal Procedure and Evidence

Credit Points 10

Legacy Code 201059

Coordinator Francine Feld (https://directory.westernsydney.edu.au/search/name/Francine Feld/)

Description The subject is designed to provide an understanding of the law, the theoretical underpinnings and the underlying policy issues, in the areas of evidence and criminal procedure. This subject deals with principles and stages of civil and criminal procedure in order to comply with the formal requirements for admission to legal practice, themes and theories of procedural law, identification and interpretation of the key legislative provisions and key stakeholders, and techniques of statutory interpretation including comprehension of the interpretation of statute through case law and academic commentary. It is expected that the students will be able to solve hypothetical problem questions through the application of procedural legislation and precedent.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7048 Criminal Law

Incompatible Subjects LAWS 4004 Criminal Procedure and Evidence

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate theories and rationales underlying the policy and processes of criminal procedure and evidence;
2. Critique the statutory and common law rules of evidence and criminal procedure as they operate in a practical context in New South Wales;
3. Assess the circumstances and needs of Aboriginal and Torres Strait Islander peoples in criminal courts, procedures and processes;
4. Construct solutions to legal problems that indicate a deep comprehension and critical application of procedural legislation and precedent;
5. Reflect on the roles and professional responsibilities of legal practitioners in the administration of justice to exercise ethical judgment when undertaking scholarly and legal tasks;
6. Assess factual, evidentiary and policy issues to construct reasoned, justifiable and logical legal and scholarly arguments.

Subject Content

- The nature of The adversarial Trial in The criminal context
- alternative rationales underlying The uniform evidence acts and The common Law
- forms of evidence
- theories of proof and relevance
- Standards and Burden of proof
- Rules of exclusion including, hearsay, opinion, admissions, tendency and coincidence, character, credibility, identification evidence
- Privileges
- Rules and principles of questioning witnesses and tendering documents
- Judicial warnings, comment and directions
- mandatory and Discretionary exclusions and The limitations on evidence
- Prosecutorial and defence ethics
- The Law governing procedure before A criminal Trial including arrest
- The needs of Aboriginal and Torres Strait Islander peoples in criminal Courts, procedure and processes

LAWS 7050 Designing Law Apps for Access to Justice

Credit Points 10

Legacy Code 201065

Coordinator Grace Borsellino (https://directory.westernsydney.edu.au/search/name/Grace Borsellino/)

Description This subject will teach students how to design and build an application using expert system software. This subject will provide students with a clinical legal experience by providing access to a community based client to ascertain their needs and undertake collaborative work to provide a solution that requires applied legal research, teamwork, innovative and creative design thinking, and the capacity to manage a project. This subject will teach students how to identify, design and build appropriate legal information systems for use in generating legal documents from precedents and assisting users to navigate solutions to legal problems. Students will be exposed to a variety of automated legal tasks and various legal and practical issues associated with their use, including issues of professional regulation. This will include guest lectures from those working on legal expert systems and related technologies. After learning the necessary skills, students will work in small groups to design and build a legal information system. This subject does not require students to have any pre-existing skills or experience in expert systems or computer programming. Instead, the subject itself includes instruction on how to use an expert system software.

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program. Admission is by invitation only. Enrolment numbers are strictly limited and will be subject to competitive entry so as to ensure enrolment is limited to the best performing cohort. Students must have completed at least 80 credit points of 2826 Juris Doctor core subjects to be considered for admission into this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically assess the limitations and implications of automated legal services in enhancing community access to legal information and services;
2. Collaborate with community partners to obtain instructions, isolate legal problems, and design creative and innovative solutions;
3. Design and build a basic automated legal information system to solve a real world problem;
4. Work constructively as a member of a self-managed team on an extended automated legal service project;
5. Present the automated legal solution clearly and persuasively;
6. Critically reflect on the complex impact of technology in providing legal services within community contexts.

Subject Content

- Working with community partners
- Overview of legal service applications
- how to build and use A legal application
- principles of programming ? including precision, modularity, efficiency, maintainability, scalability, provability, user engagement, effectiveness, testing, debugging
- design thinking for The new future: case-by-case analysis, aggregated data, data visualization, insights
- teamwork and Project collaboration
- work-based Project management
- Presenting Project solutions to clients

Assessment

LAWS 7051 Elder Law

Credit Points 10

Legacy Code 201066

Coordinator Richard Mccullagh (https://directory.westernsydney.edu.au/search/name/Richard Mccullagh/)

Description Whilst Elder Law has been an acknowledged speciality for many years in countries such as Canada and the United States of America, it is only in the last two decades that it has gained recognition in Australia. This subject examines law, theories and issues relevant to an ageing community. The legal issues are examined in a broad social, cultural and ethical context. Issues of legal capacity relevant not only to the law of contracts but also to delegated decision making, medical treatment and end of life decisions are considered. Similarly, the law relating to areas of special importance to the elder community such as, pensions, retirement villages, wills and estate planning and equitable remedies for financial elder abuse are also discussed.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) Students enrolled in 2826 Juris Doctor must have successfully completed subjects LAWS 7072 and LAWS 7047 and students enrolled in 2824 M Laws must have successfully completed LAWS 7078 before enrolling in this subject

Restrictions

Students must be enrolled in 2826 Juris Doctor or 2824 Master of Law.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically evaluate the legal, policy, moral and practical issues concerning Substitute Decision Making for older persons.
2. Analyse the legal, policy, moral and practical issues related to accommodation, retirement finances, and estate planning for older persons, considering equitable remedies for financial elder abuse.
3. Provide advice in relation to elderly community interests and disputes.
4. Construct clear and logical arguments in responses addressing legal issues affecting older persons.
5. Assess ethical issues arising in Elder law and the lawyer's role in promoting justice and service to the community.

Subject Content

1. Policymaking and the older person: social and philosophical factors
2. Sources of law affecting older persons
3. Financial decision-making agents
4. Health decision-making agencies
5. Fiduciary duties
6. Unconscionable conduct, undue influence and proprietary estoppel
7. Equitable remedies for financial elder abuse, including elder abuse of Indigenous people
8. Resulting trusts and constructive trusts
9. Inter vivos statutory property adjustment orders
10. Deceased estate statutory property adjustment orders
11. Staying home: Income support payments and subsidised care costs
12. Retirement villages and manufactured home parks
13. Granny flat arrangements
14. Residential aged care facilities

LAWS 7053 Equity & Trusts

Credit Points 10

Legacy Code 201054

Coordinator Maria Bhatti (https://directory.westernsydney.edu.au/search/name/Maria Bhatti/)

Description This subject examines the principles of Equity and the law of trusts in Australia. The primary emphasis is on the nature and development of equitable principles and introduces students to fundamental principles in the law of trusts in a culturally diverse society. Topics include the nature and application of principles and maxims of Equity, the trust, the types of trusts and introduction to express trusts. The subject emphasises contemporary applications of the rules, principles and remedies of Equity, including the operation of the principles of Equity in relation to First Nations peoples. It also explores issues that are presently unresolved and the subject of contention. Students will be able to use a range of legal research tools to select high quality and relevant primary and secondary legal information to support the construction of solutions to hypothetical problems and theoretical legal issues that indicate a deep comprehension of Equity and trusts.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7056 Fundamentals of Australian Law

Co-requisite(s) LAWS 7067 Property Law

Incompatible Subjects LAWS 3018 Equity Trusts

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse principles, procedure and policy of Equity and trusts, and their relationship to broader social, economic and political contexts, including in relation to First Nations peoples.
2. Construct solutions to hypothetical problems and theoretical legal issues that indicate a deep comprehension of equity and trusts in a culturally diverse society.

3. Use a range of legal research tools to select high quality and relevant primary and secondary legal information.
4. Evaluate the quality, currency and relevance of legal and non-legal information from a range of primary and secondary sources

Subject Content

- Historical overview and theoretical foundations of Equity
- The nature and application of equitable principles especially in relation to First Nations people
- Fiduciary relationships and obligations of a fiduciary, including fiduciary duties owed to First Nations people
- Obligations of Confidence arising from principles of equity
- Concept of the trust and an introduction to express trusts
- Powers and duties of trustees
- The Beneficiary Principle, Non-Charitable Trusts and Aboriginal Land Trusts
- The Constitution of Express Trusts
- The Requirement of Writing for Express Trusts
- Express Trusts - Vitiating Elements
- Charitable Trusts
- Implied/Resulting Trusts
- Rights and Liabilities of Trustees
- Rights of the Beneficiary
- Variation and termination of trusts

LAWS 7057 Government and Public Law

Credit Points 10

Legacy Code 201053

Coordinator Shreeya Smith (https://directory.westernsydney.edu.au/search/name/Shreeya Smith/)

Description Government and Public Law is designed to provide an overview of government and public law in Australia and a foundation for the later study of Administrative Law and Constitutional Law. It introduces students to the principles and structures that underpin constitutional and administrative law in Australia. The subject.
The subject has four key focus areas: Public Law in Australia, How Government Works, Government Accountability and Integrity, and Individuals and Government. Students will collaborate in problem/case-based learning and engage with online learning materials to develop knowledge and skills in legal research and communication enabling them to address critical contemporary public law challenges.

Coordinator Grace Borsellino (https://directory.westernsydney.edu.au/search/name/Grace Borsellino/)

Description This subject deals with issues that arise in relation to the selection of appropriate structures for the conduct of non-profit and commercial dealings. Students examine the legal and practical requirements involved in creating, operating and winding up associations, partnerships and corporations, and their relationship to broader social, economic and political contexts. Emphasis is on the creation and operation of corporations, and the duties and liabilities of directors and officers, as well as the rights and obligations of shareholders. It is expected that students will be able to propose solutions to legal problem questions and issues relating to commercial associations with a focus on corporate law displaying a clear and coherent argument that evidences legal research, legal reasoning and professional judgement in responding to issues relating to commercial associations with a focus on corporate law. This subject will critically analyse key ethical issues arising in the law of associations and consider different stakeholder perspectives.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7053 or LAWS 7078

Incompatible Subjects LAWS 3045 Law of Associations

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Students should be familiar with fiduciary duties and the concepts and Principles of Equity

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess the principles of the law of commercial associations with a focus on the regulation of corporations and corporate activities, procedure and policy, and their relationship to broader social, economic and political contexts;
2. Propose solutions to legal problem questions and issues relating to commercial associations with a focus on corporate law;
3. Present a clear and coherent argument that evidences legal research, legal reasoning and professional judgement in responding to issues relating to commercial associations with a focus on corporate law;
4. Reflect on ethical issues arising in the law of commercial associations practice and the professional responsibilities of lawyers in promoting justice and service to the community.

Subject Content

1. The origin, nature and functions of companies, including Indigenous corporations
2. Forms of business organisations and legal entities including partnerships, joint ventures, unincorporated associations, sole traders
3. Incorporation and its consequences
4. Formation, promotion and establishment of companies
5. Corporate governance rules
6. Company Constitution
7. Board of Directors
8. Shareholders
9. Meetings: Directors and Shareholder
10. Distribution of power between shareholders and directors
11. Directors duties and liabilities
12. Company's liability for civil and criminal wrongs
13. Fiduciary obligations
14. Acting Properly and with Care
15. Conflicts of Interest
16. Accounts, Audit and Disclosure
17. Members' Remedies
18. Corporate Finance including equity and debt financing, dividends, creditors, security holdings, fundraising
19. Takeovers and disclosure of shareholdings
20. Corporate reorganisation and elimination of minority holdings
21. External administration in insolvency
22. Receiverships
23. Voluntary administration
24. Winding up

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour	5	N	Individual

LAWS 7061 Legal Analysis and Critique

Credit Points 10

Legacy Code 201050

Coordinator Jacinta Sassine (https://directory.westernsydney.edu.au/search/name/Jacinta Sassine/)

Description This subject introduces students to the processes of critical evaluation of arguments, legal communication and logical and critical problem solving. Students will have the opportunity to explore how law is made, some of the institutional limitations on law and justice, and the impact of globalisation on law. It introduces theories about the nature and function of law in historical, political, social, economic, cultural, ethical and international contexts. The connection between race, gender, culture and law is examined within the context of the Australian legal tradition, legal history, and the impact of the Australian legal system on Aboriginal and Torres Strait Islander Peoples. Students will use logical and critical skills to develop solutions to problems involving statutory interpretation and the application of precedent; and articulate legal thought effectively and persuasively for diverse audiences.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) LAWS 7056 Fundamentals of Australian Law

Incompatible Subjects LAWS 1009 Legal Analysis and Critique

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse how law in Australia developed and the impact of these developments on Aboriginal and Torres Strait Islander Peoples.
2. Analyse theories about the nature and function of law in local and global contemporary contexts and from different perspectives.
3. Demonstrate logical and critical skills to analyse legal texts.
4. Demonstrate legal research skills in relation to primary and secondary sources to engage in critical analysis of legal texts, focusing on case analysis.
5. Articulate legal arguments effectively and persuasively for diverse audiences.

Subject Content

1. The Australian legal tradition
2. English legal history
3. Doctrine of reception and repugnancy
4. Australian constitutional independence
5. The impact of the Australian legal system on Australian First Peoples
6. Critical evaluation of arguments
7. The nature of function of law
8. Legal formalism and the rule of law
9. Gender, race, culture and the law
10. Law in an economic context
11. Legal communication
12. Case analysis, statutory interpretation and legal research.

LAWS 7062 Legal Research Dissertation

Credit Points 20

Legacy Code 201074

Coordinator Rehan Abeyratne (https://directory.westernsydney.edu.au/search/name/Rehan Abeyratne/)

Description This is a 20-credit point subject. This subject provides students with a capstone research experience in relation to a supervised legal dissertation. Students develop and refine legal research and writing skills by analysing a legal topic chosen in consultation with an academic supervisor. This subject requires the student to undertake a literature review, to develop a research proposal, to present on the proposal and finished work, and to submit a dissertation. The research project areas will principally focus upon those areas identified by the School of Law in its Research Strategy.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7027

Restrictions

Students must be enrolled in 2826 Juris Doctor or 2824 Master of Laws to enrol in this subject.

Students in 2826 Juris Doctor must have completed 160 credit points before they can enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the theories and real-life issues relevant to legal practice in Australia;
2. Conduct a legal research project;
3. Communicate the results of a legal research project to peers and other legal professionals in oral and written forms in a professional manner;
4. Reflect on own learning and professional development needs.

Subject Content

- research proposal
- ethics
- research Protocol and design
- data collection
- data analysis
- logical argument

Special Requirements

Legislative pre-requisites

Special requirements would depend on research topic and would be assessed on a case by case basis.

Essential equipment

Special requirements would depend on research topic and would be assessed on a case by case basis.

Equivalent Subjects LAWS 7023 - International Independent Study Law 1

Restrictions

Students must be enrolled in program 2784 or 2810 Master of Laws (International Governance), 2824 Master of Laws or 2826 Juris Doctor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Present a sustained evidence based research paper.
2. Demonstrate a high level of comprehension of the selected topic.
3. Undertake legal research to locate up to date and accurate information from a variety of both primary and secondary sources.
4. Engage in analytical, critical and reflective evaluation of issues and materials.
5. Develop reasoned, coherent and persuasive arguments that lead to a logical conclusion.
6. Demonstrate excellent academic method and originality in research and writing.

Subject Content

Students will undertake the following key elements of their research project on an agreed research question under the guidance of their respective supervisors:
1. Research methodology
2. Literature review
3. Topic proposal
4. Submission of paper
5. Class presentation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

LAWS 7064 Legal Research Project 2

Credit Points 10

Legacy Code 201076

Coordinator Rehan Abeyratne (https://directory.westernsydney.edu.au/search/name/Rehan Abeyratne/)

Description This subject provides students with a capstone research experience in relation to a structured research project. Students will develop and refine their legal research and communication skills by exploring and analysing a legal topic chosen by the Law School. Students will compose a research paper of 5,000 words on an approved topic in law and will provide a 20-minute presentation based upon the completed project. The research project areas will principally focus upon those areas identified by the School of Law in its Research Strategy. This subject can be delivered either in a combination of onshore in Australia and offshore in a host country, or solely onshore in Australia. Students enrolled in the subject with an offshore component must be available to travel for two weeks to the host country. When no host country is available, this subject may be delivered wholly onshore (in Australia) only. Students will be advised whether there is an offshore component of study and the availability of a host country in advance of opportunities to enrol. When delivered offshore in a host country the teaching materials will incorporate host country-specific issues and activities relevant to the topics covered in the subject. Offshore delivery integrated with host country specific delivery provides the students with an immersive international and comparative experience to help them develop their research project.

School Law

Discipline Law, Not Elsewhere Classified.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7027

Equivalent Subjects LAWS 7024 - International Independent Study Law 2

Restrictions

Students must be enrolled in program 2824 Master of Laws or 2826 Juris Doctor.

In addition, when the subject is delivered offshore, the subject will not be available for self-select enrolment. Intake in the subject will be restricted to expressions of interest. GPA and progression in the program will be considered, and the pre-requisites must be met. Students must be able to travel to the offshore destination for a specified period of 2 weeks (The dates for the term of offer will be made available to students through the School of Law's regular communication channels).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Present a sustained evidence based research paper.
2. Demonstrate a high level of comprehension of the selected topic.

3. Undertake legal research to locate up to date and accurate information from a variety of both primary and secondary sources.
4. Engage in analytical, critical and reflective evaluation of issues and materials.
5. Develop reasoned, coherent and persuasive arguments that lead to a logical conclusion.
6. Demonstrate excellent academic method and originality in research and writing.

Subject Content

Students will undertake the following key elements of their research project on an agreed research question under the guidance of their respective supervisors:

1. Reflection on research experiences
2. Research methodology
3. Literature review
4. Topic proposal
5. Submission of paper
6. Class presentation

Note: the area of research may extend, but must not duplicate research done in previous subjects.

Special Requirements

Legislative pre-requisites

Students must meet any visa and medical requirements relevant for host country when subject is delivered offshore.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

LAWS 7065 Moot Court

Credit Points 10

Legacy Code 201070

Coordinator John Juriansz (https://directory.westernsydney.edu.au/search/name/John Juriansz/)

Description Students will participate in mooting conducted before an appellate court or tribunal. Students will be provided with a grounding in issues including jurisdiction, admissibility, and remedies. The subject will focus on one or more areas of domestic substantive law and will include a research component. Students will prepare and present a hypothetical case before an appellate court or tribunal and will be given the opportunity to develop their advocacy skills, including the preparation of written submissions and delivery of oral submissions. Undertaking this subject would be useful for students seeking to participate in one or more law mooting competitions representing Western Sydney University.

School Law

Student Contribution Band HECS Band 4 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7072 AND
LAWS 7046 AND
LAWS 7047 AND
LAWS 7067

Restrictions

Students must be enrolled in program 2826 Juris Doctor.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse complex factual problems involving issues of substantive law;
2. Undertake extensive research in relation to complex issues of substantive law;
3. Produce draft written submissions which demonstrate clear, well structured, appropriately referenced, critical and original analysis and arguments;
4. Exhibit command of court etiquette, the rules of procedure and requirements regarding an oral presentation to the relevant court by engaging in a moot;
5. Display a level of oral presentation skills appropriate to that required for national moot court competitions;
6. Collaborate constructively with team members in researching issues and preparing oral and written submissions.

Subject Content

- Issues including Jurisdiction, admissibility, and Remedies
- Issues of Substantive Law
- Mooting conducted before An Appellate court or tribunal
- Advocacy skills
- presentation of A hypothetical case before An Appellate court or tribunal
- Rules and procedures of The relevant court or tribunal
- legal research skills

LAWS 7066 Professional Responsibility and Legal Ethics

Credit Points 10

Legacy Code 201049

Coordinator Michael Brogan (https://directory.westernsydney.edu.au/search/name/Michael Brogan/)

Description This subject provides students with the opportunity to critically reflect on the legal, statutory and ethical principles and standards that underpin the professional obligations of legal practitioners. Students will also analyse ethical issues that commonly occur in professional legal practice in contemporary multicultural Australia, particularly with Aboriginal and Torres Strait Islander peoples. It deals with the professional, legal and ethical responsibilities legal practitioners owe to the law, the courts, their clients and to fellow practitioners, as well as the state and society at large. Students will be able to explain and evaluate the law and practice of legal practitioners, by reference to key topics, such as: professionalism; legal ethics; the history, structure and regulation of the legal profession; and the interpersonal, psychological and cultural factors affecting lawyering. Guided by an ethical decision-making model, students will demonstrate their ability to use primary legal materials to answer legal ethical problems, and explore the relationship between personal and professional attitudes and values by reflecting on their own views and observations.

LAWS 7069 Revenue Law

Credit Points 10

Legacy Code 201071

Coordinator Tenille Buttigieg (https://directory.westernsydney.edu.au/search/name/Tenille Buttigieg/)

Description This subject examines the legal basis for the Australian taxation system and its application. It will cover taxation of income from personal exertion, business and property, as well as the taxation of fringe benefits provided in the context of employment and the goods and services tax (popularly known as the GST). Lectures and tutorials cover the constitutional basis of taxation, income tax assessment and the concepts of income tax, allowable deductions, other federal and state taxes, taxation of business associations (partnerships,

companies, trusts and primary producers), taxation accounting, administration and practice, taxation planning and avoidance.

School Law

Discipline Taxation Law

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7057

Incompatible Subjects LAWS 7031

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the key elements of the Australian Income Tax System and the Goods and Services Tax System.
2. Examine the relevance of tax law information in a decided taxation case, effectively and appropriately, how the case law and legislation are applied in solving tax law problems.
3. Apply their understanding of revenue law concepts to analysing and solving practical problems.
4. Use a range of research tools to locate and evaluate the quality, currency and relevance of legal information.

Subject Content

1. Introduction to the legal and policy framework in which the Australian taxation system operates.
2. Taxation of Remuneration
3. Assessable Income: Income from Business
4. Assessable Income: Capital Gains Tax
5. Allowable Deductions: General Deductions
6. Allowable Deductions: Specific Deductions
7. Entities: Taxation of Partnership Income
8. Entities: Taxation of Trust Income
9. Entities: taxation of companies
10. Tax Administration
11. Tax Avoidance

Assessment

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7056 or LAWS 7009

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine new risks, obligations and ethical issues for the courts and practitioners arising from the use of technology in the delivery of justice and legal services;
2. Critically analyse the ways in which emerging technologies are changing, challenging and enabling the way that lawyers and legal systems work;

3. Critically analyse the way that disruptive technologies challenge regulators across global jurisdictions;
4. Use communication skills required by new and emerging technological platforms;
5. Reflect on issues and strategies to personally maintain currency in digital literacies and their innovative application.

Subject Content

1. Digital literacy & Ethics
- Law and Technology: lawyers as advocates for vulnerable populations in A World disrupted by Technology
- Paperless Workflows and information security
- information Governance and Privacy in A Big data World
- Forensics & data collection
- professional strategies for maintaining currency and Innovative practice
2. Virtual and Distributed Courts
- virtual Courts
- online Dispute Resolution
- case management systems
3. Legal Technology and Practice
- coding for lawyers
- Technology assisted Review (TAR)
- legal research, Discovery, document and data management
- financial and Regulatory technologies
4. Human Rights and Technology

LAWS 7072 Torts Law

Credit Points 10

Legacy Code 201051

Coordinator Liesel Spencer (https://directory.westernsydney.edu.au/search/name/Liesel Spencer/)

Description Torts Law will provide students with the opportunity to critically analyse the key principles of Australian torts law and its impact within the broader legal context. The topics covered include legal principles and policy of a variety of torts, defences and remedies. The subject also introduces students to legal skills, statutory interpretation and legal problem solving, as well as placing the law in the wider political and social context. Students will be able to search for, analyse, and evaluate cases, statutes, and theoretical writings relevant to torts law to resolve legal problems.

LAWS 7073 Animal Law

Credit Points 10

Coordinator Francine Feld (https://directory.westernsydney.edu.au/search/name/Francine Feld/)

Description This subject examines the legal and ethical relations between humans and non-human animals. Students will apply theoretical perspectives to support their own stance regarding human/animal relations. They will critically evaluate the legal framework which governs those relations. The subject will examine a range of topic such as the moral and legal status of animals, animal rights versus animal welfare, farming and husbandry practices, animals in scientific research, animals in the entertainment industry, wildlife protection and endangered species, companion animals and Indigenous approaches to animal welfare. Students will engage in professional learning activities and use a range of legal research tools to demonstrate their application of this body of law in practice.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7056 AND LAWS 7061

Incompatible Subjects LAWS 3090

Restrictions

Must be enrolled in the 2826 Juris Doctor program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Apply a range of philosophical approaches to the status of non-human animals.
2. Construct solutions using advanced knowledge of animal law.
3. Critically evaluate legal issues and apply relevant legal principles to problems involving the use of animals and propose solutions.
4. Demonstrate legal research skills to assess legal frameworks for the regulation of relations between humans and non-human animals.

Subject Content

- Historical development of animal Law
- Philosophical approaches to the moral status of animals
- Legal status of animals
- Overview of Animal Law in Australia
- Regulation companion animals
- Regulation of farm animals
- Regulation of wild animals
- Regulation of animals in research
- Regulation of animals in entertainment and sport
- Indigenous approaches to animal welfare

LAWS 7074 Family Law

Credit Points 10

Coordinator Angelo Bistolaridis (https://directory.westernsydney.edu.au/search/name/Angelo Bistolaridis/)

Description Family Law is a key area of study for students who intend to enter legal practice. This subject aims to graduate students who will become reflective, ethical, and effective family lawyers and/or family dispute resolution practitioners. Students will engage in professional learning activities to demonstrate their application of this body of law in practice. This subject adopts a range of critical perspectives in relation to developments in theory, laws, policies, and practices concerned with the legal regulation of intimate relationships, particularly after separation. Family law balances the competing rights, obligations and interests of partners, children and others following separation, often in the context of complex family dynamics. It also examines the cultural, social, political, psychological and economic contexts that influence separating families.

School Law

Discipline Law, Not Elsewhere Classified.

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7056

Incompatible Subjects LAWS 3023

Restrictions

Must be enrolled in the 2826 Juris Doctor program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Critically analyse the impact of family domestic violence on families and children and propose appropriate measures to ensure the safety of family members.
2. Apply relevant legislation and case law, focusing on the Family Law Act, to provide practical assistance to clients with post separation problems.
3. Critically evaluate developments in law, policy, and practices in family law systems.
4. Critically reflect on their own development and competence as a family law professional.

Subject Content

- Family Law
- Constitutional & Jurisdictional Context
- Regulating adult relationships: marriage and divorce
- Family Domestic Violence
- Family Dispute Resolution
- Children & Parents 1
- Children & Parents 2
- Child Support
- Economic context and spousal maintenance
- Property & 3rd party rights
- Property - assessing contribution
- Indigenous people and the family law system

LAWS 7075 Mediation

Credit Points 10

Coordinator Miriam Ziegler (https://directory.westernsydney.edu.au/search/name/Miriam Ziegler/)

Description Mediation is an essential skill for law graduates. This subject will provide students the opportunity to develop mediation skills in a practical way that enhances their employability and professionalism. It will focus on the skills and theory of mediation, specifically in the context of the Australian legal system. Students will further develop the knowledge and skills introduced in Alternative Dispute Resolution (which is a prerequisite for this subject). This subject is experientially based, and students will engage in professional activities such as role-plays. The theory and practice of mediation will be critically considered, as will the social and legal contexts within which mediation is practised. The subject will adopt a multi-disciplinary approach and will consider issues of culture (including the perspectives of First Nations peoples), power, mediator neutrality and ethical dilemmas for the mediator.

School Law

Discipline Law, Not Elsewhere Classified.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7044

Incompatible Subjects JUST 2013

Restrictions

Must be enrolled in the 2826 Juris Doctor program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Critically and independently analyse contemporary issues in mediation.
2. Effectively prepare for mediation by conducting pre-mediation processes
3. Independently conduct mediation, including an evaluation and in-depth analysis of the practical, procedural, ethical and legal issues
4. Communicate clearly and persuasively, referencing according to the Australian Guide to Legal Citation.
5. Demonstrate advanced oral communication skills.

Subject Content

- Introduction to Mediation and Conflict Resolution
- Negotiation and Mediation Advocacy Skills

- Mediation Process
- Mediator Skills
- Assessment and Preparation for Mediation
- Legal and Ethical Issues in Mediation
- Current Trends in Mediation
- Mediation and First Nations peoples

Assessment

LAWS 7076 Media Law

Credit Points 10

Coordinator Sarah Hook (https://directory.westernsydney.edu.au/search/name/Sarah Hook/)

Description This subject analyses various aspects of the laws that regulate the media. The content of the subject includes defamation, contempt, privacy and surveillance and a selection of other laws impacting upon the media industry. It explores two key themes. The first is whether, as a question of policy, current legal restrictions to media freedom appropriately balance the protection of free speech with various other interests, including protection of reputation, personal privacy and the effective administration of justice. The second theme asks whether media laws that were developed to regulate traditional mass-media organisations apply to individuals who publish their own content online, particularly via social media, and, if so, whether this application is appropriately balanced. Analysis of the application of existing media law principles to a range of new technologies will be featured throughout the subject. Students will engage in professional learning activities to demonstrate their application of this body of law in practice.

School Law

Discipline Law, Not Elsewhere Classified.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7072 AND LAWS 7057

Incompatible Subjects LAWS 3049

Restrictions

Must be enrolled in the 2826 Juris Doctor program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Evaluate the principles, statutes, case law and selected policy aspects in each of defamation, contempt, privacy and prohibited publications
2. Critically analyse the impact of new technologies on traditional concepts of media law and policy
3. Apply enhanced legal communication and reasoning skills and effective research strategies to an understanding of current issues in media law
4. Apply media law concepts to solve practical problems
5. Demonstrate oral persuasion, legal reasoning and drafting skills to the preparation of court documents and courtroom etiquette

Subject Content

- Defamation
- Contempt of Court
- Privacy
- Offensive publications
- Media and National Security
- Regulation and Media
- Case study: Bla(c)k Lives Matter- the role of the media in race relations

LAWS 7077 Self-Managed Superannuation and Trusts

Credit Points 10

Coordinator Leeanne Hodgson (https://directory.westernsydney.edu.au/search/name/Leeanne Hodgson/)

Description This subject equips students with the ability to critically analyse law and policy relating to self-managed superannuation funds and the use of the trust structure, which are essential components for professionals in this area of practice. It provides students with the requisite skills to provide comprehensive financial advice, particularly within the context of an individual being able to choose a superannuation fund or create a self-managed superannuation fund (SMSF). The subject will provide students the opportunity to synthesise areas of law in a practical way that enhances their employability and professionalism.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) LAWS 7053 OR LAWS 7010

Incompatible Subjects LAWS 3067

Restrictions

Must be enrolled in a School of Law PG program.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Apply advanced communication skills in diverse contexts.
2. Synthesize relevant sources of law relating to self-managed superannuation and trusts through accessing, evaluating and using relevant information.
3. Apply theoretical and practical knowledge of self-managed superannuation and trusts to critically analyse and solve complex and novel problems.
4. Critically reflect on the value of ethical conduct as a professional in work and in civic life.

Subject Content

- Introduction to self-managed funds
- Compliance issues
- Investment requirements
- Taxation and superannuation
- Making payments
- Transfer of assets
- Preservation rules
- Estate planning issues
- Financial planning strategies
- Taxation, audit and compliance
- Lump sum benefits
- Advantages/disadvantages of trusts

MANU 2001 Design and Manufacturing

Credit Points 10

Legacy Code 301340

Coordinator Leigh Sheppard (https://directory.westernsydney.edu.au/search/name/Leigh Sheppard/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject introduces basic aspects of design and manufacturing, process selection, manufacturing processes, material selection based on material properties and the use of computers in the design process. A project selected allows students to work individually and in a team environment to achieve the final objective which is a workable product. As part of the project, students are asked to develop a product from a page of functional requirements by developing a concept sketch, material selection, detail engineering drawings, process plan and finally making the product in a workshop. At the end of the semester, the products are tested.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical Exam	2 hours	20	N	Individual
Applied Project	2x CAD files and 1x CAM file	15	N	Individual
Applied Project	2x physical items	10	N	Individual
Practical Exam	2 hours	20	N	Individual
Report	15-20 pages (2500 words)	20	N	Individual
Report	a SOLIDWORKS ‘Pack and Go’ .zip file	15	N	Individual

MANU 3003 Creative Digital: Robots and Avatars

Credit Points 10

Legacy Code 301307

Coordinator Mauricio Novoa (https://directory.westernsydney.edu.au/search/name/Mauricio Novoa/)

Description This is a project-based learning subject that assists students to creatively synthesise skills learned in previous subjects. Students are introduced to current problem solving in professional practice that negotiates between physical and digital components to form smart artefacts. That relation is represented with the development of an interactive robot and its digital mirror counterpart

as its avatar. The subject also assists in the preparation of a professional portfolio show piece for job applications in the industry. Learning by experimentation, the subject links traditional skillsets including software and 3D printing with new forms of design, from engineering narratives to digital creativity within augmented and virtual environments.

Level Undergraduate Level 3 subject

Equivalent Subjects MANU 3001 - Graphics 5 Creative Computing

Assumed Knowledge

Understanding of 3D CAD and basic programming is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Create a project brief that challenges the normal or typical uses of an object.
2. Design and implement techniques for linking components in the virtual (avatar) and real worlds (robot).
3. Develop design solutions using an empathic human-centred approach.
4. Identify and use appropriate range of modalities of communication between user, real world and virtual world for the project.

Subject Content

1. Augmented and Virtual Reality
2. Digital simulation of products and environments
3. Implementing Tangible Interaction between physical and virtual environments by manipulating physical artefacts (robot) that interact with 2D and 3D world objects (avatar, scenario)
4. Use of parametric and polygon CAD software together with cross-platform game engines
5. Visual analytics

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project: Making the Robot Stage 3D Physical Design and Development	300 words 3D Physicial Model and Professional Presentation Pitch (5 slides)	15	N	Individual
Applied Project: Making the Avatar Stage 3D Virtual Design and Development	500 words 3D Digital/VR Model and Professional Presentation Pitch (10 slides)	25	N	Individual
Applied Project: The Smart System (bringing it all together): 3D Physical and Virtual Synchronization through programming	850 words Final Product/ System Presentation and Professional Presentation Pitch (20 slides)	40	N	Individual
Process: E-Portfolio and Visual Diary	30 pages	20	N	Individual

MATH 0002 Foundations of Mathematics (WSTC)

Credit Points 10

Legacy Code 900055

Coordinator Bhupendra Pant (https://directory.westernsydney.edu.au/search/name/Bhupendra Pant/)

Description Foundations of Mathematics is designed to develop knowledge, understanding and skills in Mathematics to a level, which is appropriate for day-to-day life and also as a basis for further study at university entrance level. The course aims to build on existing skills, develop skills in new areas and encourage students' confidence in their own ability.

MATH 0003 Introductory Business Mathematics (WSTC)

Credit Points 10

Legacy Code 900114

Coordinator Michael Casey (https://directory.westernsydney.edu.au/search/name/Michael Casey/)

Description This subject consists of two modules. The first module has been designed to provide a revision of basic mathematical concepts and methods that apply to business situations. They include basic mathematical operations, percentages, equations, index numbers, logarithms, direct and inverse variation, and graphs. The second module has been designed to provide students with the necessary skills for making practical financial decisions. The concepts taught include simple interest, compound interest, annuities and their applications as they apply in a business environment.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects MATH 0007 - Mathematics 1

Restrictions Students must be enrolled in a Foundation program at The College.

Assumed Knowledge

Mathematics Year 10 or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Solve problems involving basic mathematical operations, equations and formulae.
2. Model mathematical problems using appropriate graphs.
3. Apply simple and compound interest concepts and annuities to real-life business problems.
4. Demonstrate an understanding of how the concept of the time value of money can be applied to investments.
5. Demonstrate an understanding and an ability to apply a variety of fundamental mathematical concepts to solve familiar and unfamiliar problems.
6. Interpret and communicate mathematical ideas in a clear and effective manner, using appropriate notation.
7. 1. Solve problems involving basic mathematical operations, equations and formulae.
8. 2. Model mathematical problems using appropriate graphs.
9. 3. Apply simple and compound interest concepts and annuities to real-life business problems.
10. 4. Demonstrate an understanding of how the concept of the time value of money can be applied to investments.
11. 5. Demonstrate an understanding and an ability to apply a variety of fundamental mathematical concepts to solve familiar and unfamiliar problems.
12. 6. Interpret and communicate mathematical ideas in a clear and effective manner, using appropriate notation.

Subject Content

Module 1 - Basic mathematics
1. Basic mathematical operations on whole numbers, decimals and fractions
2. Percentages, ratios and rates
3. Linear equations
4. Simultaneous linear equations (elimination and the substitution method)
5. Substitution into formulae, rearranging formulae
6. Quadratic equations
7. Index numbers
8. Logarithms
9. Functions and their graphs (linear, quadratic, exponential, logarithmic)
10. Direct and inverse variation
Module 2 - Financial Mathematics
11. Simple interest (interest amount, length of time, interest rate, principal and maturity value, applications, time lines and equations of value)
12. Compound interest (maturity value, principal, interest amount, interest rate, length of time, effective and nominal rates, time lines and equations of value, multiple interest rates)
13. Annuities (ordinary annuities and annuities due, accumulated value, present value, size of annuity, rate per interest period, deferred annuities, perpetuities, general annuities)
14. Applications (loans- affordability, repayment schedules, loan outstanding; investment decisions using NPV and IRR)

Assessment

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled at Western Sydney University, The College.

Assumed Knowledge

Mathematics Year 10 equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Perform operations and solve simple problems involving whole numbers, decimals, fractions and surds.
2. Apply algebraic rules and techniques to solve simple equations and manipulate formulas
3. Demonstrate conceptual understanding of a function, the domain and range, function graph, and the inverse function, and apply it to model and analyse relationships between quantities.
4. Relate functions (linear and quadratic) and the corresponding equations and apply the relationship to analyse engineering applications.
5. Apply the basic trigonometric ratios and Pythagoras fs theorem to solve problems involving. triangles.
6. Calculate areas and volumes.

Subject Content

1. Arithmetic (numbers, operations with numbers including whole numbers, fractions, decimal and percentages, properties of real numbers). Measurements and units, estimates, scientific notation and rounding, uncertainties.
2. Algebra (algebraic rules and techniques, equations and identities, working with formulas).
3. Functions (definition and notation, domain and range, graphs, the inverse function).
4. Linear and Quadratics functions and equations; linear systems of 2 equations.
5. Basic Geometry and Trigonometry (angles, triangles, Pythagoras?fs theorem, trigonometric ratios).
6. Areas and Volumes.
1. Arithmetic (numbers, operations with numbers including whole numbers, fractions, decimal and percentages, properties of real numbers). Measurements and units, estimates,

Equivalent Subjects MATH 0011 - Mathematics 3 (UWSC)

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the main concepts of arithmetic and geometric series to solve problems.
2. Manipulate algebraic expressions involving trigonometric identities.
3. Choose and apply appropriate techniques of differential and integral calculus to solve a variety of problems, including real-life problems.
4. Solve problems involving inverse trigonometric functions including those involving derivatives and integrals.
5. Demonstrate an understanding of the basic concepts of vectors and perform basic operations on vectors and matrices.
6. Demonstrate an ability to solve problems by identifying interrelationships between ideas from different areas of mathematics.
7. Communicate abstract mathematical ideas and relationships using appropriate notation and logical arguments.

Subject Content

1. Series (arithmetic and geometric progressions, limiting sum of infinite series)
2. Trigonometry (revision of basic identities, sum and difference of two angles, double angles, and in terms of
3. Differentiation (gradient of a curve; differentiation from first principles; differentiating powers of x; differentiating trigonometric, exponential and logarithmic functions; rules of differentiation: sums and differences of functions, product rule, quotient rule, chain rule)
4. Applications of differentiation (determining stationary points and their nature; inflection points, curve sketching, problem solving)
5. Integration (indefinite and definite integrals, rules of integration, area under and between curves, volumes of solids of revolution)
6. Inverse trigonometric functions (and , derivatives and integrals involving inverse trigonometric functions)
7. Vectors (scalars and vectors, addition and subtraction of vectors, problem solving)
8. Matrices (terminology, basic operations on matrices, determinants of 2x2 and 3x3 matrices)

Coordinator Miriam Krakovska (https://directory.westernsydney.edu.au/search/name/Miriam Krakovska/)

Description This subject is replaced by 700146 - Foundation Mathematics 2 (UWSCFS) from Term 1 2014. This subject has been specifically designed for students who need to refresh or upgrade their understanding of basic mathematical concepts taught in high school mathematics. The topics include basic arithmetic and algebra, geometry, trigonometry, coordinate geometry, quadratic functions, indices, logarithms and an introduction to differential calculus.

Assumed Knowledge

Completion of Year 10 Mathematics or equivalent.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Three Class Tests (10%, 20%, 20%)		50	N	Individual
Final Exam		50	N	Individual

MATH 0013 Mathematics B (WSTC)

Credit Points 10

Legacy Code 900033

Coordinator Miriam Krakovska (https://directory.westernsydney.edu.au/search/name/Miriam Krakovska/)

Description The Mathematics B course is designed and written to prepare students for further mathematical study at first year university level in courses that do not demand an in-depth study of Calculus. The course particularly develops those skills peculiar to the mathematical requirements of further study in the area of Business, Finance and Economics. It is usually studied in conjunction with 'Commercial Mathematics'.

MATH 0015 Mathematics Extension (WSTC)

Credit Points 10

Legacy Code 900034

Coordinator Miriam Krakovska (https://directory.westernsydney.edu.au/search/name/Miriam Krakovska/)

Description The course Mathematics Extension is designed and written to prepare students for further mathematical study at first year university level, particularly in the areas of Science and Engineering. Mathematical concepts developed in the 'Mathematics' course are expanded upon and harder mathematical concepts are introduced. The course develops those skills peculiar to the mathematical requirements of further study in the areas of Computing, Information Technology, Science and Engineering. Undergraduate study in the Physics and Engineering areas of university require the student to have been exposed to the mathematics presented at Extension level.

MATH 0017 Mathematics for Health Science (WSTC)

Credit Points 10

Legacy Code 900088

Coordinator Michael Casey (https://directory.westernsydney.edu.au/search/name/Michael Casey/)

Description This subject is designed to prepare students for further study at university level in the areas of Health Science and, in particular, Nursing. Undergraduate study in Health Science places a particular emphasis on mathematical skills in the workplace and this subject provides a basis for developing those skills. The subject places equal emphasis on both theoretical and practical application of mathematical techniques as would apply in practice in the Health environment.

School Western Sydney The College

Discipline Mathematical Sciences, Not Elsewhere Classified.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects None

Restrictions

This subject is only available to College students enrolled in the Undergraduate Preparation Programs.

Assumed Knowledge

Year 10 Mathematics or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of basic mathematical concepts (basic mathematical operations, fraction, percentages, ratios and measurements).
2. Apply different mathematical techniques to solve problems related to oral medication, with and without technological assistance.
3. Apply different mathematical techniques to solve problems related to parental and paediatric medicine, with and without technological assistance.
4. Apply different mathematical techniques to solve problems related in the areas of volume and rates, with and without technological assistance.
5. Interpret, analyse, and solve health-related problems in relation to specific patient case studies.

Subject Content

Module 1: Basic Mathematics
1.Basic mathematical operations with whole numbers, decimals and fractions.
2.Ratios and rates.
3.Percentages.
4.Metric system.
5.Graphs and data.
Module 2: Mathematical Calculations in Health Care
6.Oral Medication ? Dosage: tablets and mixtures.
7.IV Fluid Management ? rate of flow, drop factor, burettes, pumps.
8.Injections ? types, mixing solutions, calculating dosage.
9.Paediatrics ? determine body surface area, dosage by body weight, verifying safe dosages by comparison with recommendations.
10.Volumes/Rates ? calculating complex volumes using the metric system, oral, parenteral and intravenous medications.
Module 1: Basic Mathematics
1.Basic mathematical operations with whole numbers, decimals and fractions.
2.Ratios and rates.
3.Percentages.
4.Metric system.
5.Graphs and data.

MATH 0026 Practical Mathematics (WSTC)

Credit Points 10

Legacy Code 900115

Coordinator Michael Casey (https://directory.westernsydney.edu.au/search/name/Michael Casey/)

Description This subject has been designed to develop the students' mathematical literacy and mathematical thinking necessary for further education, work and everyday life. The subject aims to build on existing skills, develop skills in new areas and encourage students' confidence in their own ability by applying mathematical concepts to a series of real life problems.

School Western Sydney The College

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects MATH 0002 - Foundations of Mathematics (WSTC)

Restrictions Students must be enrolled in University Foundation Studies Extended 3 Term program

Assumed Knowledge

Year 9 Mathematics or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding and proficiency in using the mathematical language and terminology presented in the subject.
2. Translate real life problems into mathematical language.
3. Select and apply a variety of problem solving strategies and techniques to solve familiar and unfamiliar real life problems.
4. Use appropriate techniques to assess validity of solutions and interpret results.

Subject Content

1. Problem solving
2. The Real Number System
3. Basic Arithmetic
4. Basic Algebra
5. Tables and Graphs
6. Measurements and Geometry
7. Trigonometry
8. Basic probability

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam 1	1 hour	10	N	Individual
Intra-session Exam 2	1 hour	25	N	Individual
Intra-session Exam 3	1 hour	25	N	Individual
End of session exam	2 hours + 1 hour = 3 hours	40	N	Individual

MATH 0027 Scientific Methods for Construction Management (WSTC Prep)

Credit Points 10

Legacy Code 700264

Coordinator Robert Paluzzano (https://directory.westernsydney.edu.au/search/name/Robert Paluzzano/)

Description This subject is designed to assist students to become competent in the fields of mathematics and basic physical science. It reinforces the mathematical skills in the areas of basic arithmetic, algebra, geometry and trigonometry. The subject introduces the study of forces, work and energy and selected applications of these concepts. Emphasis is placed on developing the key competencies of scientific methods to provide the necessary introduction for Building Design and Construction Technology.

School Western Sydney The College

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled at Western Sydney University The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply appropriate arithmetic and algebraic techniques to solve problems.
2. Solve problems involving simple linear equations, and quadratic equations using the formula and where relevant, apply the SI units appropriately.
3. Solve geometric and trigonometric problems that involve two and three dimensional objects.
4. Demonstrate a basic knowledge and understanding of the relationship between force, work, and energy and power.
5. Solve problems involving these as they relate to such quantities as distance, mass and velocity.
6. Identify and discuss the key issues related to the relationship between building design and acoustics.
7. Explain the thermal properties of selected materials used in construction.
8. Interpret and communicate ideas in a clear and effective manner, using logical arguments, appropriate notation and correct units of measurement.

Subject Content

1. Arithmetic processes
a) Working with whole numbers
b) Working with fractions, decimals and percentages
c) Working with index numbers
2. Algebra
a) Terminology
b) Working with algebraic expressions
3. Solving equations
a) SI units and measurement
b) Linear equations
c) Quadratic equations using the quadratic formula
4. Geometry
a) Angles
b) Area, volume and surface area of common objects
5. Trigonometry
a) Right angled triangle
b) Sine and Cosine rules
6. Forces, Work and Energy
a) Force = Mass x Acceleration
b) Forces in equilibrium
c) Work = Force x distance
d) Work = Change in(?E) Energy
e) Kinetic Energy
f) Gravitational Potential Energy
7. Sound waves and acoustics
8. The Thermal properties of materials

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Numerical Problem Solving and Reflection	Tutorial activities completed during class time and submitted and assessed twice during the term.	(10% each) 20	N	Individual
Short answer	1 hour	20	N	Individual
Presentation	3 minutes	10	N	Individual
Short answer	1 hour	20	N	Individual
End-of-session Exam	2 hrs and 20 mins	30	N	Individual

MATH 0028 Statistics for Academic Purposes (WSTC Prep)

Credit Points 5

Legacy Code 700045

Coordinator Michael Casey (https://directory.westernsydney.edu.au/search/name/Michael Casey/)

Description Understanding, creating and working with statistics are fundamental skill requirements in many areas and career pathways within the arts, business, science and the humanities disciplines. This subject will provide students with a comprehensive overview of statistics in order to prepare them for success in first year university subjects of study where they will further develop their skills. Through both individual and group tasks students will use statistics to organize and display data as well as draw valid inferences, based on data, by using appropriate statistical tools.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects MATH 0029 - Statistics for Academic Purposes (UWSC)

Restrictions Students must be enrolled at Western Sydney University, The College.

Assumed Knowledge

Year 10 Mathematics or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate an understanding of the statistical terminology and use the correct notation.
2. Collect, organise and display data.
3. Calculate descriptive characteristics and describe data sets.
4. Calculate and describe the relationship between two variables and use simple linear regression to predict or estimate values.
5. Calculate probabilities.
6. Apply appropriate statistical methods to analyse data and make inferences.
7. Use computer software to display and analyse data.

Subject Content

1. Statistical terminology and methods of collecting data.
2. Organising and displaying data.
3. Measures of central tendency, variation and spread.
4. Correlation and simple linear regression.
5. Probability.
6. Binomial distribution.
7. Normal distribution.
8. Sampling distribution.
9. Estimation.
10. Hypothesis testing.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1 hour	25	N	Individual
Report	Approximately 100 words plus tables and graphs	10	N	Individual
Report	Approximately 500 words plus statistical calculations	30	N	Group
Report	2-3 minutes per student approximately 8 minutes per group + 2 min question time	10	N	Individual
Intra-session Exam		25	N	Individual

2. Apply algebraic techniques to solving problems
3. Solve problems involving simple linear equations
4. Solve quadratic equations using the formula
5. Apply the SI units appropriately
6. Solve geometric problems

Subject Content

1. Arithmetic processes
- Working with whole numbers
- Working with fractions, decimals and percentages
- Working with index numbers
- Arithmetic operations and order of operations
2. Algebra
- Terminology
- Working with algebraic expressions
3. Solving Equations
- SI units and measurements
- Linear equations
- Quadratic equations using the quadratic formula
4. Geometry
- Angles
- Area, volume and surface area of common objects
1. Arithmetic processes
- Working with whole numbers
- Working with fractions, decimals and percentages
- Working with index numbers
- Arithmetic operations and order of operations
2. Algebra
- Terminology
- Working with algebraic expressions
3. Solving Equations
- SI units and measurements
- Linear equations
- Quadratic equations using the quadratic formula
4. Geometry
- Angles

- Area, volume and surface area of common objects

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Intra-session Exam	1 hour	20	N	Individual
Numerical Problem Solving	1 hour	30	N	Individual
Numerical Problem Solving	90 minutes	30	N	Individual
Participation	In Class	10	N	Individual
Presentation	5 minutes + 2 minutes question time	10	N	Individual

MATH 1001 Analysis of Change

Credit Points 10

Legacy Code 300830

Coordinator Sherwin Bagheri (https://directory.westernsydney.edu.au/search/name/Sherwin Bagheri/)

Description This Level 1 subject introduces students to the mathematical modelling techniques that are used to formulate and solve problems in the physical and biological sciences. To use these techniques successfully, students must develop the ability to formulate a problem mathematically and then be able to use the appropriate knowledge to test conclusions by analytical and numerical means. These skills will be emphasized as each technique in introduced. Apart from some introductory work on logarithms and exponentials (essential concepts in the sciences), the main techniques developed involve aspects of differential calculus, culminating in the use of differential equations to model real phenomena in the sciences.

Level Undergraduate Level 1 subject

Equivalent Subjects MATH 1011 - Fundamentals of Mathematics LGYB 0484 - Analysis of Change (WSTC)

Incompatible Subjects MATH 1014 - Mathematics 1A

Restrictions Students may complete the three subjects Quantitative Thinking, Analysis of Change and Maths 1A in the following order: 300831 Quantitative Thinking, 300830 Analysis of Change, 300672 Mathematics 1A. This means that students may complete 300831 before attempting 300830, but not after. 300830 and 300831 may be attempted before 300672, but not after. Students may not enrol in 300831 and 300830 or 300831 and 300672 or 300830 and 300672 in the same teaching session. Students enrolled in the Bachelor of Engineering (Honours), Bachelor of Engineering or Bachelor of Engineering Science may not enrol in any of the subjects 300830, 300831 or 300672.

Assumed Knowledge

General Mathematics background achieved at bands 5 or 6, or Mathematics, achieved at band 4, or equivalent or 300831 Quantitative Thinking.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define, graph and manipulate exponential, logarithmic and trigonmetric functions.
2. Apply correctly the techniques of differential calculus to solve biological and chemical- based problems
3. Apply correctly algebraic techniques and manipulate basic limits.
4. Communicate mathematical ideas using standard practices

Subject Content

Exponential and Logarithmic functions
Differential Calculus
Limits
Rules of differentiation
Applications of differentiation
Basic Integration
Trigonometry

Assessment

Assignment	3 weeks/ approx. 2000 words	40	N	Individual

MATH 1003 Biometry

Credit Points 10

Legacy Code 200263

Coordinator Preethi Kottegoda (https://directory.westernsydney.edu.au/search/name/Preethi Kottegoda/)

Description Biometry introduces students to various statistical techniques necessary in scientific endeavours. Presentation of the content will emphasise the correct principles and procedures for collecting and analysing scientific data, using a hands-on approach. Topics include effective methods of gathering data, statistical principles of designing experiments, error analysis, describing different sets of data, probability distributions, statistical inference, non-parametric methods, simple linear regression and analysis of categorical data.

Equivalent Subjects MATH 1032 - Statistics for Science MATH 1028 - Statistical Decision Making MATH 1030 - Statistics for Business ECON 1006 - Introduction to Economic Methods 30123 - Management Analytics

Incompatible Subjects MATH 1025 - Quantitative Techniques

Assumed Knowledge

HSC Mathematics or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. apply the basic principles of statistical design incorporating error analysis
2. design a simple scientific experiment, and then carry out and analyse the data obtained
3. estimate population means using confidence intervals
4. test hypotheses about population means using parametric techniques and find appropriate sample sizes for experiments
5. use regression and correlation techniques to describe relationships between variables
6. use the chi-square test for goodness of fit and test for independence to analyse categorical type data
7. develop statistical computing skills as part of a 'tool-kit' for solving statistical problems. (R-commander)

Subject Content

1. Overview - What is Statistical Thinking? And what role does in play in Scientific Research.

2. Gathering Data - Types of data and dealing with measurements
3. Statistical Principles of Design - understanding randomness; types of sampling including observational studies, experiments, blocking and stratification, and levels of replication; sampling concerns.
4. Describing Sets of Data - Qualitative data; graphical methods for describing quantitative data; numerical measures of central tendency and variability; dealing with errors; error bars
5. Basic probability concepts; enough to understand p-values, confidence intervals and independence. Normal distributon and methods for assessing normality; use of transformations to meet assumptions; sampling distributions; the Central Limit Theorem.
6. Estimation with Confidence Intervals: Single sample - Large and small sample confidence intervals for a population mean; determining the sample size.
7. Tests of Hypothesis: Single sample - Elements of a statistical test; type I and type II errors; large and small sample test of hypothesis about a population mean; p-values.
8. Comparing Population Means: Estimation and Hypothesis testing - Comparing two population means: independent sampling and paired difference sampling; comparing three or more population means: one-way and two-way ANOVA;
9. Simple Linear Regression and Correlation - Least squares approach; assessing the usefulness of the model; using the model for estimation and prediction; the coefficients of correlation and determination.
10. Analysis of Categorical Data - Test for independence and 'Goodness-of-fit' test.

Assessment

Level Undergraduate Level 1 subject

Equivalent Subjects LGYB 0448 - Discrete Mathematics (UWSC)

Incompatible Subjects MATH 2004 - Discrete Structures and Complexity

Assumed Knowledge

HSC Mathematics or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Decide the truth of logical statements involving connectives, and simplify logical expressions using the laws of logic and truth tables
2. Give simple proofs by induction and contradiction;
3. Define and recognise primes, factorise small integers, use the Euclidean algorithm, and do calculations with modular arithmetic;
4. Perform simple operations on sets, find Cartesian products of sets, and use Venn diagrams to illustrate relationships between sets;
5. Solve basic problems in counting and probability;
6. Recognize a function, decide whether a given function is one-to-one or onto, and perform elementary manipulations with functions;
7. Describe simple and directed graphs, use concepts such as "path", and find minimal spanning trees

Subject Content

1. Sets: definitions, subsets, equality, operations, properties, empty set.

2. Counting and probability: Introduction, permutations and combinations, counting rules.

3. Functions: one-to-one, onto, inverse functions, composition.

4. Logic: logical connectives, equivalence, conditional statements, contrapositive, converse, valid arguments, predicates, quantifiers.

5. Number theory and mathematical proof: division, direct proof, counter-examples, division into cases, proof by contradiction and contraposition.

6. Induction and recursion: examples, sequences, sigma and product notation.

7. Graphs and trees: paths, circuits, isomorphisms of graphs, definitions, spanning trees, Kruskal's algorithm.

MATH 1010 Fundamentals for Engineering Studies (WSTC AssocD)

Credit Points 10

Legacy Code 700112

Coordinator Abbas Ranjbar (https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/)

Description This subject serves as an introduction to the key mathematics and physics concepts required to study engineering at a tertiary level. This subject has two major components, physics and mathematics. The physics component includes physical quantities, scalars and vectors, kinematics and dynamics. The mathematics component includes basic arithmetic and algebra, trigonometry, coordinate geometry, relations and functions and introduction to differentiation.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in 7022 Associate Degree in Engineering

Assumed Knowledge

Year 10 Mathematics

Learning Outcomes

On successful completion of this subject, students should be able to:

Physics
1. Apply the physical quantities, scalars and vectors, in physics.
2. Explain fundamental concepts of kinetics and solve problems in this area including Motion in a one and two dimensions, Graphing motion, and Relative motion.
3. Explain fundamental concepts of dynamics and solve problems in this area including Newton's Law of Motion, Momentum and Impulse, Conservation of Momentum, Work and Energy, and Conservation of Energy.
4. Perform simple experiments to verify concepts covered in the subject.

Mathematics
5. Apply appropriate arithmetic, algebraic, graphical techniques, and trigonometry to solve theoretical and real-life problems.
6. Use introductory calculus concepts to solve problems involving rates of change.
7. Apply mathematical techniques to model/solve real world problems related to engineering and science.
8. Communicate mathematical ideas in a clear and effective manner, using logical arguments and appropriate notation, in a range of formats.

Subject Content

1. Physics
a. Mechanics - Physical Quantities - Units and their relationships
b. Mechanics - Scalars and Vectors - Addition and subtraction
c. Mechanics - Kinematics
- Motion in a straight line
- Motion in two dimensions
- Graphing motion
- Relative motion
d. Mechanics - Dynamics
- Newton's Law of Motion
- Momentum and Imp

MATH 1012 Management Analytics

Credit Points 10

Legacy Code 301123

Coordinator Neil Hopkins (https://directory.westernsydney.edu.au/search/name/Neil Hopkins/)

Description Management Analytics provides students with introductory knowledge and skills in identifying, analysing and interpreting data relevant to Business, Human Resources and Management. In order to develop evidence-based decision-making skills, students will learn how to work with data. Students will organise and summarise data, present data visually and design surveys for new data collection and use. Students will develop skills in understanding decision-making models and forecasting as a means of improving business processes and HR, management and business metrics.

Assumed Knowledge

HSC maths (2 unit desirable) or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise the importance of communicating with data in Business, Management and Human Resource contexts
2. Demonstrate knowledge of evidence-based decision-making techniques in business, human resources and management
3. Organise and summarise numerical data
4. Manipulate, analyse and graph data using Excel
5. Employ appropriate statistical methods and techniques in given situations.
6. Understand the basics of forecasting in Business, Human Resource and Management contexts.
7. Design survey tools for data collection and analysis.

Subject Content

1. Foundations of management analytics
- data presentation
- Analytics on spreadsheets
- collecting data - survey design
2. Descriptive analytics
- Descriptive statistical measures
- probability distributions
3. Predictive analytics
- estimation and Hypothesis testing
- survey analysis
- simple linear regression analysis
4. Making decisions and decision analysis

Coordinator Charles Zworestine (https://directory.westernsydney.edu.au/search/name/Charles Zworestine/)

Description This Level 1 subject provides a solid foundation in the theory and applications of differential calculus, as well as some introductory work on complex numbers. It is the first of two subjects developing aspects of calculus.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects LGYA 4423 Concepts of Mathematics

Incompatible Subjects LGYA 4295 Mathematics for Business
MATH 1016 Mathematics for Engineers 1

Restrictions

Students may complete the three subjects Quantitative Thinking, Analysis of Change and Maths 1A in the following order: MATH 1026 Quantitative Thinking, MATH 1001 Analysis of Change, MATH 1014 Mathematics 1A. This means that students may complete MATH 1026 before attempting MATH 1001, but not after. MATH 1001 and MATH 1026 may be attempted before MATH 1014, but not after. Students may not enrol in MATH 1026 and MATH 1001 or MATH 1026 and MATH 1014 or MATH 1001 and MATH 1014 in the same teaching session. Students enrolled in the Bachelor of Engineering (Honours), Bachelor of Engineering or Bachelor of Engineering Science may not enrol in any of the subjects MATH 1001, MATH 1026 or MATH 1014.

Assumed Knowledge

Mathematics achieved at Bands 5-6, or knowledge equivalent to 300830 Analysis of Change.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Define i and operate with complex numbers.
2. Define and manipulate the following functions: exponential, trigonometric, hyperbolic, logarithmic, inverse trig and inverse hyperbolic.
3. Find limits of functions and determine if a function is continuous or differentiable.
4. Find the derivatives of functions.
5. Apply correctly techniques of differential calculus to problems involving optimization, curve sketching and rates of change.
6. Calculate basic integrals.

Subject Content

- Functions and Inverse Functions: Functions and their Graphs; Trigonometric, Exponential, and Hyperbolic Functions; Inverse Functions; Logarithmic Functions; Inverse Trigonometric and Hyperbolic Functions.
- Complex Numbers: Definition; Basic Operations; Argand Diagram; Polar Form; Euler's Formula; De Moivre's Theorem; Powers and Roots.
- Limits and Continuity: Limit of a Function; Limit Laws; One-Sided Limits; Limits at Infinity; The Sandwich Theorem; Vertical and Horizontal Asymptotes; Intermediate Value Theorem.
- Differentiation: Definition of the Derivative; Differentiability implies Continuity; Derivatives of Polynomials and Exponential Functions; Product and Quotient Rules; Chain Rule; Implicit Differentiation; Derivatives of Trigonometric and Hyperbolic Func
- Applications of Derivatives: Maximum and Minimum Values; Extreme Value Theorem; Roll's Theorem and the Mean Value Theorem; Monotonic Functions and the First Derivative Test; Concavity and Curve Sketching; Applied Optimization; Indeterminate Forms an' L'
- Integration: Antiderivatives; Indefinite and Definite Integrals; Connection between the Definite and Indefinite Integrals.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	45 minutes	10	N	Individual
Short Answer	45 minutes	10	N	Individual
Short Answer	45 minutes	15	N	Individual
Short Answer	45 minutes	15	N	Individual
Final Exam	3 hours	50	Y	Individual

Level Undergraduate Level 1 subject

Pre-requisite(s) MATH 1014

Equivalent Subjects LGYA 4423 - Concepts of Mathematics

Incompatible Subjects LGYA 4295 - Mathematics for Business
MATH 1016 - Mathematics for Engineers 1

Restrictions

This subject is not available to students enrolled in the Bachelor of Engineering (Honours), Bachelor of Engineering or Bachelor of Engineering Science.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Do calculations with matrices and determinants and use row reduction to solve systems of equations.
2. State the definition of the definite integral and apply the Fundamental Theorem of Calculus.
3. Use the various techniques of integration to evaluate a range of integrals.
4. Apply correctly techniques of integral calculus to problems involving some of the following: areas, volumes, work, blood flow, cardiac output, consumer surplus, hydrostatic force.
5. Use the various tests to determine if a series converges and find Taylor and Maclaurin series for functions.
6. Find the dot and cross product of vectors and the equations of lines and planes.

Subject Content

- Matrices and Determinants: Operations on matrices; Systems of Linear Equations; Row Reduction (Gaussian and Gauss-Jordan Elimination); Properties of Determinants; Cramer's Rule; Inverse of a Matrix (by Row Reduction and the Adjoint Method).
- Vectors: Dot product and cross product; equations of lines and planes.
- Integration: Riemann Sums; Definition of the Definite Integral; Fundamental Theorem of Calculus; Indefinite Integrals; Integration by Substitution; The Logarithm Defined as an Integral.
- Techniques of Integration: Integration by Parts; Trigonometric Integrals; Trigonometric Substitutions; Method of Partial Fractions; Improper Integrals.
- Applications of Integration: Areas and Volumes; Average Value of a Function; Separable Differential Equations; Exponential Growth and Decay; and Topics from: Volumes using cylindrical shells, Work, Arc Length, Area of a Surface of Revolution, Hydrostat
- Infinite Sequences and Series: Definitions; Integral Test and Estimates of Sums; Comparison Tests; Alternating Series; Absolute Convergence; Ratio and Root Tests; Power Series; Taylor and Maclaurin Series; Applications of Taylor Polynomials.

Assessment

MATH 1016 Mathematics for Engineers 1

Credit Points 10

Legacy Code 200237

Coordinator Leanne Rylands (https://directory.westernsydney.edu.au/search/name/Leanne Rylands/)

Description This subject is the first of two mathematics subjects to be completed by all students enrolled in an engineering degree during their first year of study. The content covers a number of topics that underpin the later-stage engineering mathematics subjects. The subject matter includes: differential and integral calculus of a single variable, complex numbers, aspects of matrix algebra, vectors, and some elementary statistics and probability theory. The aim of this subject is to introduce a number of key mathematical concepts needed in the study of Engineering, and to provide a solid foundation for the follow-on subject Mathematics for Engineers 2.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) Students enrolled in 3740 Bachelor of Engineering (Honours) or 3689 Bachelor of Engineering must have passed MATH 1021 Mathematics for Engineers Preliminary otherwise permission is required

Equivalent Subjects MATH 1007 Engineering Mathematics 1 LGYA 4425 Mathematical Methods A LGYA 4426 Mathematical Methods B MATH 1018 Mathematics for Engineers 1 (WSTC) MATH 1017 Mathematics for Engineers 1 (WSTC Assoc Deg)

Incompatible Subjects LGYA 4295 Mathematics for Business LGYA 4423 Concepts of Mathematics MATH 1014 Mathematics 1A MATH 1015 Mathematics 1B

Assumed Knowledge

HSC Mathematics achieved at Band 5 or 6. This is the minimum requirement.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Find solutions to problems involving logarithmic, exponential, inverse trigonometric, hyperbolic and inverse hyperbolic functions.
2. Apply correctly the techniques of both differential and integral calculus to solve problems that may involve transcendental functions.
3. Solve problems involving matrices and determinants.
4. Perform operations on vectors, both in 2-D and 3-D.
5. Define i and operate with complex numbers.
6. Define a random variable and find its probability distribution and calculate probabilities based on the Binomial distribution, the Poisson distribution and the Normal distribution.
7. Appreciate the relevance of mathematics in an engineering context.
8. Communicate mathematical ideas using common conventions.

Subject Content

1. Functions and Inverse Functions: Revision - inverse functions, logs, exponentials; trig and inverse trig functions; hyperbolic and inverse hyperbolic functions.
2. Differential Calculus: Revision- limits; continuity; definition of the first derivative, differentiation rules; implicit differentiation including inverse trig functions and inverse hyperbolic functions.
3. Applications of Differential Calculus: L'Hopital's Rule; properties of curves; differentials; related rates.
4. Matrix Algebra: Determinants; matrices; solution of simultaneous equations using matrices and determinants; Gaussian elimination; eigenvalues and eigenvectors.
5. Vectors: definition; basic operations; dot product; cross product; angle between two vectors; equations of lines and planes.
6. Complex Numbers: Basic operations; polar coordinates; Euler's formula; powers and roots of complex numbers.
7. Integration: Indefinite/definite integrals, standard integrals.
8. Techniques of Integration: Method of substitution; method of partial fractions; integration by parts, reduction formula; trig functions; inverse trig and inverse hyperbolic functions; completing the square.
9. Applications of Integration: Revision - areas and volumes; length of curves; mass and moments; power series.
10. Descriptive statistics: Revision - Measures of central tendency and dispersion, mean, mode, median, standard deviation, variance.
11. Random Variables and Probability Distributions: Random variables, discrete random variable distributions, the binomial distribution, the Poisson distribution; definition of a continuous random variable, probability distribution of a continuous random variable, and the Normal distribution.

Level Undergraduate Level 1 subject

Pre-requisite(s) MATH 1016

Equivalent Subjects -

Incompatible Subjects MATH1035

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise and solve various types of first and second order differential equations and some higher order ordinary differential equations
2. Set up a linear 2D system of differential equations and investigate its solution and the nature of its critical points
3. Apply Laplace transforms in solving problems
4. Use multivariable calculus techniques competently
5. Evaluate multiple (double and triple) integrals.

Subject Content

First Order Ordinary Differential Equations - Separable and linear equations and applications.
Second Order Linear ODEs- both homogeneous and non homogeneous with constant coefficients and applications, Euler Cauchy and Power series solutions.
Higher Order ODEs - homogeneous and non homogeneous with constant coefficients and Euler-Cauchy.
2D linear constant coefficient homogeneous systems, phase plane, critical points and criteria for critical points.
Laplace Transforms and solving ODEs using Laplace transforms.
Level curves and sketching regions in space
Limits and continuity of functions of two variables
Partial differentiation
Chain rule
Gradient vectors and directional derivatives
Equations of normal lines and tangent planes
Maxima, minima and saddle points
Lagrange multipliers
Double integrals in rectangular and polar coordinates and applications
Triple integrals in rectangular, cylindrical and spherical coordinates and applications.
1. First Order Ordinary Differential Equations - Separable and linear equations and applications.

MATH 1020 Mathematics for Engineers 2 (WSTC AssocD)

Credit Points 10

Legacy Code 700102

Coordinator Zdenka Misanovic (https://directory.westernsydney.edu.au/search/name/Zdenka Misanovic/)

Description The content of this subject covers a number of topics that build on the student's calculus knowledge from Mathematics for Engineers 1. The subject matter includes: ordinary differential equations, Laplace transforms and multi-variable calculus.Offerings of alternate subjects are dependent on there being sufficient student enrolment numbers. If enrolments are low, the College may cancel delivery of the alternate subject.

Level Undergraduate Level 1 subject

Pre-requisite(s) MATH 1017

Equivalent Subjects MATH 1019 - Mathematics for Engineers 2 LGYB 0454 - Mathematics for Engineers 2 (WSTC)

Restrictions

Students must be enrolled at Western Sydney University, The College in 7022 Associate Degree in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise and solve various types of first and second order differential equations and some higher order ordinary differential equations.
2. Set up a linear 2D system of differential equations and investigate its solution and the nature of its critical points.
3. Apply Laplace transforms in solving problems.
4. Use multivariable calculus techniques competently.
5. Evaluate multiple (double and triple) integrals.
6. Use mathematical reasoning to solve problems and communicate mathematical ideas using standard practices.

Subject Content

1. First Order Ordinary Differential Equations (O.D.E.) ? separable and linear equations and applicat

Assessment

Equivalent Subjects -

Incompatible Subjects LGYA 4425 - Mathematical Methods A MATH 1011 - Fundamentals of Mathematics MATH 1016 - Mathematics for Engineers 1 MATH 1018 - Mathematics for Engineers 1 (WSTC)

Restrictions

All students entering the Bachelor of Engineering (Honours) and Bachelor of Engineering Science will be enrolled in this subject. Students from the Bachelor of Engineering (Honours) program who have sufficient background knowledge in mathematics may attempt a readiness test to allow them to move directly to Mathematics for Engineers 1 if they pass this test.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Perform arithmetic operations and manipulate algebraic symbols as required in solving mathematical problems set in an engineering context
2. Solve mathematical problems using trigonometry, logarithmic and exponential functions
3. Apply correctly the techniques of both differential and integral calculus to solve problems that may involve transcendental functions.
4. Communicate mathematical ideas using standard practices

Subject Content

1.Arithmetic and Algebra: Rational and irrational numbers, indices, manipulation of algebraic expressions, factorisation, linear equations and quadratic expressions, simultaneous equations.
2.Relations and Functions: Domain and range, linear functions, quadratic functions, roots of quadratic equations.
3.Logarithmic and Exponential Functions: Definition and properties of exponentials, graphing exponentials, differentiation and integration of exponentials, exponential growth and decay. Definition and properties of logarithms, graphing logarithms, differentiation and integration of logarithms.
4.Trigonometry: Trigonometric ratios, exact ratios, Sine and Cosine rules, reciprocal ratios, angles of any magnitude.
5.Trigonometric Functions: Radian measure, graphing, properties of functions, differentiation, integration.
6.Further Trigonometric Functions: Applied trigonometry, sums and differences of angles, equation solving, general solutions to trigonometric equations.
7.Inverse Functions and Inverse Trigonometric Functions: y=logax and y=ax as inverse functions, inverse trigonometric functions, differentiation and integration of inverse functions.
8.Differentiation: Limits and continuity the derivative from first principles; differentiation formulae; implicit differentiation, tangents and normals to curves, stationary points, higher order derivatives, curve sketching, problems involving maxima and minima, differentiation of trigonometric functions, logarithmic and exponential functions, and inverse trigonometric functions.

9.Integration: Primitive functions, definite integrals, areas between curves; integration of trigonometric functions, logarithmic and exponential functions, and inverse trigonometric functions.

Assessment

MATH 1026 Quantitative Thinking

Credit Points 10

Legacy Code 300831

Coordinator Patrick O'Doherty (https://directory.westernsydney.edu.au/search/name/Patrick ODoherty/)

Description This subject develops the quantitative skills that underpin many fields of study in the sciences. The content covered includes basic algebra, functions, graphs, equations, linear and quadratic, introductory probability and descriptive statistics. These mathematical/statistical concepts will be revised and developed using scientific concepts such as molarity and dilution, optical density, population growth, and predator-prey models. In all aspects of this subject, students will be developing and using critical thinking skills to solve mathematical/statistical problems set in a scientific context.

School Computer, Data & Math Sciences

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects MATH 1011 - Fundamentals of Mathematics

Restrictions

Students may complete the three subjects Quantitative Thinking, Analysis of Change and Mathematics 1A in the following order: Quantitative Thinking, Analysis of Change, Mathematics 1A. This

means that students may complete QT before attempting AoC, but not after. AoC and QT may be attempted before M1A, but not after. Students may not enrol in QT and AoC or QT and M1A or AoC and M1A in the same teaching term.

Assumed Knowledge

Basic competence in algebraic manipulation and some familiarity with elementary probability and statistical concepts.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Manipulate algebraic and numeric expressions.
2. Recognise and draw graphs representing linear, quadratic , logarithmic and exponential functions.
3. Solve linear equations, and quadratic equations.
4. Use modelling techniques to represent basic biological systems.
5. Describe data in both numerical and graphical forms.
6. Communicate mathematical and statistical ideas using standard practices.
7. Employ critical thinking skills to solve mathematical and statistical problems set in a scientific context.

Subject Content

- Critical Thinking Skills: Problem-solving strategies; Inductive and Deductive reasoning.
- Numeracy and Calculation: Fractions; Index rules; SI units; Scientific notation; Rounding and estimation; Significant figures; Accuracy and precision; Using a calculator.
- Basic Algebra Review: Substitution in formulae; Rearranging formulae; Proportional reasoning.
- Interpretation: functions; graphs - linear, parabola, logarithmic, exponential; linear equations, quadratic equations.
- Uncertainty and Probability: introductory probability; basic statistics; Descriptive statistics; Random variables and probability distributions; the Normal distribution; treatment and assessment of errors; introductory hypothesis testing; introductory l

MATH 1028 Statistical Decision Making

Credit Points 10

Legacy Code 300700

Coordinator Volker Gebhardt (https://directory.westernsydney.edu.au/search/name/Volker Gebhardt/)

Description Statistical Decision Making introduces students to various statistical techniques for analysing and interpreting data. Presentation of the content will emphasise the correct principles and procedures for collecting and analysing data, using statistical software. Topics include describing different sets of data, probability distributions, statistical inference, and simple linear regression and correlation. The open-source statistical software package R will be introduced and used in this subject. Analysing and interpreting data is crucial in many sectors of modern economy and society. Thus, basic competencies in statistics, data collection and data analysis are essential employability skills in virtually every profession.

MATH 1029 Statistical Decision Making (WSTC)

Credit Points 10

Legacy Code 700041

Coordinator Rubie Herrera (https://directory.westernsydney.edu.au/search/name/Rubie Herrera/)

Description Statistical Decision Making introduces students to various statistical techniques supporting the study of computing and science. Presentation of the content will emphasise the correct principles and procedures for collecting and analysing scientific data, using information and communication technologies. Topics include describing different sets of data, probability distributions, statistical inference and simple linear regression and correlation.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) Students enrolled in 7005 Diploma in Information and Communications Technology 7067 Diploma in Information and Communications Technology Extended 7104 Diploma in Information and Communications Technology (Health Information Management) 7106 Diploma in Information and Communications Technology (Health Information Management) Extended must pass MATH 0028 Statistics for Academic Purposes (WSTC Prep) before enrolling in this unit

Equivalent Subjects MATH 1032 - Statistics for Science MATH 1003 - Statistics for Business ECON 1006 - Introduction to Economic Methods MATH 1028 - Statistical Decision Making MATH 1031 - Statistics for Business (WSTC) MATH 1004 - Biometry (WSTC)

Incompatible Subjects MATH 1025 - Quantitative Techniques

Restrictions Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended Diploma programs (7067, 7083, 7106, 7107) must have passed 40 credit points in order to enrol in this subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year 2 subjects.

Learning Outcomes

1. Analyse data using traditional methods or modern resampling methods
2. Use technology to assist in performing statistical analysis
3. Recognise the limitations of data collection methods and demonstrate awareness of the influence of these limitations on inference
4. Choose the correct statistical method for analysis and correctly interpret the results
5. Aanalyse data using traditional methods or modern resampling methods
6. Recognise the limitations in data collection methods and have awareness in the role of data collection on inference

Subject Content

Collecting and describing data
Probability
Confidence intervals and hypothesis tests
Simple linear regression

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes	5	N	Individual
Intra-session Exam	1 hour	15	N	Individual
Intra-session Exam	1 hour	20	N	Individual
Applied Project	5 hours	10	N	Group
End-of-session Exam	2 hours	50	Y	Individual

MATH 1030 Statistics for Business

Credit Points 10

Legacy Code 200032

Coordinator Neil Hopkins (https://directory.westernsydney.edu.au/search/name/Neil Hopkins/)

Description Statistics for Business introduces the basic concepts and techniques of statistics that are particularly relevant to problem solving in business. It also provides a sound base for more advanced study in statistics and forecasting in subsequent sessions. Topics include: presentation of data; descriptive statistics; the role of uncertainty in business decision making; hypothesis testing; and basic forecasting.

Assumed Knowledge

HSC Mathematics/Mathematics Extension 1 is desirable.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. organise and summarise data numerically
2. recognize the foundation behind inferential statistics
3. identify the underlying assumptions associated with each statistical technique and interpret the results
4. formulate economic and financial hypotheses into statistically testable forms
5. manipulate, analyse and graph data using Excel
6. employ the appropriate statistical methods and techniques in given situations

Subject Content

Data presentation and descriptive statistics
Elementary probability
Random variables and probability distributions
Normal distributions and sampling distributions
Parameter estimation and hypothesis testing - single population
Parameter estimation and hypothesis testing - two populations
Simple linear regression analysis and correlation
Analysis of categorical data

MATH 1034 Mathematics for Engineers 1 (Advanced)

Credit Points 10

Legacy Code 301333

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject provides foundational knowledge in key mathematical concepts which are essential for other mathematics subjects in engineering degrees. The subject matter includes: differential and integral calculus of a single variable, complex numbers, aspects of matrix algebra, vectors, and some elementary statistics and probability theory. In applying maths concepts to problems, students develop analytical thinking and problem solving skills, as well as communication skills to present clear and logical arguments. Students are encouraged to be independent and reflective learners in completing tutorial problems and online assessments.

MATH 1035 Mathematics for Engineers 2 (Advanced)

Credit Points 10

Legacy Code 301337

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject covers a number of topics that build on calculus knowledge from Mathematics for Engineers 1 (Advanced). Calculus is essential for engineering as it involves studying how things change over small intervals of time and allows for modelling such changes. Topics include ordinary differential equations, Laplace transforms and multi-variable calculus. In applying mathematical concepts to problems, students develop analytical thinking and problem solving skills, as well as communication skills to present clear and logical arguments. Students are encouraged to be independent and reflective learners in completing tutorial problems and online assessments.

MATH 1038 Mathematics for Computing

Credit Points 10

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description Mathematics forms the backbone of information and communication technology. Video games and multimedia programmers use linear algebra to control movement, actions and animations; analysts depend on number and graph theory to devise models of complex systems; data scientists and machine learning specialists use statistics to train their machine counterparts. The knowledge of mathematics is the difference between a good programmer and a great one. In this subject, we build a foundation of mathematical concepts that computing graduates require for their careers. During tutorials students will use an online interactive system allowing them to interactively explore mathematical concepts.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Learning Outcomes

1. Demonstrate an understanding of the basics of sets and functions, including exponentials and logarithms.
2. Solve systems of equations with two and three unknowns, and perform basic matrix operations.
3. Use trigonometry and coordinate systems, together with matrices and determinants, to solve problems and perform geometric (matrix) transformations (2D and some simple 3D).
4. Work with various number systems relevant to computing and with modular arithmetic.
5. Solve introductory probability problems.
6. Demonstrate an understanding of algorithm efficiency by analysing some simple algorithms.

Subject Content

- Revision of high school algebra
- Sets and functions
- Logarithms
- Trigonometry
- Introductory Linear Algebra
- Coordinate systems, matrices, determinants, 2D and 3D geometric (matrix) transformations
- Numbers and modular arithmetic
- Introduction to probability
- Complexity of algorithms

MATH 1039 Engineering Mathematics and Statistics (WSTC)

Credit Points 10

Description This subject will introduce you to fundamental mathematical concepts crucial for comprehending, interpreting, and resolving contemporary engineering problems. By developing their numeracy skills, you will enhance your problem-solving abilities, critical thinking, and creativity, all of which are transferrable to your future careers and ongoing educational pursuits. Moreover, a grasp of these fundamental principles in mathematics and statistics will empower you to navigate our ever-evolving, complex world.

School Eng, Design & Built Env

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Destination College Diploma program listed below:

- 7188 Diploma in Culture, Society and Justice
- 7189 Diploma in Health Science
- 7190 Diploma in Business
- 7191 Diploma in Information and Communication Technologies
- 7192 Diploma in Building Design and Construction
- 7193 Diploma in Engineering Studies
- 7194 Diploma in Creative Industries and Communications
- 7195 Diploma in Arts
- 7196 Diploma in Science
- 7197 Diploma in Education Studies

Learning Outcomes

1. Perform operations with numbers and use them to process and analyse measurements and quantitative data.
2. Apply statistical methods to estimate uncertainties and errors using statistical software.
3. Use algebra, elementary functions and equations to model and solve problems in engineering.
4. Use geometry and trigonometry to solve problems in engineering.
5. Apply mathematical concepts and procedures to select and justify problem-solving strategies.

Subject Content

- Arithmetic (numbers, operations with numbers including whole numbers, fractions, decimal and percentages, properties of real numbers)
- Measurements and units, estimates, scientific notation and rounding, uncertainties.
- Statistics, descriptive statistics, histograms, normal distribution
- Algebra (algebraic rules and techniques, equations, and identities, working with formulas)
- Functions (definition, translation, and notation, domain and range, graphs, the inverse function, linear and quadratics functions and equations; linear systems of 2 equations)
- Basic geometry and trigonometry; trigonometric functions
- Exponential and log functions and their applications

MATH 1040 Engineering Mathematics and Computing (WSTC)

Credit Points 10

Description The subject aims to equip you with fundamental skills in calculus and computer programming as essential tools for problem-solving and data analysis in engineering. You will be introduced to basic calculus (differentiation and integration) and their common applications in engineering. The subject will also introduce you to computer programming and other technology tools for calculation and data analysis and visualisation. This subject will also include extensive practical work and problem-solving activities focusing on algorithmic approach to problem-solving. You will be able to apply the acquired skills and knowledge in various engineering subjects as well as in your future careers.

School Eng, Design & Built Env

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Destination College Diploma program listed below:

- 7188 Diploma in Culture, Society and Justice
- 7189 Diploma in Health Science
- 7190 Diploma in Business
- 7191 Diploma in Information and Communication Technologies
- 7192 Diploma in Building Design and Construction
- 7193 Diploma in Engineering Studies
- 7194 Diploma in Creative Industries and Communications
- 7195 Diploma in Arts
- 7196 Diploma in Science
- 7197 Diploma in Education Studies

Learning Outcomes

1. Use functions to describe and model quantities in engineering.
2. Use differential calculus to study how various engineering quantities change.
3. Use integral calculus to calculate various quantities based on their density functions.
4. Apply basic programming control structures including sequence, selection, and iteration to create computer programs based on algorithmic solutions.
5. Use mathematical skills and logical thinking to solve and communicate challenging and complex problems where solution is not immediately obvious.

Subject Content

- Functions (definition and basic properties, graphs, elementary functions)
- Introduction to a programming environment for numerical computing and data analysis (simple calculations and graphs in programming environment for numerical computing and data analysis)
- Algorithmic approach to problem-solving
- Differentiation (definition and applications, calculating derivatives in a programming environment for numerical computing and data analysis)
- Integration (fundamental theorem of calculus; applications of integration, integration with a programming environment for numerical computing and data analysis)
- Using loops, selection and repletion structures in a programming environment for numerical computing and data analysis to solve problems and analyse data

MATH 2001 Advanced Calculus

Credit Points 10

Legacy Code 200028

Coordinator Matthias Fresacher (https://directory.westernsydney.edu.au/search/name/Matthias Fresacher/)

Description This subject is designed for students undertaking studies in mathematics, statistics, operations research and mathematical finance. It provides further mathematical training in the areas of multivariable and vector calculus, which is essential to the understanding of many areas of both pure and applied mathematics.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1015

Equivalent Subjects LGYA 3785 - Advanced Calculus LGYA 3865 - Mathematics 4 LGYB 9666 - Mathematics 21

Incompatible Subjects MATH 1019 - Mathematics for Engineers 2

Restrictions

Students enrolled in Bachelor of Engineering, Bachelor of Engineering (Honours) or Bachelor of Engineering Science may not enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. tackle and solve calculus problems in the multi-variable context
2. apply multi-variable calculus to practical situations
3. perform vector operations and apply to solving geometric problems
4. recognise continuous multi-variable functions
5. calculate limits of multi-variable functions
6. compute directional derivatives, partial derivatives, and gradients
7. find and classify critical points of differentiable multi-variable real valued functions
8. perform multi-variable integration and apply various techniques such as change of variables
9. apply integration to calculating arc lengths, surface areas, and volumes
10. recognise vector fields such as conservative vector fields
11. apply Fundamental Theorem and Green's Theorem to calculating line integrals and/or double integrals

Subject Content

multi-variable differential calculus: functions of several variables and their graphs
continuity, limits, directional derivatives, partial derivatives and vector-valued functions
chain rule, level sets, gradient, extreme values, Lagrange multiplier methods
multivariable integral calculus: multiple integration and iterated integrals, change of order
curvilinear coordinate systems
properties of vectors and vector fields
vector differentiation
gradient, divergence and curl of a vector
line, surface and volume integrals
Green's theorem in the plane
theorems of Gauss and Stokes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MATH 2003 Differential Equations

Credit Points 10

Legacy Code 200030

Coordinator Shatha Aziz (https://directory.westernsydney.edu.au/search/name/Shatha Aziz/)

Description Differential equations arise naturally both in abstract mathematics and in the study of many phenomena. This subject provides the theory of ordinary differential equations and an introduction to partial differential equations together with methods of solution. Examples are drawn from a wide range of biological, chemical, physical and economic applications.

School Computer, Data & Math Sciences

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH1015 - Mathematics 1B

Incompatible Subjects MATH 1019 - Mathematics for Engineers 2

Restrictions

Students enrolled in Bachelor of Engineering, Bachelor of Engineering (Honours) or Bachelor of Engineering Science may not enrol in this subject.

Assumed Knowledge

None

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Classify and solve various types of first order ordinary differential equations
2. Classify and solve various types of second order ordinary differential equations
3. Apply Laplace transforms to solve problems including second order ordinary differential equations
4. Classify and solve various types of basic partial differential equations.

Subject Content

- Review of first order differential equations
- homogeneous linear second order equations
- reducible second order equations
- linear second order equations with constant coefficients
- differential operators
- method of undetermined coefficients
- variation of parameters
- equations with variable coefficients
- power series solutions
- Laplace transforms
- simple partial differential equations and separation of Variables, eg diffusion, wave and Laplace equations
- application of Fourier series to partial differential equations

MATH 2004 Discrete Structures and Complexity

Credit Points 10

Legacy Code 300699

Coordinator Volker Gebhardt (https://directory.westernsydney.edu.au/search/name/Volker Gebhardt/)

Description The fact that computers work at all in the way they do is due to the formal mathematical structure that is used in their design. The same holds for establishing important matters such as the reliability of our computer networks. This subject presents, in their computing context, a range of mathematical concepts that are essential for understanding a number of topics concerning computers: the ways they work, they ways they interact, and the ways we interact with them.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1028

Incompatible Subjects MATH 1006 - Discrete Mathematics

Restrictions Students must be enrolled in 3639 Bachelor of Information and Communications Technology or the following double degrees 3654, 3655, 3656, 3657, 3661

Assumed Knowledge

Basic programming such as that in 300580 - Programming Fundamentals.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appreciate some of the roles that mathematics plays in computing;
2. Recognise a function, decide whether a given function is one-to-one or onto, and perform elementary manipulations with functions;
3. Decide the truth of logical statements involving connectives, and simplify logical expressions using the laws of logic and truth tables;
4. Describe the connections between basic set operations and logic connectives;
5. Describe simple and directed graphs, use concepts such as "path", and find minimal spanning trees
6. Understand the differences between logarithmic, linear, quadratic and exponential algorithms and perform basic complexity analysis on algorithms such as simple sorting algorithms.
7. Appreciate the relevance of the content to computing.

Subject Content

The content of the subject is driven by several computing questions, broken down into modules. Each module consists of an issue in computing that requires certain mathematics to address. The modules, and the mathematics they address, are:
Module 1: Functions, what is and isn't a function, one-to-one and onto functions, representing functions.
Module 2: The way computers "think": logic, and how this relates to sets.
Module 3: Networks and their structure: graphs, spanning trees and matrices.
Module 4: Algorithm efficiency: the analysis of some simple algorithms. Comparisons of various algorithms, why complexity is important. Revision of relevant counting material.

MATH 2006 Experimental Design and Analysis

Credit Points 10

Legacy Code 100013

Coordinator Tuki Attuquayefio (https://directory.westernsydney.edu.au/search/name/Tuki Attuquayefio/)

Description This subject is driven by the scientific method with a focus on experimental design and related data analysis. Research design and methodology and ethical issues, statistical concepts and techniques, computer analysis of data, and communicating research findings are all features of this subject, which build on the content in its prerequisite.

School Psychology

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) For students NOT enrolled in programs 1630 Graduate Diploma in Psychological Studies 1796 Graduate Diploma in Psychology and 1837 Bachelor of Cyber Security and Behaviour - BEHV 1016

Restrictions

Note that only students enrolled at WSU Online may register in the WSU Online subjects offered at that location.

This pre-requisite will not apply to students enrolled in courses 1630 Graduate Diploma in Psychological Studies, 1796 Graduate Diploma in Psychology and 1837 Bachelor of Cyber Security and Behaviour.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Express understanding of the scientific method, and an appreciation of its role in developing psychological knowledge.
2. Demonstrate knowledge of experimental ethics and experimental research methodology and apply this methodology to experimental data.
3. Contrast basic experimental statistical techniques with emphasis on computerised analysis methods (SPSS).
4. Appraise the relationship between experimental design, collected data and the appropriate statistical technique.

Subject Content

Psychology as science. The role of research in psychology.
Making research and ethical decisions. Reviewing the literature, forming research questions and hypotheses, operationalising constructs, choosing variables.
Experimental and quasi-experimental designs.

Between and within-subjects experimental designs.
Reporting experimental results. The publication manual of the APA.
Statistical concepts: Variance, the normal distribution, levels of measurement, descriptive and inferential statistics.
Descriptive statistics: Frequencies, graphical presentation, measures of central tendency, measures of variability, percentiles, z-scores.
Inferential statistics: Populations and samples, sampling distributions, standard error, confidence intervals, significance, alpha, power.
Parametric versus non-parametric statistics, assumptions.
The t-tests, analysis of variance (ANOVA) and their non-parametric equivalents.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MATH 2009 Introduction to Data Science

Credit Points 10

Legacy Code 301033

Coordinator Antoinette Cevenini (https://directory.westernsydney.edu.au/search/name/Antoinette Cevenini/)

Description This subject is replaced by equivalent subject COMP 2025 Introduction to Data Science from 2022. Analysis of data is essential for scientific investigation, modelling processes and predicting future events. Data Science is the investigation of the tools required that allow us to perform this modelling and prediction. The increase in accessible data over the past few decades has promoted the use of Data Science, making it a desired skill in many professions. In this subject we further investigate the methods of regression, clustering and classification that form the basis of a data scientist's toolbox.

School Computer, Data & Math Sciences

Discipline Computer Science, Not Elsewhere Classified.

Pre-requisite(s) For students NOT enrolled in 3769 Bachelor of Data Science or 3770 Bachelor of Applied Data Science - MATH 1028

Statistical Decision Making or MATH 1003 Biometry or MATH 1030 Statistics for Business

Co-requisite(s) For students enrolled in 3769 Bachelor of Data Science or 3770 Bachelor of Applied Data Science - MATH 1033 Thinking About Data

Assumed Knowledge

Computer Programming.

Learning Outcomes

1. Discuss the issues (computational and social) in data science.
2. Choose and apply appropriate data analysis methods for a given set of data.
3. Define the assumptions required behind each data analysis model.
4. Choose and apply appropriate evaluation methods to computed models to gain insight into the effectiveness of the models.
5. Use computer software (R) to achieve the above.

Subject Content

1. Introduction to Data Science
2. Classification
3. Tree-based methods
4. Clustering and unsupervised learning
5. High dimensional data sets
6. Visualisation of model performance
7. Data science ethics
8. Regression

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Numerical Problem Solving	to consist of 10 or so pages of text, not including code and output	40	N	Individual

MATH 2010 Linear Algebra

Credit Points 10

Legacy Code 200027

Coordinator Shatha Aziz (https://directory.westernsydney.edu.au/search/name/Shatha Aziz/)

Description The objective of this subject is to present the main fundamentals of linear algebra and includes such topics as solving systems of linear equations, matrix algebra, determinants, eigenvalues and eigenvectors, Euclidean vector spaces, general vector spaces, inner product spaces and linear transformations.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Assumed Knowledge

Solving systems of equations with two and three unknowns, basic matrix operations, including multiplication.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Implement Gaussian elimination to solve systems of linear equations.
2. Use and apply vector operations such as the dot product, and concepts such as orthogonality, span, and linear dependence of vectors.
3. Use matrix operations, including matrix multiplication, matrix inversion and LU factorisation.
4. Use and apply concepts related to vector spaces, subspaces and the connection between dimension, linear independence, spanning sets, and basis.
5. Use and apply concepts related to basic linear transformations of the plane, general linear transformations, and the basic notion of kernel.
6. Evaluate determinants using a range of techniques.
7. Be able to compute the eigenvalues and eigenvectors of a linear transformation.
8. Use the concept of orthogonality and orthogonal matrices, including orthogonal projections and the Gram-Schmidt process.

Subject Content

Linear Equations: Introduction to Linear Systems, Gaussian Elimination, applications.
Matrices: matrix operations and rules of arithmetic, elementary matrices, inverses and their calculation, applications.
Determinants: Determinant function, properties, cofactor expansion, Cramer's rule.
Eigenvalues and Eigenvectors: eigenvalues and eigenvectors, diagonalization, applications.
Euclidean Vector Spaces: Vectors in 2 and 3 space, geometric and algebraic interpretation, norms, dot product, cross product, lines and planes. Generalization to Euclidean n-Space, linear transformations between Euclidean vector spaces.
General Vector Spaces: Real vector spaces, subspaces, and concepts of span, linear independence, basis, and dimension.
Inner Product Spaces: Inner product, Cauchy-Schwarz inequality, angle between vectors, orthogonality, Gram-Schmidt Process, least squares, singular value decomposition.
General Linear Transformations: matrix and linear transformations, kernel and range, matrix of linear transformations.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	Weekly, 30 minutes each; 1% each, with the best 10 marks counted	10	N	Individual
Participation	Weekly Problem Sets, 3 hours in length	10	N	Group/ Individual
Numerical Problem Solving	50-minute closed book test	15	N	Individual
Numerical Problem Solving	50-minute closed book test	15	N	Individual
Final Exam	Three-hour closed book examination	50	N	Individual

MATH 2012 Mathematics for Engineers 3

Credit Points 10

Legacy Code 200242

Coordinator Volker Gebhardt (https://directory.westernsydney.edu.au/search/name/Volker Gebhardt/)

Description Students enrolled in Bachelor of Engineering who are yet to successfully complete 200242 Mathematics for Engineers 3, are to seek advice from Dr Jamal Rizk to enable them to complete the course. This subject is a core subject in the Computer, Electrical, or Telecommunications key programmes of the Bachelor of Engineering course. It builds on the first two mathematics subjects in that course and provides mathematical tools and techniques needed for the above key programmes. The subject covers topics from advanced calculus including vector calculus, complex analysis, Fourier series, heat and wave equations, Fourier integrals and transforms; discrete mathematics including logic and set theory; random variables and random processes including mean, correlation and covariance functions, ergodicity, ensemble averages, and Gaussian processes.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1008 OR
MATH 1019

Equivalent Subjects MATH 2005 - Engineering Mathematics 3

Restrictions

This subject is designed to meet the requirements of students enrolled in an engineering degree. There are other mathematics subjects more suitable for students from other disciplines.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. decide the truth of logical statements involving connectives, and simplify logical expressions using the laws of logic and truth tables; find and use normal forms of Boolean expressions, and simplify a digital circuit using Boolean expressions;
2. perform simple operations on sets, find Cartesian products of sets, use Venn diagrams to illustrate relationships between sets, and solve simple counting problems;
3. calculate mean, variance and related statistical descriptors of random variables and random processes;
4. recognise stationary and ergodic processes, and the significance of these;
5. solve problems in vector calculus, including the calculation of line integrals and surface integrals;
6. solve problems involving complex functions and evaluate a complex integral;
7. calculate the Fourier representation for a given function and apply it to the solution of heat and wave equations;

Subject Content

Discrete Mathematics: Logic; set theory; counting.
Random Variables: Notion of a random variable; statistical descriptors such as mean and variance of a random variable.
Random Processes: Notion of a random process; stationary random processes; description of the random process in terms of mean, correlation and covariance functions; ergodicity; ensemble averages; Gaussian processes.
Vector Calculus: Parametric representation of curves in 3D; line integrals; work; circulation; flux; conservative fields; Green's theorem in the plane; surface integrals; Stokes' theorem; divergence theorem.
Complex Analysis: Functions; limits; differentiation; analytic functions; Cauchy-Riemann equations; line integrals in the complex plane; Cauchy integral theorem and Cauchy integral formula.
Fourier Analysis: Fourier Series; Fourier Integrals; Fourier Transforms.
Partial Differential Equations: Basic concepts; wave, heat and Laplace equations.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Quiz	2 x 15 minutes, each 7.5%	15	N	Not Known
Intra-session Exam	55 minutes	30	N	Not Known
Final Exam	2 hours	50	N	Not Known
Participation	n/a	5	N	Group

MATH 2013 Object Oriented Analysis (WSTC)

Credit Points 10

Legacy Code 700039

Coordinator Buddhima De Silva (https://directory.westernsydney.edu.au/search/name/Buddhima De Silva/)

Description The core strength of this subject is to analyse and model business objectives and critical requirements of software systems to be developed using object-oriented (OO) approaches. The system analysis is taken to greater depths within the context of object orientation. The Unified Modelling Language version 2.0 (notably use cases, activity diagrams, class diagrams and sequence diagrams) is used as a modelling standard for creating OO models in the problem space. The subject also covers the rational unified process methodology and applications of design patterns for software development through practical case studies.

Level Undergraduate Level 2 subject

Pre-requisite(s) Students enrolled in 7004 Diploma in Information and Communications Technology Fast Track 7005 Diploma in Information and Communications Technology 7067 Diploma in Information and Communications Technology Extended 7134 Diploma in Information and Communications Technology Extended – ICT 7138 Diploma in Information and Communications Technology Extended - ICT 7139 Diploma in Information and Communications Technology Extended 7140 Diploma in Information and Communications Technology Extended - Information Systems 7163 Diploma in Information and Communications Technology 6035 DiplomaBachelor of Information and Communications Technology 6036 Diploma in Information and Communications TechnologyBachelor of Information Systems 6039 DiplomaBachelor of Information and Communications Technology and 6040 Diploma in Information and Communications Technology Bachelor of Information Systems must pass INFS 1007 Systems Analysis and Design before enrolling in this unit

Equivalent Subjects INFS 2006 Object Oriented Analysis INFS 2011 Object Oriented Analysis (WSTC)

Restrictions Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended Diploma programs must have passed 40 credit points of preparatory subjects in order to enrol in this subject. Students enrolled in the combined Diploma/Bachelor programs listed below must pass all College Preparatory subjects listed in the program structure before progressing to the Year 2 subjects.

Assumed Knowledge

General understanding of what an information system is and how information systems development is undertaken and Introductory knowledge about system analysis and design, including
- basic problem solving experience in computerised information systems
- ability to derive systems requirements from problem definitions
- ability to produce system models using process, data, object and network modelling.
- understanding design and implementation issues include, (but may not be limited to), elementary database design, input, output and user interface design and prototyping.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the theoretical fundamentals underpinning Object Oriented Analysis.
2. Identify Unified Modelling Language (UML) of the Object Management Group (OGM) for analysing software requirements,
3. Outline an object oriented lifecycle and explain the process of object oriented analysis, especially within the context of iterative and incremental nature of the process,
4. Apply the iterative and adaptable process frame work of RUP in software development
5. Construct well-documented UML-based artefacts from the early phases of the development process for the case study,
6. Construct the Model of the Problem Space based on the analysis in an industrial CASE tool,
7. Apply team work skills in a small development team, including: distributing the development workload, resolving disputes, running meetings, and taking minutes,
8. Identify and create operational (non functional) requirements of a system including performance and security,
9. Develop a report based on verbal and written instructions about the performance of software development tasks and associated administrative duties,
10. Illustrate quality assurance, quality control and user-expectations via reports and theoretical explanation.
11. Explore possibilities of applying design patterns in software design.

Subject Content

1. The concepts of Object Orientation including the fundamentals, processes and application of the concepts to practical modelling and object-oriented analysis techniques,
2. Three modelling spaces: Problem, Solution and Background; Roles in Requirement Analysis,
3. Critical Requirement Analysis and Business Evaluation to arrive at high-level requirements and their prioritisation,
4. Package Diagrams and high-level slicing of packages as sub-systems,
5. Four phases of Rational Unified Process (RUP): Inception, Elaboration, Construction and Transition
6. Documenting Actors and Use Cases,

7. Introduction to Use Case Diagrams, Use Case Notations, Relationships, Analysis & Testing,
8. Activity Diagrams as mechanisms to document the flow of the system/use case,
9. Class Notations and definition of a class including attributes and operations,
10. Documenting Class Diagram and Relationships between various classes such as Association and Inheritance,
11. Documenting Sequence Diagrams and the persistence design with Class and Sequence Diagrams,
12. Major Ingredients and Creation of State Chart Diagrams,
13. Prototypes and Operational (Non-Functional) Requirements including Performance, Scalability, Security & Volume,
14. Quality assurance, management and testing aspects of a system,
15. Emerging technologies and design.
16. Introduction to Creational, Structural and Behavioural design patterns.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	10 marked sessions x 1.0% each Approx. 2 hours each	10	N	Individual
Quiz	90 mins	15	N	Individual
Applied Project	30-40 hours each member	25	N	Group
Report	3 hours	50	N	Individual

MATH 3001 Abstract Algebra

Credit Points 10

Legacy Code 200193

Coordinator Roozbeh Hazrat (https://directory.westernsydney.edu.au/search/name/Roozbeh Hazrat/)

Description This subject develops algebraic thought to a high level. The abstract concepts involved in the main topics (group theory and number theory) have many applications in science and technology, and the subject includes an application to cryptography.

School Computer, Data & Math Sciences

Discipline Mathematical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 1 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 1006

Equivalent Subjects LGYA 3893 - Advanced Algebra LGYA 3789 - Algebra 3

Learning Outcomes

On successful completion of this subject, students should be able to:

1. recognise, describe and manipulate the basic structures in abstract algebra and number theory; namely, groups, rings and integral domains
2. explain the links between these structures and the symmetries of natural objects
3. apply concepts from group theory and number theory to real life situations, such as RSA cryptography
4. demonstrate proficiency in both spoken and written mathematical communications, particularly constructing and communicating proofs

Subject Content

1. Number Theory - Divisibility, Euclid's algorithm - Prime numbers - Fundamental Theorem of Arithmetic - Theorems of Fermat and Euler - Congruences - Modular arithmetic - Applications to Cryptography: the RSA cryptosystem
2. Ring Theory - Abstract rings and concrete examples - Integral domains and fields - Rings of polynomials - Polynomial congruences and quotients - Fundamental Theorem of Algebra
3. Group Theory - Abstract groups - Subgroups - Direct products - Isomorphism - Permutations, the Symmetric group - Rubik's cube - Cayley's Theorem - Group of units of a ring - Cosets, Lagrange's Theorem, Quotient groups

Number Theory - Divisibility, Euclid's algorithm - Prime numbers - Fundamental Theorem of Arithmetic - Theorems of Fermat and Euler - Congruences - Modular arithmetic - Applications to Cryptography: the RSA cryptosystem

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 2001

Equivalent Subjects LGYA 3794 - Advanced Mathematical Topics

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the difference between pointwise and uniform convergence
2. Test for convergence sequences and uniform convergence of series of functions on a given interval
3. Apply interchange theorems for uniformly convergent sequences and series
4. Explain the definition of the Riemann integral
5. Calculate upper and lower sums and integrals of simple functions
6. Prove and apply theorems concerning classes of integrable functions and integrability of sums and products
7. Find limits of sequences via the use of Riemann sums
8. Test for differentiability of a function of a complex variable using the Cauchy-Riemann equations
9. Explain what is meant by an analytic function
10. Apply the Cauchy-Riemann equations to harmonic functions
11. Parametrize a path and then to evaluate some complex integrals directly
12. Evaluate complex integrals by using results such as the Cauchy integral formulae and residue theorem
13. Work out Taylor and Laurent series for some of the simpler functions

Subject Content

- field axioms
- completeness
- limits
- compactness
- cauchy sequences
- uniform Continuity
- uniform convergence
- Continuity
- differentiability
- Rolle's theorem and mvt
- Riemann integral
- differentiation of complex functions
- cauchy-Riemann equations
- analytic functions
- contour integrals
- Cauchy's theorem
- Taylor and Laurent series
- residues
- evaluation of certain real integrals

Assessment

MATH 3004 Discovery Project

Credit Points 10

Legacy Code 301111

Coordinator Rosalind Wang (https://directory.westernsydney.edu.au/search/name/Rosalind Wang/)

Description In this subject students will gain experience in applying data science skills and using knowledge gained during their bachelor's course of their primary discipline. Students will carry out a real life project transforming data to knowledge under the supervision of an academic mentor. Students will develop a knowledge discovery project proposal and carry out a literature review highlighting the current status of the problem. Assisted by a mentor they will apply the data science skills learned through-out the degree and produce a final

discovery project report and/or interactive project tool and give an oral presentation.

MATH 1003 OR
MATH 1030

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design an environmental sampling program
2. Use and interpret control charts
3. Estimate and interpret Tolerance and Prediction Intervals
4. Use statistical software to conduct time series analyses
5. Use statistical software to analyse spatial data

Subject Content

1. Environmental Sampling
2. Prediction and Tolerance Intervals
3. Control Charts
4. Time Series - Trend and Autocorrelation
5. Autoregressive and Moving Average Process
6. Models for Spatial Data
7. Modelling Spatial Correlation

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Numerical Problem Solving	15 mins for each of 10 weeks	24	N	Individual
Quiz	3 quizzes of 30 minutes each	12	N	Individual
Applied Project	To consist of 10 or so pages of text and computer output, equivalent to approx. 2000 words	14	N	Group
Final Exam	One exam of 2 hours	50	N	Individual

MATH 3006 Mathematical Modelling

Credit Points 10

Legacy Code 200022

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description Mathematical Modelling is about solving real world problems. The real world is a complicated place which we often need or want to understand better. One way to do this is to set up a mathematical model which we hope can provide insights, predictions and a greater understanding of a complex system. Selected real-world problems are approximated by mathematical models that are amenable to being written in terms of linear and non-linear equations or differential equations. Once equations are solved emphasis is placed on interpreting solutions, modifying models as required and using models for prediction.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 2003

Assumed Knowledge

Matrix algebra and how to find eigenvalues and eigenvectors.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. formulate equations (both differential and non-differential) which describe selected common physical situations,
2. solve such equations analytically, where appropriate
3. apply computer packages to solve such equations
4. interpret the effects of altering parameters involved in a modelling situation
5. identify limitations of mathematical models proposed
6. evaluate the effectiveness of a model.

Subject Content

1. The modelling process
2. Modelling using proportionality and geometric similarity
3. Modelling discrete dynamical systems:
- modelling change with difference equations
- approximating change with difference equations
- solving difference equations
4. Modelling continuous dynamical systems:
- first and second order ordinary differential equations
- higher order linear ordinary differential equations
- systems of ordinary differential equations - nonlinear ordinary differential equations
5. Applications will be drawn from areas of biology, chemistry, physics, social sciences and economics.

MATH 3007 Predictive Modelling

Credit Points 10

Legacy Code 301034

Coordinator Yi Guo (https://directory.westernsydney.edu.au/search/name/Yi Guo/)

Description In this information age, business and science depend on accurate predictions to make informed decisions. Machine learning is the process of allowing a computer to learn from data, which at its heart is used in making these important decisions. This unit provides students with the knowledge and practice required to implement and effectively use these predictive models such as Neural Networks and Support Vector Machines. Students will use the Python programming language throughout this unit.

MATH 3011 Probabilistic Models and Inference

Credit Points 10

Legacy Code 301250

Coordinator Oliver Obst (https://directory.westernsydney.edu.au/search/name/Oliver Obst/)

Description The subject provides students with an understanding of probabilistic models and inference. It covers model-based approaches for complex systems - from constructing these models to applying information to models. The models, which can be created manually and obtained by learning from data, will also be useful to make decisions under uncertainty. A variety of models and techniques will be discussed; examples include Monte Carlo Methods, Decision Theory, Bayesian networks, Markov networks, and the use of information theory.

MATH 3012 Combinatorics

Credit Points 10

Legacy Code 301378

Coordinator Leanne Rylands (https://directory.westernsydney.edu.au/search/name/Leanne Rylands/)

Description This subject builds upon the knowledge acquired in the prerequisite subject Discrete Mathematics and helps students to develop understanding and mathematical maturity. The subject covers more sophisticated counting techniques, additional concepts in graph theory, and it introduces coding theory. Many applications of these concepts are included, and some combinatorial algorithms are studied. The applications and techniques presented in the subject are used to model systems such as transport networks and social networks, and they have relevance for communication, computing, probability, statistics, and science, and for many everyday problems such as scheduling.

Pre-requisite(s) MATH 1006 AND
MATH 1015

Assumed Knowledge

Logic, proof techniques, counting techniques, graph theory, matrices.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply a variety of techniques to solve counting problems, including the calculation of various probabilities.
2. Apply concepts and algorithms from graph theory to solve problems.
3. Evaluate the use of coding theory for error detection and error correction.
4. Formulate proofs involving counting, graph theory and coding theory.
5. Communicate mathematical arguments effectively in written format.

Subject Content

- Revision of mathematical proof
- Counting techniques, including generating functions
- Applications of counting, including probability
- Graph theory and graph algorithms
- Applications of graph theory
- Introduction to coding theory and applications

MATH 3013 Fields and Equations

Credit Points 10

Legacy Code 301377

Coordinator James East (https://directory.westernsydney.edu.au/search/name/James East/)

Description This subject develops abstract algebraic thought to a higher level. The abstract concepts introduced in the subject, ring theory, field theory and algebraic equations, have many applications in science and technology. The theory of algebraic equations is the study of solutions of polynomial equations. Although the problem originates in explicit manipulations of polynomials, the modern (and far more powerful) treatment is in terms of field extensions. The subject is an introduction to ring theory and field theory; it includes applications to cryptography (RSA) and geometry (proving that it is impossible to trisect an arbitrary angle using only a straightedge and compass).

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 3015

Assumed Knowledge

Basic notions in algebra, such as equivalence relations, groups, homomorphisms and isomorphisms.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply fundamental structures in abstract algebra and number theory: rings, integral domains, and fields.
2. Examine practical applications, such as RSA cryptography, based on abstract concepts from ring theory and number theory.
3. Formulate proofs involving rings, integral domains, and fields.
4. Communicate mathematical arguments effectively in both spoken and written format.

Subject Content

- Introduction to rings
- Ideals and factor rings
- Ring homomorphisms, ring isomorphisms, and related theorems
- Rings of integers and their congruences
- Polynomial rings and factorization of polynomials
- Fields and solutions to equations
- Extension of fields
- Application: RSA cryptography
- Application: Ruler and compass, 2000 years of impossible constructions

Assessment

MATH 3014 Financial Mathematics

Credit Points 10

Legacy Code 301380

Coordinator Rehez Ahlip (https://directory.westernsydney.edu.au/search/name/Rehez Ahlip/)

Description This subject is an introduction to stochastic calculus and relevant simulation techniques applied to modern finance and the mathematical modelling of financial markets. The core topics developed in the subject are the Ito stochastic integral, Ito's formula, and basic stochastic differential equations, as well as computer simulation techniques with emphasis on Monte Carlo simulations. Some mathematical background is assumed, but the subject will cover any necessary material that is not contained in prerequisites subjects.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 1014 AND
MATH 1015 AND
MATH 2010 AND
MATH 2003

Assumed Knowledge

Calculus, Riemann integration, QR factorisation and generalised inverses of matrices, first and second order differential equations.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the concept of No Arbitrage and its consequences.
2. Apply the binomial model to price options on non-dividend stock (using computer software such as MATLAB or R), for instance by employing Monte Carlo techniques and control variates.
3. Apply key definitions and results on martingales and stochastic calculus to financial modelling.
4. Explain the solution to the Black-Scholes equation for European Call and Put Options, using the general solution of the initial value problem.
5. Deduce the bond pricing equation from the yield curve.

Subject Content

- Basic option theory
- Binomial model for stock options applied to derivatives
- Asset price random walk
- Monte Carlo simulation
- The Black-Scholes model
- Partial differential equations
- Black-Scholes formulae
- Variations on the Black-Scholes model
- Martingales
- Numerical methods
- Binomial approach to option pricing
- Put-Call parity

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	40 minutes per Quiz	30	N	Individual
Intra-session Exam	50 minutes	20	N	Individual
Final Exam	2 hours	50	N	Individual

MATH 3015 Groups and Symmetry

Credit Points 10

Legacy Code 301376

Coordinator Roozbeh Hazrat (https://directory.westernsydney.edu.au/search/name/Roozbeh Hazrat/)

Description This subject develops abstract algebraic thinking to a higher level. The abstract concepts introduced in the subject, the theory of groups and abstract symmetry, have many applications in science and technology. Symmetry plays a role in many different contexts: in crystals, in visual arts, in music and in architecture, to name a few. Analysing and exploiting the symmetries of a particular problem often is the first step towards finding a practical solution to the problem. Group theory is the study of symmetry. This subject develops the language of groups and techniques to understand the structure of groups.

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 1006

Equivalent Subjects MATH 3001 Abstract Algebra

Assumed Knowledge

Logic, proof techniques: direct proof, proof by division into cases, proof by contradiction, proof by induction.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply fundamental structures in abstract algebra: groups, subgroups, and permutation groups.
2. Apply concepts from group theory to the study of the symmetry of objects, such as polygons.
3. Formulate proofs involving groups, subgroups, and permutation groups.
4. Communicate mathematical arguments effectively in both spoken and written format.

Subject Content

- Sets and equivalence relations
- Introduction to groups
- Examples of groups and basic properties of groups
- Finite groups and subgroups
- Cyclic groups
- Permutation groups
- Cosets and Lagrange?fs Theorem
- Normal subgroups and factor groups
- Group homomorphisms and group isomorphisms
- Cayley graphs of groups
- Applications of groups

MATH 3016 Mathematics Project

Credit Points 10

Legacy Code 301379

Coordinator Volker Gebhardt (https://directory.westernsydney.edu.au/search/name/Volker Gebhardt/)

Description In this subject, students can deepen or apply knowledge gained during their course and practise verbal and written presentation skills. Students will carry out a project under the supervision of an academic staff member. Assisted by their supervisor, students will define the problem to be studied and then acquire, develop and apply the appropriate theory or methodology. They will prepare and present on a final report detailing theoretical results or methodology, an analysis and a discussion followed by an appropriate conclusion, as well as a literature review or a list of references as appropriate.

Level Undergraduate Level 3 subject

Pre-requisite(s) None

Equivalent Subjects MATH 3008 Quantitative Project

Restrictions

Students must be enrolled in course 3778 Bachelor of Mathematics and must have completed 200 credit points before enrolling into the subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan and develop an investigative project.
2. Locate, identify and use information relevant to the problem being studied.
3. Undertake self-directed study relevant to the problem being investigated.
4. Undertake a theoretical and/or analytical investigation.
5. Develop a comprehensive research report in a logical, concise and professional manner.
6. Verbally present a project and its results to an audience.

Subject Content

There is no formal content definition for this subject, as the projects offered will vary according to the expertise and interests of academic staff and the research interests of students. Students will choose individual project topics in consultation with the unit coordinator and the supervising staff member.

Assessment

MATH 3017 Data Analysis and Visualisation for Social Policy

Credit Points 10

Coordinator Thierno Diallo (https://directory.westernsydney.edu.au/search/name/Thierno Diallo/)

Description This subject provides students with an applied interdisciplinary understanding of statistics and quantitative data science methods, commonly used within the social sciences and social policy environments. The subject will equip learners with quantitative tools and methods utilised with small and large datasets, and data visualisation techniques to answer questions of cultural, social, economic, and policy interest. The subject develops students' theoretical knowledge of statistical methods, practical knowledge of commonly used statistical software package, and applied knowledge through the analysis of real-world social problems. The knowledge and skills of this subject are of relevance to students seeking to work in social policy and/or social research within academia, government, industry and/or NGOs.

School Social Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Restrictions

Successful completion of 120 credit points.

Learning Outcomes

• SLO1: Summarise data graphically and numerically
• SLO2: Apply software tools to manage and explore data
• SLO3: Evaluate statistical strategies to answer a research question
• SLO4: Interpret results of a statistical analysis
• SLO5: Evaluate the appropriateness of statistical methodologies when analysing a variety of problems arising from the social sciences
• SLO6: Communicate results of statistical analysis

Subject Content

- Role of quantitative method in social policy
- Measurement scales
- Descriptive statistics
- Data visualisation
- Basic probability
- Normal distribution
- Sampling distribution of statistics
- Confidence intervals and hypothesis testing
- Analysis of variance
- Chi-squared test
- Correlations
- Single and multivariate linear models

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MATH 4001 Mathematics Honours Thesis

Credit Points 40

Legacy Code 200413

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description This is a 40 credit point year-long subject taken over two terms (20 credit points in each term). The aim of this subject is to further develop the student's research and problem solving skills. The student is required to implement the research plan, complete a substantive piece of research in the field of Mathematics/Statistics, and to communicate the results of that work to an interested and technically literate audience. All projects will therefore contain at least two broad areas of assessment: the substantive work itself, and the oral and written communication of the work to others. All assessment components submitted in both of these areas are expected to be of a high professional standard. Students will present their research in the thesis. The thesis topic and structure will vary according to the area of interest of the student and the expertise of the supervisor. Throughout this subject regular planned consultations between the student and supervisor will occur. Students are expected to work to a schedule devised in consultation with their supervisor. The schedule will include set dates for the presentation of draft chapters for review by the supervisor.

School Computer, Data & Math Sciences

Discipline Mathematical Sciences

Student Contribution Band HECS Band 1 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Restrictions Students must have a grade point average greater than 5 unless a case can be made.

Assumed Knowledge

To effectively research in the area of Mathematics/Statistics, an understanding and knowledge equivalent to an undergraduate Bachelor of Science (Mathematics) degree or major in Mathematics/Statistics is required.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. understanding of the fundamentals of pertinent theories and ability to apply these to a novel problem/situation;
2. evidence of original thought in the design and development of the research strategy
3. demonstrate superior communication skills and due care and attention to the requirements of academic writing and reporting of independent research;
4. facility in scholarly argument appropriate to the project, the discipline and to an Honours level
5. demonstrate an understanding of, and adherence to, the ethical and social implications of Mathematics/Statistics research and enquiry

Subject Content

The content is flexible depending on the nature of the research project

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Thesis	8,000 - 12,000 words	100	N	Individual

MATH 7001 Advanced Mathematical Investigations

Credit Points 20

Legacy Code 301176

Coordinator Paul Hurley (https://directory.westernsydney.edu.au/search/name/Paul Hurley/)

Description Advanced Mathematical Investigations is an integral part of the Master of Research for students planning a future in mathematical and/or statistical research. Students will carry out extensive investigations under the supervision of an academic staff member that will allow the development of skills, knowledge and a way of thinking that will assist in the learning of mathematics and/or statistics needed for research in their chosen field of mathematics. They will also develop their written and oral communication skills, culminating in a paper which will be written as though it is to be submitted to a mathematics/statistics journal for publication (including following the journal's requirements for presentation) and an oral presentation of the style expected at a mathematics/statistics conference.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 8086 Master of Research.

Assumed Knowledge

Undergraduate level of knowledge in mathematics or statistics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan and develop an investigative project.
2. Locate, identify and use information relevant to the problem being studied.
3. Write an extensive literature review.
4. Undertake self-directed study relevant to the problem being investigated.
5. Undertake a theoretical and/or analytical investigation.
6. Write and produce a comprehensive research report in a logical, concise and professional manner.
7. Present a project and its results to an audience in a talk.
8. Prepare results of research for submission to a mathematics or statistics journal for publication.

Subject Content

How to write in a professional manner in mathematics.
Employing LaTeX to write reports/papers and give presentations in mathematics.
Expert knowledge on history/background of chosen field of mathematical research.
Current areas of interest/study and/or open problems in chosen field of mathematical research.
How to write and submit work for publication to a journal in mathematics or statistics.

Assessment

MATH 7002 Advanced Statistical Methods

Credit Points 10

Legacy Code 301115

Coordinator Laurence Park (https://directory.westernsydney.edu.au/search/name/Laurence Park/)

Description There has been a significant trend away from simple statistical models for complex and Big Data. Advanced Statistical Methods is a technical subject that looks at computer intensive statistical techniques for modelling complex data. Students will learn about methods including Density Estimation, the Expectation-Maximisation (EM) algorithm, Bayesian, Markovian and Hidden Markov Models, enabling them to apply sophisticated statistical tools in a Data Science setting.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MATH 7012 AND
MATH 7016

Co-requisite(s) COMP 7006

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the axioms of probability and the principle of maximum likelihood.
2. Use density estimation to model continuous data.
3. Apply the EM algorithm (Expectation-Maximisation Algorithm) to maximise complex likelihood functions.
4. Evaluate models using computational techniques
5. Analyse data using Bayesian statistical models and MCMC (Markov-Chain Monte Carlo)

Subject Content

1. Review of Probability Theory and Likelihood
2. Density Estimation
3. Maximum Likelihood and EM algorithm
4. Jack-knife, Bootstrap and Cross-validation
5. Introduction to Bayesian Methods
6. Markovian and Hidden Markov Models

Assessment

MATH 7003 Applied Business Statistics

Credit Points 10

Legacy Code 300962

Coordinator Kenan Matawie (https://directory.westernsydney.edu.au/search/name/Kenan Matawie/)

Description This subject introduces the basic statistical concepts and techniques for descriptive and inferential data analysis. It will aid and improve business decision-making, especially when faced with uncertain outcomes.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Mathematics to the HSC level.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Organise, tabulate, present, summarise and graph data appropriately;
2. Apply probability to solve business decision making problems;
3. Define and distinguish between discrete and continuous probability distributions;
4. Estimate population means and proportions using confidence intervals;
5. Test hypotheses about population means and proportions;
6. Understand and apply correlation and linear regression to describe and analyse relationships between variables;
7. Use the Chi-square test for goodness of fit and test for independence to analyse categorical type data;
8. Use the necessary computing skills required in Excel to solve and analyse statistical data.

Subject Content

Data type and collection, graphical and tabular techniques
Numerical descriptive measures, and basic Probability
Discrete and continuous probability distributions
Sampling distribution
Statistical inferences - hypothesis testing
Correlation and Linear regression analysis
Statistical inferences -estimation
Analysis of Categorical data
Index Numbers

Poster	A3 size poster	10	N	Individual

MATH 7009 Mathematical Proof and Reasoning

Credit Points 10

Legacy Code 301177

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description Proving and getting a new proposition by careful reasoning from given propositions, is the essence of mathematics. Proof is what makes mathematics special and eternal. This subject looks at the different methods of proof and reasoning that can be employed to verify that statements are true or not. Students will consider propositions and theorems from various areas of mathematics and look at classic, interesting and sometimes novel ways these can be proved. Successful students taking this subject will not only be able to follow and determine if a proof is correct, but become proficient at mathematical reasoning.

School Computer, Data & Math Sciences

Discipline Mathematical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Undergraduate level of knowledge in mathematics or statistics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse mathematical arguments and determine whether or not they are sound.
2. Make concise rational arguments to prove true statements.
3. Be able to construct counter examples to disprove false statements.
4. Recognise standard types of statements and know the type of argument that is required to prove them.
5. Correctly utilise different types of proof; for example, direct, contradiction and induction.
6. Apply proof techniques to different areas of mathematics; for example, geometry, number theory and other relevant areas.

Subject Content

Logic, valid arguments and common invalid arguments.
The structure of mathematical proofs.
Direct proof and counter-example.
Proof by cases.
Indirect proof, contradiction and contrapositive.
Existence and Uniqueness proofs.
Mathematical Induction proofs.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MATH 7011 Predictive Analytics

Credit Points 10

Legacy Code 301117

Coordinator Rosalind Wang (https://directory.westernsydney.edu.au/search/name/Rosalind Wang/)

Description The information age has allowed business and science to take advantage of the vast amount of available data for predicting outcomes and estimating trends, to make informed decisions. Machine learning is the process of allowing a computer to learn from data, which at its heart is used in making these important decisions. This subject provides students with the knowledge and practice required to implement and effectively use these predictive models such as Neural Networks and Support Vector Machines, and provides opportunity for students to investigate state-of-the-art. Students will use the Python programming language throughout this subject.

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MATH 7016

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Multiple linear regression models;
2. Linear models, and generalised linear models;
3. Simple Machine Learning techniques, Support vector Machines and Regression Trees;
4. Create appropriate models using selection procedures in various scenarios;
5. Use Computer software (R) to analyse data including model building, model selection and outcome prediction.

Subject Content

1. Gradient Descent
2. Regularisation and Feature selection
3. Neural Networks
4. Support Vector Machines
5. Naive Bayes
6. Machine Learning applications
7. Semi-supervised learning

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Online Quizzes	5 x 40 minutes (per quiz)	20	N	Individual
Intra-session Exam	2 hours	30	Y	Individual
Applied Project: Computer based assignment, part 1	2000 words	10	N	Group
Applied Project: Computer based assignment, part 2	2000 words	40	N	Group

MATH 7012 Programming for Data Science

Credit Points 10

Legacy Code 301113

Coordinator Franco Ubaudi (https://directory.westernsydney.edu.au/search/name/Franco Ubaudi/)

Description The use of computers and computer programming for Data Science is fundamental to the discipline. This introductory subject will briefly cover the use of spreadsheet systems and then will consider programming in the statistical system "R" in detail. Other special purpose languages will also be touched on briefly including SQL (Structured Query Language).

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use Excel to manage and manipulate data.
2. Extract, transform and load data using R and R-Studio; including reading and writing data files.
3. Create complex R programs to conduct Data Science tasks.
4. Use basic SQL to access databases.
5. Apply simulation techniques to Data Science tasks.
6. Create reports using Markdown and R-Markdown.

Subject Content

1. Use of Spreadsheets for Data Science
2. Introduction to R and R-Studio
3. Data Types, Variables , Expressions, and Data Structures
4. Input and Output
5. Control Structures: Loops, ,Conditional Expressions, and Functions
6. Simulation techniques
7. Object-oriented programming in R
8. Introduction to SQL
9. Using Markdown for reporting

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Online Quizzes	5 x 30 minutes	20	N	Individual

Assignment	3,000 words	40	N	Individual

MATH 7014 Social Media Intelligence

Credit Points 10

Legacy Code 301116

Coordinator Laurence Park (https://directory.westernsydney.edu.au/search/name/Laurence Park/)

Description Social Media Intelligence presents the theory and practice of extracting and analysing information from social media networks. The aims are to identify properties of social networks, and to make predictions about future events. Topics included will cover areas such as Graph theory, Game theory and Network dynamics and we will identify how these can be used to model and extract information from Facebook and Twitter.

School Computer, Data & Math Sciences

Discipline Computer Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Assumed Knowledge

Basic algebra and computing skills.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and describe properties of social media networks.
2. Compute graph statistics from given social media networks.
3. Analyse simple games and describe their connection to social media networks.
4. Compute and interpret centrality scores over social media networks.
5. Generate and identify small world networks.
6. Use a computer to assist in the analysis of large scale social networks.

Subject Content

1. Graph theory and social networks
2. Introduction to Game theory
3. Information networks and the Web
4. Network population models
5. Network structural models

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Online quizzes	5 x 30 minutes	20	N	Individual

MATH 7015 Statistics for Accountants (PG)

Credit Points 10

Legacy Code 200424

Coordinator Kenan Matawie (https://directory.westernsydney.edu.au/search/name/Kenan Matawie/)

Description Statistics for Accountants introduces the basic concepts and techniques for statistical inference and decision making in a business context.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate Business program.

Assumed Knowledge

Mathematics to the HSC level.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. organise, summarise and graph data appropriately;
2. apply probability and risk measures to solve business decision making problems;
3. formulate economic and financial hypotheses into statistically testable forms and carry out tests of hypotheses accordingly;
4. derive confidence intervals for unknown population parameters
5. identify the underlying assumptions associated with each statistical technique; be able to carry out the technique and interpret the results
6. employ appropriate statistical methods and techniques for statistical analysis and forecasting;
7. use one or more statistical analysis packages.

Subject Content

Data presentation, descriptive statistics and index numbers
Probability, probability distributions and decision analysis
Sampling distributions
Statistical inferences -estimation
Statistical inferences - hypothesis testing
Linear regression and correlation analysis
Analysis of categorical data

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MATH 7016 The Nature of Data

Credit Points 10

Legacy Code 301114

Coordinator Franco Ubaudi (https://directory.westernsydney.edu.au/search/name/Franco Ubaudi/)

Description This subject covers concepts of data centric thinking. The main areas discussed are; Populations and Samples; Sampling concepts; Types of Data; Descriptive Methods; Estimation and Inference; and Modelling. The subject takes a computational and nonparametric approach, before discussing theoretical concepts and Normal distribution theory as large sample approximations.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

Undergraduate degree with some statistical content (1 subject) is useful.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe types of data and the relevance to real world examples
2. Design data collection strategies that provide unbiased and reliable data
3. Apply appropriate computer based strategies to estimate population parameters of interest
4. Analyze data to make inferences about populations
5. Create and evaluate simple predictive models, using computer software
6. Evaluate literature and identify common statistical mistakes.

Subject Content

1. The Types, Description and Exploration of Data
2. Collecting Good Data
3. Probability Theory
4. Computer assisted Estimation and Inference
5. Linear Modelling
6. Large Samples and Normal Theory
7. Common Statistical Mistakes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

MATH 7017 Probabilistic Graphical Models

Credit Points 10

Legacy Code 301365

Coordinator Oliver Obst (https://directory.westernsydney.edu.au/search/name/Oliver Obst/)

Description Modelling data provides us with a method for inference, but there are many occurrences when interest lies in the reasoning behind the decision making. In this subject, students learn to model processes and the reasoning behind the processes using probabilistic graphical models. The subject investigates the construction and application of model-based approaches for complex systems. Students will manually create models based on prior knowledge and investigate methods of learning model structures from data, which can be used to make decisions under uncertainty. Topics covered include Monte Carlo Methods, Decision Theory, Bayesian networks, Markov networks, and the use of information theory.

School Computer, Data & Math Sciences

Discipline Statistics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MATH 7016

Assumed Knowledge

Probability, Linear Algebra, Basic Programming.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Manually construct probabilistic models for specific data.
2. Automatically construct probabilistic models by learning from data.
3. Use the models to make decisions under uncertainty.
4. Accurately represent a probabilistic model using a graphical representation.

Subject Content

1.Network representation and graphical models
2.Probabilistic models and entropy
3.Inference in graphical models
4.Learning graphical models

Assessment

MATH 7018 Scientific Informatics

Credit Points 10

Legacy Code 301388

Coordinator Miroslav Filipovic (https://directory.westernsydney.edu.au/search/name/Miroslav Filipovic/)

Description This subject discusses the most important scientific revolutions in informatics throughout history and the role of Scientific Informatics in modern scientific research. It examines the influence of computing and informatics on the major paradigm shifts in the social, behavioural, biological, health and physical sciences and assesses the societal impact of future discoveries. The subject aims to provide training for Research and Coursework Masters in the computational techniques that are integral to much of modern scientific research as well as cultural and philosophical perspectives on the Science, Technology, Engineering and Mathematics (STEM). Students complete practical assessment items that are relevant to their field of research, which are designed to develop transferrable skills and familiarity with computing tools.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects MATH 7013 - Scientific Informatics

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique the most important scientific revolutions that took place in Informatics related to social, behavioural, biological, health and physical sciences, their causes, and their historical context.
2. Critically examine the social impact of Informatics revolutions through the use of relevant information.
3. Assess the impact on society of the major Informatics discoveries of the future.
4. Examine the role of Informatics in modern human history.
5. Analyse the impact of Informatics in larger socio-cultural context.
6. Write low-level scientific software to solve problems, using several standard languages/tools.
7. Present a solution to an Informatics problem with discussion of strengths and weaknesses.
8. Express research related contents through presentation and report writing.

Subject Content

These scientific informatics revolutions had a deep social impact by changing the way the world is seen and understood and by laying the foundations for the emergence of game-changing new technologies that continue to profoundly shape our lives and social order.
The Unit will promote deep thinking and open discussion on the social contexts and socio-cultural impacts of the major scientific revolutions with the main emphasis on the Scientific Informatics (Computing). Scientific Informatics knowledge and its application by scientists influence, even unconsciously, the way individuals in society think about themselves and interact with others and the world around them. The way of life for billions of people is deeply affected by the technologies and truths that have emerged.
The Unit will address the following fundamental issues
1. What is science informatics and how does it work (apply)?
2. What is the nature of scientific (informatics) research?
3. How does science (and informatics) develop and how do paradigms change?
4. How do scientific controversies begin and end so that rival professional commitments become shared scientific endeavour; For example, what distinguishes creationism from evolutionary theory, or astrology from astronomy?
5. What are the social, cultural and technological impacts and consequences of scientific revolutions with the main emphasis on Computing & Informatics and its applications?
6. What is the nature of observation and experiment?
7. How to question the scientific realism,
8. The rationality or irrationality of scientific revolutions,
9. The relation between science and values and the nature of explanation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are

regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
10 x Practicals	2 hours (per Practical)	30	N	Individual

MATH 7019 Mathematics of Signal Processing

Credit Points 10

Legacy Code 301440

Coordinator Paul Hurley (https://directory.westernsydney.edu.au/search/name/Paul Hurley/)

Description This subject teaches students to abstract and develop algorithms, in Python, for analysing and processing deterministic and stochastic data/signals. Students are taught strategies in developing solutions that are optimal and efficient to implement. They learn how to analyse signals under the Fourier transform and under different bases, allowing for an appreciation of how lossy compression works, and how to formulate and solve some convex optimisation algorithms. This subject will be undertaken at Parramatta City - Hassall St campus.

School Computer, Data & Math Sciences

Discipline Mathematics

Student Contribution Band HECS Band 1 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Students should know and understand basic linear algebra. Basic programming skills are necessary. Familiarity with Python notebooks is helpful but not mandatory.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain mathematical formulations of signal processing algorithms
2. Demonstrate mastery of tools for tackling advanced signal and data processing problems
3. Analyse advanced signal and data processing algorithms using numerical python programming
4. Design applications as advanced signal and data processing algorithms
5. Appraise applications of mathematical signal processing

Subject Content

1.Motivation - what is mathematics of signal processing, etc.
2.Linear algebra and Hilbert spaces
Examples ? neural networks
Basis and frames
3.Fourier Transforms
Continuous Fourier series, Fast Fourier transforms
Convolution
4.Sampling and interpolation
1D, 2D (sphere/manifold)
5.Filtering
Finite Impulse Response (FIR) filters, Infinite Impulse Response (IIR) filters
6.Approximation and compression
Wavelets
Time-frequency analysis
7.Inverse problems and optimisation
Compressed sensing
LASSO
8.Random signals
Probabilistic modelling
Wiener filter, etc.
Max likelihood / EM
9.Event-driven sampling/filtering
Sampling in time vs sampling in amplitude
Filtering in asynchronous time
10.Array signal processing
Beamforming

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

MECH 2001 Kinematics and Kinetics of Machines

Credit Points 10

Legacy Code 300035

Coordinator Mobarak Hossain (https://directory.westernsydney.edu.au/search/name/Mobarak Hossain/)

Description Kinematics is the study of the motion of objects, and Kinetics is the study of the causes of the motion. The focus for this subject is on rigid body kinematics which involves the study of a solid body with little or no deformation in planar motion, such as those in machines. The motion of key machine components and the forces they generate gives rise to design problems. Students gain an understanding of the relevance of kinematics and kinetics in the analysis and design of mechanical systems and of methods to ensure machines operate efficiently and safely.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1016 AND
ENGR 1018

Equivalent Subjects MECH 2002 Kinematics and Kinetics of Machines (WSTC AssocD)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret the kinematic structure of mechanisms
2. Identify freedom and constraint in machine
3. Apply graphical velocity and acceleration analysis techniques to mechanisms
4. Predict the movement of particles, a single rigid body
5. Analyse translational and angular displacements, velocities and accelerations of a single rigid body
6. Analyse multi-body mechanisms, gear trains, and cams
7. Verify measurements in the real worldagainst theory presented in the lectures.

Subject Content

Freedom and constraints in mechanisms
Velocity and acceleration analysis of mechanisms
Particle kinematics
Particle kinetics
Rigid body kinematics
Rigid body kinetics
Mechanism kinematics
Simple and epicyclic gear trains.
Involute geometry of gear teeth
The geometry of cams.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	12 x 2 hours in class; 12x2 hours before class	5	N	Group/ Individual
Quiz	15 minutes (per Quiz)	20	N	Individual
Practical	3 hours (per Practical)	15	N	Group/ Individual
Final Exam	2 hours	60	N	Individual

MECH 2002 Kinematics and Kinetics of Machines (WSTC AssocD)

Credit Points 10

Legacy Code 700244

Coordinator Abbas Ranjbar (https://directory.westernsydney.edu.au/search/name/Abbas Ranjbar/)

Description Kinematics is the study of the motion of objects, and Kinetics is the study of the causes of the motion. The focus for this subject is on rigid body kinematics, which involves the study of a solid body with little or no deformation in planar motion, such as those in machines. The motion of key machine components and the forces they generate gives rise to design problems. Students gain an understanding of the relevance of kinematics and kinetics in the analysis and design of mechanical systems and of methods to ensure machines operate efficiently and safely.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1017 AND
ENGR 1019

Equivalent Subjects MECH 2001 - Kinematics and Kinetics of Machines

Restrictions

Students must be enrolled at Western Sydney University, The College in 7022 Associate Degree in Engineering

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret the kinematic structure of mechanisms
2. Identify freedom and constraint in machines
3. Apply graphical velocity and acceleration analysis techniques to mechanisms
4. Predict the movement of particles
5. Analyse translational and angular displacements, velocities and accelerations of a single rigid body
6. Analyse multi-body mechanisms, gear trains, and cams
7. Verify measurements in the real world against theory presented in the lectures

Subject Content

1. Freedom and constraints in mechanisms
2. Velocity and acceleration analysis of mechanisms
3. Particle kinematics
4. Particle kinetics
5. Rigid body kinematics
6. Rigid body kinetics
7. Mechanism kinematics
8. Simple and epicyclic gear trains
9. Involute geometry of gear teeth
10. The geometry of cams

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MECH 2003 Mechanics of Materials

Credit Points 10

Legacy Code 300040

Coordinator Baolin Wang (https://directory.westernsydney.edu.au/search/name/Baolin Wang/)

Description Mechanics of Materials is the study of the stresses and deformation of a body made of any elastic solid material, and how these are related to the body's shape and the load applied to it. This subject looks at how and why structural components including bars and beams deform and break. It concentrates on how these are affected by the geometry of the body and loading. Types of loadings considered include normal loads, torsional loads and bending loads. The main objective of the subject is to introduce students to the aspects of stress, strain and internal force development in the components and the methods to determine the deformation and deflections of the components. Energy methods and impact loadings are also considered.

Level Undergraduate Level 2 subject

Pre-requisite(s) ENGR 1018

Equivalent Subjects LGYA 5707 Mechanics and Materials MECH 2004 Mechanics of Materials (WSTC Assoc Deg)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Represent a general traction as stresses and a general displacement as strains and predict stress, strain and deformation for an engineering component under a static/dynamic loading
2. Calculate support reactions, stress, strain and deformation in statically indeterminate an axially loaded member
3. Predict stress and angle of twist in a circular shaft undergoing torsion
4. Construct bending moment, shear force diagrams, bending stresses, deflections and transverse shear stresses for beams carrying point forces, distributed forces, and couples
5. Calculate strain energy in axially loaded columns, shafts under torsion and beams under bending and use energy methods to calculate the deflection of a truss
6. Predict the buckling of columns
7. Take measurements in the real world, and use them to verify the theory presented in the lectures
8. Predict stress, strain and deformation in an axially loaded member
9. Calculate support reactions in statically indeterminate an axially loaded member
10. Represent a General Traction as Stresses
11. Represent a General Displacement as Strains
12. Construct bending moment and shear force diagrams, for beams carrying point forces, distributed forces, and couples

13. Calculate bending stresses and deflections for beams
14. Calculate transverse shear stresses in beams
15. Calculate strain energy in axially loaded columns, shafts under torsion and beams under bending
16. Predict stress, strain and deformation as a result of an impact loading
17. Use energy methods to calculate the deflection of a truss

Subject Content

Normal stress, strain and deformation
Statically indeterminate components
Representing a General Traction as Stresses
Representing a General Displacement as Strains
Torsional stresses and deformations
2D stress transformations
Bending moment and shear force diagrams
Bending stresses and deflections
Transverse shear stresses
Energy methods
Buckling of columns

MECH 2005 Mathematics for Mechanical and Mechatronic Engineers

Credit Points 10

Legacy Code 301342

Coordinator Stephen Weissenhofer (https://directory.westernsydney.edu.au/search/name/Stephen Weissenhofer/)

Description This subject will be offered at Engineering Innovation Hub - Hassall St, Parramatta campus. This subject introduces mathematical tools and analytical reasoning useful for a wide range of professions, as well as highlighting mathematical foundations that have contributed to advances in engineering. The course content focuses more on useful concepts at the core of applied mathematics rather than theoretical mathematics. Students learn a range of concepts and methods from applied mathematics and how these apply to various fields of engineering.

Level Undergraduate Level 3 subject

Pre-requisite(s) MECH 3004 OR
MECH 2001

Incompatible Subjects ENGR 3006 - Control Systems

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and develop mathematical models of multi-degree of freedom mechanical dynamical systems.
2. Analyse system response characteristics based on physical properties of the system.
3. Determine absolute and relative stability of a system using system responses to various control inputs and disturbances.
4. Analyse the effects of a controller in the system and its effects on system stability.
5. Design controllers in both frequency and time domain for linear time-invariant systems.

Subject Content

- Multi-degree of freedom vibration analysis and modelling;
- Open and closed loop systems;
- Transfer function and state variable methods in mechanical system modelling;
- System responses and concepts of stability;
- design and analyse control systems using root-locus, bode diagram and state-space methods for mechanical systems.

MECH 3002 Advanced Mechanics of Materials

Credit Points 10

Legacy Code 300761

Coordinator Baolin Wang (https://directory.westernsydney.edu.au/search/name/Baolin Wang/)

Description This subject builds on the Mechanics of Materials to provide students with knowledge about impacts of deformation, stresses, strains and strength on materials and components essential in understanding how to improve mechanical design. Students' analytic and problem solving skills are developed through analysis of impacts including non-elastic deformation, orientation of the reference axes, and how materials fail. Using knowledge about materials, students evaluate impacts on materials, the mechanisms to control properties of materials, and use mathematical calculations and techniques to determine stresses and strains on simple components. Overall, students develop the capacity to select appropriate materials and improve mechanical design.

School Eng, Design & Built Env

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MECH 2003

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use mathematical calculations to determine a range of stresses
2. Use graphical techniques to represent transformation equations for stresses and angles
3. Evaluate failure of materials in demonstrating knowledge of the relationship between the structure of materials and mechanical properties
4. Outline the mechanisms associated with creep, fatigue, and stress concentrations
5. Determine appropriate methods for controlling the properties of materials such as an alloy

Subject Content

1. Stresses beyond the yield point
2. Residual stresses
3. Failure Theories
4. Creep and fatigue
5. Stress concentrations
6. Strain energy, Castigliano's Theorem
7. Un-symmetric bending of beam
8. Shear centre
9. Transformation of stress, transformation of strain, state of three-dimensional stress

Pre-requisite(s) MECH 2001 AND
MECH 2003

Equivalent Subjects LGYA 5694 - Dynamics and Mechanical Systems

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use Virtual work to determine the equilibrium position of a mechanism.
2. Calculate the acceleration of a mechanism subjected to an applied force or torque.
3. Model a real world system as a collection of simple mechanical components.
4. Determine the equation(s) of motion for a system of simple mechanical components.
5. Solve the equation of motion for a free, 1dof system.
6. Calculate the response to a forced vibration.
7. Balance a rotating disk.
8. Use Laplace transforms to determine the response to impulse and step forces.

9. Take measurements in the real world, and use them to verify the theory presented in the lectures.

Subject Content

Virtual work, and the equilibrium position of a mechanism.
Acceleration of a mechanism subjected to an applied force or torque.
Modelling a real world system as a collection of simple mechanical components.
Determining the equation(s) of motion for a system of simple mechanical components.
Solution of the equations of motion for a free, 1dof system.
Calculation of the response to a forced vibration.
Balancing a rotating disk.
Using Laplace transforms to determine the response to impulse and step forces.

Level Undergraduate Level 3 subject

Pre-requisite(s) MECH 2003 AND
MECH 2001

Equivalent Subjects MECH 3003 - Design of Servo-Systems

Assumed Knowledge

This subject assumes that the student has undertaken first and second year studies in Western Sydney University engineering programs or equivalent.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply knowledge of science and engineering fundamentals in mechanical design.
2. Apply engineering design methodologies that can assist the design of machine components.
3. Manage complex mechanical engineering design projects in a team working environment.
4. Determine the integrity of structures and machines, to design the safe for machine components.
5. Design a creative and innovative solution to the complex real-world STEM projects.
6. Communicate concepts and designs in a range of formats to a diverse audience, and in an ethical manner.

7. Collaborate with team members from diverse backgrounds in a responsible way.

Subject Content

1. The design process – specifying problems and generating solutions
2. Making decisions – decision-making strategies, cost benefit analysis, economic and human factors
3. Engineering materials in design
4. CAD Modelling
5. Design for machine components
6. Structural integrity in engineering design

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MECH 3006 Mechatronic Design

Credit Points 10

Legacy Code 300487

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description Through practical lab exercises and a design project, students will integrate basic skills of mechanics, mechanical systems, and automation in the practice of engineering design (Design for X and system engineering) as applied to mechatronic devices and systems. Students will perform detailed design analysis on important machine elements such as bearings, brakes, clutches, shaft, motor and to integrate those elements to form an automatic mechatronic system is the intended outcome of undertaking this unit. The project-based tasks incorporated into this program build team work experience as well as each student's individual capabilities.

School Eng, Design & Built Env

Discipline Mechanical and Industrial Engineering and Technology, Not Elsewhere Classified.

Level Undergraduate Level 3 subject

Pre-requisite(s) MECH 2003

Equivalent Subjects LGYA 5708 - Mechatronic Design 1 LGYA 5709 - Mechatronic Design 2

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically discuss how mechanical/mechatronic design concepts are applied in an industrial context
2. Design main machine elements, such as bearings, shaft, linear motion element and motion control elements
3. Design solutions for automatic mechanical/mechatronic systems
4. Undertake a design of typical mechanical/mechatronic systems including the selection of components in senses of system engineering and design for X
5. Design an integrated mechanical/mechatronic system in a project-based environment
6. Work in a team for a project in designing and building a mechanical/mechatronic device

Subject Content

System Engineering Approach and Theory for Engineering Design
Principles and Applications of Design for X (Disassembly, Environment,Recycling, and Fatigue) in Product Design
Tolerances and Fits
Shaft Design
Design of Bearings
Design of Linear Motion Elements
Electric Motors and Controls
Design of Automatic Mechatronic System
Brakes and Clutches
Project-based design of integrated mechanical/mechatronic systems including selection of suitable components

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	2,000 words (each)	30	N	Individual
Report	8,000 – 10,000 words	40	Y	Group
Presentation	3 minutes	10	N	Individual
Log/ Workbook	800 words (each)	20	N	Individual

Prescribed Texts

- Mott, RL 2014, Machine elements in mechanical design, 5th edn, Pearson, Boston
- Ulrich, KT & Eppinger, SD 2012, Product design and development, 5th edn, McGraw-Hill/Irwin, New York, NY.

MECH 3007 Thermal and Fluid Engineering

Credit Points 10

Legacy Code 300759

Coordinator Ming Zhao (https://directory.westernsydney.edu.au/search/name/Ming Zhao/)

Description The subject provides an understanding of thermo-fluid principles and their engineering applications related to career pathways in manufacturing, renewable energy, human health and the environment. In addition to examining theoretical principles, students' analytical skills are developed as they evaluate thermal and fluid systems and apply basic computational techniques to solve problems in practical laboratory sessions. Students will explore topics such as aerodynamics, hydrodynamics, turbomachinery, combustion, and ventilation to develop industry applicable, practical skills.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) CIVL 2003 AND
MECH 3008

Assumed Knowledge

Fundamentals on Fluid Mechanics, Thermodynamics, and Heat Transfer.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate dynamics of fluid flow and solid body interaction.
2. Analyse mass and heat transfer in fluid flow.
3. Perform basic design and analysis of pumps and turbines.
4. Apply basic computational techniques in solving thermal and fluid engineering problems.
5. Integrate basic fluid engineering principles in industrial applications while in a team environment.

Subject Content

1. Aerodynamics and its impact
2. Turbomachinery
3. Wind engineering
4. Fluid-structure interaction
5. Combustion and compressible flow (introductory)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	3 x 15-minute (per Quiz)	15	N	Individual

Practical	3 x Practical reports 1000 words (per report)	30	N	Individual
Participation	9 x 2-hour tutorials	5	N	Individual
Final Exam	2-hour	50	N	Individual

MECH 3008 Thermodynamics and Heat Transfer

Credit Points 10

Legacy Code 300760

Coordinator Ming Zhao (https://directory.westernsydney.edu.au/search/name/Ming Zhao/)

Description This subject introduces students to the fundamentals of thermodynamics which involves energy in the form of heat and heat transfer. Students explore the basic laws and properties of thermodynamics to discover how energy is converted and transferred. Students will apply their knowledge to evaluate power and refrigeration cycles, industrial devices, as well as to design a simple industrial device.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Level Undergraduate Level 3 subject

Pre-requisite(s) MATH 1019 AND
ENGR 1011 OR
ENGR 1028

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe thermodynamic systems and the associated heat transfer processes
2. Illustrate the concepts of thermodynamic parameters and processes
3. Explain thermodynamic relations
4. Apply thermodynamic principles to evaluating power and refrigeration cycles
5. Explain the nature of heat transfer processes
6. Apply heat transfer principles to design and evaluation of simple industrial device

Subject Content

Properties of thermodynamic systems
Laws of thermodynamics
Concepts of energy, work, heat and entropy
Thermodynamic relations
Reversible and irreversible processes
Power and refrigeration cycles
Heat conduction
Natural and forced convection
Radiation heat transfer
Heat exchangers

MECH 4001 Computational Fluid Dynamics

Credit Points 10

Legacy Code 300999

Coordinator Ming Zhao (https://directory.westernsydney.edu.au/search/name/Ming Zhao/)

Description This subject introduces students to the fundamentals of computational fluid dynamics. The subject covers the conventional methods for solving the ordinary and partial differential equations. The numerical method for solving the inviscid flow and the viscous flow problems will be introduced. The students learn the application of the commercial software in the engineering problems.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ELEC 1006 AND
MECH 3007

Assumed Knowledge

Numerical methods, thermal dynamics and fluid mechanics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Solve flow equations using the basic concepts of Computational Fluid Dynamics;
2. Analyse laminar flow, turbulent flow and heat transfer using numerical method;
3. Apply computational methods to solve simple flow and heat transfer problems;
4. Use commercial CFD software to analyse practical flows.

Subject Content

1. Flow topics governed by ordinary differential equations;
2. Numerical simulation of inviscid fluid flows;
3. Numerical simulation of viscous flows;
4. Heat transfer;
5. CFD modelling using commercial software;
6. Engineering applications of CFD.

Assessment

MECH 4002 Computer Aided Engineering

Credit Points 10

Legacy Code 301000

Coordinator Leo Zhang (https://directory.westernsydney.edu.au/search/name/Leo Zhang/)

Description This subject describes the basics and fundamentals of computer aided engineering focusing on the advanced topics of finite element methods, which is a powerful numerical tool for analysing a wide range of engineering problems. Through applied projects students will apply the finite element method (FEM)-based computer aided engineering (CAE) and its applications in the fields of solid mechanics, fluid mechanics, thermodynamics and heat transfer and product design and development as well. The development of students' academic skills in research and communication are also achieved through the completion of FEM-based CAE projects.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 3020

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the basic and fundamental principles of finite element method on solving typical engineering problems with aids from computer modelling and simulation

2. Investigate and explain boundary conditions, mesh generation, error control and other practical considerations in finite element models for conducting finite element analyses for different types of problems
3. Implement finite element method into design process for optimal solution
4. Apply commonly-used finite element programs to solve practical engineering problems in solid mechanics
5. Apply commonly-used finite element programs to solve practical engineering problems in fluid mechanics and thermodynamics and heat transfer

Subject Content

Review on fundamentals of finite element method
3-D finite element methods (solid, shell and plate elements)
Boundary conditions, mesh generation, error control and other practical considerations
Finite element analysis on Solid Mechanics Problems (Linear and Nonlinear Finite Element Analysis)
Finite element analysis on Fluid Mechanics Problems
Finite element analysis on Heat Transfer Problems
FEA-based design optimisation
Computer aided engineering and product design and development

Assessment

Level Undergraduate Level 4 subject

Pre-requisite(s) ENGR 1018

Restrictions

Successful completion of 160 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and classify the different types of mechanical structures of mobile robots.
2. Examine the issues of localisation in mobile robots.
3. Examine and apply the map building and path planning techniques used in mobile robotics

4. Evaluate various sensors and assess their applications in mobile robots

Subject Content

Mechanics of Mobile robots
Localisation, map-building and path planning
Sensors and sensing techniques.
Actuators for mobile robots
Recent development in mobile robots

Level Undergraduate Level 4 subject

Pre-requisite(s) MECH 3004

Restrictions

Successful completion of 200 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. analyse and develop mathematical models of a robot.
2. design suitable controllers for robot systems.
3. understand the use of sensors in robots.
4. appreciate the fundamental aspects of artificial neural networks and fuzzy logic systems.
5. undertake the design and implementation of artificial intelligence in robot applications.
6. Effectively communicate their results via professional report writing.
7. Work as a team to complete different learning tasks that include lab experiments and team assignments.

Subject Content

Robot kinematics and dynamics
Robot trajectory planning and control
Robot sensing
Artificial neural networks
Fuzzy logic control
Recent developments in robotics

MECH 4005 Advanced Engineering Thesis 1: Preliminary Investigations

Credit Points 10

Legacy Code 300969

Coordinator Pan Hu (https://directory.westernsydney.edu.au/search/name/Pan Hu/)

Description Advanced Engineering Thesis 1 - Preliminary Investigations subject consists of a research project designed and implemented under the direction of an academic supervisor and research mentor. This subject is the culmination of studies for students who have completed their first three years of an undergraduate degree and provides substantial training in Preliminary Investigations. Under staff supervision, students are allocated a particular topic for their research, design their own programme of research, and perform the research. The emphasis of this subject is on the application of research knowledge gained in other subjects to the practical conduct of the individual research project. This subject provides final year Advanced engineering students with the opportunity to undertake research on a specialist topic within their Key Program of undergraduate study.

MECH 5001 Vertical Transportation Technology

Credit Points 10

Coordinator Jamal Rizk (https://directory.westernsydney.edu.au/search/name/Jamal Rizk/)

Description As technology, architecture and building construction advance, vertical transportation systems must keep up to ensure best performance of systems in terms of safety, sustainability, passenger comfort and accessibility. This subject addresses the complexity of integrating systems to ensure best performance in specific contexts and for multiple stakeholders. Students work on projects and use computer-aided design (CAD) to develop design solutions that maximise performance while meeting requirements. In doing so, students further develop their technical and professional communication skills. Knowledge gained in this subject will benefit students aspiring to careers such as system, electrical and mechanical design of vertical transportation.

School Eng, Design & Built Env

Discipline Mechanical and Industrial Engineering and Technology, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Learning Outcomes

1. Use software tools to design vertical transportation systems.
2. Produce professional reports demonstrating vertical transportation industry standards and meeting project deadlines.
3. Justify solutions and recommendations for designs.
4. Communicate with groups and individuals with awareness of diversity and ethics.

Subject Content

- Appreciate principles into vertical transportation system design
- Design of vertical transportation systems with CAD
- Integrated electrical engineering in vertical transportation systems
- Integrated mechanical engineering in vertical transportation systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Report	up to 10 pages	50	N	Group

MECH 5002 Fundamentals of Vertical Transportation Systems

Credit Points 10

Coordinator Baolin Wang (https://directory.westernsydney.edu.au/search/name/Baolin Wang/)

Description Vertical transportation, which includes lifts and escalators, has undergone significant changes over the last 10 years. This subject provides an overview of these changes and introduces current requirements that are essential for the safety and flow of people in and around different building types and systems. Students learn various technical and engineering aspects of vertical transportation systems and evaluate designs in relation to compliance with regulations and standards. Knowledge gained in this subject will benefit students aspiring to careers such as vertical transportation planning, design and installation.

School Eng, Design & Built Env

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Learning Outcomes

1. Analyse human circulation and human factors.
2. Justify selection of transportation systems for different building types.
3. Determine appropriate electrical power supply.
4. Evaluate vertical transportation designs and implementations for relevant regulations and safety in design principles.

Subject Content

- human circulation
- human factors
- types of transportation systems
- escalator arrangement
- selection of equipment
- vertical transportation arrangement
- electrical power supply for vertical transportation
- safety in design principles

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Up to 5 pages	20	N	Individual
Professional Task	2000-3000 words (including diagrams)	30	N	Individual
Report	Up to 10 pages	50	N	Individual

MECH 5003 Vertical Transportation Operations and Management

Credit Points 10

Coordinator Baolin Wang (https://directory.westernsydney.edu.au/search/name/Baolin Wang/)

Description The focus in this subject is on integrating the electrical and mechanical elements as part of selecting a suitable vertical transportation system in line with the standards and regulations. In making the selection, students create layouts, use simulation and methods of calculation. Students then determine an appropriate maintenance plan. Students are encouraged to assess their professional development needs given the integration of different engineering disciplines in the context of vertical transportation, as well as to evaluate their performance in group work. Knowledge gained in this subject will benefit students aspiring to careers such as vertical transportation operations, maintenance and service.

School Eng, Design & Built Env

Discipline Mechanical and Industrial Engineering and Technology, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Learning Outcomes

1. Integrate project requirements, standards, regulations and legislation, and a range of vertical transportation factors to design appropriate layouts;
2. Calculate mechanical and electrical requirements appropriate for specific vertical transportation systems;
3. Design maintenance plan according to Design in Safety principles, including expected modifications and work by others;
4. Analyse professional performance and skill development needs.

Subject Content

Human circulation (disabled access)
Human factors (velocity, force)
Types of transportation systems
Walkways and principle components installation

- Vertical Transportation control systems
- Selection of equipment
- Vertical Transportation arrangement, electrical and mechanical components, firefighting lifts and evacuation, layouts
- Legislation and standards
- Vertical Transportation maintenance, modifications, and work by others

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	Up to 5 pages	20	N	Individual
Applied Project	2000-3000 words (including diagrams)	30	N	Individual
Report	Up to 10 pages	50	N	Group

MECH 7001 Advanced Computational Fluid Dynamics

Credit Points 10

Legacy Code 301023

Coordinator Ming Zhao (https://directory.westernsydney.edu.au/search/name/Ming Zhao/)

Description This subject introduces students to commonly used numerical methods used in computational fluid dynamics (CFD). The subject covers the theory and the application of CFD for solving engineering problems. The numerical methods for solving the in viscid flow and the viscous flow problems will be introduced. The students learn the application of the engineering software in the engineering problems.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Finite element methods, Thermal dynamics and Fluid mechanics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Solve flow equations using numerical methods;
2. Analyse laminar flow, turbulent flow and heat transfer using CFD;
3. Design computer code for simulating flow problems;
4. Apply computational methods to solve simple flow and heat transfer problems;
5. Analyse practical flows using commercial CFD software.

Subject Content

1. Numerical methods for in viscid fluid flows;
2. Numerical methods for vicious flows;
3. Heat transfer;
4. Numerical stability analysis;
5. CFD modelling using commercial software;
6. Engineering applications of CFD.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	3000 word written report	35	N	Individual
Practical	3000 word written report	35	N	Individual
Quiz	1 hour	30	N	Individual

MECH 7002 Advanced Computer Aided Engineering

Credit Points 10

Legacy Code 301022

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject focuses on advanced topics in computer aided engineering and their applications in mechanical engineering in analysing a wide range of engineering problems. The objective of this subject is to advance students' knowledge and skill level on the finite element method (FEM)-based computer aided engineering (CAE) and its advanced applications in the fields of solid mechanics, fluid mechanics, thermodynamics and heat transfer and product design and development as well. Academic skills on research and communication are ensured to be achieved through conducting FEM-based CAE projects.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program or in the 8083 Bachelor of Research Studies.

Assumed Knowledge

Students should have a good understanding of the basics of finite element method and analysis, the fundamentals and advanced topics in mechanics of materials, the fundamentals on fluid mechanics and heat transfer and thermal dynamics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. apply the basic and fundamental principles of finite element method on solving typical engineering problems with aids from computer modelling and simulation;
2. investigate and explain boundary conditions, mesh generation, error control and other practical considerations in finite element models for conducting finite element analyses for different types of problems;
3. implement finite element method into design process for optimal solution;
4. apply commonly-used finite element programs to solve practical engineering problems in the following fields: a. Solid mechanics b. Flumechanics c. Thermodynamics and heat transfer d. Optimisation design e. Product design and development

Subject Content

1. Review on fundamentals of finite element method
2. Finite element methods (spring, bar, beam, solid, shell and plate elements)
3. Boundary conditions, mesh generation, error control and other practical considerations
4. Finite element analysis on Solid Mechanics Problems (Linear and Nonlinear Finite Element Analysis)
5. Finite element analysis on Fluid Mechanics Problems
6. Finite element analysis on Thermodynamics and Heat Transfer Problems
7. FEA-based design optimisation
8. Computer aided engineering and product design and development

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Numerical Problem Solving	3 x approx. 6 pages each	30	N	Individual
Practical	4 x approx. 5 pages each	20	N	Individual
Applied Project	Presentation (15 mins) Standard Technical Report 8000 Words	35	Y	Group/ Individual
Quiz	1 hour (each)	15	N	Individual

MECH 7003 Advanced Dynamic Systems

Credit Points 10

Legacy Code 301019

Coordinator Mobarak Hossain (https://directory.westernsydney.edu.au/search/name/Mobarak Hossain/)

Description This subject covers three-dimensional kinematics and kinetics of a rigid body. The principles of virtual work are used to investigate the equilibrium and dynamics of mechanisms. Some key aspects of mechanical vibrations are introduced, including vibration response, vibration isolation and vibration measurement.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use Virtual work to determine the equilibrium position of a mechanism
2. Analyse the three-dimensional kinematics and kinetics of a rigid body
3. Model a real world system as a collection of simple mechanical components
4. Determine the response to free and forced vibrations using standard differential methods or Laplace transforms
5. Balance a rotating disk to reduce vibrations according to standards
6. Analyse vibration isolation systems and measurement systems
7. Verify the theory presented in the lectures by taking the measurements in the real world and use them for verification purposes

Subject Content

1. Virtual work and potential energy method
2. Three-dimensional kinematics and kinetics of a rigid body
3. Modelling a real world system and determining the equations of motion for mechanical systems
4. Response to free and forced vibrations
5. Balancing a rotating disk
6. Vibration isolation
7. Vibration measurement
8. Using Laplace transforms to determine the response to impulse and step forces.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Final Exam	2 hours	50	N	Individual
Quiz	4 x 1 hour	20	N	Individual
Report	10 pages	20	N	Individual
Practical	2 times x 3 hours each	10	N	Individual

MECH 7004 Advanced Mobile Robotics

Credit Points 10

Legacy Code 301020

Coordinator Gu Fang (https://directory.westernsydney.edu.au/search/name/Gu Fang/)

Description This subject aims to develop an understanding of Mobile Robotics, encompassing fundamental concepts such as mobile robot mechanics, localisation, map building, and path planning. Additionally,

the subject will introduce diverse sensors and their applications in the field of mobile robotics.

School Eng, Design & Built Env

Discipline Mechanical And Industrial Engineering And Technology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program OR in 8083 Bachelor of Research Studies.

Assumed Knowledge

Some basic skills in computer programming, such as MATLAB and C++.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Model different types of mechanical structures of mobile robots.
2. Solve issues of localisation in mobile robots.
3. Examine the map building and path planning techniques used in mobile robotics.
4. Evaluate various sensors and assess their applications in mobile robots.

Subject Content

1. Mechanics of Mobile robots
2. Localisation, map-building and path planning
3. Sensors and sensing techniques.
4. Recent development in mobile robots

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	3x 2hrs	20	N	Individual
Quiz	3x0.5hr	30	N	Individual

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects LGYA 5817 - Advanced Robotics LGYA 5833 - Mobile Robotic Systems

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Some Knowledge of MATLAB/Simulink.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse and develop mathematical models of an industrial robot.
2. Design advanced controllers for robot systems.
3. Analyse and apply sensors in robots.
4. Design and implement artificial intelligence in robot applications.

Subject Content

1. Robot kinematics
2. Robot dynamics
3. Robot trajectory planning
4. Robot controller design
5. Sensing in robotics
6. Artificial neural networks and fuzzy logic and their applications in robotics

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	No more than 3 pages for each lab.	20	N	Individual
Numerical Problem Solving	no more than 10 pages	20	N	Individual

MECH 7006 Advanced Thermal and Fluid Engineering

Credit Points 10

Legacy Code 301021

Coordinator Mariam Darestani (https://directory.westernsydney.edu.au/search/name/Mariam Darestani/)

Description This subject covers fundamental principles in the thermal and fluid engineering. While the main focus will remain on incompressible fluids, effects of compressible fluids will also be discussed. The contents of this subject include fluid mechanics, thermodynamics and heat transfer. Students will learn the engineering applications of thermal and fluid principles.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Fundamental knowledge of fluid mechanics, theory of thermodynamics, knowledge of heat transfer including conduction, convection.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply fundamental knowledge of fluid kinematics and dynamics to solve problems in the fluid engineering.
2. Apply the energy equation to solve the energy and mass flow.
3. Analyse the thermodynamics process and heat transfer of a system.
4. Apply heat transfer principles to the design and evaluation of industrial device.
5. Evaluate heat engine and refrigeration cycles using the thermodynamics principles.

Subject Content

1. Fluid statics and kinematics
2. Steady incompressible flow in pressurised pipe system
3. Forces on bodies immerged in fluid flow
4. Laws of thermodynamics
5. Energy analysis
6. Fundamental mechanisms of heat transfer

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	2500-word practical report	25	N	Individual
Report	2500-word written report	25	N	Individual

MECH 7007 Mechanical System Design

Credit Points 10

Legacy Code 301018

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject advances students understanding on product design and development of machine components and assemblies using systems engineering approaches. The subject covers a review on the design of main components of machinery to ensure their functionality, strength and durability, which includes drive components

- gears, shafts, belt drives, and bearings, and structural components - welds and treaded fasteners. The machine assembly design is delivered based on systems engineering. Academic skills on research and communication are ensured to be achieved through conducting systems engineering approached-based mechanical system design projects.

School Eng, Design & Built Env

Discipline Mechanical Engineering

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in the Master of Engineering, Graduate Certificate in Engineering or Bachelor of Research Studies / Master of Research.

Assumed Knowledge

The students are assumed to have a good understanding on basics of mechanical design, fundamentals and advanced topics in mechanics of materials, fundamentals on fluid mechanics and heat transfer and thermal dynamics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the concepts of machine design in devising machine components design
2. Recognise standard engineering formats of representing machine parts
3. Apply governing standards guiding mechanical design to interpret and evaluate mechanical component and system design
4. Apply the design process towards an applied end
5. Examine the typical design process using basics of main machine components and bearing design and their selection
6. Apply principles of stress analysis for sizing of machine components and systems engineering approaches to perform a mechanical system design overall
7. Practise design alternatives to enhance CAD skills using commercial software
8. Conduct mechanical design in a team working environment

Subject Content

1. Nature of Mechanical System Design and Systems Engineering
2. Machine Component Design I - Chain Drives, Belt Drives, and Gears
3. Machine Component Design II - Shaft, Keys, Couplings and Seals
4. Machine Component Design III - Machine Frames, Bolted Connection and Welded Joints
5. Systems Engineering Design I - Systems Engineering Landscape and Structure of Complex Systems
6. Systems Engineering Design II - The System Development Process and Systems Engineering Management
7. Systems Engineering Design III - Systems Engineering Management
8. Systems Engineering Design IV - Concept Development
9. Systems Engineering Design V - Engineering Development
10. Systems Engineering Design VI - Post Development

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	3 x approx. 6 pages each	30	N	Individual
Log/ Workbook	4 x approx. 5 pages each	20	N	Individual
Report	15-min oral presentation conducted in class and marked individually (10%) and design project report marked as group work (30%)	40	Y	Group
Quiz	1 hour each including ten minutes reading time	10	N	Individual

MECH 7008 Mechatronic System Design

Credit Points 10

Legacy Code 300600

Coordinator Richard Yang (https://directory.westernsydney.edu.au/search/name/Richard Yang/)

Description This subject will advance the skills of mechanics, mechanical systems and automation in the practice of engineering design as applied to mechatronic devices and systems. The ability to perform detailed design analysis of machine elements as well as control systems as applicable to manufacturing and process machinery

is the intended outcome of undertaking this subject and project-based tasks will form part of the learning process and team work experience.

School Eng, Design & Built Env

Discipline Mechanical and Industrial Engineering and Technology, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects LGYA 6106 - Servo Systems Design (PG) LGYA 5832 - Mechatronic System Design

Restrictions

Students must be enrolled in a postgraduate program

Assumed Knowledge

Equivalent Bachelor of Engineering degree.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Design machine elements, such as shafts, bearings, brake, gears & clutches.
2. Design of a mechatronic system.
3. Design and analyse fluid power servo systems
4. Compare available equipment and select suitable components for the designed system.
5. Design an integrated mechatronic system in a team project-based environment

Subject Content

Shaft, bearing and gear analysis and design.
Belt drives, shaft, clutches, brakes, coupling and motor systems.
Pneumatic and hydraulic equipment and circuits.
Feedback loops and equipment selection.
Project based design of an integrated mechanical system including selection of suitable components.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Numerical Problem Solving	4 X Tutorial Assignments (7.5% each)	30	N	Individual
Practical	4 X Lab Workbooks (5% each) Finish lab workbooks within 2 hour practical sessions	20	N	Individual
Report	3,000 words (Report 25%) and 15 minutes (Presentation 5%)	30	Y	Group
Quiz	2 X Quizzes (10% each) 1 hour each	20	N	Individual

MEDI 1002 Foundations of Medicine 1

Credit Points 80

Legacy Code 400861

Coordinator Ritesh Raju (https://directory.westernsydney.edu.au/search/name/Ritesh Raju/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). This subject integrates the foundational sciences with clinical skills. Students learn the structure and function of the human body, particularly, whole body organisation, basic anatomy, nutrition and metabolism, function and pathology of the gastrointestinal system (including liver), cardiovascular system and respiratory system. In addition, students will gain an understanding of health psychology, patient experience, the medical system, identifying risk, errors in medical practice, managing error and basic procedures such as hand washing. A particular focus will be the communities that make up Greater Western Sydney. Students will also participate in clinical tutorials and will gain skills in history taking and communication in Session 1H and skills in history and examination of the gastrointestinal tract, cardiovascular system and respiratory systems during Session 2H. The subject outline is available from the link on the left-hand menu.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in 4641 Bachelor of Medicine, Bachelor of Surgery or 4647 Bachelor of Medical Research.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Patient Care
2. Health in the Community
3. Personal and professional development
4. Scientific basis of medicine

Subject Content

1. The major objectives are to gain an integrated understanding of the structure and function of the human body. This will be addressed at the levels of organ systems, tissues, cells and molecules. The scientific basis of the following topics will be discussed: whole body organisation including basic anatomy, roles of the major organ systems, functional organisation of cells and their specific organelles, characteristics of specialised cells, structure-function characteristics of major biological molecules including carbohydrates, lipids, proteins, enzymes and DNA, the biochemical basis of complex processes such as homeostasis, reproduction and inheritance, growth and development, defence against infectious agents, pathological changes, ageing and death.
2. The unit then examines nutrition and metabolism before exploring the structure, function and pathology of the gastrointestinal system (including liver), cardiovascular system and respiratory system.

3. In the Personal and Professional Development (PPD) stream there is a focus on developmental psychology, the patient experience, the doctor, human interactions, the human in context and the healthcare system.
4. Population health will focus on Evidence Based Medicine in sessions 1 and 2.
5. Introduction to Clinical Medicine will cover generic history taking and communication skills in semester 1 and skills in history and examination of the gastrointestinal tract, cardiovascular system and respiratory systems during semester 2.

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	2 hours	18	N	
Multiple Choice	2 hours	18	N

Short Answer	2hrs	22	N	
Multiple Choice	2 hours	22	N	
Multiple Choice	1 hr	12	N	
Multiple Choice	1 hr	6	N	
Multiple Choice	1 hr	S/U	Y	
Critical Review	200 words throughout 2H	6	N	
Reflection	500 words	S/U	Y	
Applied Project	Compiled throughout 2H	S/U	Y	

Participation	Throughout 2H	S/U	Y
Quiz	30 minutes	S/U	Y
Professional Placement Performance	Throughout placement in 2H	S/U	Y
Participation	Throughout Subject	S/U	Y
Professional Task	2 hours	S/U	Y
Learning Contract	Throughout Subject	S/U	Y

Prescribed Texts

- The MBBS is an integrated 5 year professional entry program which emphasizes life-long and self-directed learning. Accordingly, there are no prescribed textbooks for subjects in the MBBS program. A list of recommended textbooks is available in the subject Learning Guide.

MEDI 1004 Clinical Sciences 1

Credit Points 80

Legacy Code 401276

Coordinator Victoria Mansour (https://directory.westernsydney.edu.au/search/name/Victoria Mansour/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). Foundational learning for medicine is provided in this yearlong subject that integrates the biomedical sciences through the use of authentic clinical scenarios. Small group problem based learning and bedside teaching with patients, scaffolded by lectures, tutorials and practicals cover each of the body systems in turn, so that students are well prepared for clinical learning. Students will also learn about the human context of health and disease, medical professionalism, the quality and safety of healthcare, evidence based practice, research and clinical skills through community visits, hospital based sessions and workshops. The Professional Portfolio component within this subject will provide students in the Doctor of Medicine (MD) program with the means to monitor and support their acquisition of professional competencies in medicine. Supported by teaching sessions, learning resources and Professional Advisors, students will collate and review evidence of their learning, such as clinical assessments and case studies, preparatory work and outcomes from research and scholarly projects. By identifying and addressing their learning and professional development needs, students will create their own personalised learning journey as the basis for life-long learning in medicine. The Professional Portfolio will also prepare students for the portfolios used extensively in post graduate specialty training in medicine. The subject outline is available from the link on the left-hand menu.

Students must be enrolled in 4758 - Doctor of Medicine (MD)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Patient Care
2. Health in the Community
3. Personal and professional development
4. Scientific basis of medicine

Subject Content

Patient Care
- Communicating with patients, carers, families and healthcare professionals
- Practical skills in history taking, physical examination
- Diagnostic and clinical problem formulation

Health in the Community
- Determinants of health and illness in communities and populations
- Understanding health needs of diverse communities, the social and cultural context of health, illness and healthcare
- Aboriginal and Torres Strait Islander health
- Disease prevention and health promotion

Professional and Personal Development
- Medical professionalism, professional standards and codes of conduct, legal obligations of students and medical practitioners
- Identifying and addressing own learning and personal needs
- Quality and safety of health care
- Self-evaluation and critical reflection on learning

Scientific Basis of Medicine
- Demonstration of an understanding of the body as a complex, adaptive biological system
- Application of the biomedical, social and psychological sciences to clinical and health problems
- Information skills and academic literacy
- Evidence based practice and research skills

MEDI 2002 Foundations of Medicine 2

Credit Points 80

Legacy Code 400862

Coordinator Neeshaan Abrahams (https://directory.westernsydney.edu.au/search/name/Neeshaan Abrahams/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). This subject integrates the biomedical sciences with clinical skills. Students continue to build their knowledge of the structure and function of the human body, particularly: renal, musculoskeletal, neuroscience, reproduction and development, endocrinology, infectious disease, immunology and cancer. In addition, students will gain an understanding of the human context of health and disease, global health, medical professionalism, the quality and safety of healthcare, evidence based practice and research skills. On clinical days, students will participate in bedside tutorials to further develop their skills in history and examination of body systems and will also learn how to carry out basic clinical procedures. The subject outline is available from the link on the left-hand menu.

Level Undergraduate Level 2 subject

Pre-requisite(s) MEDI 1002

Incompatible Subjects MEDI 2003 - Clinical Sciences 2

Restrictions

Students must be enrolled in 4641 Bachelor of Medicine, Bachelor of Surgery or 4647 Bachelor of Medical Research.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care as a member of an interdisciplinary team under appropriate supervision: Communication, Patient Assessment, Patient Management
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander Australia: Determinants of Health & Illness, Health Needs, Health Care Systems, Health Promotion, Indigenous Health
3. Demonstrates and develops professional skills, responsibilities and attitudes: Ethical Practice, Teamwork, Learning and Teaching, Personal Needs, Medical humanities
4. Develops and applies a sound understanding of the scientific foundations (social, basic and clinical) of medical practice: Applies Science to Practice, Uses Evidence, Research

Subject Content

1. The Scientific Basis of Medicine integrates understanding of the structure and function of the human body. This will be addressed at the level of organ systems, tissues, cells and molecules. The scientific basis of the following topics will be discussed: renal system, musculoskeletal system, neuroscience, reproduction and development, endocrinology, infectious disease, immunology and cancer.
2. In the Personal Professional and Development (PPD) stream there is a focus on medical professionalism, professional standards and codes of conduct, legal obligations of students and medical practitioners and identifying and addressing own learning and personal needs
3. Quality and Safety tutorials are part of PPD, looking at identifying risk, the way errors occur in medical practice, managing error as a medical student
4. Population Health will explore statistics, translational research, epidemiology, outbreaks, health promotion and other challenges to public health.
5. Introduction to Clinical Medicine and Clinical Procedural Skills will continue to extend the history and examination of body systems and will introduce students to clinical procedures.

MEDI 2003 Clinical Sciences 2

Credit Points 80

Legacy Code 401277

Coordinator Neeshaan Abrahams (https://directory.westernsydney.edu.au/search/name/Neeshaan Abrahams/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). Foundational learning for medicine is provided in this yearlong subject that integrates the biomedical sciences through the use of authentic clinical scenarios. Small group problem based learning, bedside teaching with patients and procedural skills teaching scaffolded by lectures, tutorials and practicals cover each of the body systems in turn, so that students are well prepared for clinical learning. Students will also learn about the human context of health and disease, medical professionalism, the quality and safety of healthcare, evidence based practice, research and clinical skills through community visits, hospital based-sessions and workshops. The Professional Portfolio component within this subject will provide students in the Doctor of Medicine (MD) program with the means to monitor and support their acquisition of professional competencies in medicine. Supported by teaching sessions, learning resources and Professional Advisors, students will collate and review evidence of their learning, such as clinical assessments and case studies, preparatory work and outcomes from research and scholarly projects. By identifying and addressing their learning and professional development needs, students will create their own personalised learning journey as the basis for life-long learning in medicine. The Professional Portfolio will also prepare students for the portfolios used extensively in post graduate specialty training in medicine.

Level Undergraduate Level 2 subject

Pre-requisite(s) MEDI 1004

Incompatible Subjects MEDI 2002 Foundations of Medicine 2

Restrictions

Students must be enrolled in 4758 - Doctor of Medicine (MD)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Patient Care: Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Health in the Community: Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Personal & professional development: Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Scientific basis of medicine: Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

Patient Care
- Communicating with patients, carers, families and healthcare professionals
- Practical skills in history taking, physical examination and procedural skills
- Diagnostic and clinical problem formulation

Health in the Community
- Determinants of health and illness in communities and populations
- Understanding health needs of diverse communities, the social and cultural
context of health, illness and healthcare
- Aboriginal and Torres Strait Islander health
- Disease prevention and health promotion

Professional and Personal Development
- Medical professionalism, professional standards and codes of conduct, legal obligations of students and medical practitioners
- Identifying and addressing own learning and personal needs
- Quality and safety of health care
- Self-evaluation and critical reflection on learning

Scientific Basis of Medicine
- Application of the biomedical, social and psychological sciences to clinical and health problems
- Information skills and academic literacy
- Evidence based practice and research skills

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Multiple Choice	30 minutes	S/U	N	Individual
Applied Project	Compiled throughout 1H	S/U	Y	Individual
Quiz	30 mins	S/U	Y	Individual

MEDI 3002 Clinical Assessment Methods

Credit Points 10

Legacy Code 400879

Coordinator Richard Thomas (https://directory.westernsydney.edu.au/search/name/Richard Thomas/)

Description This subject is designed to introduce students to basic principles and essential skills of physical examination and diagnostic/laboratory investigation procedures, required for successful approach to diagnosis of health impairment states. Primary contact health practitioners are expected to have sound understanding of disease presentation, techniques of patient interviewing and examination for collection of relevant clinical information as well as the ability to select appropriate laboratory tests and interpret their findings. This subject will also help students to develop fundamental clinical reasoning skills required in the medical decision making process.

Pre-requisite(s) BIOS 2029 AND
NATS 1009 AND
NATS 1010

Equivalent Subjects LGYA 7174 - Clinical Diagnosis

Assumed Knowledge

Understanding of human anatomy & physiology and pathophysiology of common impairments of health.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. demonstrate the ability to conduct a patient interview and to take a structured and directed patient history relating to the presenting complaint;
2. demonstrate competency in the physical examination of major body systems;
3. explain and interpret the clinical significance of common symptoms and signs in each system;
4. explain and interpret the results of common laboratory diagnostic investigations;
5. demonstrate the skills required in the clinical reasoning process.

Subject Content

- medical history and interviewing techniques
- techniques for The assessment of vital signs
- common Symptoms and signs of cardiovascular disorders
- cardiovascular assessment
- common Symptoms and signs of pulmonary disorders
- Thoracic and pulmonary assessment
- common Symptoms and signs of gastrointestinal disorders
- Abdominal and gastrointestinal assessment
- common Symptoms and signs of neurologic disorders
- neurologic assessment
- interpretation of common laboratory tests

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	2,000 words	20	N	Individual
Quiz	1 hour	20	N	Individual
Final Exam	2 hours written exam (40%); Assessment plan 200-300 words + 10 minutes Video + Documentation 200 words	60	N	Individual

MEDI 3003 Integrated Clinical Rotations 1

Credit Points 80

Legacy Code 400810

Coordinator Priya Acharya (https://directory.westernsydney.edu.au/search/name/Priya Acharya/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). Integrated Clinical Rotations 1 is the first major clinical year of the MBBS program. It consists of 10 weeks each in Surgery, Medicine and Medicine in Context (MiC), and 5 weeks in Critical Care. Surgery, Medicine and Critical Care attachments will be at Campbelltown, Blacktown, Mt Druitt, Bankstown, Fairfield and Liverpool hospitals. In Surgery and Medicine students spend 5 weeks in each of two sub-specialities. In Critical Care students spend time in Emergency and Anaesthetics Departments. The 10-week MiC attachment is conducted in two 5-week blocks and involves community-based aspects of the health care system including community organisations and general practice. Students also have 3 Conference Weeks; tutorials in clinical communication skills; and undertake an assignment in Evidence-Based Medicine and 3 online Scientific Streams learning modules. The subject outline is available from the link on the left-hand menu.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MEDI 2002

Restrictions

Students must be enrolled in 4641 Bachelor of Medicine/Bachelor of Surgery.

Learning Outcomes

On successful completion of this subject, students should be able to:

As years 3-5 of the MBBS program are an integrated whole and students will undertake various aspects of the clinical and community programs asynchronously in any of the three years it is not possible to divide the learning outcomes on a year by year basis, so the overall course learning outcomes are presented below. However, each of the attachments will have their own learning outcomes which will be made explicit to students in Learning Guides.

CURRICULUM THEMES	COURSE LEARNING OUTCOMES

1. Patient Care	**Provides patient centred care as a member of an interdisciplinary team under appropriate supervision.**
1.1 Communication	1.1.1 Communicates empathically and effectively with patients, families and health care team members to interact, negotiate, learn and foster understanding. 1.1.2 Establishes trusting relationships and communicates sensitively, empathically and effectively, without prejudice, with individuals and families from diverse backgrounds. 1.1.3 Creates and manages communication and information in all media, for example orally, in writing, electronically, by telephone.
1.2 Patient Assessment	1.2.1 Assesses patient health needs, attending to physical, functional, social, cultural and psychological factors. 1.2.2 Gathers a relevant and comprehensive patient history, generating and testing differential diagnoses 1.2.3 Performs an accurate and appropriate clinical examination, testing & refining differential diagnoses 1.2.4 Synthesises clinical findings to develop prioritised differential diagnoses and a comprehensive problem list 1.2.5 Selects, justifies and interprets investigations to evaluate likely diagnoses.
1.3 Patient Management	Develops, implements and monitors a management plan through a process of shared decision making which addresses the patient's unique medical, psychological and social needs and preferences: 1.3.1 Formulates and implements (under supervision) a comprehensive management plan. 1.3.2 Ensures that management addresses the patient's unique psycho-social, functional & cultural needs and preferences. 1.3.3 Explores the role of integrative and complementary therapies utilised by patients for their health care. 1.3.4 Monitors the effectiveness of management and provides continuity of care throughout the duration of clinical responsibility. 1.3.5 Makes timely, informed and rational decisions in circumstances of uncertainty according to best practice. 1.3.6 Performs an appropriate range of technical and practical procedures safely and effectively. 1.3.7 Prescribes and administers an appropriate range of medications and other therapeutic agents safely and effectively. 1.3.8 Recognises, assesses, initiates management and seeks assistance for deteriorating and critically unwell patients who require immediate care.
2. Health in the Community	**Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander Australia.**
2.1 Determinants of Health & Illness	2.1.1 Evaluates the determinants of health and illness in populations. 2.1.2 Explains how health inequities arise from the interplay of biological, socio-economic, behavioural, sociocultural and environmental factors. 2.1.3 Discusses and evaluates the major issues and trends confronting global health, their determinants and effects on individuals and populations.

2.2 Health Needs	2.2.1 Analyses the health needs and priorities of communities and populations, taking into consideration the historical, cultural, social and political forces which impact on health and wellbeing. 2.2.2 Evaluates a range of strategies, including patient and population oriented approaches, for illness prevention and management, and health promotion. 2.2.3 Demonstrates culturally sensitive communication and effective engagement with diverse communities and populations.
2.3 Health Care Systems	2.3.1 Explains the roles of health agencies, services and providers and how they interact to provide health care to individuals and populations. 2.3.2 Evaluates the effectiveness of health care systems and services in addressing individual and population needs and priorities.
2.4 Health Promotion	2.4.1 Promotes the health and well-being of individual patients and populations within the context of the culture, health status and health needs of the community of which that patient is a member. 2.4.2 Articulates the role of advocacy and public policy in promoting and protecting health and preventing disease.
2.5 Indigenous Health	2.5.1 Explains how various factors, including historical, cultural and political, interact to influence the health of the Aboriginal and Torres Strait Islander peoples.
3. Personal and professional development	**Demonstrates and develops professional skills, responsibilities and attitudes**
3.1 Ethical Practice	3.1.1 Aware of and adheres to accepted medical professional codes of conduct. 3.1.2 Applies ethical principles in professional practice. 3.1.3 Displays and reflects on, appropriate professional attitudes and values. 3.1.4 Values patient autonomy, privacy and confidentiality. 3.1.5 Aware of and complies with legal responsibilities and requirements, and the guidelines of regulatory bodies. 3.1.6 Maximises patient safety, ensures quality care, and manages risk and adverse medical outcomes
3.2 Teamwork	3.2.1 Works effectively and cooperatively as a member of a multidisciplinary team and as a member of the health care system.
3.3 Learning & Teaching	3.3.1 Engages in self and peer evaluation, lifelong learning and teaching.
3.4 Personal Needs	3.4.1 Recognises own personal, physical and emotional needs and is aware of the pathways available for assistance.
3.5 Medical humanities	3.5.1 Engages in scholarship of the arts and humanities to interpret the diverse human experience of health, illness and medical care.
4. Scientific basis of medicine	**Develops and applies a sound understanding of the scientific foundations (social, basic and clinical) of medical practice.**
4.1 Applies Science to Practice	Applies an understanding of the social and biomedical sciences to the assessment and management of the health needs of individuals and populations: 4.1.1 Demonstrates an understanding of the body as a complex adaptive biological system. 4.1.2 Applies an understanding of the basic, social and clinical sciences to clinical reasoning. 4.1.3 Explains the underlying mechanisms of health problems. 4.1.4 Explains the underlying mechanisms of investigative and therapeutic measures, including emerging technologies. 4.1.5 Applies an understanding of the psychological and social sciences to interpret health and illness within a social and cultural context.
4.2 Uses Evidence	Seeks, critically appraises and applies best available evidence relevant to health and illness in individuals and populations.
4.3 Research	4.3.1 Takes opportunities to engage in research and scientific endeavour. 4.3.2 Applies an understanding of research rigour by formulating answerable research questions, selecting appropriate study designs, synthesising, critically analysing and disseminating research findings. 4.3.3 Applies an understanding of ethical principles, and relevant guidelines and laws, to the conduct of research

Subject Content

1. Three Conference Weeks
2. 10 weeks of Surgery in a hospital practicum

3. 10 weeks of Medicine in a hospital practicum
4. 10 weeks of Medicine in Context in community-based practicum
5. Five weeks of Critical Care in a hospital practicum
6. Three Scientific Streams online learning packages (25 hours each)
7. One Evidence-Based Medicine project

MEDI 3004 Medical Research Project

Credit Points 60

Legacy Code 400813

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This is a 60 credit point year-long subject taken over two terms (30 credit points in each term). This subject is the principal component in the Bachelor of Medical Research. It aims to give students, enrolled in the Western Sydney University MBBS, the opportunity to develop their critical thinking and gain a more detailed experience in medical research than is provided in the medical program. It consists of a research project in any area of medical research for which the School can provide suitable supervision. Students will study the relevant literature, develop and conduct the program of research with the assistance of their supervisor, take part in research seminars in their research group, and present the results as a dissertation. The main learning outcomes are a subset of the 15 Learning Tasks/Outcomes for the medical program as a whole, but will be achieved at a considerably higher level than is expected in the main MBBS program. The task numbers relate to the complete set in the MBBS learning outcomes.

School Medicine

Discipline Medical Studies, Not Elsewhere Classified.

Pre-requisite(s) MEDI 1002 AND
MEDI 2002

Co-requisite(s) Must pass two of the following- HLTH 3006 Methods of Scientific Researching HLTH 2021 - Research Methods (Quantitative and Qualitative) HLTH 1001 -Foundations of Research and Evidence-Based Practice

Restrictions This program requires the background of at least two years of a medical degree before it can be successfully attempted. It will therefore be available only to currently enrolled Western Sydney University medical students as part of an intercalated year leading into the Bachelor of Medical Research.

Assumed Knowledge

Knowledge from successful completion of years 1 and 2 of Bachelor of Medicine, Bachelor of Surgery (MBBS).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Task 11. Seeking and applying knowledge: G.11. in seeking and applying knowledge to health problems &#65533;c; G.11.1 Identify the question/s posed by the health problem; G.11.2 Find information efficiently to answer the question/s; G.11.3 Evaluate the quality of the information / evidence; G.11.4 Decide whether to apply the information / evidence to the problem, and justify the decision taken.
2. Task 12. Developing new knowledge: G.12. in developing new knowledge &#65533;c; G.12.1 Identify gaps in existing knowledge, and develop precise research questions; G.12.2 Plan, design and implement (alone or in appropriate collaboration) studies designed to answer the research question(s); G.12.3 Write up and submit for publication (alone or in appropriate collaboration) the results of such studies; G.12.4 Provide clear and intelligible presentations of the results of such studies in appropriate professional forums

Subject Content

1. Identify an area of achievable research in consultation with the supervisor of the unit
2. Perform a detailed literature search and analysis, relevant to the area of proposed research
3. Develop a research plan
4. Obtain ethical approval
5. Perform the planned experiments
6. Present the literature review then the interim research findings to the supervisor?fs research group and/or other B Med Res students at intervals during the year
7. Present the literature review, research plan, results and discussion as a dissertation for examination

Restrictions

Restricted to students enrolled in 4758 - Doctor of Medicine (MD). Students must also meet the inherent requirements of the program as outlined in the University of Western Sydney Inherent Requirements for Medicine: (www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses). Inherent requirements are personal capabilities which are essential for achieving the learning outcomes of the program or subject in a way that will preserve the integrity of the University teaching, learning and assessment standards and the accreditation requirements for the program. The Disability Education Standard, Section 3.4 (3) states: In assessing whether an adjustment to the Course, Unit of the Course or program in which the student is enrolled, or proposes to be enrolled, is reasonable, the provider is entitled to maintain the academic requirements of the Course or program, and other requirements or components that are inherent in or essential to its nature. Note: In providing for students with disabilities, a provider may continue to ensure the integrity of its Courses or programs and assessment requirements and processes, so that those on whom it confers an award can present themselves as having the appropriate knowledge, experience and expertise implicit in the holding of that particular award.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

Medical professional competencies in
- Application of science to understanding of health and disease
- Evaluation of health and disease in individuals and communities
- Evidence based practice and introductory research skills
- Teaching and evaluation of learning
Scholarly competencies in
- Academic literacy
- Critical inquiry through application of the biomedical, psychological and social sciences, arts and humanities Self-evaluation and critical reflection on learning, personal and professional development

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement. Use the link to the Special Requirements webpage below for more information. http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements (http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Students are required to obtain and provide all necessary documentation to be verified by NSW ClinConnect. This verification is a requirement of the NSW Health Department for all students enrolled in medical programs. If a student fails to produce this documentation to ClinConnect they will not be able to attend hospital and health service teaching sessions, and placements. Attendance is a mandatory requirement of the program to ensure that professional competencies are met. Failure to attend will result in a Fail Grade for the subject. Documents that must be provided to ClinConnect are:
1. National Police Certificate
2. Adult Health Immunization Schedule
3. Code of Conduct Agreement

MEDI 3006 Applied Clinical Sciences 1

Credit Points 80

Legacy Code 401278

Coordinator Priya Acharya (https://directory.westernsydney.edu.au/search/name/Priya Acharya/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). Applied Clinical Sciences 1 is the first major clinical year of the Doctor of Medicine. Students will apply and extend the knowledge and skills gained in previous subjects during clinical and community placement rotations. Attachment modules Surgery 1 and General Medicine 1 each cover two placement rotations. The Critical Care 1 placement includes experience in the Emergency, Intensive Care, and Anaesthetics departments. The Medicine in Context 1 placement focuses on community-based aspects of the health care system, including community services and general practice. The Doctor of Medicine MD Scholarly Project attachment rotation will be conducted in a site suited to the student's medical research, service, or education project. Placement sites include the Campbelltown, Blacktown/Mt Druitt, Bankstown, Fairfield and Liverpool hospitals, and a variety of community organisations throughout the Greater Western Sydney region. Theoretical Modules support student experiential learning and research skills development in the clinical and community placements. These are 'Evidence -based Medicine and Research Skills 1', 'Professional and Personal Development 1', 'Scientific Streams 1'. Students continue preparation of their Professional Practice Portfolio. Students undertake a minimum of 1050 clinical practice hours, a 175-hour project rotation, and 3 conference weeks in this unit. Travel and accommodation - Students are required to arrange and pay for their own travel, accommodation, and living expenses for the duration of the placement rotations.

Restrictions

Students must be enrolled in program 4758 Doctor of Medicine.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Patient care - Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Health in the Community - Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Personal & professional development - Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Scientific basis of medicine - Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

1. Theoretical Modules
i. Professional Practice Portfolio 1
ii. Scientific Streams- 1
- cardiac disease
- Immunity and allergy
- nutrition and metabolism
iii. Professional and Personal Development 1
iv. Evidence-based Medicine and Research Skills 1
2. Attachment Modules (and clinical practicum)
i. Critical Care 1 (Clinical attachment 5 weeks)
ii. Surgery 1 (Clinical Attachment 10 weeks)
iii. General Medicine 1 (Clinical Attachment 10 weeks)
iv. Medicine in Context (Clinical attachment 5 weeks)
3. Conference

Special Requirements

Legislative pre-requisites

Students are required to obtain and provide all necessary documentation to be verified by NSW ClinConnect. This verification is a requirement of the NSW Health Department for all students enrolled in medical programs. If a student fails to produce this documentation to ClinConnect they will not be able to attend hospital and health service teaching sessions, and placements. Attendance is a mandatory

requirement of the program to ensure that professional competencies are met. Failure to attend will result in a Fail grade for the subject.

All Students

To be eligible to enrol in and attend a health-related placement in your program, students must meet Western Sydney University requirements **and** Special Legislative Requirements to be assessed in their first year of study against the following:

1. National Criminal History Check: Students must have a current check, valid for their entire program. Criminal history check must be an Australia wide check, include the student's full name matching their Student ID card and date of birth offences listed. If a student has a criminal history identified on their check, they must provide a Clinical Placement Authority Card (CPAC from the NSW HealthShare Employment Screening and Review Unit:https://www.health.nsw.gov.au/careers/student_clearance/Documents/appendix-10-student-application.pdf

International students must additionally have a translated International Police Check or statutory declaration.

2. A NSW Working with Children Check (WWCC) clearance letter issued under the category of volunteer valid for their entire program.

3. A completed vaccination/immunisation card with all serology results containing expiry dates and currency must be maintained by the compliance for their entire program.

4. NSW Undertaking/Declaration form.

5. Completed any additional health forms required (such as NSW Health Code of Conduct, Health Student Undertaking/Declaration and Assessment Tool).

6. Relevant Local Health District specific documentation as requested. Contact your School for further details. Resources are also available on the Placement Hub (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/) website.

Inherent Requirements

Students must also meet the inherent requirements of the program as outlined in the University of Western Sydney University Inherent Requirements for Medicine:

(www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses). (https://hbook.westernsydney.edu.au/subject-details/medi3006/www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses).html)

Inherent requirements are personal capabilities which are essential for achieving the learning outcomes of the Program or Subject in a way that will preserve the integrity of the University's teaching, learning and assessment standards and the accreditation requirements for the program. The Disability Education Standard, Section 3.4 (3) states:

"In assessing whether an adjustment to the course, unit of the course or program in which the student is enrolled, or proposes to be enrolled, is reasonable, the provider is entitled to maintain the academic requirements of the course or program, and other requirements or components that are inherent in or essential to its nature. Note: In providing for students with disabilities, a provider may continue to ensure the integrity of its courses or programs and assessment requirements and processes, so that those on whom it confers an award can present themselves as having the appropriate knowledge, experience and expertise implicit in the holding of that particular award."

Level Undergraduate Level 3 subject

Restrictions

Students must be enrolled in 4656 Bachelor Health Science in either the T021 Public Health, T018 Health Promotion or T019 Health Services Management testamur major and have completed 160cp.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a capacity for critical self-assessment regarding professional competence, social and professional responsibility and ethical conduct
2. Identify the elements of best practice from a health policy, process or program perspective using a range of evidence-based sources and discuss how these elements can be applied to contemporary health practice
3. Evaluate a current policy, process or program within an organisational setting, using a range of techniques for measurement and evaluation
4. Develop recommendations for a policy, process or program within an organisational setting
5. Collate information, write relevant reports and disseminate information to stakeholders and peers
6. Collaborate professionally and effectively as part of a work team to achieve a shared goal

Subject Content

1.Health competencies and professional behaviour
2.Models of self-reflection
3.Managing the supervisory relationship
4.What is best practice
5.Case studies of best practice and innovation
6.Applying best practice to contemporary health practice.
7.Developing best practice interventions
8.Evaluating best practice interventions
9.Develop future recommendations for interventions

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

MEDI 3008 Mortuary Practice

Credit Points 10

Legacy Code 301394

Coordinator Hayley Green (https://directory.westernsydney.edu.au/search/name/Hayley Green/)

Description This subject introduces the student to processes and techniques used in a forensic mortuary context. Students will undertake activities that prepare them for clinical placement with an operational forensic mortuary setting, which includes a brief placement within a NSW Forensic and Analytical Science Service (FASS) facility or NSW Organ and Tissue Donation Service. Student must have demonstrated full compliance with NSW Health placement requirements in the first year of their candidature before enrolling in this subject and 301128 Advanced Mortuary Practice. This subject, together with completion of 301128 Advanced Mortuary Practice is essential for graduates of this course seeking employment as a forensic mortuary technician with FASS.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Co-requisite(s) NATS 2004

Restrictions

Students must be enrolled in 3733 Bachelor of Medical Science (Forensic Mortuary Practice) and successfully completed 120 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply principles of safe work practice
2. Demonstrate knowledge of key Acts, policies and procedures directly related to a forensic mortuary facility
3. Reflect on the role of the forensic mortuary technician
4. Demonstrate professional behaviours, communication skills and self management
5. Apply beginning level skills in forensic mortuary practices
6. Appraise practice experiences and skills
7. Produce industry relevant documentation for forensic mortuary practice

Subject Content

Professional attitudes and behaviour
Professional roles and relationships
Professional communication skills
Legislative requirements related to practice
Professional ethics
Safe work practices
Scope of mortuary practice
Forensic mortuary practice skills

Special Requirements

Legislative pre-requisites

To be eligible to enrol in a subject and attend a health-related placement in your program, students must meet Western Sydney University program requirements and Special Legislative Requirements to be assessed in their first year of study against the following.
1. National Criminal History Check: Students must have a current (expiring 3 years from date of issue) check valid for their entire program. A valid National Criminal history check must be an Australia wide check, include the student's full name matching their Student ID card and date of birth and not have any offences listed. If a student has a criminal history identified on their check, they must provide a Clinical Placement Authority Card (CPAC) or conditional letter from the NSW HealthShare Employment Screening and Review Unit https://www.health.nsw.gov.au/careers/student_clearance/Documents/appendix-10-student-application.pdf
International students must additionally have a translated International Police Check or statutory declaration.
2. A NSW Working with Children Check (WWCC) clearance letter issued under the category of volunteer valid for their entire program.

3. A current approved first aid certificate valid for their entire program. Approved provider courses can be found at http://training.gov.au (http://training.gov.au/).
4. A completed vaccination/immunisation card with all serology results containing expiry dates and currency must be maintained by the student to ensure compliance for their entire course.
5. NSW Undertaking/Declaration form.
6. Completed any additional health forms required (such as NSW Health Code of Conduct, Health Student Undertaking/Declaration and Tuberculosis (TB) Assessment Tool).
7. Relevant Local Health District specific documentation as requested.

Contact your School for further details. Resources are also available on the Placement Hub (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/) website.

MEDI 3009 Foundational Diagnostic Imaging

Credit Points 10

Legacy Code 401468

Coordinator Paul Stoodley (https://directory.westernsydney.edu.au/search/name/Paul Stoodley/)

Description This subject will introduce students to a range of diagnostic imaging modalities providing an overview of both the technical and practical aspects. Three imaging modalities will be covered, MRI, cardiac sonography and vascular sonography. Within the MRI module, you will learn how to view MRI images and compare them with CT/ultrasound as well as understand the clinical values of each modality and the risks associated. In the cardiac module you will learn the principles of cardiac ultrasound image acquisition, methods used to evaluate cardiac anatomy and function, and the essentials of complimentary tests such as electrocardiograms and stress tests. In the vascular module, undertaking non-imaging assessments will be covered, alongside imaging principles. The practical skills are aimed at providing students with a working knowledge of imaging modalities and enhancing students' prospects of successful application for a training position. The majority of this course is delivered online. However, students must attend a compulsory one-day face-to-face practical skills workshop at Blacktown clinical school.

School Medicine

Discipline Medical Studies, Not Elsewhere Classified.

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explore key imaging concepts and principles to inform clinical practice
2. Review 3D and relational anatomy and the relationship to advanced diagnostic imaging
3. Apply theories and strategies used in the performance of both imaging and non-imaging assessments
4. Assess the clinical values of different imaging modality covering diagnostic confidence of each modalities and the risks associated
5. Examine professional pathways and development within medical imaging

Subject Content

MRI: MR image acquisition / 3D and relational anatomy / clinical aspect.
Cardiac ultrasound: image acquisition / evaluating anatomy and function / complimentary tests.
Vascular ultrasound: image acquisition / evaluating anatomy and haemodynamics / non-imaging assessments.

Assessment

MEDI 4001 Integrated Clinical Rotations 2

Credit Points 80

Legacy Code 400811

Coordinator Phillipa Hay (https://directory.westernsydney.edu.au/search/name/Phillipa Hay/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). Integrated Clinical Rotations 2 is the second major clinical year of the MB BS program. It consists of 9 weeks in each of Paediatrics, Obstetrics & Gynaecology and Mental Health and four weeks in each of Oncology/Palliative Care and Community Research. There will also be 2 weeks of "Year 4 Campus Learning". These will be one week each and held at either Campbelltown Campus or Blacktown Clinical School. During the year, students will be based at a number of appropriate hospitals throughout Sydney, Bathurst and Lismore. Students will also undertake 3 online learning modules (Scientific Streams). Students will complete a reflective portfolio. Slight variations in the delivery of ICR2 occur in the Rural clinical schools. Learning outcomes & assessment requirements do not differ.The subject outline is available from the link on the left-hand menu.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 40cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) MEDI 3003

Restrictions

Students must be enrolled in 4641 Bachelor of Medicine/Bachelor of Surgery.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care as a member of an interdisciplinary team under appropriate supervision; Communication, Patient Assessment, Patient Management.
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander Australia; Determinant of Health and Illness, Health Needs, Health Care Systems, Health Promotion, Indigenous Health.
3. Demonstrates and develops professional skills, responsibilities and attitudes; Ethical Practice, Teamwork, Learning and Teaching, Personal Needs, Medical humanities.
4. Develops and applies a sound understanding of the scientific foundations (social, basic and clinical) of medical practice; Applies Science to Practice, Uses Evidence, Research.

Subject Content

Integrated Clinical Rotation 2 (ICR 2) consists of three 9-week attachments in each of Mental Health, Paediatrics, Obstetrics & Gynaecology and two 4-week attachments in Community Research and Oncology, in addition to two Campus Learning weeks.
1. Obstetrics & Gynaecology
- normal Pregnancy and childbirth
- The more common obstetric emergencies
- The principles of antenatal and Postnatal care
- aspects of family planning
- common women's health problems
2. Mental health - discuss and describe (at the level of an undifferentiated practitioner) the assessment, aetiology, epidemiology, classification, phenomenology, medical and psychological co-morbidities, prognosis and management of the following psychiatric problems:
- Affective (mood) disorders
- anxiety disorders
- common disorders of childhood and adolescence (including autism; ADHD, ODD and separation anxiety)
- disorders related to Pregnancy and The post-natal period
- eating disorders
- loss and other crises
- organic Brain disorders (particularly delirium and dementia)
- personality disorders
- schizophrenia and related psychoses
- somataform disorders (including chronic pain, unexplained physical syndromes and psychological problems in general medicine)
- substance Abuse and dependence
- suicidal and Dangerous behaviour
3. Paediatrics - students will be prepared for encounters, in their early postgraduate years, with children.
- Recognition of A sick child
- management of common diseases
- challenges faced by children with disability
- The value of public health interventions such as Vaccination and newborn Screening
- problems faced by indigenous children
4. Oncology
- talking with and Examining people affected by all stages of cancer
- talking with and Examining people affected by all common cancers
- observing all components of multidisciplinary cancer care
- Seeing shared decision-making between people with cancer and their doctors
- talking with and Examining dying people
- students will experience management of cancer in all stages of disease, predominantly Managed in A non-inpatient setting, although inpatient and emergency management is also involved as well as dedicated time in A Palliative care unit Seeing inpatient, community and Home care.
5. Community Research
The Community Research (CR) rotation aligns with the broader goals of the School of Medicine to improve the health of communities in Greater Western Sydney and other under-served areas through education and research. The aim of the rotation is to extend students' previous learning on research skills such as; literature review, critical appraisal, biostatistics, quantitative and qualitative research and evidence-based medicine by supporting the student in undertaking research that investigates the relationships between determinants of health, access to healthcare and health outcomes.
6. Personal and Professional Development (PPD)
- ethics case presentation and written statement

- learning journal
For the ethics case presentation and analysis, students are required to present a case with significant et

MEDI 4002 Integrated Clinical Rotations 3

Credit Points 40

Legacy Code 400977

Coordinator Benjamin Woodham (https://directory.westernsydney.edu.au/search/name/Benjamin Woodham/)

Description The Subject Outline for this subject can be found by clicking on the "Current MBBS, MD Subject Outlines" link in the left-hand menu. Integrated Clinical Rotation 3 is the first session of the third major clinical year of the MB BS program. It consists of five weeks in each Medicine, Surgery, General Practice or Indigenous Health or ICU, ED & Anaesthetics. There will also be two Conference weeks where all students will be based at either Campbelltown Campus, Macarthur Clinical School or Blacktown Clinical School. Students will be based at a number of appropriate hospitals throughout Sydney. Students will also undertake two online learning modules (Scientific Streams). Students will also undertake a reflective portfolio. The subject outline is available from the link on the left-hand menu.

Level Undergraduate Level 4 subject

Pre-requisite(s) MEDI 4001

Restrictions

Students must be enrolled in 4641 Bachelor of Medicine/Bachelor of Surgery.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Patient Care: Provides patient centred care as a member of an interdisciplinary team under appropriate supervision; Communication, Patient Assessment, Patient Management.
2. Health in the Community: Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander Australia; Determinants of Health & Illness; Health Needs; Health Care Systems; Health Promotion; Indigenous Health.
3. Personal and professional development: Demonstrates and develops professional skills, responsibilities and attitudes; Ethical Practice, Teamwork, Learning & Teaching, Personal Needs, Medical humanities.
4. Scientific basis of medicine: Develops and applies a sound understanding of the scientific foundations (social, basic and clinical) of medical practice; Applies Science to Practice, Uses Evidence, Research.

Subject Content

1. Elective (Five weeks)
2. Five weeks of Medicine in a hospital practicum and
3. Five weeks of Surgery in a hospital practicum and
4. Five weeks of General Practice in a practicum or
5. Five weeks of Indigenous Health in a community practicum or
6. Five weeks of ICU, ED & Anaesthetics in a hospital practicum
7. Conference weeks x 2, including one in the last week of Teaching
8. Two Scientific Streams ? on line learning packages appropriate to rotation (25 hours each)

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites Pre-requisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western

Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Professional Placement Performance	30-60 minutes each	S/U	Y	Individual
Final Exam	The assessment will consist of three 2-hour papers containing Multiple Choice Questions (Paper A), a mixture of Modified Essay Questions and Short Answer Question format (Paper B) and Extended Matching Questions (Paper C).	S/U	Y	Individual
Professional Placement Performance	Case-Based Discussions Clinical One assessment consisting of at least three scenarios of 10 minutes each. Prescribing Skills Assessment Examination Online exam, Summative Long case 80 minutes	S/U	Y	Individual
Essay	Throughout the Year	S/U	Y	Individual
Reflection	1200-1500 words	S/U	Y	Individual
Quiz	There is a total of 25 hours per module through out the Year	S/U	Y	Individual
Learning Contract	Throughout the Year	S/U	Y	Individual
Participation	Throughout the Year	S/U	Y	Individual

MEDI 4005 Professional Portfolio 3

Credit Points 10

Legacy Code 401259

Coordinator Jennifer Mcdonald (https://directory.westernsydney.edu.au/search/name/Jennifer Mcdonald/)

Description This is a 10 credit point year-long subject taken over two terms (5 credit point in each term). This subject is the third of five Professional Portfolio subjects which will provide students in the Doctor of Medicine (MD) program with the means to monitor and support their acquisition of professional competencies in medicine. Supported by workshops, resources and your Academic and Project Supervisors, you will collate and review evidence of your learning, such as clinical assessments and case studies, preparatory work and outcomes from research and scholarly projects. By identifying and addressing your learning and professional development needs, you will create your own personalised learning journey as the basis for life-long learning in medicine. The Professional Portfolio will also prepare you for the portfolios used extensively in post graduate specialty training in medicine.

Level Undergraduate Level 4 subject

Pre-requisite(s) MEDI 2001 AND
MEDI 3005

Co-requisite(s) MEDI 3001

Restrictions

Restricted to students enrolled in 4758 - Doctor of Medicine (MD). Students must also meet the inherent requirements of the program as outlined in the University of Western Sydney Inherent Requirements for Medicine: (www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses). Inherent requirements are personal capabilities which are essential for achieving the learning outcomes of the program or subject in a way that will preserve the integrity of the University teaching, learning and assessment standards and the accreditation requirements for the program. The Disability Education Standard, Section 3.4 (3) states: In assessing whether an adjustment to the Course, Unit of the Course or program in which the student is enrolled, or proposes to be enrolled, is reasonable, the provider is entitled to maintain the academic requirements of the Course or program, and other requirements or components that are inherent in or essential to its nature. Note: In providing for students with disabilities, a provider may continue to ensure the integrity of its Courses or programs and assessment requirements and processes, so that those on whom it confers an award can present themselves as having the appropriate knowledge, experience and expertise implicit in the holding of that particular award.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

Medical professional competencies in
- Application of science to understanding of health and disease
- Evaluation of health and disease in individuals and communities
- Application of evidence based practice and research skills
- Teaching and evaluation of learning
- Application of clinical and professional skills in clinical and community settings
Scholarly competencies in
- Academic literacy
- Aspects of the research process, including problem and question formulation, data collection and analysis
- Critical inquiry through application of the biomedical, psychological and social sciences, arts and humanities
Self-evaluation and critical reflection on learning, personal and professional development

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement. Use the link to the Special Requirements webpage below for more information. http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements (http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Students are required to obtain and provide all necessary documentation to be verified by NSW ClinConnect. This verification is a requirement of the NSW Health Department for all students enrolled in medical programs. If a student fails to produce this documentation to ClinConnect they will not be able to attend hospital and health service teaching sessions, and placements. Attendance is a mandatory requirement of the program to ensure that professional competencies are met. Failure to attend will result in a Fail Grade for the subject.
Documents that must be provided to ClinConnect are:
1. National Police Certificate
2. Adult Health Immunization Schedule
3. Code of Conduct Agreement

MEDI 4006 Honours Project (Medicine)

Credit Points 0

Legacy Code 401172

Coordinator Phillipa Hay (https://directory.westernsydney.edu.au/search/name/Phillipa Hay/)

Description Students who meet prerequisite requirements are offered an opportunity in this Subject to undertake enhanced research and scholarship activities while enrolled in the Bachelor of Medicine / Bachelor of Surgery (MBBS) 4641.5. A key objective is to assist students towards the independent application of knowledge and skills in the principles and methods of medical research on a specialist topic of their choice. With supervision, students will further develop their ability to critically evaluate theories and evidence in disciplines relevant to medicine, and to disseminate their work to a range of audiences. Prior to enrolment in the subject, students must have satisfactorily completed a Research Portfolio and given a 10 minute oral PowerPoint presentation summarising the research program and outcomes. The presentation is to be at a venue approved by the research supervisor and the supervisor must consider the presentation to be of a satisfactory standard.

School Medicine

Discipline General Medicine

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 4 subject

Pre-requisite(s) MEDI 4002

Co-requisite(s) MEDI 4003

Restrictions Due to the GPA requirements for the Honours Award, this subject is restricted to students enrolled in 4641 MBBS who have achieved an overall program GPA ? 5.5 (combining grades from 400861 Foundations of Medicine 1, 400862 Foundations of Medicine 2, 400810 Integrated Clinical Rotations 1, 400811 Integrated Clinical Rotations 2 and 400977 Integrated Clinical Rotations 3) in order for the student to have a realistic expectation of achieving and Honours Award of ? Class II Division II. Students must be concurrently enrolled in subject 400978, Integrated Clinical Rotations 4 in Session 2H to be enrolled in the subject. Prior to enrolment in the Unit, students must have satisfactorily completed both the Seminar Presentation and Research Portfolio requirements. To obtain pre-approval, a structured research proposal, endorsed by a research supervisor, must be submitted to the School of Medicine Research and Higher Degrees Committee (RHDC) for review. The research proposal may be submitted to the RHDC any time between the completion of subject 400861, Foundations of Medicine 1 and before commencement of subject 400811, Integrated Clinical Rotations 2. Pre-approval must be obtained prior to collating evidence towards the Research Portfolio. The Research Portfolio will comprise written documentation and evidence of a pre-approved program of research, including a research supervisor endorsement stating that 200 hours was spent on the research.

Assumed Knowledge

MBBS Years 1 to 4 research methodology. Students will be expected to have applied knowledge and skills in designing and conducting research.

Learning Outcomes

On successful completion of this subject, students should be able to:
1. Demonstrate academic writing skills required for writing peer reviewed journal publications
2. Independently identify and seek to address own learning needs for the planning and completion of a defined program of research
3. Seek, critically appraise and apply best available evidence relevant to a defined program of research
4. Demonstrate research rigour by systematically formulating answerable research questions, selecting and implementing appropriate study designs to generate, support or refute a testable hypothesis

5. Demonstrate an understanding of all aspects of the research process, including appropriate data collection and data analysis methods, and the synthesis, appraisal and dissemination of research findings
6. Apply ethical principles, relevant guidelines and laws to the conduct of own research

Subject Content

There is no formal teaching for the Unit. The workload is self-managed, supported by regular meetings with research supervisor(s). The Unit requires submission of an Honours dissertation, a seminar presentation and a research portfolio, together with attainment of the minimum GPA. Students will be assisted individually by their supervisor(s) to develop and apply skills in critical analysis, evaluation and synthesis of their research findings with knowledge from relevant disciplines. Students will be assisted by their supervisor(s) to develop academic writing and oral presentation skills to an Honours standard.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Thesis	5000 – 8000 words, may be less if submitted in the form of an approved journal manuscript	S/U	Y	Individual
Presentation	10 minute PowerPoint presentation followed by Question and Answer session	S/U	Y	Individual
Portfolio	Written documentation and evidence of completion of the pre-approved program of 200 hours of research	S/U	Y	Individual

MEDI 5001 Newborn and Infant Development

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject introduces students to the foundational concepts and knowledge of newborn and infant development required to understand the specialised area of infant health practice. Students will examine the key issues, concepts and topics that are specific to newborn and infant development. This subject covers the techniques needed to carry out a comprehensive newborn examination, and to be able to assess common acute, chronic, and critical issues in infancy to ensure improved health outcomes. Students will be provided with a practical approach to the management of newborn medical presentations, feeding and sleeping issues, and updates to the Australian Immunisation schedule.

MEDI 5002 Behaviour, development and disability

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject provides guidance to students in conducting a thorough paediatric history and examination, including strategies to engage children and communicate effectively with parents. Students will develop skills to assess normal childhood developmental milestones and behaviours, and recognise key factors that indicate at-risk and vulnerable populations so they can benefit from timely interventions. This subject specifically addresses common conditions such as ADHD, autism and language delay. This subject outlines non-pharmacological and pharmacological approaches to management for common behavioural and developmental issues in children. Students will learn to implement management plans effectively and advocate for vulnerable populations, including children with disabilities.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Learning Outcomes

Students will be able to:

1. engage with children and assess common child developmental and behavioural issues
2. use an evidenced based approach to investigations in children with suspected development disabilities
3. develop and communicate a multi-disciplinary management plan for children with behaviour and developmental concerns
4. advocate for early intervention to improve health outcomes for children and families

Subject Content

1. The First 2000 Days
2. Paediatric history and examination
3. Engaging Children
4. Children and families
5. Tantrums and other normal toddler behaviours
6. Behavioural problems in school age children
7. ADHD
8. Learning Difficulties
9. Approach to the child with developmental concerns
10. Speech and Communication Problems in Children
11. Hearing Impairment (Hearing Loss and Deafness in Children)
12. Autism Spectrum Disorder
13. Neural Tube Disorders
14. Cerebral Palsy
15. Trisomy 21 and other common genetic variations
16. The Importance of early intervention and the role of NDIS

17. Common problem for children with disabilities
18. Genetic Tests in Paediatrics - Choices and Challenges

MEDI 5003 Adolescent, mental health and health inequity

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject provides students with an informed, structured approach to common acute and chronic adolescent issues, including approaches to mental health (HEADSS), substance use, and sexual health assessments. This subject outlines evidence-based strategies in non-pharmacological and pharmacological management of common mental health conditions in adolescents and young adults. This subject includes insights from clinical experts on improving health outcomes for refugee populations and current global paediatric health initiatives aimed at improving child health outcomes. Experienced academics, clinical experts and adolescent health practitioners will provide students with resources to effectively communicate with adolescents and their families, understanding informed consent and confidentiality.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Learning Outcomes

Students will be able to:

1. assess common adolescent and mental health issues
2. arrange appropriate investigations to assist with diagnosis and minimise distress to adolescents
3. formulate differential diagnoses for common adolescent conditions and develop age-appropriate management strategies based on variety of evidence and sources
4. advocate and promote access to appropriate healthcare to improve health outcomes adolescents and at-risk populations

Subject Content

1. Approach to Adolescents
2. Informed consent and confidentiality
3. Cultural Context
4. Normal Puberty and Disorders of Puberty
5. Acne
6. Obesity
7. Paediatric and Adolescent Gynaecology
8. Adolescent Sexual health
9. Anxiety disorders in children and adolescents
10. Acute Mental Health Assessment of Children
11. Mood Disorders and Suicide
12. Eating Disorders
13. Drug and alcohol use in adolescents
14. Chronic Illness in Adolescents
15. Global paediatric healthcare initiatives
16. Health Issues in Disadvantaged Children

17. Health Issues in Indigenous Children
18. Refugee Health

MEDI 5004 Emergency and acute care

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject is designed to provide students with a systematic approach to assess common emergency presentations in children, including unwell infants, febrile children, and children with breathing difficulties. Students are guided by clinical experts in the provision of emergency care and appropriate referral pathways to maximise patient outcomes, minimise complications and avoid unnecessary hospital presentations. Students will learn to communicate effectively with parents enabling them to detect and manage common clinical situations and prevent adverse outcomes. In this subject, students learn to identify children at risk and appropriately intervene and advocate to ensure safety and protection of these children.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 5 subject

Learning Outcomes

Students will be able to:

1. recognise and assess common emergency presentations utilising primary and secondary resources to support
2. facilitate timely and appropriate investigations in an emergency setting
3. initiate emergency management prior to escalation of care
4. advocate for appropriate access to services for children at-risk based on Australian and international requirements for ethical conduct and professional standards

Subject Content

1. Paediatric Resuscitation
2. The Approach to the Unwell Infant
3. Approach to the febrile infant
4. Approach to the Febrile Child
5. Approach to the Child with Breathing Difficulties
6. Febrile Seizures
7. The Fitting Child
8. Approach to the Drowsy / Unconscious Child
9. Approach to the Vomiting Child and Dehydration
10. Acute Abdomen
11. Intussusception and Bowel Obstruction
12. Anaphylaxis Management
13. Paediatric Trauma
14. Burns
15. Paediatric Endocrine Emergencies
16. The Poisoned child (Toxicology)
17. Recognising and Reporting Child Abuse
18. Paediatric Pain Management

19. Musculoskeletal Imaging
20. Nuclear Medicine

MEDI 6001 Cardiorespiratory, ENT and Allergy

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject provides participants with a systematic approach to the assessment of children with common cardiorespiratory, ENT and allergy presentations, a structured approach to management, and practical advice on communicating care plans and health promotion strategies with parents and carers. This subject specifically addresses chest pain, asthma, bronchiolitis, tonsillitis and dermatitis. Students will learn to differentiate between common food allergies and intolerances and arrange appropriate investigations to assist with diagnosis minimising cost and distress to the family. Throughout this subject, students will consider the specific health needs of our First Nations people to maximise health outcomes and close the gap.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Learning Outcomes

Students will be able to:

1. examine common cardiorespiratory, ENT and allergy related presentations in children
2. implement appropriate investigations to support diagnosis while minimising unnecessary cost and distress to the patient
3. design and implement age-appropriate management strategies for common respiratory and ENT conditions
4. communicate effective management and prevention strategies with parents and children to maximise health outcomes

Subject Content

1. Cardiac
2. Congenital Upper Airway Issues
3. Acute Upper Airway Obstruction
4. Asthma and wheeze – acute care
5. Chronic Asthma
6. Bronchiolitis
7. Pneumonia
8. Chronic Suppurative Lung Disease in Children
9. Chest imaging
10. Sleep and Sleep disorders
11. Obstructive sleep apnoea
12. Tonsillitis
13. Outer and Middle Ear Conditions
14. ENT mix - epistaxis, salivary glands, chondritis/perichondritis
15. An Approach to allergy

16. Medication Allergies and Adverse Reactions
17. Insect allergies
18. Food Allergies – IgE-mediated
19. Food Intolerances
20. Asthma / Rhinitis – immune/allergic implications and immunotherapy
21. Atopic Dermatitis
22. Immunotherapy Update

MEDI 6002 Gastroenterology, Urology and other specialties

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject examines gastroenterological, urological and haematological presentations commonly encountered in paediatric clinical practice. It provides students with a systematic approach to assessment and practical advice on communicating with parents and carers. This subject focuses on common conditions in primary care, including the approach to abdominal pain, nocturnal enuresis and urinary tract infections. Students learn the essential work-up and critical management for these conditions. This subject also addresses the assessment and management of anaemia, bleeding disorders and childhood malignancy. This subject includes health promotion strategies and parental education to ensure parents recognise when there is a need for emergency care.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Learning Outcomes

Students will be able to:

1. detect, evaluate, and assess common gastroenterological and urological presentations
2. use an evidence-based approach to investigation to support diagnosis
3. devise management strategies for common gastroenterological and urological conditions to maximise health outcomes
4. promote health awareness on common issues such as bedwetting and urinary tract infections in children based on Australian and international requirements for ethical conduct and professional standards

Subject Content

1. Approach to Recurrent Abdominal Pain in Children
2. Eosinophilic Oesophagitis
3. Coeliac disease
4. Liver Disease in Children
5. Inflammatory Bowel Disease
6. Constipation and faecal incontinence
7. Chronic Diarrhoea
8. Abdominal Imaging

9. Urinary incontinence
10. Urinary Tract Infection and Vesico-Ureteric Reflux
11. Haematuria and Proteinuria
12. Hypertension in Children
13. Diabetes Mellitus
14. Approach to Growth Disorders in Children
15. Anaemia
16. Neutrophil and Platelet Disorders
17. Bruising and Bleeding in Children
18. Approach to Childhood Malignancy
19. Paediatric Palliative Care

MEDI 6003 Infectious Disease and Autoimmune conditions

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject covers a structured approach to the recognition and assessment of acute and critical childhood infections commonly encountered in primary care, from common paediatric skin infections and gastroenteritis to bone and joint infections and meningitis. This subject also addresses antibiotic resistance and teaches best prescribing practices. Given the incidence and impact of paediatric skin infections globally, students will also develop a systematic approach to address health inequities experienced by children both nationally and internationally. This subject also addresses common childhood autoimmune conditions and juvenile arthritis, providing students with a systematic approach to assessment and management of these conditions.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Learning Outcomes

Students will be able to:

1. assess and diagnose common paediatric infections
2. use investigations aligned with ethical and professional standards to support the diagnosis of common childhood infections and autoimmune conditions
3. devise evidence-based management strategies
4. communicate effective management with parents and families and advocate for improved health outcomes at population level

Subject Content

1. Common Childhood Viral Infections
2. Paediatric Skin Infections
3. Gastroenteritis
4. Bone and Joint Infections
5. Meningitis
6. COVID-19 In Children
7. Managing COVID in the community
8. Rheumatic fever and its complications

9. Approach to the returned paediatric traveller
10. Tropical disease (Malaria, Typhoid , Dengue)
11. Tuberculosis in Children
12. HIV
13. Antibiotics and Resistance
14. Immunodeficiencies
15. Rheumatic Diseases in Children
16. Arthritis in Children
17. Recurrent fever syndromes

MEDI 6004 Neurology, Musculoskeletal and Surgical problems

Credit Points 10

Coordinator John Morley (https://directory.westernsydney.edu.au/search/name/John Morley/)

Description This subject introduces the key features of a comprehensive neurological examination. Clinical experts will guide the student on the important clinical features to recognise, assess and manage acute, chronic, and critical neurological disorders. This subject specifically addresses the approach to the child with weakness, headaches in children and concussion. It also addresses common surgical presentations providing students with a pathway of escalation of care. Participants will be provided with resources and advice for communicating the management plans of neurological and common surgical conditions with children, parents and carers and provide long-term surveillance and family support.

School Medicine

Discipline Paediatrics

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 6 subject

Learning Outcomes

Students will be able to:

1. assess common neurological, musculoskeletal and surgical presentations in children and young adults based on evidence-based approach
2. arrange appropriate neurological investigations to assist with diagnosis minimising cost to the patient and the system
3. formulate and communicate evidence-based management plans to maximise clinical outcomes in neurological and surgical conditions
4. provide long-term patient surveillance and family support for complex neurological conditions

Subject Content

1. Neurological examination in kids
2. Approach to the Child with Weakness
3. Seizure Mimickers in Children
4. Childhood Epilepsy
5. Headaches in Children
6. Hydrocephalus and Space-occupying lesions
7. Brain Injuries
8. Concussion

9. Common Eye Disorders in Childhood
10. Paediatric Dentistry
11. Postural Problems in Childhood
12. Scoliosis and Chest Deformities
13. The Limping Child
14. Common fractures and dislocations (Childhood Fractures)
15. Paediatric Sports Medicine
16. Common Surgical Problems 'North'
17. Common Surgical Problems 'South'
18. Child mortality and Injury prevention

MEDI 7002 Allergic Sciences 1

Credit Points 20

Legacy Code 401249

Coordinator Miriam Codarini (https://directory.westernsydney.edu.au/search/name/Miriam Codarini/)

Description This subject will consist of four online modules dealing with the immunological and clinical aspects of allergic diseases. These modules will cover basic immunology and fundamental theoretical and clinical concepts underlying Eczema and Contact Dermatitis, Urticaria and Angioedema, and Drug Hypersensitivity Reactions, Insect Allergy and Anaphylaxis. The purpose of Allergic Sciences 1 is to provide students with sound knowledge of essential immunological principles and common allergic conditions. Students will use self directed learning to link basic science with clinical understanding, and must attend a written exam at a university approved venue for one of the assessments.

School Medicine

Discipline Internal Medicine

Student Contribution Band HECS Band 3 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYA 7790 Allergic Sciences 1 AND LGYA 7791 Allergic Sciences 2 MEDI 7001 Allergic Sciences

Restrictions

Students must be enrolled in program Graduate Certificate in Allergic Diseases, the Graduate Diploma in Allergic Diseases (exit only) or Master of Medicine (Allergic Diseases). Students must be qualified and registered medical practitioners.

Assumed Knowledge

Must have completed a medical degree (MBBS, MBChB or equivalent qualification) and preferably have previous clinical experience.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the immune mechanisms involved in allergic disease pathogenesis and implications for diagnosis and treatment.
2. Examine the pathophysiology, epidemiology, clinical presentation and treatment of allergic skin disease, drug and insect allergy, and anaphylaxis.
3. Consider key aspects of the professional practice required of doctors caring for patients with allergic skin disease, drug and insect allergy, and anaphylaxis including their limitations and referral pathways for complex patients.

4. Apply critical thinking to assess and manage patients with allergic skin disease, drug and insect allergy, and anaphylaxis.
5. Acquire evidence based knowledge that informs best clinical allergy practice via online self-directed learning strategies.

Subject Content

This subject consists of four modules covering:
1. Immunology
2. Eczema and Contact Dermatitis
3. Urticaria and Angioedema
4. Drug Hypersensitivity Reactions, Insect Allergy and Anaphylaxis
These modules explain the immunological mechanisms underpinning allergic diseases and link basic science with clinical aspects of specific allergic diseases to provide students with clinically relevant knowledge.

The learning materials will enable students in the Graduate Diploma in Allergic Diseases (exit only) and Master of Medicine (Allergic Diseases) to undertake the required clinical experiences.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes x 4	S/U	N	Individual
Reflection	300 words x 4 (final mark is average of marks for all four reflections)	30	N	Individual
Multiple Choice	60 minutes	10	N	Individual
Final Exam	2 hours	60	N	Individual

MEDI 7003 Allergic Sciences 2

Credit Points 20

Legacy Code 401250

Coordinator Miriam Codarini (https://directory.westernsydney.edu.au/search/name/Miriam Codarini/)

Description This subject will consist of four online modules dealing with the immunological and clinical aspects of allergic diseases. These modules will cover fundamental theoretical and clinical concepts underlying Food Allergy, Allergic Airways Diseases, and Rhinoconjunctivitis, Sinusitis and Immunotherapy. The purpose of Allergic Sciences 2 is to complement Allergic Sciences 1 and provide students with comprehensive knowledge for managing patients with allergic conditions in clinical practice. Students will use self directed learning to link basic science with clinical understanding, and must attend a written exam at a university approved venue for one of the assessments.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7002

Equivalent Subjects LGYA 7790 - Allergic Sciences 1 and LGYA 7791 - Allergic Sciences 2 MEDI 7001 - Allergic Sciences

Restrictions

Students must be enrolled in the Graduate Certificate in Allergic Diseases or Master of Medicine (Allergic Diseases). Students must be qualified and registered medical practitioners.

Assumed Knowledge

Students must have completed a medical degree (MBBS, MBChB or equivalent qualification) and preferably have a basic understanding of core immunological concepts and previous clinical experience.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the immune mechanisms involved in allergic disease pathogenesis and implications for diagnosis and treatment.
2. Examine the pathophysiology, epidemiology, clinical presentation and treatment of food allergy and respiratory allergy.
3. Consider key aspects of the professional practice required of doctors caring for patients with food allergy and respiratory allergy, including their limitations and referral pathways for complex patients.
4. Apply critical thinking to assess and manage patients with food allergy and respiratory allergy.
5. Acquire evidence based knowledge that informs best clinical allergy practice via online self-directed learning strategies.

Subject Content

This subject consists of four modules covering:
1. Food Allergy ? IgE Mediated
2. Food Allergy ? Non IgE Mediated
3. Allergic Airways Disease
4. Rhinoconjunctivitis, Sinusitis and Immunotherapy

These modules link basic science with clinical aspects of specific allergic diseases to provide students with clinically relevant knowledge. The learning materials will enable students in the Graduate Diploma in Allergic Diseases (exit only) and Master of Medicine (Allergic Diseases) to undertake the required clinical experiences.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7004 Applications of Magnetic Resonance from Cancer to Neuroanatomy

Credit Points 10

Legacy Code 401203

Coordinator Bill Price (https://directory.westernsydney.edu.au/search/name/Bill Price/)

Description Magnetic resonance (MR) provides a suite of versatile information rich and non-invasive techniques of which magnetic resonance imaging (MRI), Magnetic Resonance Spectroscopy (MRS) and Nuclear Magnetic Resonance (NMR) spectroscopy are the best known. These techniques have enormous applications across the sciences (e.g., inorganic and organic chemistry) but increasingly to medicine (e.g., to cancer diagnosis and treatment). Western Sydney University has state-of-the-art MR infrastructure and an international reputation in MR development. This subject will explore the diverse applications and teach experimental practice and fundamental physical principles that underpin all the MR-based techniques. It is intended for medical science, medical and science students who use/intend to use NMR/MRI technology or merely want a deeper understanding of its rapidly expanding capabilities (e.g., functional MRI) and applications.

School Science

Discipline Medical Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate a clear understanding of the concepts of magnetic resonance and imaging.
2. Discuss the current and potential applications of magnetic resonance to medicine and other fields.
3. Conduct basic and advanced magnetic resonance experiments.
4. Process and analyse MRS and MRI data.
5. Apply magnetic resonance and imaging to other disciplines.
6. Understand OH&S issues related to magnetic resonance.

Subject Content

1. Safety in the Research Magnetic Resonance/Clinical MRI Laboratory
2. Basic NMR theory
3. Chemical shift and spin-spin coupling
4. Spin relaxation and diffusion
5. Standard 1D and multidimensional NMR experiments
6. Basic magnetic resonance imaging (MRI) experiments
7. Magnetic resonance spectroscopy (MRS) in brain and tissues
8. Functional magnetic resonance imaging of the brain
9. Medical image processing
10. Diffusion imaging
11. Advanced Techniques in magnetic resonance

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Written worksheet submission	5 x 3 hours	30	N	Individual
Essay	1,500-2,000 words	20	N	Individual
Written Examination	2 hours	50	N	Individual

MEDI 7006 Applied Clinical Sciences 2

Coordinator Ka Lai Shek (https://directory.westernsydney.edu.au/search/name/Ka Lai Shek/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

MEDI 7007 Applied Clinical Sciences 3

Legacy Code 401262

Coordinator Neil Merrett (https://directory.westernsydney.edu.au/search/name/Neil Merrett/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

The major specialties and subspecialties of Medicine, Surgery, General Practice, Aboriginal Health and Critical Care are covered in Applied Clinical Sciences 3 through a combination of clinical and community based placements, campus and clinical school lectures, workshops and tutorials. Topics covered in these specialties include the following
1. Patient care
- Diagnosis and investigation of problems and presentations in general medicine, surgery, general practice, Aboriginal health and Critical care
- formulation and implementation (under supervision) of patient centred management plans
- prescribing medications and other therapeutic agents
- application and evaluation of clinical and procedural skills
2. Health in the Community
- health care systems and services
- Advocacy for disease prevention and health promotion
3. Scientific Basis of Medicine
- appraisal, application and evaluation of evidence to clinical problems
- application of The biomedical, psychological and social sciences to medical and health problems and presentations
- conducting research
4. Professional and Personal Development
- Ethical practice
- multidisciplinary teamwork and communication
- learning and Teaching in clinical environments
- safety and quality in clinical settings

MEDI 7008 Chronic Disease Management in Rural Practice

Credit Points 10

Legacy Code 401272

Coordinator Andrew Page (https://directory.westernsydney.edu.au/search/name/Andrew Page/)

Description This subject will examine the pathophysiology, epidemiology, clinical presentation and treatment of chronic diseases in rural and remote settings in the Australian context. Students will develop systems to effectively manage chronic disease within their clinical environment and consider key aspects of the professional practice required of doctors caring for patients with chronic diseases. This subject will also introduce the concepts of collaboration with a multidisciplinary team.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4760 Master of Medicine (Rural Generalism)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and evaluate the pathophysiology, epidemiology, clinical presentation and treatment of chronic diseases in rural and remote settings in the Australian context
2. Explain key aspects of the professional practice required of doctors caring for patients with chronic diseases in rural and remote settings in the Australian context, including their limitations and referral pathways for complex patients.
3. Assess and manage patients with chronic diseases in rural and remote settings in the Australian context
4. Reflect on own practice to promote best practice in rural generalism
5. Develop systems within your clinical setting that promote chronic disease management
6. Evaluate policies, ethical, professional and legal statutory requirements applicable to rural medical practitioners
7. Work effectively and in collaboration with a multidisciplinary team to effect chronic disease management

Subject Content

What is Chronic Disease in Rural and Remote Australia ULO 1,2,3
Principles of Chronic Disease Management ULO 1,2,3,4,5,7
Common Chronic Disease Presentations in Rural Generalist practice 1 ULO 1,2,3,6,7
Chronic Disease Care in the Aboriginal and Torres Islander Community ULO 1,2,3,6,7
Common Chronic Disease Presentations in Rural Generalist practice 2 ULO 1,2,3,6,7
Practice Systems to Promote Chronic Disease Management ULO 2,3,4,5,6,7

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Online Quizzes	15mins at end of each module	10	N	Individual
Online Forum Participation	Twice weekly throughout the semester	10	N	Individual
Case Study x 2	500 words each	30	N	Individual
Reflection: Essay	2000 words	50	N	Individual

Prescribed Texts

MEDI 7009 Clinical Allergy

Credit Points 20

Legacy Code 401064

Coordinator Miriam Codarini (https://directory.westernsydney.edu.au/search/name/Miriam Codarini/)

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). This yearlong subject will consist of 50 hours of supervised consultation of patients with allergic diseases within the setting of a specialist Immunology/Allergy clinic. The purpose of Clinical Allergy is to apply previously acquired knowledge of allergic diseases to patient care in real time. Students will be supervised by experienced Clinical Immunologists/Allergists and develop skills in allergy diagnosis and management of children and adults. Clinical experiences will include history taking, physical examination, skin prick testing and spirometry interpretation, and management of various allergic conditions. Students will need to participate in online case conference discussions also, and attend two course workshops, the Australasian Society of Clinical Immunology and Allergy (ASCIA) Annual Scientific Meeting and the Macarthur Series in Immunology.

School Medicine

Discipline Internal Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7002 AND
MEDI 7003

Equivalent Subjects LGYA 7792 - Clinical Allergy 1 LGYA 7793 - Clinical Allergy 2

Restrictions

Students must be enrolled in 4689 Graduate Certificate in Allergic Diseases or 4753 Master of Medicine (Allergic Diseases)

Assumed Knowledge

Must have completed a medical degree (MBBS, MBChB or equivalent qualification) and be practising as a medical practitioner in clinical practice. Also, must have sound knowledge and understanding of immunological concepts and clinical aspects of allergic diseases including diagnosis and management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine aspects of the professional practice required of doctors caring for patients with allergic diseases, including their limitations, referral pathways for complex patients, and reflection and collaboration with other health professionals.
2. Recognise and interpret patient history, physical examination and test results.
3. Diagnose and manage patients with allergic diseases with a safe, caring, ethical and professional practice.
4. Perform and analyse common tests used to investigate and monitor patients with allergic diseases.
5. Communicate relevant clinical information about allergic diseases to patients, their family and health professionals.
6. Perform self-directed learning strategies to enhance evidence based clinical practice.

Subject Content

This subject consists of the following clinical experiences:
1. History and physical examination of patients with allergic diseases
2. Investigation of patients with allergy including skin prick testing and spirometry
3. Management of patients with allergic diseases including anaphylaxis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	1.5 hrs x 12	S/U	Y	Individual
Professional Task	30 mins each	S/U	Y	Individual
Professional Task	Variable time per patient (total 8-15 patients depending on option chosen for clinical placement)	S/U	N	Individual
Presentation	Variable time per patient (up to 4 patients depending on option chosen for clinical placement)	S/U	N	Individual

Professional Task	300 words each (total 8-15 letters depending on option chosen for clinical placement)	S/U	N	Individual
Log/ Workbook	Throughout the year (all clinical consultations undertaken during placement)	S/U	N	Individual

MEDI 7011 Clinical Minimally Invasive Gynaecological Surgery 2

Credit Points 30

Legacy Code 401057

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is a 30 credit point year-long subject taken over two terms (15 credit points in each term).Students undertaking this subject will have a detailed knowledge of open abdominal surgery at commencement. This subject will extend their knowledge in the practical aspects of laparoscopic surgery. This subject will be completed in Year 2 of the program.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 15cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7010

Restrictions

Students must be advanced trainees in Obstetrics and Gynaecology undertaking a Fellowship in Minimally Invasive Gynaecological Surgery at Blacktown Hospital or other accredited site. Students must be enrolled in 4690 Master of Surgery in Advanced Gynaecological Surgery

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Perform minimally invasive gynaecological surgery in a competent and safe manner for all appropriate problems
2. Perform competent patient assessment and postoperative care of complex problems
3. Demonstrate the theory and practice of minimally invasive gynaecological surgery to junior staff
4. To achieve these, the student needs to demonstrate a high level of critical thinking and judgement through the completion of extensive clinical experience treating patients across the full range of gynaecological surgical disorders, receiving continual critical feedback and engaging in reflective discussion with their clinical specialist supervisor. Achievement of these learning outcomes demonstrate extensive experience in the area of Clinical Minimally Invasive Gynaecological Surgery.

Subject Content

Surgical techniques required in minimally invasive gynaecological surgery
Pre-operative assessment and post operative care

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Logbook: Logbook continual record and critical reflection on clinical experience, reviewed by and requiring reflective discussion with the supervisor.	Continuous	50	Y	Individual
Formative assessment report: Clinical assessment	3 monthly	0	N	Individual
Summative assessment report: Clinical assessment	6 monthly	50	Y	Individual

MEDI 7012 Critical Care: Skills and Practice

Credit Points 10

Legacy Code 401271

Coordinator Andrew Page (https://directory.westernsydney.edu.au/search/name/Andrew Page/)

Description This subject that will enhance the student's critical and practical clinical skills for rural generalist practice. The student will become familiar with common critical care presentations and develop a structured approach to the common practical skills of practice. They will also develop effective decision making skills that incorporate a team management approach. The development of these skills will be supported by a mandatory two day face to face practical simulation workshop.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4760 Masters of Medicine (Rural Generalism)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and evaluate common critical care presentations in rural and remote practice
2. Outline the importance of effective decision making skills in an emergency situation including team management and delegation of tasks
3. Manage the common trauma and medical presentations expected to be seen, and identify the key clinical procedures likely to be required in pre hospital/ primary aeromedical environments
4. Develop a structured approach to common practical skills applicable to rural practice
5. Recognise, assess and manage the deteriorating patient using a structured ABCDE approach
6. Execute effective life-saving procedural skills required in emergency situations
7. Present relevant information to patients, their family and health professionals in a professional manner
8. Manage an effective working plan for professional development in rural generalism practice

Subject Content

Module 1: Common Critical Care (cardiac/sepsis/collapse) ULO 1,2,3,4,5,6,7
Module 2: Common Practical Skills ULO 1,3,4
Module 3: The Seriously Ill Child ULO 1,2,3,4,5,6,7
2-day workshop (Critical Care Simulation and Practical Skills) ULO 1,2,3,4,5,6,7,8
Module 4: The Obstetric Emergency ULO 1,2,3,4,5,6,7
Module 5: Emergency Response (triage/retrieval/organisation) ULO 1,2,3,4,5,6,7
Module 6: Trauma in a Rural Setting (#; MVA; farming) ULO 1,2,3,4,5,6,7

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

MEDI 7015 Diversity in Generalist Practice

Credit Points 10

Legacy Code 401273

Coordinator Andrew Page (https://directory.westernsydney.edu.au/search/name/Andrew Page/)

Description This subject will explore the diversity of populations and examine the complexities of health and health care delivery in rural and remote settings in Australia. Students will develop a structured approach to managing the undifferentiated clinical presentations in a rural practice setting and will also analyse cultural, social, community, population and health factors influencing the practice of rural and remote medicine. Critical reasoning skills will be developed and students will be encouraged to self-reflect on their current clinical situation.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4760 Masters of Medicine (Rural Generalism)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the diversity of populations in rural and remote settings in the Australian context
2. Analyse cultural, social, community, population and health factors influencing the practice of rural and remote medicine
3. Identify and evaluate the complexities of health and health care delivery in rural and remote communities
4. Develop a structured approach to manage the undifferentiated clinical presentation in rural practice settings
5. Differentiate health care needs of culturally diverse and disadvantaged groups
6. Discuss patient history, physical examination and test results relevant to medical practices in rural and remote settings in the Australian context
7. Access professional networks to maintain professional skills and to access support and debriefing where required
8. Acquire evidence based knowledge that informs best clinical generalism practice via online self-directed learning strategies

Subject Content

Diversity in the Practice Setting (populations & social factors) ULO 1,2,3,5
The Undifferentiated presentation (Structured approach) ULO 3,4,6,7,8
Rural Generalist Practice 1 (Obstetric; Psychiatry; Palliative Care) ULO 1,2,3,4,5,6,8
Critical Reasoning for Generalist Practice ULO 1,2,3,4,6,7,8
Rural Generalist Practice 2 (Paediatric; Cardiac AF; Diabetes) ULO 1,2,3,4,5,6,8
Maintaining Self Care ULO 3,7,8

MEDI 7016 Endometriosis

Credit Points 10

Legacy Code 401058

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in Year 2 of the Master of Surgery (Advanced Gynaecological Surgery) course. Endometriosis commonly presents with pelvic pain and infertility, with gynaecological surgery being a significant treatment option. Surgery in women with endometriosis can be challenging, with gynaecological surgeons requiring advanced training and a multi-disciplinary approach to obtain the best patient outcomes. This subject will provide the students with the opportunity to explore management aspects of endometriosis tailoring treatment options depending on the patient's symptoms and goals. By enrolling in this subject, the student will be expected to produce a detailed discussion on various aspects of endometriosis, focusing on minimally invasive techniques. This includes exploring the pre-operative rationale to perform surgery, intra-operative nuances of surgical techniques used and post-operative care of importance to ensure the best outcomes for the patient.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Student must be enrolled in 4770 Master of Surgery (Advanced Gynaecological Surgery) or 4690 Master of Surgery in Advanced Gynaecological Surgery

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of an Advanced Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) and satisfactory completion of the Graduate Diploma in Advanced Gynaecological Surgery [ie, Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) program].

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate diagnostic and treatment options for patients with endometriosis
2. Effectively counsel patients with endometriosis regarding treatment options and therapy dependent on patient symptoms and goals
3. Critique complex endometriosis surgical techniques, focusing on minimally invasive surgical techniques
4. Reflect on the importance of multi-disciplinary and collaborative surgical approaches for patients with severe endometriosis
5. Critically appraise the medical literature on specific aspects of endometriosis

Subject Content

1. Aspects of the diagnosis and management of endometriosis
2. Tailoring treatment options dependent on the patient?fs symptoms and goals
3. The benefits and disadvantages of surgical intervention in endometriosis including complications from surgery
4. Complex surgical techniques, especially focusing on minimally invasive techniques required to surgically treat endometriosis
5. The importance of a multi-disciplinary and collaborative surgical approach with other surgical specialities in severe endometriosis to optimise patient outcomes
6. Review of current literature on endometriosis

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report	Total 5,000 words: 1a. Literary Review 4,000 words (SLOs 1, 3, 4); 1b. ~ 1,000 words (SLOs 2, 5)	100	N	Individual

MEDI 7017 Gynaecological Surgery Ergonomics

Credit Points 10

Legacy Code 401059

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in the Graduate Diploma in Advanced Gynaecological Surgery and Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) course. This subject provides students with the knowledge on surgical ergonomics in both open and minimally invasive gynaecological surgery. This subject will extend their knowledge in theoretical and practical aspects, focusing on strategies to maximise ergonomics and its effects on situational awareness, communication and leadership during gynaecological surgery. Students will explore factors associated with gynaecological surgery ergonomics, such as surgeon and surgical assistant positions, theatre setup, incision sites, port placement and surgical techniques to maximise surgical ergonomics in order to reduce surgeon fatigue, injury and improve patient safety and outcomes. It is expected the student will be able to perform operations safely, with economy of movement to optimise surgeon comfort and ultimately improve patient outcomes.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4766 Graduate Diploma of Advanced Gynaecological Surgery or 4770 Master of Surgery (Advanced Gynaecological Surgery) or 4690 Master of Surgery in Advanced Gynaecological Surgery

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of a Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) with satisfactory completion of RANZCOG written examination as per enrolment restrictions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the factors that influence surgical ergonomics with various approaches to gynaecological surgery

2. Develop effective techniques in gynaecological surgery to optimise surgical ergonomics leading to safe work practices
3. Critically analyse the benefits of improving surgical ergonomics from a patient, surgeon and surgical team perspective
4. Examine strategies to improve theatre communication, situational awareness and leadership in an operative setting
5. Reflect on specific aspects of surgical ergonomics in gynaecological surgery to enhance professional practice

Subject Content

1. Factors that influence ergonomics within different approaches to gynaecological surgery including surgeon and surgical assistant positions, theatre setup, incision sites, port placement and surgical techniques
2. he benefits of improving surgical ergonomics for both the surgeon and patient
3. Strategies to improve theatre communication, situational awareness and leadership in an operative setting
4. Current practices to ensure safe work practices to protect both patients and staff

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7020 Medicine in Practice

Legacy Code 401264

Coordinator Neil Merrett (https://directory.westernsydney.edu.au/search/name/Neil Merrett/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

The major specialties and subspecialties of Medicine, Surgery, General Practice, Aboriginal Health and Critical Care are covered in Applied Clinical Sciences 3 through a combination of clinical and community based placements, campus and clinical school lectures, workshops and tutorials. Topics covered in these specialties include the following
1- Patient care
o Diagnosis and investigation of problems and presentations in General Medicine, Surgery, General Practice, Aboriginal Health and Critical Care
o Formulation and implementation (under supervision) of patient centred management plans
o Prescribing medications and other therapeutic agents
o Application and evaluation of clinical and procedural skills
2. Health in the Community
o Health care systems and services
o Advocacy for disease prevention and health promotion
3. Scientific Basis of Medicine
o Appraisal, application and evaluation of evidence to clinical problems

o Application of the biomedical, psychological and social sciences to medical and health problems and presentations
o Conducting Research
4. Professional and Personal Development
o Ethical practice
o Multidisciplinary teamwork and communication
o Learning and teaching in clinical environments
o Safety and quality in clinical settings

MEDI 7021 Mental Health Aspects of Allergic Diseases

Credit Points 10

Legacy Code 401252

Coordinator Natalie Morrison (https://directory.westernsydney.edu.au/search/name/Natalie Morrison/)

Description Allergic diseases are chronic conditions which can influence psychosocial wellbeing. Early recognition of effects on mental health is essential to ensure optimal support and enhance quality of life. This subject provides students with knowledge and skills to address mental health concerns in patients with allergic diseases. Modules will cover the psychological effects of living with chronic

disease, anxiety and depression, somatic symptom disorders and eating disorders. Students will use online lectures, case discussion and evidence-based materials to explore key elements and strategies for effective mental health assessment and management in clinical allergy practice.

School Medicine

Discipline Internal Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7002 AND
MEDI 7003 OR
MEDI 7001

Co-requisite(s) MEDI 7009

Restrictions

Students must be enrolled in Master of Medicine (Allergic Diseases). Students must be medical practitioners registered with AHPRA or the New Zealand Medical Board.

Assumed Knowledge

A completed medical degree (MBBS, MBChB or equivalent qualification) is required and current practice as a clinician is desirable to successfully undertake this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explore common psychological conditions and effects in patients with allergic diseases.
2. Consider the best strategies to assess and manage psychological conditions early in patients with allergic diseases.
3. Use evidence-based resources to promote best practice in caring for patients with allergic diseases and mental health conditions.

Subject Content

1. Psychological effects of living with chronic disease including adaptation, loss, grief, coping and adjustment from the child and adult perspective.
2. Anxiety disorders associated with allergic diseases including generalised anxiety, social phobia and post-traumatic stress disorder.
3. Depression in relation to allergic diseases.
4. Somatoform disorders associated with allergic diseases including chronic pain, unexplained physical syndromes and psychological problems.
5. Eating disorders associated with allergic diseases including food avoidance and aversion.
6. Child specific mental health conditions associated with allergic diseases including separation anxiety, oppositional defiant disorder and other emotional, behavioural and educational effects.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

MEDI 7022 Nutritional Aspects of Allergic Diseases

Credit Points 10

Legacy Code 401251

Coordinator Miriam Codarini (https://directory.westernsydney.edu.au/search/name/Miriam Codarini/)

Description Dietary and nutritional aspects of allergic diseases often need consideration in patient management. This subject provides students with a detailed understanding of nutritional fundamentals and requirements especially for children and adults with food allergy. Online learning materials and case discussion facilitated by an experienced dietitian will promote essential knowledge and practical skills. Modules will provide the latest evidence on nutritional basics, weight management, diagnosis and management of food allergies and intolerances, food labelling, and early infant feeding recommendations. This content will complement the clinical experiences in the Master of Medicine (Allergic Diseases) and enhance clinical allergy practice.

School Medicine

Discipline Internal Medicine

Student Contribution Band HECS Band 3 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7002 AND
MEDI 7003 OR
MEDI 7001

Co-requisite(s) MEDI 7009

Restrictions

Students must be enrolled in Master of Medicine (Allergic Diseases). Students must be medical practitioners registered with AHPRA or the New Zealand Medical Board.

Assumed Knowledge

A completed medical degree (MBBS, MBChB or equivalent qualification) is required and current practice as a clinician is desirable to successfully undertake this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explore nutritional fundamentals and requirements for patients with allergic diseases.
2. Examine feeding recommendations for children with and without food allergies.
3. Determine best evidence to assess and manage nutritional aspects of allergic diseases.
4. Use evidence-based resources to enhance learning in the nutritional aspects of allergic diseases.

Subject Content

This subject consists of four modules covering:
- Nutritional fundamentals and bone health
- weight management and The effect of Corticosteroids
- restrictive diets and supplementation, particularly for children with food allergies
- food intolerances
- food labelling
- early feeding recommendations
- evidence for food chemicals and additives causing allergy
- tests for food allergy

Assessment

MEDI 7023 Pelvic Anatomy

Credit Points 10

Legacy Code 401061

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in the Graduate Diploma in Advanced Gynaecological Surgery and Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) course. The student is expected to attain an advanced understanding and knowledge of the Anatomy of the Female Pelvis. The eventual aim is to become a competent surgeon in this field. Detailed Pelvic Anatomy is a vital component required to attain the skills necessary for the performance of Advanced Gynaecological Surgery. Knowledge of the normal versus the abnormal anatomy is required for the correct identification of pelvic structures. When abnormal features are present caused by pathological changes, the student is expected to know how to recognise the distortion caused, thus paving the way to try and normalise the anatomy as best as possible. The student should choose a topic relevant to the operations observed and learned. An analysis of the anatomy important to the topic should be presented in a detailed fashion. Evidence for any conclusions drawn or reflections made should be provided from a review of the literature. An important aspect of detailed knowledge of Pelvic Anatomy is crucial in the avoidance or detection and management of complications at surgery.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4766 Graduate Diploma of Advanced Gynaecological Surgery or 4770 Master of Surgery (Advanced Gynaecological Surgery) or 4690 Master of Surgery in Advanced Gynaecological Surgery

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of a Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) with satisfactory completion of RANZCOG written examination as per enrolment restrictions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse aspects of pelvic anatomy relevant to the performance of advanced gynaecological surgery
2. Assess the distortion of anatomy that occurs with pathology
3. Critique surgical techniques to manage pathology appropriately
4. Evaluate surgical anatomy and landmarks required to facilitate safe gynaecological surgery and avoid inadvertent surgical injury
5. Apply reflective and evidence based approaches with respect to pelvic anatomy to enhance professional practice

Subject Content

1. Detail aspects of anatomy of the female pelvis relevant to Advanced Gynaecological Surgery
2. Appreciation of the distortion of anatomy that occurs with pathology

3. Spatial awareness required for the location of important anatomical structures during gynaecological surgery
4. Anatomical landmarks which are key to performing advanced gynaecological surgical procedures
5. Surgical anatomy to avoid complications at gynaecological surgery

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7025 Port Entry

Credit Points 10

Legacy Code 400995

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in the Graduate Diploma in Advanced Gynaecological Surgery and Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) course. Students undertaking this subject are expected to have a working knowledge on port entry techniques at commencement. This subject will extend their knowledge in theoretical and practical aspects, focusing on the port entry techniques and strategies of port placement and management of port site complications. Students will explore the multitude of port types which are commercially available in minimally invasive gynaecological surgery, the current technologies and tailoring their use in patients to provide optimal surgical outcomes. By enrolling in this subject, the student will be expected to produce a detailed discussion on various aspects of minimally invasive port entry, exploring the pre-operative and intra-operative nuances of surgical planning and techniques. This will extend the student's knowledge so they can safely and effectively establish port entry in minimally invasive gynaecological surgery.

School Medicine

Discipline Obstetrics and Gynaecology

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4766 Graduate Diploma of Advanced Gynaecological Surgery or 4770 Master of Surgery (Advanced Gynaecological Surgery) or 4690 Master of Surgery in Advanced Gynaecological Surgery

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of a Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) with satisfactory completion of RANZCOG written examination as per enrolment restrictions.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique various port entry techniques and their application.
2. Manage pre-operative and intra-operative nuances of surgical planning and techniques with respect to port entry to safely and effectively establish port entry in minimally invasive gynaecological surgery.
3. Evaluate commercially available port site equipment and current technologies to appropriately tailor these products to patient care.
4. Examine port entry complications and manage these complications in a clinical setting.
5. Review the medical literature on specific aspects of port entry utilising an evidence based approach to enhance patient care.

Subject Content

Port entry techniques and its application in an operative setting.
Pre-operative and inta-operative surgical planning to ensure effective and safe use of ports in minimally invasive gynaecological surgery.
Various commercially port entry equipment and current technologies.
Port entry complications and management of such complications in a clinical setting.
Review of the medical literature in an evidence based approach to port entry.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7026 Power Modalities

Credit Points 10

Legacy Code 400996

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in the Graduate Diploma in Advanced Gynaecological Surgery and Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) course. A thorough understanding of the range of power modalities available when performing gynaecological surgery is a key fundamental concept to gynaecologists performing such surgery. Students undertaking this subject are expected to have a working knowledge on power modalities at commencement. This subject will extend their knowledge in theoretical and practical aspects. Students will explore the physics behind various power modalities, its physiological effect on human tissue and potential complications related to each power modality. Students will review and compare the current range of commercially available power modalities, assisting them to be competent with its use in a clinical setting and tailoring their use dependent on the type of surgery and pathology. By enrolling in this subject, the student will be expected to produce a detailed discussion on various aspects of power modalities, exploring the nuances of surgical planning and techniques. This will extend the student's knowledge so they can safely and effectively use various power modalities in gynaecological surgery.

MEDI 7027 Professional Portfolio 4

Credit Points 40

Legacy Code 401261

Coordinator Jenny Mcdonald (https://directory.westernsydney.edu.au/search/name/Jenny Mcdonald/)

Description This is a 40 credit point year-long subject taken over two terms (20 credit points in each term). This subject is the penultimate subject of five Professional Portfolio subjects which will provide students in the Doctor of Medicine (MD) program with the means to monitor and support their acquisition of professional competencies in medicine. Supported by workshops, resources and your Academic Supervisor, you will collate and review evidence of your learning, such as clinical assessments and case studies, preparatory work and outcomes from research and scholarly projects. By identifying and addressing your learning and professional development needs, you will create your own personalised learning journey as the basis for life-long learning in medicine. The Professional Portfolio will also prepare you for the portfolios used extensively in post graduate specialty training in medicine.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 3001 AND
MEDI 4005

Co-requisite(s) MEDI 7006

Restrictions

Restricted to students enrolled in 4758 - Doctor of Medicine (MD). Students must also meet the inherent requirements of the program as outlined in the University of Western Sydney Inherent Requirements for Medicine: (www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses). Inherent requirements are personal capabilities which are essential for achieving the learning outcomes of the program or subject in a way that will preserve the integrity of the University teaching, learning and assessment standards and the accreditation requirements for the program. The Disability Education Standard, Section 3.4 (3) states: In assessing whether an adjustment to the Course, Unit of the Course or program in which the student is enrolled, or proposes to be enrolled, is reasonable, the provider is entitled to maintain the academic requirements of the Course or program, and other requirements or components that are inherent in or essential to its nature. Note: In providing for students with disabilities, a provider may continue to ensure the integrity of its Courses or programs and assessment requirements and processes, so that those on whom it confers an award can present themselves as having the appropriate knowledge, experience and expertise implicit in the holding of that particular award.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

Medical professional competencies in
- Application of science to understanding of health and disease, including recent developments in local, regional, national and international contexts
- Evaluation of health and disease in individuals and communities
- Application and evaluation of evidence based practice
- Teaching and evaluation of learning
- Application and evaluation of clinical and professional skills to a broad range of situations in diverse clinical and community settings
Scholarly competencies in
- All aspects of the research process, including data collection, analysis and interpretation, and dissemination of research findings to professional academic and community audiences through conducting an independent project
- Critical inquiry through application of the biomedical, psychological and social sciences, arts and humanities
Self-evaluation and critical reflection on learning, personal and professional development

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement. Use the link to the Special Requirements webpage below for more information. http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements (http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Students are required to obtain and provide all necessary documentation to be verified by NSW ClinConnect. This verification is a requirement of the NSW Health Department for all students enrolled in medical programs. If a student fails to produce this documentation to ClinConnect they will not be able to attend hospital and health service teaching sessions, and placements. Attendance is a mandatory requirement of the program to ensure that professional competencies are met. Failure to attend will result in a Fail Grade for the subject.
Documents that must be provided to ClinConnect are:
1. National Police Certificate
2. Adult Health Immunization Schedule
3. Code of Conduct Agreement

MEDI 7028 Professional Portfolio 5

Credit Points 40

Legacy Code 401263

Coordinator Jenny Mcdonald (https://directory.westernsydney.edu.au/search/name/Jenny Mcdonald/)

Description This is a 40 credit point year-long subject taken over two terms (20 credit points in each term). This subject is the final subject

of five Professional Portfolio subjects which will provide students in the Doctor of Medicine (MD) program with the means to monitor and support their acquisition of professional competencies in medicine. Supported by workshops, resources and your Academic Supervisor, you will collate and review evidence of your learning, such as clinical assessments and case studies, preparatory work and outcomes from research and scholarly projects. By identifying and addressing your learning and professional development needs, you will create your own personalised learning journey as the basis for life-long learning in medicine. The Professional Portfolio will also prepare you for the portfolios used extensively in post graduate specialty training in medicine.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7006 AND
MEDI 7027

Co-requisite(s) MEDI 7007 AND
MEDI 7020

Restrictions

Restricted to students enrolled in 4758 - Doctor of Medicine (MD). Students must also meet the inherent requirements of the program as outlined in the University of Western Sydney Inherent Requirements for Medicine: (www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses). Inherent requirements are personal capabilities which are essential for achieving the learning outcomes of the program or subject in a way that will preserve the integrity of the University teaching, learning and assessment standards and the accreditation requirements for the program. The Disability Education Standard, Section 3.4 (3) states: In assessing whether an adjustment to the Course, Unit of the Course or program in which the student is enrolled, or proposes to be enrolled, is reasonable, the provider is entitled to maintain the academic requirements of the Course or program, and other requirements or components that are inherent in or essential to its nature. Note: In providing for students with disabilities, a provider may continue to ensure the integrity of its Courses or programs and assessment requirements and processes, so that those on whom it confers an award can present themselves as having the appropriate knowledge, experience and expertise implicit in the holding of that particular award.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities
3. Evaluates and continuously develops own personal and professional capabilities, and those of others
4. Applies a sound understanding of the biomedical, psychological and social sciences to medical practice

Subject Content

Medical professional competencies in
- Application of science to understanding of health and disease, including recent developments in local, regional, national and international contexts
- Evaluation of health and disease in individuals and communities
- Application and evaluation of evidence based practice
- Teaching and evaluation of learning
- Application and evaluation of clinical and professional skills to a broad range of situations in diverse clinical and community settings
Scholarly competencies in
- All aspects of the research process, including data collection, analysis and interpretation, and dissemination of research findings to professional academic and community audiences through completing an independent project
- Critical inquiry through application of the biomedical, psychological and social sciences, arts and humanities
Self-evaluation and critical reflection on learning, personal and professional development

Special Requirements

Legislative pre-requisites

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement. Use the link to the Special Requirements webpage below for more information. http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements (http://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Students are required to obtain and provide all necessary documentation to be verified by NSW ClinConnect. This verification is a requirement of the NSW Health Department for all students enrolled in medical programs. If a student fails to produce this documentation to ClinConnect they will not be able to attend hospital and health service teaching sessions, and placements. Attendance is a mandatory requirement of the program to ensure that professional competencies are met. Failure to attend will result in a Fail Grade for the subject. Documents that must be provided to ClinConnect are:
1. National Police Certificate
2. Adult Health Immunization Schedule
3. Code of Conduct Agreement

MEDI 7029 Reflective Clinical Allergy Practice

Credit Points 20

Legacy Code 401253

Coordinator Miriam Codarini (https://directory.westernsydney.edu.au/search/name/Miriam Codarini/)

Description This is an online bridging subject for students with a Graduate Certificate in Allergic Diseases qualification or other recognised allergy training who wish to pursue further study in allergic diseases. Students with acceptable prior learning to enrol in this subject will enter Year 2 of the Master of Medicine (Allergic Diseases) with the option to exit at the Diploma level. The subject enables students to revise the latest theoretical and clinical concepts in allergic diseases and reflect on their own clinical allergy practice. Reflection will be promoted through case presentation and reports and literature review.

School Medicine

Discipline Internal Medicine

Student Contribution Band HECS Band 3 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7001 OR
MEDI 7002 AND
MEDI 7003

Restrictions

Students must be enrolled in Master of Medicine (Allergic Diseases). Students must be medical practitioners registered with AHPRA or the New Zealand Medical Board.

Assumed Knowledge

A completed medical degree (MBBS, MBChB or equivalent qualification) is required and current practice as a clinician is desirable to successfully undertake this subject. Also, must have knowledge of immunological concepts and clinical aspects of allergic diseases, and experience with allergy diagnosis and management in clinical practice. Satisfactory knowledge and experience in clinical allergy will have been acquired through the existing Graduate Certificate in Allergic Diseases (program code 4689) or via other accredited professional training.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine current literature regarding the pathophysiology, epidemiology, clinical presentation and treatment of allergic diseases.
2. Review key aspects of the professional practice required of doctors assessing and managing patients with allergic diseases.
3. Present clinical cases in a clear and well structured manner.
4. Reflect on aspects of diagnosis and management of allergic diseases.
5. Conduct a literature review to inform clinical allergy practice.

Subject Content

1. All learning modules from Allergic Sciences 1 and 2 units
2. Clinical case reflection:
a. Case study 1 (own case)
- present and discuss case with PowerPoint slides via Zoom
- summary report of main diagnostic and treatment challenges
b. Case study 2 (provided by lecturer)
- choose one question emerging from The case, modules or set Topics for literature Review

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	30 minutes x 8	S/U	N	Individual
Quiz	60 mins x 2	S/U	N	Individual
Presentation	15 minutes	15	Y	Individual
Reflection	500 words	20	Y	Individual
Reflection	500 words	25	Y	Individual
Literature Review	1,500 words	40	Y	Individual

MEDI 7030 Research Project in Rural Generalist Medicine

Credit Points 20

Legacy Code 401275

Coordinator Andrew Page (https://directory.westernsydney.edu.au/search/name/Andrew Page/)

Description This subject is an essential part of the final year of the Masters of Medicine (Rural Generalism). It will build on the students' knowledge and skills gained in prior subjects and the aim of this subject is to design and conduct a research project from an area relevant to their practice of rural generalism. Successful completion of the subject results in the composition of a report, and in an oral presentation, which will include details of the aims, methods, results and conclusions of the project.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Must be enrolled in the Master of Medicine (Rural Generalism)

Assumed Knowledge

401080 Research Protocol and Design.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the theories and real-life issues relevant to rural medical practice
2. Design and conduct a research project in a rural and remote context
3. Communicate the results of the project to peers and other health professionals in oral and written forms in a professional manner
4. Reflect on own learning and professional development needs
5. Apply technology and self-directed learning strategies to enhance evidence-based practice.

Subject Content

Online Tutorial 1: Introduction to the Unit outlining Objectives and Timelines ULO 1,2,3,4,5
Online Tutorial 2: Reflection on Research Protocol and Design Unit ULO 1,2,3,4,5
Online Tutorial 3: Project design tutorial: designed to address design aspects of the project in response to student ?es research proposal ULO 1,2,3,4,5
Online Tutorial 4: Data collection and measurement tutorial: aimed at ensuring data collection and measurements are being made appropriately ULO 1,2,3,4,5
Online Tutorial 5: Data analysis tutorial: aimed at ensuring data analysis will be appropriately performed ULO 2,3,4,5
Online Tutorial 6: Report writing (Introduction; Methods; results and discussion) ULO 1,2,3,4,5
Online Tutorial 7: Research Presentation Skills aimed at identifying the key aspects of the research (for inclusion in the presentation ULO 2,3,4,5

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Research Project Proposal	500-1000 words	10%	N	Individual
Oral Presentation	20 minute	25%	N	Individual
Research Project	4000 words excluding references	65%	Y	Individual

MEDI 7031 Rural and Remote Medicine: The Generalist Approach

Credit Points 10

Legacy Code 401270

Coordinator Andrew Page (https://directory.westernsydney.edu.au/search/name/Andrew Page/)

Description This subject introduces the student to the concepts of rural generalist practice and provides them with an understanding of the complexities and inequalities of providing health care in rural and remote Australian settings. Students will be expected to appraise the current literature around generalist practice and evaluate the models of care and health systems that support a generalist approach. The students will also determine the skills required to effectively deliver the required scope of practice

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4760 Masters of Medicine (Rural Generalism)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explore key concepts and principles of rural health and generalist practice
2. Assess the impact of different models of rural practice from a practitioner and patient perspective
3. Describe the diversity of populations in rural and remote settings in the Australian context
4. Evaluate and describe models of care and health systems that support a generalist approach
5. Identify and evaluate the requirements of skills for rural generalist practice
6. Appraise the current rural health policy as it relates to scope of practice
7. Use critical thinking to review literature relevant to (diseases and) medical practices in rural and remote settings in the Australian context
8. Examine the ethical and standards applicable to rural generalist practice

Subject Content

Module 1: What is generalist practice? ULO 1,4,5
Module 2: Diversity in populations in rural and remote Australia ULO 2,3

Module 3: Models of Care for Generalist practice ULO 2,4,5
Module 4: Using the Library Resources for Research ULO 7
Module 5: Rural Health Policy and its Impact ULO 4,5,6
Module 6: Skills for generalist practice ULO 4,5,8

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	15 minutes at the end of each module	10	N	Individual
Participation	Twice weekly throughout the semester	10	N	Individual
Presentation	15 minutes	30	N	Individual
Literature review	1500 words	50	N	Individual

MEDI 7032 Surgical Pathology 1

Legacy Code 401227

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Assumed Knowledge

A basic undergraduate level knowledge in Pathology and microscopy skills is expected, as the candidates will have a MBBS or equivalent pre-requisite degree.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Neuropathology Diagnostic Case Studies (Online tasks)	10 cases - 50-100 words each	50	Y	Individual
Practical exam - Surgical Pathology Microscopy and reporting (held during conference week)	2 hours	50	Y	Individual

MEDI 7033 Surgical Pathology 2

Credit Points 10

Legacy Code 401229

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Description In 2022 this subject replaced by subject 401474 - Surgical Pathology of the Genito-urinary Tract, Salivary Gland and Endocrine System. This subject will re-inforce the diagnostic entities in genito-urinary tract, salivary gland and endocrine system pathology that were introduced in Surgical Pathology I. Two self-directed online learning modules with digitalized images and practical notes on the diagnostic approach to important pathological entities of the above sub-specialties will be provided. The basic concepts in surgical, cyto- and small biopsy pathology, including the appropriate ancillary techniques in the diagnosis, prognostication and treatment prediction will be assessed. This subject is designed to further develop the basic research and communication skills, and critical thinking acquired in Surgical Pathology I, and to reinforce the resources and technical requirements needed to reach the correct pathological diagnosis.

School Medicine

Discipline Pathology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4750 Masters of Medicine (Pathology).

Assumed Knowledge

A basic undergraduate level knowledge in Pathology and microscopy skills is expected, as the candidates will have a MBBS or equivalent pre-requisite degree.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine and interpret diagnostic entities in surgical pathology in the subspecialties of genito-urinary pathology, salivary gland and endocrine pathology
2. Identify and apply appropriate ancillary techniques in the diagnosis and treatment of conditions within the subspecialties of genito-urinary pathology, salivary gland and endocrine pathology
3. Identify common and uncommon disease entities in genitourinary pathology, salivary gland and endocrine pathology, including the diagnosis of non-neoplastic, benign and malignant entities
4. Define the resources and technical requirements needed to reach the correct diagnosis in genitourinary pathology, salivary gland and endocrine pathology
5. Produce a written report that communicates surgical and cytopathology diagnostic findings
6. Exemplify the behaviour required to create a safe, caring, ethical and professional practice required by pathologists

Subject Content

1. Genito-urinary tract pathology
2. Salivary gland pathology
3. Endocrine system pathology

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Genito-Urinary Pathology Diagnostic Case Studies (Online task)	20 cases ~300-500 words each	S/U	Y	Individual
Salivary Gland and Endocrine Pathology Diagnostic Case Studies (Online task)	20 cases ~300-500 words each	S/U	Y	Individual
Essay	1500 word limit	50	Y	Individual
Histopatholog Case Reports	10 cases ~300-500 words each	50	Y	Individual

MEDI 7034 Surgical Pathology 3

Credit Points 10

Legacy Code 401230

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Description In 2022 this subject replaced by subject 401475 - Surgical Pathology of Skin, Bone and Soft Tissue. This subject will re-inforce the diagnostic entity in skin and soft tissue pathology that were introduced in Surgical Pathology I. The first self-directed online learning module is composed of digitalized images and practical notes on the diagnostic approach to important pathological entities of these sub-specialties. The second online module will revise prior learning of the sub-specialities neuropathology, cardiorespiratory pathology, genito-urinary pathology, salivary gland and endocrine pathology. A literature review and discussion of contemporary and emerging developments in the relevant pathological entity will be conducted. This subject is designed to not only re-inforce/revise the above topics, but to harness effective communication and analytical research skills and to understand the importance of professional development.

School Medicine

MEDI 7038 Telehealth and Rural Communities

Credit Points 10

Legacy Code 401274

Coordinator Andrew Page (https://directory.westernsydney.edu.au/search/name/Andrew Page/)

Description This subject will examine the main clinical, technical and contextual aspects of telehealth relevant to the practice in rural and remote communities. Students will appraise the literature and evidence-based resources regarding e-health to promote best practice in rural generalism and formulate an implementation plan for the introduction or expansion of telehealth services in their practice. They

will also develop skills that will enable them to conduct a safe, effective and culturally appropriate telehealth consultation

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled on Masters of Medicine (Rural Generalism)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Practice e-health to provide effective clinical care for patients in rural and remote communities
2. Identify and evaluate the main clinical, technical and contextual aspects of telehealth relevant to the practice in rural and remote communities
3. Appraise the literature and evidence-based resources regarding e-health to promote best practice in rural generalism and with view to further research and study
4. Provide quality medical care or facilitate access to specialised care for patients in rural and remote communities
5. Formulate and promote an implementation plan for the introduction or expansion of telehealth services in their practice
6. Conduct a safe, effective and culturally appropriate telehealth consultation
7. Apply technology and self-directed learning strategies to enhance evidence-based practice.

Subject Content

Module 1: What is e-health and telehealth? ULO 1,2,3
Module 2: Setting up telehealth ULO 2,3,4,5,7
Module 3: Evidence Based Use of e-health ULO 1,2,3,7
Module 4: Telehealth Decision Making (Risk Management in Rural and Remote Practice) ULO 1,2,4,5,6,7
Module 5: Introducing e-health and telehealth into practice ULO 1,2,4,5,6,7
Module 6: The Telehealth consultation ULO 2,4,5,6,7

Assessment

Legacy Code 401284

Coordinator Cathy Wilson (https://directory.westernsydney.edu.au/search/name/Cathy Wilson/)

Description This subject introduces students to the aetiology, pathophysiology and clinical picture of the various types of diabetes and the short and long term physical impact on individuals. This is the basis for all clinical subjects in this course. Students will comprehensively examine the overall management of the different types of diabetes that are fundamental for advance and specialised diabetes clinical practice.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program with evidence of 12 month clinically relevant practice or substantial experience in working with people with diabetes

Assumed Knowledge

Basic knowledge and understanding of diabetes pathophysiology and sufficient experience working with diabetes patients in a clinical setting.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the classification, aetiology and pathophysiology of the three major types of Diabetes
2. Integrate lifestyle modification and Medical Nutrition Therapy as an integral part in the management of DM
3. Analyse diagnostic criteria and treatment target ranges for each of the three major types of diabetes to determine treatment and management options for each type of diabetes
4. Provide education and training on the pharmodynamics of oral agents, insulin and other injectable medication in the management of DM
5. Apply best practice guidelines, clinical recommendations and evidence based practice to support diabetes education

Subject Content

1. Pathophysiology of the different types of diabetes
2. Diabetes Medication Management
3. Blood Glucose Monitoring (Point of Care and Continuous Glucose Monitoring)
4. Lifestyle - Nutrition and Activity
5. Acute complications of diabetes - Hyperglycaemia and Hypoglycaemia
6. Sick day management
7. Implications for driving and reporting
8. Diabetes Care in Paediatrics and Young Adults (Transition)
9. Insulin Pump Therapy
10. Pregnancy
11. Diabetes Care in the Elderly
12. Surgery
13. Driving

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Participation	Participation - Online tutorials	20	N	Individual

MEDI 7040 Clinical Practice in Diabetes 2

Credit Points 10

Legacy Code 401286

Coordinator Cathy Wilson (https://directory.westernsydney.edu.au/search/name/Cathy Wilson/)

Description This subject will focus on the disease process leading to chronic complications of diabetes. Students will examine the screening process, interventions and the management of established microvascular and macrovascular disease associated with diabetes. Students investigate the elderly and vulnerable populations for the synthesis of individualisation of diabetes care and management. Health practitioner clinical skills directly impact on the short and long term health status of people with diabetes. In this online subject, there is a mandatory five day face-to-face clinical workshop component and a mandatory 40 hours of clinical practicum that will be undertaken by all students in this subject.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7039 AND
MEDI 7041

Restrictions

Students must be enrolled in 4761 Graduate Certificate or 4762 Graduate Diploma in Person-centred Diabetes Care and Education.

Assumed Knowledge

Basic knowledge and understanding of pathophysiology and clinical diabetes. Demonstrated understanding of psychosocial education and support in diabetes self-management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the pathophysiology in the development of chronic complications for people living with diabetes.
2. Support and educate people living with diabetes to prevent, detect and delay the onset of diabetes related chronic complications in the context of their lives.
3. Educate people living with diabetes with the practical skills required for the self-management of diabetes.

4. Adapt diabetes clinical management for vulnerable populations with diabetes such as the elderly, people having surgery and with mental health issues.
5. Adapt critical thinking skills and reflection to enhance professional practice in diabetes self-management and education.

Subject Content

Overview pathophysiology in complications
Practical skills in diabetes management
Chronic complications in diabetes
Macrovascular complications associated with diabetes
Microvascular complications associated with diabetes
Vulnerable populations with diabetes such as the elderly, people having surgery and with mental health issues

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Peer Review	45 - 60 minutes	S/U	Y	Individual
Presentation	7 minutes	S/U	Y	Individual
Professional Placement Performance	40 Hours	S/U	Y	Individual
Quiz	45 minutes	S/U	Y	Individual

MEDI 7041 Diabetes Self-Management Support 1: Individuals

Credit Points 10

Legacy Code 401285

Coordinator Therese Fletcher (https://directory.westernsydney.edu.au/search/name/Therese Fletcher/)

Description Supporting individuals to self-manage their diabetes is the central element of advanced diabetes practice. Underpinned by the empowerment approach, students undertaking this subject will learn the necessary knowledge and skills in educating people with diabetes how to best manage their condition and support behaviours and emotional wellbeing that achieves person centred goals. Drawing on educational, psychological, social and behavioural theories students will learn practical skills in communication, psychological assessment,

goal setting and problem-solving that will promote self-care for people with prediabetes and diabetes. This subject is only offered in Spring Session.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in the a postgraduate program with evidence of 12 month clinically relevant practice or substantial experience in working with people with diabetes.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Establish an empowerment and person-centred approach in supporting and educating a person with diabetes to optimally self-manage their condition and partner with health professionals involved with their health care.
2. Apply interpersonal communications strategies to develop a trusting rapport and assess a person's value
3. Individualise emotional and psychological support for people with diabetes to enhance wellbeing and minimise psychological complications.
4. Assess the cultural, social and family background that may impact on a person's ability to self-manage their diabetes
5. Employ evidence-based teaching and learning strategies for individual and groups to enhance diabetes self-management and care
6. Utilise different evidence- based behavioural strategies to initiate and sustain behaviour change for people with diabetes to optimise self-care

Subject Content

- Empowerment and Person-centred Diabetes Care and Education
- Education and Health Literacy: Developing the Skills and Knowledge in Self-care for People with Diabetes
- Promoting, supporting and sustaining person centred healthy behaviours
- Emotional Wellbeing and Psychological Health for People with Diabetes
- Mental health co-morbidities
- Social Issues Associated with Diabetes: Culture, Relationships and Stigma

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7042 Diabetes Self-Management Support II: Systems and Organisations

Credit Points 10

Legacy Code 401287

Coordinator Therese Fletcher (https://directory.westernsydney.edu.au/search/name/Therese Fletcher/)

Description The increasing number of people with diabetes in Australia and globally is a major public health issue. This subject will explore the increasing burden of diabetes, why some groups of people are more at risk of developing diabetes then others, how society and the way health services are organised and delivered influence the risk of developing diabetes, access to quality health care and individual health outcomes. This subject with examine social determinants related to diabetes, the impact of diabetes on Indigenous Australians, diabetes public policy, workforce capability and the integrated nature of service delivery in reducing prevalence and improving health outcomes for people with diabetes and prediabetes.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the prevalence and economic burden of diabetes
2. Explore the broader social determinants and the organisation of health service delivery that influence diabetes prevalence, diabetes self-management and health outcomes for individuals and community
3. Appraise the high incidence of diabetes and diabetes related complications amongst Indigenous Australians and the provision of culturally appropriate health care
4. Analyse the impact of public health, non -health policies, and the role of primary health care in reducing diabetes prevalence and its complications
5. Analyse primary, secondary and tertiary prevention in diabetes and the importance of the integrated approach at the macro, meso and micro levels.
6. Critically evaluate the central role of primary care, general practice and interventions that maximise service delivery effectiveness
7. Critically appraise evidence and practice through research and quality improvement activities

Subject Content

- Epidemiology of diabetes and social determinants of diabetes
- Primary Health Care and Primary Prevention
- Diabetes public policy
- Models of integrated person-centred diabetes care
- Integrated patient centred diabetes care
- Provider focussed interventions
- Evidence based diabetes practice
- Workforce capability and scope of practice

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Presentation	30 minutes	30	N	Individual
Participation	Autumn Semester	10	N	Group

MEDI 7043 Diabetes in Paediatrics, Transition and Pregnancy

Credit Points 10

Legacy Code 401290

Coordinator Cathy Wilson (https://directory.westernsydney.edu.au/search/name/Cathy Wilson/)

Description The physical and psychosocial developmental stage and age of the person with diabetes directly impacts on diabetes self-management, diabetes care and quality of life. This specialised subject will explore diabetes in the context of physical, psychological and social development with a focus on children, young adults and pregnant women. Ongoing family, therapeutic and social relationships are central to optimising diabetes management. Family, friends, peers, healthcare providers/organisations role will be examined in the ongoing holistic care and self-management of diabetes and prevention of diabetes complications. Students will evaluate the physiological impact of diabetes, treatment and emerging technology in the management of diabetes such as insulin pump therapy and continuous blood glucose monitoring systems. Accessing and interpreting data for the overall management of diabetes will be undertaken in this subject.

MEDI 7041 AND
MEDI 7040 AND
MEDI 7042

Restrictions

Students must be enrolled in the a postgraduate program with evidence of 12 month clinically relevant practice or substantial experience in working with people with diabetes.

Assumed Knowledge

Advanced knowledge in diabetes care and skills, Graduate Certificate in Diabetes.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the aetiology, pathophysiology and clinical management of Diabetes in children, young adults and pregnant women.
2. Utilise current guidelines in balancing nutritional, physical activity and medication requirements for children, young adults and

pregnant women with different types of diabetes in optimising their health status and support diabetes self-management.
3. Assess the impact on diabetes management in relation to the physiological, psychological and social/cultural developmental stages across the life span.
4. Formulate a person-centred approach in planning care taking into account the developmental and life stages of individuals and families.
5. Consider the implication of using emerging technology and devices for children in the management of diabetes.

Subject Content

- Diabetes in children and young adults
- Diabetes in pregnancy
- Psychological and social/cultural impact of diabetes on children, young adults and pregnant women
- Emerging technology in the management of diabetes

MEDI 7044 Diabetes in Primary Care

Credit Points 10

Legacy Code 401288

Coordinator Cathy Wilson (https://directory.westernsydney.edu.au/search/name/Cathy Wilson/)

Description Most of the health care provided to people with diabetes is provided by general practice clinicians and multidisciplinary health care professionals in primary care. This subject will explore the core issues that arise in primary care relating to foundational aspects of care. The subject will comprise of Learning Pods/modules that enable students to choose and learn about areas of practice that are most relevant to their health discipline, context of care and gap in knowledge. There will be a compulsory Learning Pod/modules on primary prevention, secondary and tertiary prevention in primary care and the role of inter-professional integrated practice. Students will also be able to choose from the following diabetes related Learning Pods such as medication therapy, exercise therapy, nutrition therapy and podiatry, insulin pumps and continuous glucose monitoring sensors, cardiovascular and renal health, aged care in diabetes in primary care.

Restrictions

Students must be enrolled in the a postgraduate program with evidence of 12 month clinically relevant practice or substantial experience in working with people with diabetes.

Assumed Knowledge

Advanced knowledge in diabetes care and education.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the concept and principles of primary, secondary and tertiary prevention for people with diabetes in primary care.
2. Individualise holistic management and education for people with diabetes when prescribing, titrating and monitoring one central approach (medication, nutritional, exercise, podiatric therapy)
3. Individualise holistic management and education for people with diabetes with complex needs.
4. Apply primary care strategies to overcome common barriers to self-management for people with diabetes in the context of their lives.

Subject Content

- Diabetes primary, secondary and tertiary prevention
- Inter-professional practice
- Diabetes Medication intensification
- Weight loss and nutrition
- Podiatry therapy
- Exercise therapy

MEDI 7045 Diabetes in the Hospital

Credit Points 10

Legacy Code 401289

Coordinator Therese Fletcher (https://directory.westernsydney.edu.au/search/name/Therese Fletcher/)

Description People with diabetes are more likely to be admitted to hospital, experience more complications, have longer length of stay and have higher mortality rates compare to people without diabetes. This subject will provide students with the skills and knowledge to optimise metabolic health in the complex care of i- patients with diabetes. The subject will examine the prevalence and economic costs of people with diabetes in hospitals and review current pathological hypotheses on why poor glycaemic control is associated with poorer inpatient health outcomes. Best practice management in inpatient diabetes care, treatment targets and medication intensification for patient in critical, noncritical, peri-operative, end of life will be analysed Clinical governance in providing safe quality diabetes care and organisation response will be included in this subject. An online inter-professional case based approached to learning will be the mode of delivery.

School Medicine

Discipline General Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in the a postgraduate program with evidence of 12 month clinically relevant practice or substantial experience in working with people with diabetes.

Assumed Knowledge

Advanced knowledge of diabetes pathophysiology and diabetes clinical care.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the prevalence and economic burden of patients with hyperglycaemia and diabetes in hospital.
2. Review current pathological hypotheses pertaining to the association of poor glycaemic control with poor inpatient health outcomes.
3. Justify the optimisation of blood glucose levels and the prevention and treatment of hypoglycaemia and hyperglycaemia in the care of inpatients with diabetes.
4. Apply evidence based diabetes inpatient management, treatment targets, nutrition and medication intensification in caring for inpatients with diabetes in critical, noncritical, peri-operative, end of life clinical contexts.
5. Evaluate the role of clinical governance and hospital wide systems in supporting safe and effective diabetes care.

Subject Content

Diabetes inpatient prevalence and health outcomes
Inpatient glycaemic targets
Hyperglycaemia and hyperglycaemia emergencies
Insulin pharmacology and best practice in inpatient prescribing and titrating
Hypoglycaemia and appropriate management
Inpatient diabetes education
Diabetes in patient care for critical, perioperative, end of life and mental health patients
Clinical governance, quality and safety

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7046 Advanced Gynaecological Surgery 1

Credit Points 20

Legacy Code 401317

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). This is a year long core subject in the Graduate Diploma in Advanced Gynaecological Surgery and Year 1 of the Master of Surgery (Advanced Gynaecological Surgery). This subject aims to allow students to discuss and reflect on a broad range of topics pertaining to Advanced Gynaecological Surgery with an emphasis on minimally invasive techniques. The pre-operative, intra-operative and post-operative management of patients and their conditions are considered with a review of the literature to substantiate and support any conclusions made which may help shape future clinical practice.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4766 Graduate Diploma of Advanced Gynaecological Surgery or 4770 Master of Surgery (Advanced Gynaecological Surgery). All students are expected to have a knowledge base commensurate with a level of a Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) with satisfactory completion of RANZCOG written examination as per admission requirements.

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of a Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) with satisfactory completion of RANZCOG written examination as per admission requirements.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess the pre-operative management where Gynaecological Surgery is contemplated
2. Critically analyse intra-operative surgical principles involved in performing Gynaecological Surgery, particularly focusing on minimally invasive techniques
3. Diagnose and manage complications, with particular reference to laparoscopic surgical methods utilised when returning to theatres
4. Evaluate the post-operative care to patients following gynaecological surgery
5. Appraise the medical literature to improve clinical judgment and gynaecological surgical competency
6. Employ a safe, caring and ethical approach in the practice of gynaecological surgery
7. Communicate effectively with patients, family and other health care professionals to convey outcomes and concerns in the professional practice of advanced gynaecological surgery

Subject Content

1.Pre-operative assessment of the patient?fs condition where surgery is an option for the patient
2.Surgical principles required to deal with the contemplated surgical problem, particularly focusing on minimally invasive techniques
3.Intra-operative surgical techniques used at operations to prevent complications with algorithms and pathways to clinically diagnose complications
4.Post-operative care used in Advanced Gynaecological Surgery, particularly in minimally invasive techniques
5.Literature review on proposed gynaecological surgical procedures, including ethical and safety frameworks

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7047 Advanced Gynaecological Surgery 2

Credit Points 20

Legacy Code 401318

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is a 20 credit point year-long subject taken over two terms (10 credit points in each term). This is a yearlong core subject in Year 2 of the Master of Surgery (Advanced Gynaecological Surgery) program. The student is expected to attain a comprehensive understanding and knowledge of the procedures performed in the management of Gynaecological Disorders where surgery is indicated. The ultimate aim is to become a competent surgeon in this field. This subject aims to build upon the knowledge gained from Advanced Gynaecological Surgery 1 to allow students to further discuss and reflect on a broad range of topics pertaining to Advanced Gynaecological Surgery with an emphasis on minimally invasive techniques. The theoretical aspects of teaching surgery is an important aspect in the development of competent surgeons. A review of teaching techniques, including simulation is an area to be evaluated, appraised and developed. The pre-operative, intra-operative and post-operative management of patients and their conditions are considered with a critical review of the literature to substantiate and support any conclusions made which may help shape future clinical practice.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7046

Co-requisite(s) MEDI 7050

Restrictions

Student must be enrolled in 4770 Master of Surgery (Advanced Gynaecological Surgery)

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of an Advanced Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) and satisfactory completion of the Graduate Diploma in Advanced Gynaecological Surgery [ie, Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) program].

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Appraise the pre-operative management where Gynaecological Surgery is contemplated
2. Critically evaluate the intra-operative surgical principles involved in performing Gynaecological Surgery, particularly focusing on minimally invasive techniques
3. Effectively diagnose and manage complications, with particular reference to laparoscopic surgical methods utilised when returning to theatres
4. Critique the post-operative care to patients following gynaecological surgery
5. Conduct research reports on the practice of gynaecological surgery to empower continued self-improvement
6. Reflect on the practice of surgery and teaching strategies relevant to gynaecological surgery and their effectiveness
7. Execute safe, caring and ethical approaches to gynaecological surgery involving patients, family and other health care professionals in a clinical setting

Subject Content

1.Pre-operative assessment of the patient?fs condition where surgery is an option for the patient
2.Surgical principles required to deal with the contemplated surgical problem, particularly focusing on minimally invasive techniques
3.Intra-operative surgical techniques used at operations to prevent complications with algorithms and pathways to clinically diagnose complications
4.Post-operative care used in Advanced Gynaecological Surgery, particularly in minimally invasive techniques
5.Literature review on proposed gynaecological surgical procedures
6.Theoretical aspects of teaching gynaecological surgery

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Critical Review	5,000 words in total: 1a. 4,000 words (SLOs 1-5, & 7); 1b. ~ 1,000 words (SLO 6)	50	N	Individual
Critical Review	5,000 words in total: 2a. 4,000 words (SLOs 1-5, & 7); 2b. ~ 1,000 words (SLO 6)	50	N	Individual
Professional Placement Performance	Ongoing	S/U	Y	Individual
Log/ Workbook	Ongoing	S/U	Y	Individual

MEDI 7048 Advanced Imaging Research Project

Credit Points 20

Legacy Code 401330

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description In 2021 this subject replaced by 401467 - Medical Research Project (PG). This subject is an essential part of the final year of the Masters of Advanced Imaging (MRI). It will consolidate and build on the students' knowledge and skills gained in prior subjects. Students will design and conduct a research project from an area of inqury relevant to Adavnced Imaging - MRI. Successful completion of the subject results in the composition of a report, and in an oral presentationwhich will include details of the aims, methods, results and conclusions of the project.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 20cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4767 Master Advanced Imaging (MRI) and have successfully completed 100 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. 1. Evaluate the theories and real-life issues relevant to the use of Magnetic Resonance Imaging (MRI) in Australia.
2. 2. Conduct a research project in the field of MRI.
3. 3. Communicate the results of the project to peers and other health professionals in oral and written forms in a professional manner.
4. 4. Reflect on own learning and professional development needs in MRI.
5. 5. Effectively employ technology and self-directed learning strategies to enhance evidence-based practice and patient safety in the field of medical Imaging and MRI.

Subject Content

1. Research Proposal
2. Ethics
3. Research Protocol and Design
4. Data collection and measurement
5. Data analysis
6. Project Report

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Thesis	1,000 words	10	N	Individual
Thesis	15 minutes	25	N	Individual
Thesis	4,000 words excluding references	65	N	Individual

MEDI 7049 Advanced MR Theory

Credit Points 10

Legacy Code 401324

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description This subject provides students with a detailed understanding of "MR Accessories, Image Quality and Contrast Media" employed in Magnetic Resonance Imaging (MRI) technology and the relationship between magnet and coil, the utilisation of the different channels for image formation and pixilation, as well as exploring the role contrast media plays in enhancing body organs. Students will have an in-depth understanding of interactive effects of scanning parameters on the image quality and how to prevent the formation of artefacts and reduce Specific Absorption Rate to improve image quality, reduce artefact and reduce heat generation, and to prevent harm of burns to the patient.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7057 MRI Physics

Restrictions

Students must be enrolled in 4767 Master of Advanced Imaging (MRI) or 4768 Graduate Diploma of Advanced Imaging (MRI)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse the principles of Nuclear Magnetic Resonance and the process of Magnetic Resonance Imaging (MRI) signal acquisition
2. Apply MRI physics in clinical practice
3. Examine MRI parameters, image contrast and image formation
4. Evaluate pulse sequences and their applications to better respond to clinical indications
5. Optimise image resolution, Signal to Noise Ratio and scan time, to produce high-quality diagnostic images
6. Explore the origin of image artefact, measures applied to reduce artefact formation in images as well as preventing burns to a patient due to a specific absorption rate
7. Explore the causes of Signal to Noise Ratio deterioration and the methods to maximise relevant diagnostic data acquisition

Subject Content

1. MRI Physics in practice
2. MRI equipment relationship between the main unit and coil and channels
3. Differences in Pulsation artefacts, environmental effects and image visual artefacts and distortion
4. Contrast Media “composition and side effects
5. Image reconstruction include k-space concept, Fourier transformation, spatial frequency in image reconstruction
6. The interactive factors on image optimisation
7. The latest hardware and software technology in fast MR imaging

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Reflection	500 words each x 8	40	N	Individual
Report	1,500 words	30	N	Individual
Case Study	2,000 words	30	N	Individual

MEDI 7050 Advanced Practice in Gynaecological Surgery

Credit Points 10

Legacy Code 401314

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is a 10 credit point year-long core subject taken over two terms (5 credit point in each term) in Year 2 of the Master of Surgery (Advanced Gynaecological Surgery) program. Students undertaking this subject are expected to apply advanced knowledge and skills in clinical settings in a safe and effective manner. There is a strong emphasis in reflecting and reviewing surgical cases based on clinical experience the student has gained at surgery. A review of the relevant medical literature and what changes are envisaged when performing this procedure into the future. This subject provides students with the opportunity to produce a detailed discussion on various aspects relating to pre-operative, intra-operative and post-operative gynaecological surgery and provide an evidence based approach. Ultimately, the aim is to improve the student's surgical skills and patient outcomes.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 5cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7046

Co-requisite(s) MEDI 7047

Restrictions

students must be enrolled in 4770 Master of Surgery (Advanced Gynaecological Surgery)

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of an Advanced Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) and satisfactory completion of the Graduate Diploma in Advanced Gynaecological Surgery [ie, Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) program].

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate surgical principles, techniques and technologies in advanced gynaecological surgery to perform surgery in a safe manner with a high level of confidence
2. Critically analyse aspects relating to pre-operative, intra-operative and post-operative gynaecological surgery to provide an evidence based approach
3. Evaluate the medical literature on various aspects of gynaecological surgery
4. Reflect on aspects of gynaecological surgery to improve surgical acumen and patient outcomes in future practice
5. Critically analyse clinical cases utilising an evidence based approach

Subject Content

1.Dissect components of gynaecological surgery based on the student?fs clinical exposure
2.Review clinical cases, including pre-operative surgical planning, surgical technique and recognition and management of surgical complications
3.Review of the medical literature on specific aspects of gynaecological surgery
4.Reflect on professional practice in aspects of gynaecological surgery to improve surgical acumen and patient outcomes

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	Throughout Semester (SLOs 1-5): 1a. ~ 100 words per week (SLO 2 & 5); 1b. ~ 400 words per week (SLO 4); 1c. ~ 400 words per week (SLO 1,3 & 5)	50	N	Individual
Case Study	Throughout Semester (SLOs 1-5): 2a. ~ 100 words per week (SLO 2 & 5); 2b. ~ 400 words per week (SLO 4); 2c. ~ 400 words per week (SLO 1,3 & 5)	50	N	Individual

MEDI 7051 Evidence Based Imaging and Clinical Pathways

Credit Points 10

Legacy Code 401321

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description Evidence based imaging is a foundation tool that ensures patients are referred to pertinent modalities for tests of high sensitivity and specificity while fostering a cognisance to the harm of investigations such as the low sensitivity of certain modalities to certain investigations, radiation effects and the societal costs of the health budget. This core subject will enable health professionals with an understanding of the best evidence based diagnostic algorithm "pathway" for the different clinical presentations. In conjunction with the radiobiology subject, this will also equip clinicians with the knowledge to better evaluate the risk versus benefit for any examination requested.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7059

Restrictions

Must be enrolled in 4767 Master of Advanced Imaging (MRI), 4768 Graduate Diploma of Advanced Imaging (MRI) or 4769 Grad Certificate in Advanced Imaging (MRI)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse the principles of evidence-based health care practice for the delivery of diagnostic imaging in the clinical context.
2. Develop a template algorithm for diagnostic imaging studies of the brain, spine, upper abdomen, pelvis, knee and shoulder.
3. Develop Algorithm Charts for different clinical indications.
4. Review ethical and safety frameworks in health care and their application to practical diagnostic referral issues.
5. Advocate Evidence Based Medicine practice for Imaging Pathways.
6. Identify the ideal clinical and diagnostic pathway best suited for a patient's condition.

Subject Content

1. Principles of evidence based medicine to Imaging.
2. Algorithm Charts to incorporate continuing change for diagnostic pathways.
3. Evalutation of current diagnostic Imaging pathways of different clinical presentations.
4. Ethical evaluation of the harm versus benefit of diagnostic imaging modalities.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Literature Review	1500 words	40	N	Individual
Professional Task	1500 words including charts, tables and figures x 8	40	N	Individual

Presentation	10 minutes + 1 Abstract	20	N	Individual

MEDI 7052 MR Angiography and Cardiac

Credit Points 10

Legacy Code 401329

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description The MR Angiography (MRA) and MR Cardiac (MRC) Imaging unit is a core unit in the course of Advanced Imaging (MRI). The subject provides students with in-depth knowledge of cardiac anatomy, the vascular system, and the relevant protocols to create MRI sequences for the anatomical regions of MRC and MRA in different clinical examinations. It is expected that students will develop the ability to recognise normal anatomy, identify common pathologies and be able to provide diagnostic solutions and/or develop new MRI algorithms for clinical problems. They will have the ability to either produce, request or recommend the proper sequence and the best method of operating the MRI equipment for the anatomical region in question. The subject is offered to students who completed the Graduate Diploma in Advanced Imaging (MRI) 4768, with a varied pathway for the clinical component relevant to their undergraduate discipline. Students will have 2 weeks of clinical training in an MRI clinical site.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7055 MR Neurology - Head Neck and Spinal Imaging
MEDI 7054 MR Musculoskeletal Imaging
MEDI 7053 MR Body and Pelvis Imaging

Restrictions

Students must be enrolled in 4767 Master of Advanced Imaging (MRI) and have successfully completed 80 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse sectional Magnetic Resonance –Cardiac (MRC) and Magnetic Resonance – Angiography (MRA) that can be produced on Magnetic Resonance Imaging (MRI) equipment.
2. Critique MRC and MRA scanning principles and their common applications for different clinical problems, and/or any proposed modification to suit individual patient's clinical needs.
3. Create departmental MRC and MRA Magnetic Resonance Imaging (MRI) protocols.
4. Propose new MRC and MRA imaging algorithm and techniques to peers and health professionals.
5. Review MRA and MRC clinical cases to provide image Interpretation with high-level diagnostic confidence.
6. Critique clinical and operational pathways focusing on efficiency, productivity and provision of access to patients to MRA and MRC imaging.
7. Reflect on clinical and operational pathways based on the MR Angiography and Cardiac imaging

Subject Content

1. Sectional cardiovascular anatomy: Heart, valves, major coronary vessels, systemic vasculature of head and neck, body and peripheral vascular structures.
2. Common pathology
3. Selection of appropriate sequences and imaging protocol setup.
4. The use of contrast medium, dosage, type and timing of image acquisition.
5. Contrast and non-contrast Magnetic Resonance –Cardiac (MRC) and Magnetic Resonance – Angiography (MRA) techniques.
6. Advanced Cardiac Imaging: T1 & T2 Mapping, Late Gadolinium Enhancement (LGE), Perfusion
7. Clinical Training via 3 different pathways

- Medical Officer – Image Interpretation and observation of practical work and Interaction with an MRI team.

- Medical MRI Practitioner – Hands on Practical training and basic Image interpretation.

- Allied Health – Interaction with the MRI Operations team, close observation of the operation and patient management and basic Image interpretation.

Special Requirements

Legislative pre-requisites

Note: Due to covid restriction, the Working with Children Check (WWCC) and Student Undertaking has been temporarily been removed.

Special Requirements - NSW Health Legislative Prerequisites Pre-requisites

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Co-requisite(s) MEDI 7051 AND
MEDI 7049

Restrictions

Successful completion of 60 credit points and Students must be enrolled in 4767 Master of Advanced Imaging (MRI) or 4768 Graduate Diploma of Advanced Imaging (MRI).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically examine sectional chest, abdominal and pelvic anatomy that can be produced on Magnetic Resonance Imaging (MRI) equipment
2. Critique chest, abdominal and pelvic scanning principles and their common applications for different clinical problems
3. Set up the departmental chest, abdominal and pelvis MRI protocols
4. Present new Body and Pelvis imaging algorithm and techniques to peers and health professionals

5. Critique the use of the different equipment design for body and pelvis imaging and the different MR frequencies required to achieve the best outcome for the patient
6. Review image interpretation cases and analyse operation and technical setup to achieve high-level diagnostic confidence during clinical placement
7. Reflect on clinical and operational pathways based on the MR Body and Pelvis imaging

Subject Content

1. Anatomy of neck, chest, and torso, including chest wall and ribs, Magnetic Resonance (MR) mediastinum and pulmonary Angiography (MRPA), liver, kidney, adrenal, Magnetic Resonance Cholangiopancreatography (MRCP), small bowel and appendix imaging; female pelvis and prostate.
2. Common pathology.
3. Selection of appropriate sequences and imaging protocol setup.
4. Contrast and non-contrast Body and Pelvis imaging techniques.
5. Clinical Training via 3 different pathways.
a. Medical Officer - Image Interpretation and observation of practical work and Interaction with an MRI team.
b. Medical Radiation Practitioner - Hands on Practical training and basic Image interpretation.
c. Allied Health - Interaction with the MRI Operations team, close observation of the operation and patient management and basic Image interpretation.

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	1500 words	30	N	Individual
Literature Review	2000 words	30	N	Individual
Reflection	500 words each x 8	40	N	Individual

MEDI 7055 MR Neurology - Head, Neck and Spinal Imaging

Credit Points 10

Legacy Code 401325

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description MR Neurology ﷺHead, Neck and Spinalﷺ Imaging is a core unit in the course of Advanced Imaging (MRI). The unit provides students with in-depth knowledge of neuro-anatomy and the relevant protocols to create Magnetic Resonance Imaging (MRI) sequences for the anatomical regions in the Head, Neck and Spinal Region for different clinical examinations. It is expected that students will develop the ability to recognise normal anatomy, identify common pathologies to provide diagnostic solutions and/or develop new MRI algorithms for clinical problems. They will have the ability to either produce, request or recommend the proper sequence and the best method of operating MRI equipment for the anatomical region in question. The subject is offered to all eligible students with a varied pathway for the two weeks clinical component relevant to their undergraduate discipline. Students will have 2 weeks of clinical training in an MRI clinical site.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7051 Evidence Based Imaging and Clinical Pathways
MEDI 7057 MRI Physics

Restrictions

Students must be enrolled in 4767 Master of Advanced Imaging (MRI) or 4768 Graduate Diploma of Advanced Imaging (MRI).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine sectional neuro-anatomy that can be produced on Magnetic Resonance Imaging (MRI) equipment
2. Critique Neurology scanning principles and their common applications for different clinical problems
3. Set up departmental neurology MRI protocols
4. Present new MRI imaging algorithm and techniques to peers and health professionals
5. Critique the use of the different equipment design for MRI imaging and the different MR frequencies required to achieve the best outcome for the patient
6. Review Neurology cases to provide image Interpretation with high-level diagnostic confidence
7. Critique Clinical and Operational pathways focusing on efficiency, productivity and provision of access to patients to neurology imaging

Subject Content

1. Anatomy of head, neck and spine to include spinal and plexuses scan, head scan, cranial nerve imaging, orbits and optic nerve, internal auditory meatus, sinuses, pituitary, skull base, temporal seizure protocol, temporomandibular joint, brain tumour imaging
2. Common pathology
3. Selection of appropriate sequences and imaging protocol setup.
4. The use of contrast medium, dosage, type and timing of image acquisition relevant to Head, Neck and Spinal Imaging.
5. Clinical Training via 3 different pathways:

a. Medical Officer – Image Interpretation and observation of practical work and Interaction with an MRI team.
b. Medical MRI Practitioner – Hands on Practical training and basic Image interpretation.
c. Allied Health – Interaction with the MRI Operations team, close observation of the operation and patient management and basic Image interpretation.

Special Requirements

Legislative pre-requisites

Note: Due to covid restriction, the Working with Children Check (WWCC) and Student Undertaking has been temporarily been removed.

All Students
To be eligible to enrol in a subject and attend a NSW- located health-related placement in your program, students must meet Western Sydney University program requirements **and** Special Legislative Requirements to be assessed early in their second year of part-time study against the following:

1. National Criminal History Check: Students must have a current (expiring 4 years from date of issue) check valid for their entire program. A valid National Criminal history check must be an Australia wide check, include the student's full name matching their Student ID card and date of birth and not have any offences listed. If a student has a criminal history identified on their check, they must provide a Clinical Placement Authority Card (CPAC) or conditional letter from the NSW HealthShare Employment Screening and Review Unit. https://www.health.nsw.gov.au/careers/student_clearance/Documents/appendix-10-student-application.pdf
International students must additionally have a translated International Police Check or statutory declaration.
2. A NSW Working with Children Check (WWCC) clearance letter issued under the category of volunteer valid for their entire course.
3. A current approved first aid certificate valid for their entire course, approved provider courses can be found at http://training.gov.au
4. A completed vaccination/immunisation card with all serology results containing expiry dates and currency must be maintained by the student to ensure compliance for their entire program.
5. NSW Undertaking/Declaration form.
6. Completed any additional health forms required (such as NSW Health Code of Conduct, Health Student Undertaking/Declaration and Tuberculosis (TB) Assessment Tool).
7. Relevant Local Health District specific documentation as requested. Contact your School for further details. Resources are also available on the Placement Hub (https://www.westernsydney.edu.au/placements_hub/placements_hub/student_compliance/) website.
Where Clinical training is in a private setting, the special requirements may differ from public institutions; students will need to comply with requirements identified by their training organisation. Training for some students outside of NSW will be as per the state based requirements.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

MEDI 7056 MR Screening

Credit Points 10

Legacy Code 401328

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description MR Screening is a core subject in the course of Advanced Imaging. Magnetic Resonance (MR) Screening tests are essential to categorise patients' conditions for faster and reliable patient management. In a real clinical environment, less than 10 per cent of MR Screening patients will need to go for a full Magnetic Resonance Imaging (MRI) examination. This subject will provide students with a detailed understanding of the rationale and principles of setting up MR Screening protocols. It will demonstrate the determinant criteria for the setup of the screening protocols in collaboration with the referring clinical team. Students will learn to create research programs to validate the effectiveness of the screening protocols. It is expected that students will develop the ability to recognise normal anatomy, identify common pathologies and be able to provide diagnostic solutions and/or develop new MRI algorithms for clinical problems. They will have the ability to either produce, request or recommend the proper sequence and the best method of operating the MRI equipment for the anatomical region in question. Students will have 2 weeks of clinical training in an MRI clinical site under the supervision of a WSU MRI clinician.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) MEDI 7055 MR Neurology - Head Neck and Spinal Imaging
MEDI 7054 MR Musculoskeletal Imaging
MEDI 7053 MR Body and Pelvis Imaging

Restrictions

Successful completion of 80 credit points and students must be enrolled in 4767 Master of Advanced Imaging (MRI).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique the rationale for setting up Magnetic Resonance (MR) screening protocols and the pros and cons of the screening protocol
2. Create effective MR Screening protocols to provide confident diagnostic outcomes without the lengthy scan time

3. Evaluate the safety requirement of a dedicated “Multiposition” MRI room in comparison with a traditional “Bore” technology
4. Streamline workflow and patient centred care to facilitate Open Access to dedicated MR screening protocols
5. Explore future research projects to add to the list of MR Screening tests in collaboration with specialists from different clinical specialities
6. Employ a reflective approach to recommend and establish an MR screening protocol based on the patient condition mentally, physically and clinically during clinical placements
7. Review MR Screening cases to provide image Interpretation with a high-level of diagnostic confidence

Subject Content

1. Rationale and principles for setting up screening protocols of: Brain Stroke, Appendix, Musculoskeletal, Renal Colic, Biliary Colic, Prostate, Breast Screen.
2. Advanced anatomy and normal variants as well as identifying the anatomy of abnormal organs and the different pathologies associated with different pathologies.
3. Pros and cons of Magnetic Resonance Imaging (‘MR’ or ‘MRI’) screening tests.
4. MR screening protocol setup guidelines
5. Research a program to validate the effectiveness of the screening protocol to additional clinical indications.
6. The relationship between Evidence Based Imaging and MRI.
7. Clinical Training via 3 different pathways

- Medical Officer – Image Interpretation and observation of practical work and Interaction with an MRI team.
- Medical MRI Practitioner – Hands on Practical training and basic Image interpretation.
- Allied Health – Interaction with the MRI Operations team, close observation of the operation and patient management and basic Image interpretation.

Special Requirements

Legislative pre-requisites

Note: Due to covid restriction, the Working with Children Check (WWCC) and Student Undertaking has been temporarily been removed.

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School’s requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country’s compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	1,500 words	30	N	Individual

MEDI 7057 MRI Physics

Credit Points 10

Legacy Code 401323

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description This subject provides the students with a detailed understanding of the design of the different Magnetic Resonance Imaging (MRI) Scanners. Differences in Electromagnets and Superconducting magnets; production of the magnetic field; radiofrequency (RF) energy; the physics behind pulse sequence absorption of RF Energy and MR Property of Protons are explored. This subject briefly explains their application and how they interrelate with essential accessories such as coils to form an image. The subject also explores the various forms of image contrast that can be obtained using MRI, along with various basic and intermediate MRI pulse sequences and image reconstruction techniques. Students will learn the factors that may cause artefact formation, image quality concerns, and an understanding of the noise producing factors. It also focuses on the safety requirements, and the serious consequences if proper safety procedures are not implemented and followed.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4767 Master of Advanced Imaging (MRI), 4768 Graduate Diploma of Advanced Imaging (MRI) or 4769 Grad Certificate in Advanced Imaging (MRI)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critically analyse Magnetic Resonance Imaging (MRI) Physics, characteristics of the different equipment and the role of the accessories required to form an image.
2. Employ magnetic resonance imaging as the primary diagnostic tool for the production of safe, and reliable diagnostic images.
3. Explore maintenance requirement for the different MRI designs.
4. Explore the different design of magnetic resonance imaging that employs patient-friendly and safer technology.
5. Analyse safety measures to protect MRI equipment, patients and staff.

Subject Content

Magnetic Resonance (MR) Radiofrequency, Equipment Design and Safety.
1. Principles of Magnetic Resonance Imaging (MRI) Physics and basic electromagnetism.
2. Principle of MR image formation, from proton spin signal to final image requisition.
3. Different configurations and designs of MRI equipment.
4. Maintenance ? what parts require (or may require) regular maintenance.
5. Frequencies and methods of production of the magnetic field.
6. MRI Safety Guidelines.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Reflection	500 words each (Reflective Journal x 8)	40	N	Individual
Applied Project	1500 words	40	N	Individual
Literature Review	1000 words	20	N	Individual

MEDI 7058 Multi-sectional and 3D Human Anatomy

Credit Points 10

Legacy Code 401320

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description This subject includes detailed 3D high resolution multi-sectional anatomy of the human body. Learning human anatomy in a 3D high resolution platform will enable students to conceptualise biological organs in 3D. Students will develop the ability to differentiate between normal and abnormal anatomy as well as understanding the demographics of pathological lesions in their daily clinical works. Delivered online, students will have opportunities to interact with medical imaging specialists as well as other subspecialists, such as surgeons, neurologists, and Emergency Specialists.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in 4767 Master of Advanced Imaging (MRI), 4768 Graduate Diploma of Advanced Imaging (MRI) or 4769 Grad Certificate in Advanced Imaging (MRI)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine high resolution theoretical and practical 3D anatomy.
2. Examine high resolution 3D Advanced Imaging cross-sectional anatomy.
3. Analyse the most appropriate anatomical planes for commonly investigated structures.

Subject Content

1.Differentiation between 2D and 3D anatomy.
2.Cross-sectional 3D anatomy of human body, which includes head, spine, neck, chest, Abdomen and pelvis, upper and lower extremities.
3.Illustration of anatomical structures in their common scanned planes

4.Reconstructed 3D imaging in 2D and 3D interactive platforms

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Reflection	500 words x10	50	N	Individual

MEDI 7059 Radiobiology

Credit Points 10

Legacy Code 401322

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description This subject provides a specialised study of the Characteristics and Properties of Radiation Chemistry, Structure of Matter, Chemical Behaviour, Ionisation and Excitation, as well as in-depth study of the effects of exposure to ionising radiation on biological systems from the cellular level to systemic effects. The topics of the subject will be focused on the biological response to irradiation which will be considered from the perspective of susceptibility versus resistance for the purposes of radiation protection in medical, occupational and environmental exposures to radioactivity. There will be specialist lectures by radiobiology and/or radiotherapy experts during the subject.

School Medicine

Discipline Radiology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Co-requisite(s) MEDI 7058

Restrictions

Students must be enrolled in 4767 Master of Advanced Imaging (MRI), 4768 Graduate Diploma of Advanced Imaging (MRI) or 4769 Grad Certificate in Advanced Imaging (MRI)

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the characteristics of the different levels of radiofrequencies and their interaction with matter to identify the difference between ionisation and the excitation of cells
2. Analyse the biological effects of radiation at a cellular and systemic level to assess the risks and benefits of exposure to radiation
3. Analyse the differences in response for healthy and mutagenic cells and the stages of destabilising of molecular structure and cancer formation
4. Assess stochastic and non-stochastic effects of exposure to low level of radiation from medical, occupational and environmental exposure to radiation
5. Communicate the significance of the assessment to a non-specialist audience
6. Determine the proper radiation and risk measurement tools and unit and the illegitimacy of frequented risk assessment tools.

Subject Content

1. Fundamentals of radiofrequency physics.
2. Physiology of excitable and ionisable cells.
3. Biological effects of radiation on the human body and genome.
4. Stochastic and non-stochastic effects of low levels of radiation.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

MEDI 7060 Adnexal Surgery

Credit Points 10

Legacy Code 401319

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in Year 2 of the Master of Surgery (Advanced Gynaecological Surgery) course. The performance of Adnexal Surgery and the ability to avoid complications is paramount in order to produce a safe environment for the patient. The ability to diagnose and successfully manage complications, should they occur, is a necessary part of every surgeon's makeup. The preoperative assessment of adnexal masses is to be considered, with data provided to help avoid the inadvertent operation on malignant lesions by the generalist. This subject will allow the student to explore various aspects of adnexal surgery and review evidence in the literature to support any conclusions made by the student.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7046

Equivalent Subjects MEDI 7018 Laparoscopic Adnexal Surgery

Restrictions

Students must be enrolled in 4766 Graduate Diploma of Advanced Gynaecological Surgery or 4770 Master of Surgery (Advanced Gynaecological Surgery)

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of an Advanced Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) and satisfactory completion of the Graduate Diploma in Advanced Gynaecological Surgery [ie, Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) program].

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate surgical principles involved in performing Adnexal Surgery, focusing on minimally invasive techniques including strategies for specimen removal
2. Diagnose and manage complications, with particular reference to laparoscopic surgical methods utilised when returning to theatres
3. Evaluate various approaches to Adnexal Surgery including the benefits and limitations of each technique
4. Critically appraise the evidence, with an emphasis on strategies to avoid inadvertent operations on malignant lesions
5. Reflect on aspects of Adnexal Surgery in gynaecological surgery to enhance professional practice

Subject Content

1. Surgical principles of Adnexal Surgery, particularly focusing on minimally invasive techniques
2. Surgical techniques used in minimally invasive surgery to prevent complications including the need for laparotomy.
3. Literature review on Adnexal Surgical procedures with emphasis on strategies to avoid inadvertent operations on malignant lesions

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Applied Project	Total 5,000 words: 1a. Literature Review 4,000 words (SLOs 1, 3, 4); 1b. Reflection ~1,000 words (SLOs 2, 5)	100	N	Individual

MEDI 7061 Hysterectomy

Credit Points 10

Legacy Code 401315

Coordinator Harry Merkur (https://directory.westernsydney.edu.au/search/name/Harry Merkur/)

Description This is an alternate subject in Year 2 of the Master of Surgery (Advanced Gynaecological Surgery) course. Students undertaking this subject will be expected to explore aspects of hysterectomy through various approaches in different clinical and pathological settings. This subject will enhance their ability to develop a foundation for improving their skills and achieving competency at hysterectomy, particularly utilising minimally invasive techniques. This subject will allow students to explore the rationale behind decisions to perform a hysterectomy, the nuances of surgical techniques used in a safe manner. It will allow an appreciation of the pre-operative and post-operative issues to ensure optimal patient outcomes.

School Medicine

Discipline Obstetrics and Gynaecology

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 7046

Equivalent Subjects MEDI 7019 Laparoscopic Hysterectomy

Restrictions

Students must be enrolled in 4770 Master of Surgery (Advanced Gynaecological Surgery) or 4690 Master of Surgery in Advanced Gynaecological Surgery

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of an Advanced Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) and satisfactory completion of the Graduate Diploma in Advanced Gynaecological Surgery [ie, Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) program].

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate surgical principles involved in performing hysterectomy, particularly focusing on minimally invasive techniques.
2. Effectively diagnose and manage surgical complications with respect to hysterectomy
3. Critically assess important factors in pre-operative and post-operative care when performing hysterectomy
4. Critically review the medical literature on hysterectomy techniques and strategies to minimise and manage complications

Subject Content

1.Surgical principles of hysterectomy, particularly focusing on minimally invasive techniques
2.Surgical techniques used at hysterectomy to prevent complications
3.Pre-operative and post-operative issues relevant to hysterectomy
4.Review the medical literature on hysterectomy techniques and strategies to minimise and manage complications

Assessment

Pre-requisite(s) MEDI 7046

Equivalent Subjects MEDI 7024 Pelvic Floor Function and Dysfunction

Restrictions

Students must be enrolled in 4770 Master of Surgery (Advanced Gynaecological Surgery) or 4690 Master of Surgery in Advanced Gynaecological Surgery

Assumed Knowledge

All students are expected to have a knowledge base commensurate with a level of an Advanced Trainee or Specialist in Obstetrics & Gynaecology (RANZCOG or other accredited college) and satisfactory completion of the Graduate Diploma in Advanced Gynaecological Surgery [i.e., Year 1 of the Master of Surgery (Advanced Gynaecological Surgery) program].

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Review surgical principles involved in performing Pelvic Floor Surgery, particularly focusing on minimally invasive techniques
2. Effectively diagnose and manage complications related to Pelvic Floor Surgery
3. Assess factors responsible for prolapse and urinary incontinence
4. Evaluate procedures used to avoid and treat recurrence
5. Critically appraise the literature to improve clinical judgment and surgical competency
6. Reflect on theoretical and practical aspects of Pelvic Floor Surgery to enhance professional practice

Subject Content

1.Surgical principles of Pelvic Floor Surgery, particularly focusing on minimally invasive techniques
2.Surgical techniques used at Pelvic Floor Surgery to prevent complications.
3.Procedures used in prolapse and urinary incontinence
4.Literature review on prolapse and urinary incontinence procedures

Assessment

MEDI 7063 Applied Clinical Sciences 2

Credit Points 80

Legacy Code 401279

Coordinator Phillipa Hay (https://directory.westernsydney.edu.au/search/name/Phillipa Hay/)

Description This is a 80 credit point year-long subject taken over two terms (40 credit points in each term). Applied Clinical Sciences 2 covers the second clinical year of the Doctor of Medicine. Students apply and extend on clinical knowledge and skills learned in previous subjects. Students engage in clinical and community placements to develop professional competencies. Placements may be held in hospitals and community-based service organisations in the Greater Western Sydney area, or as rural placements in Bathurst or Lismore. Students enrolled in this subject must complete each of the subject's theoretical modules and each compulsory attachment module which corresponds with the student's allocated placement site rotations. Students will also continue to work through the MD Scholarly Project. Note: The professional practice students undertake in this subject is a minimum of 1225 hours (subject to location- based placement availability) Travel and accommodation - Students are required to arrange and pay for their own travel, accommodation and living expenses for the duration of the placement.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MEDI 3006

Incompatible Subjects MEDI 4001 - Integrated Clinical Sciences 2
MEDI 7006 - Applied Clinical Sciences 2
MEDI 7027 - Professional Portfolio 4

Restrictions

Students must be enrolled in program 4758 Doctor of Medicine.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Patient Care: Provides patient centred care at all stages of care, from pre-pregnancy to end of life
2. Health in the Community: Promotes the health and wellbeing of individuals and populations, with particular focus on Greater Western Sydney, rural, regional and Aboriginal and Torres Strait Islander communities

3. Personal & professional development: Evaluates and continuously develops own personal and professional capabilities, and those of others.
4. Scientific basis of medicine: Applies a sound understanding of the biomedical, psychological and social sciences to medical practice.

Subject Content

Theoretical Modules:
- Professional and Personal Development 2
- Scientific Streams 2 - Oncology, Neurology, Genetics, Growth and development
- Professional Portfolio 2
Conference weeks - 2
Attachment modules aligned to each student?fs clinical rotations

Special Requirements

Legislative pre-requisites

Students are required to obtain and provide all necessary documentation to be verified by NSW ClinConnect. This verification is a requirement of the NSW Health Department for all students enrolled in medical programs. If a student fails to produce this documentation to ClinConnect they will not be able to attend hospital and health service teaching sessions, and placements. Attendance is a mandatory requirement of the program to ensure that professional competencies are met. Failure to attend will result in a Fail grade for the subject.

All Students

To be eligible to enrol in and attend a health-related placement in your program, students must meet Western Sydney University requirements **and** Special Legislative Requirements to be assessed in their first year of study against the following:

1. National Criminal History Check: Students must have a current check valid for their entire program. Criminal history check must be an Australia wide check, include the student's full name matching their Student ID card and date of birth offences listed. If a student has a criminal history identified on their check, they must provide a Clinical Placement Authority Card (CPAC from the NSW HealthShare Employment Screening and Review Unit:https://www.health.nsw.gov.au/careers/student_clearance/Documents/appendix-10-student-application.pdf

International students must additionally have a translated International Police Check or statutory declaration.

2. A NSW Working with Children Check (WWCC) clearance letter issued under the category of volunteer valid for their entire program.

3. A completed vaccination/immunisation card with all serology results containing expiry dates and currency must be maintained by the compliance for their entire program.

4. NSW Undertaking/Declaration form.

5. Completed any additional health forms required (such as NSW Health Code of Conduct, Health Student Undertaking/Declaration and Assessment Tool).

6. Relevant Local Health District specific documentation as requested. Contact your School for further details. Resources are also available on the Placement Hub (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/) website.

Inherent Requirements

Students must also meet the inherent requirements of the program as outlined in the Western Sydney University Inherent Requirements for Medicine:

(www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses) (https://hbook.westernsydney.edu.au/subject-details/medi7063/www.uws.edu.au/ir/inherent_requirements/inherent_requirements_for_medicine_courses)/)

Inherent requirements are personal capabilities which are essential for achieving the learning outcomes of the Program or Subject in a way that will preserve the integrity of the University's teaching, learning and assessment standards and the accreditation requirements for the program. The Disability Education Standard, Section 3.4 (3) states:

"In assessing whether an adjustment to the course, unit of the course or program in which the student is enrolled, or proposes to be enrolled, is reasonable, the provider is entitled to maintain the academic requirements of the course or program, and other requirements or components that are inherent in or essential to its nature. Note: In providing for students with disabilities, a provider may continue to ensure the integrity of its courses or programs and assessment requirements and processes, so that those on whom it confers an award can present themselves as having the appropriate knowledge, experience and expertise implicit in the holding of that particular award."

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	75 hours	S/U	Y	Individual
Case Study	1500 words	S/U	Y	Individual
Portfolio	Over length of attachment	S/U	Y	Individual
Learning Contract	Over length of attachment	S/U	Y	Individual
Participation	Over length of attachment	S/U	Y	Individual
Professional Placement Performance	Clinical Viva 6 stations, 2x written case report/ presentations (1500-2000 word), Logbook (including mini-CEX	S/U	Y	Individual

Professional Placement Performance	Structured Viva 6 stations, Term report, Multiple Choice questions/ SAQ (1.5hrs), Logbook	S/U	Y	Individual
Professional Placement Performance	MHMSA 6 stations, Essay (max 3000 words), Logbook, Clinical attachment assessment, 2x Mini- CEX	S/U	Y	Individual
Applied Project	Learning plan, Supervisor Assessment, Final Report (2500-4000 words, submitted for each attachment)	S/U	Y	Individual
Professional Placement Performance	Oncology will typically be a 4 to 5 week placement in Metro. At the two Rural Clinical Schools placement time may be varied, Case presentation, Topic Presentation, Logbook, Clinical attachment assessment	S/U	Y	Individual

MEDI 7064 Applied Clinical Sciences 3

Credit Points 40

Legacy Code 401280

Coordinator Benjamin Woodham (https://directory.westernsydney.edu.au/search/name/Benjamin Woodham/)

Description During Applied Clinical Sciences 3 students will complete clinical attachments from the pool of clinical rotations (General Medicine 2 or 3, Surgery 2 or 3, General Practice, Aboriginal Health, Critical Care, Paediatrics, Obstetrics and Gynaecology, Mental Health and Oncology) which they did not undertake during enrolment in subject 401279 'Applied Clinical Science 2'. Placements may be held across a range of hospitals and community- based services and organisations in Greater Western Sydney, Bathurst or Lismore. The learning and assessment requirements of each rotation are consistent across training sites. This learning is underpinned by the theoretical modules Professional and Personal Development 3', 'Professional Portfolio 3' and 'Scientific Streams 3'. Students will also prepare for barrier exams and continue their MD Scholarly Project. Experiential learning is supported by campus, clinical school and online activities designed to prepare students for clinical practice as a graduate doctor. Note: The professional practice students undertake in this subject is a minimum of 525 hours (subject to location-based placement availability) Note: Travel and accommodation - Students are required to arrange and pay for their own travel, accommodation and living expenses whilst on clinical placement.

On successful completion of this subject, students should be able to:

1. Examine diagnostic entities in surgical pathology in the subspecialties of gastrointestinal and liver, breast, head and neck, paediatric, gynaecological, and haematopathology.
2. Assess ancillary techniques in the diagnosis and treatment of conditions within the subspecialties of gastrointestinal and liver, breast, head and neck, paediatric, gynaecological, and haematopathology.
3. Assess common and uncommon disease entities in gastrointestinal and liver pathology, including the diagnosis of non-neoplastic, benign and malignant entities.
4. Engage in professional development activities related to anatomical pathology.
5. Use evidence-based approach to inform the practice of surgical pathology in the subspecialties of gastrointestinal and liver, breast, head and neck, paediatric, gynaecological, and haematopathology.

Subject Content

Gastrointestinal tract and liver pathology
Breast pathology
Head and neck pathology
Paediatric pathology
Gynaecological pathology
Haematopathology

Special Requirements

Legislative pre-requisites

Students need to meet the legislative requirements to be in a supervised specialist training role in Pathology, and hence be working clinically in a hospital/laboratory setting. If a student fails to meet these requirements they will not be allowed to enrol in the subject.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Case Study	20 cases ~50-100 words each	50	Y	Individual
Practical Exam	2 hours	50	Y	Individual

MEDI 7070 General Surgical and Central Nervous System Pathology

Credit Points 10

Legacy Code 401472

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Description This subject uses a blended learning approach to introduce diagnostic entities in surgical pathology entities of neuropathology, cardiorespiratory pathology, genito-urinary pathology, salivary gland and endocrine pathology, skin and soft tissue pathology. The subject provides training in basic research skills, communication skills, and critical thinking. The self-directed online learning module is composed of digitalized images, practical notes, recorded lectures and quizzes on the diagnostic approach to important pathological entities of the central nervous system and spinal cord.

School Medicine

Discipline Pathology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects MEDI 7032 - Surgical Pathology 1

Restrictions

Students must be enrolled in 4750 Masters of Medicine (Pathology) postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine diagnostic entities in surgical pathology in the subspecialties of neuropathology, cardiorespiratory pathology, genito-urinary pathology, salivary gland and endocrine pathology, skin and soft tissue pathology.
2. Examine ancillary techniques in the diagnosis and treatment of conditions within the subspecialties of neuropathology, cardiorespiratory pathology, genito-urinary pathology, salivary gland and endocrine pathology, skin and soft tissue pathology.
3. Analyse important common and uncommon disease entities in Neuropathology, including a number of non-neoplastic, benign and malignant diagnoses.
4. Define the resources needed and technical requirements to reach the correct diagnosis.

5. Produce a diagnostic case study report to the professional standard required of a pathologist.

Subject Content

This subject covers the following organ systems:
Neuropathology
Cardiorespiratory system pathology
Genito-urinary tract pathology
Salivary gland pathology
Endocrine system pathology
Skin pathology
Soft tissue pathology
Students will be required to generate 10 case studies relevant to the above systems, which will include completing a review of the relevant literature, interpretation and application to diagnosis.

Special Requirements

Legislative pre-requisites

Students need to meet the legislative requirements to be in a supervised specialist training role in Pathology, and hence be working clinically in a hospital/laboratory setting. If a student fails to meet these requirements they will not be allowed to enrol in the subject.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	10 cases - 50-100 words each	50	Y	Individual
Practical	2 hours	50	Y	Individual

MEDI 7071 Surgical Pathology of Skin, Bone and Soft Tissue

Credit Points 10

Legacy Code 401475

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Description This subject will re-inforce the diagnostic entity in skin and soft tissue pathology that were introduced in Surgical Pathology I. The first self-directed online learning module is composed of digitalized images and practical notes on the diagnostic approach to important pathological entities of these sub-specialties. The second online module will revise prior learning of the sub-specialities neuropathology, cardiorespiratory pathology, genito-urinary pathology, salivary gland and endocrine pathology. A literature review and discussion of contemporary and emerging developments in the relevant pathological entity will be conducted. This subject is designed to not only re-inforce/revise the above topics, but to harness effective communication and analytical research skills and to understand the importance of professional development.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects MEDI 7034 - Surgical Pathology 3

Restrictions

Students must be enrolled in 4750 Masters of Medicine (Pathology).

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine and interpret advanced diagnostic entities in surgical pathology in the subspecialties of skin and soft tissue pathology
2. Identify common and uncommon disease entities in skin and soft tissue pathology, including the diagnosis of non-neoplastic, benign and malignant entities
3. Use research skills to investigate disease entities in skin and soft tissue pathology to reach the correct diagnosis
4. Report pathological findings using written and oral communication skills to patients, other health professional and related stakeholders, with application of analytical research skills where necessary to form appropriate conclusions and recommendations regarding further clinical management
5. Exemplify the behaviour required to create a safe, caring, ethical and professional practice required by pathologists

Subject Content

Skin pathology
Soft tissue pathology
Analytical research skills (Literature review assessment item)

Special Requirements

Legislative pre-requisites

Students need to meet the legislative requirements to be in a supervised specialist training role in Pathology, and hence be working clinically in a hospital/laboratory setting. If a student fails to meet these requirements they will not be allowed to enrol in the subject.

MEDI 7072 Surgical Pathology of the Female Genital Tract

Credit Points 10

Legacy Code 401479

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Description This subject will revise the diagnostic entities in gynaecological pathology that were introduced in Surgical Pathology IV. The first self-directed online learning module is composed of digitalized images and practical notes on the diagnostic approach to important pathological entities of gynaecological pathology. A second online module will revise the sub-specialities covered in Surgical Pathology I through V. Students will be required to complete a literature review of contemporary and emerging developments in a relevant pathological entity. This subject is designed to revise all areas of surgical pathology within the Master of Pathology as well as promote engagement with professional development activities relevant to a career as a pathologist.

MEDI 7073 Surgical Pathology of the Genito-urinary Tract, Salivary Gland and Endocrine System

Credit Points 10

Legacy Code 401474

Coordinator Tristan Rutland (https://directory.westernsydney.edu.au/search/name/Tristan Rutland/)

Description This subject will re-inforce the diagnostic entities in genito-urinary tract, salivary gland and endocrine system pathology that were introduced in Surgical Pathology I. Two self-directed online learning modules with digitalized images and practical notes on the diagnostic approach to important pathological entities of the above sub-specialties will be provided. The basic concepts in surgical, cyto- and small biopsy pathology, including the appropriate ancillary techniques in the diagnosis, prognostication and treatment prediction will be assessed. This subject is designed to further develop the basic research and communication skills, and critical thinking acquired in Surgical Pathology I, and to reinforce the resources and technical requirements needed to reach the correct pathological diagnosis.

MEDI 7075 Advanced Imaging Clinical Practice and Research

Credit Points 20

Coordinator James Nol (https://directory.westernsydney.edu.au/search/name/James Nol/)

Description This is a 20 credit point year-long subject taken over two sessions (10 credit points in each session). This year long subject will consist of 560 hours of supervised Clinical MRI Practice within the setting of a MRI Clinical Service. The purpose of Clinical MRI Practice is to apply academically acquired knowledge of MRI Practice to patient care in real time. Students will be supervised by experienced Medical MRI Practitioners to develop skills in operating MRI equipment and MR image interpretation for children and adults. Clinical experiences will include history taking, MR safety check, and MRI Protocol setting, Image interpretation, and performing various MRI examinations and understanding the specific sequences of various clinical conditions. Students will need to participate in online case conference discussions. The program will also include 5 assessment case studies selected from their work during placements, and a Research Paper of 5000 words from a case that requires improvement for existing protocols or the introduction of a new protocol.

School Medicine

Discipline Internal Medicine

Student Contribution Band HECS Band 3 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects MEDI 7048 - Advanced Imaging Research Project

Restrictions

Students must be enrolled in program 4767 - Master Advanced Imaging (MRI). Students must have completed a minimum of 70 credit points of the 4767 program subjects before enrolling in this subject.

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Examine code of conduct and ethical behaviours of the professional practice required of Diagnostic MRI Practitioners

2. Recognise and interpret patient history, physical and clinical Safety check, and examination results.

3. Perform and interpret common MRI examinations and critical findings with a safe, caring, ethical and professional practice;

4. Provide the highest diagnostically confident imaging examinations for the different regions of the human anatomy and for the different pathologies in question;

5. Provide the relevant image interpretation for obtained images and convey the outcome to requesting clinicians.

6. Communicate relevant clinical information to medical clinicians and patients.

7. Utilise evidenced-based approach to improve existing protocols or the introduction of a new protocol.

8. Conduct a research project in the field of medical imaging.

Subject Content

1. History and Safety examination of patients requiring an MRI examination;
2. Performing MRI examinations;
3. MR Image interpretation;
4. Clinical assessment case studies: Assessment strategies and reporting;
5. Planning and Conducting a Research Project in medical imaging: Principles and Strategies.

Special Requirements

Essential equipment

Students will need a computer and internet access to use the e-learning platform vUWS at https://vuws.westernsydney.edu.au/

Assessment

MGMT 1001 Introduction to Property

Credit Points 10

Legacy Code 200601

Coordinator Mohamad Zraika (https://directory.westernsydney.edu.au/search/name/Mohamad Zraika/)

Description Introduction to Property comprises six main topic areas. The first section covers the various professions within the property industry with particular emphasis on the valuation profession. The second section covers land law and legal concepts concerning property. The third section addresses issues in property development controls and planning. The fourth section concentrates on the areas of academic and industry report writing. This section also addresses the areas of academic study, lecture procedures and examination technique. The fifth section covers topics in relation to residential valuation and introduces methodologies for valuing more advanced properties as well as the skills required for collecting data for valuation purposes. The sixth section introduces students to mathematics required for later valuation units.

MGMT 1002 Principles of Valuation

Credit Points 10

Legacy Code 200602

Coordinator Mohamad Zraika (https://directory.westernsydney.edu.au/search/name/Mohamad Zraika/)

Description This subject covers five main topic areas. The first area covers various valuation methods and extends the students' knowledge in relation to industrial property valuation. The second area covers the hypothetical development method of valuation as well as strata valuation principles. The third area introduces the valuation of partial interests and advanced valuation mathematics. The fourth area provides an introduction to statutory valuation, rating and taxing of property. The last area introduces the students to commercial property valuation.

School Business

Discipline Valuation

Level Undergraduate Level 1 subject

Equivalent Subjects LGYC 1564 - Principles of Valuation

Restrictions

External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

Students undertaking this subject should have a sound knowledge of the property industry and an understanding of introductory financial mathematics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Discuss the concepts of valuation and apply various valuation methods, including hypothetical development and Discounted Cash Flow;
2. Collect, analyse and apply data in relation to the valuation of industrial property;
3. Explain partial interests in real property and apply the appropriate method to value them;
4. Apply advanced valuation mathematics using financial calculators and computers;
5. Describe strata subdivision of real property and apply the appropriate method to value these properties;
6. Prepare statutory and taxation valuation at federal, state and local levels;
7. Apply client communication and risk management skills in the context of valuation instructions to avoid issues of professional negligence.

Subject Content

- valuation methods
- valuation of industrial properties
- advanced valuation mathematical concepts
- financial valuation concepts
- introduction to statutory and taxation valuations
- Strata property principles and valuation
- Negligence, Risk and ethics

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Level Undergraduate Level 2 subject

Equivalent Subjects LGYC 1565 - Commercial Valuation

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

Good conceptual knowledge of property valuation methodology and valuation mathematics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Collect, analyse and apply data to the valuation of commercial land and buildings;
2. Identify and assess the risk factors in retail and commercial property investments;
3. Apply the requirements of the Australian Property Institute commercial valuation practice standards and guideline notes in commercial valuation;
4. Apply the due diligence process in relation to commercial property valuation;
5. Apply the principles and practice of commercial property valuation.

Subject Content

- commercial property market analysis
- commercial property as An investment Asset
- commercial valuation methodology, including capitalisation and DCF in detail
- Rent reviews and premium valuation
- Insurance valuation concepts
- retail valuations
- Due diligence and valuation Reporting Standards

Assessment

MGMT 3002 Rural Valuation

Credit Points 10

Legacy Code 200605

Coordinator Peter Wills (https://directory.westernsydney.edu.au/search/name/Peter Wills/)

Description To provide students with a full understanding of rural land/property valuation procedures and techniques. This includes being aware of those factors, inherent and external, that need to be taken into account when assessing different types of rural property holdings. To be aware of those environmental factors that affect rural land productivity, sustainability and end value.

School Business

Discipline Valuation

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYC 1567 - Rural Valuation

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or Major.

Assumed Knowledge

Students undertaking this subject should have a good understanding of valuation principles. It is also expected that they will understand land tenure systems, collection and analysis of property sales data and technical valuation report writing.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Understand the principles of rural land tenure and title in New South Wales and how it operates in different agricultural regions;
2. Be aware of those factors that affect and impact on the productivity and value of rural property and enterprises;
3. Identify relevant rural data sources, then collate and analyse such data;
4. Appreciate the impact of the added value concept of rural improvements and the impact that farm management practices have on overall value;
5. Demonstrate a detailed knowledge of the different valuation methods and then apply these to varying rural properties and enterprises;
6. Be aware of the ANZPI Professional Practice Standard in relation to rural valuation report writing;
7. Show an understanding of the impact that environmental and sustainability aspects have on rural enterprises and land values;
8. Realise the differing types of specialised rural land uses and understand what factors have to be taken into account when valuing them.

Subject Content

- rural land in Australia and rural valuation research
- NSW agriculture regions and rural land use
- Factors affecting rural land Productivity and value
- rural property data sources
- rural improvements
- The impact of farm management on rural valuation practice
- valuation methods
- rural property valuation inspection procedure
- rural sales analysis
- rural valuation reports
- valuation calculations and reconciliation
- valuation of specific rural properties

MGMT 3003 Specialised Valuation

Credit Points 10

Legacy Code 200876

Coordinator Mohamad Zraika (https://directory.westernsydney.edu.au/search/name/Mohamad Zraika/)

Description The value of special premises constitutes an important segment of valuation practice in Australia. A number of special valuation considerations arise in the appraisal of this class of premises. However, the most compelling reason for studying the valuation of special premises is the fact that these classes of property provide an ideal vehicle whereby valuation principles and methods of valuation can be critically evaluated by students.

School Business

Discipline Valuation

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYC 1566 Valuation of Special Premises MGMT 3005 Valuation of Special Premises

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

It is assumed that students will have a sound knowledge of:
1. Valuation principles and practices
2. Accounting principles
3. Commercial property practices
4. Property investment analysis and application
5. Property portfolio analysis

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Outline the nature of specialised property types and their use.
2. Identify property type characteristics and their relationship to productivity, profitability and management.
3. Describe the factors which cause depreciation, obsolescence and alternative use of special premises improvements.
4. Analyse the ramifications of contamination and environmental issues on the operation and management of special premises.
5. Apply a range of valuation techniques and data analysis pertinent to the various classes of special premises.
6. Utilise basic principles to develop procedures for undertaking comprehensive valuations of any specialised property and preparation of industry standard gfull speaking h narrative reports.

Subject Content

1. Nature of special premises and valuation methods.
2. Accounting issues and professional liability in relation to special premises.
3. Super profit, going concerns and goodwill issues.
4. Plant and machinery valuations.
5. Specialist valuation reports and reconciling evidence.
6. Valuation considerations including good average management in relation to specialised uses.
7. Valuation of special premises and limited market properties (such as both public and accommodation hotels, motels, nursing homes, retirement villages, extractive industries, resorts, marinas, service stations etc.).

MGMT 3004 Statutory Valuation

Credit Points 10

Legacy Code 200711

Coordinator Sharon Yam (https://directory.westernsydney.edu.au/search/name/Sharon Yam/)

Description This subject covers the area of statutory valuation. It is the prescribed subject for registration as a valuer with the NSW Fair Trading. It is also the prescribed subject for Certified Practicing Valuer (CPV) membership of the Australian Property Institute. Upon completion of this subject, students will demonstrate a comprehensive understanding of the relevant property and related laws, necessary valuation methods and principles required for statutory valuations.

School Business

Discipline Valuation

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 4819 - Compulsory Acquisition and Litigation

Restrictions

External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

An understanding of the basic principles of land administration, in particular, the various interests to be held in land and forms of tenure; An understanding of the NSW planning system, the development approval process and administrative controls over decision making; An understanding of various valuation principles and methodologies and valuation of various types of property and interest in land.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the principles of property and related laws and valuation methods related to compensation and resumption;
2. Explain the process of land acquisition or resumption, and the concepts of market value, special value to the owner, injurious affection, severance, enhancement, disturbance and a loss of goodwill;
3. Apply the important court decisions in compensation valuation;
4. Prepare a professional standard report on a parcel of real estate for the purpose of a claim for compulsory acquisition;
5. Discuss the role of expert witnesses or a legal representative in compensation disputes;
6. Apply legal and valuation concepts in assessing the compensation payable on a compulsory taking;
7. Explain the importance and responsibility of acting professionally as a valuer.

Subject Content

- Compensation concepts for compulsory acquisition of property
- Valuation procedures in handling compensation cases
- Principles and valuation methods for rating and taxing valuation
- Valuation report writing
- Preparation of evidence for court
- Professional Negligence

Assessment

MGMT 7003 Financial Management of Projects

Credit Points 10

Legacy Code 301194

Coordinator Xiaohua Jin (https://directory.westernsydney.edu.au/search/name/Xiaohua Jin/)

Description Projects are always unique and their processes are always subject to elements of uncertainty and change. The skill of project management professionals in securing the best return for their organisation's efforts is thus held in great value. This subject is concerned with financial aspects of project management from both theoretical and practical perspectives. The aim is to explain how financial management tasks are carried out in the context of projects as well as stimulate students' reflection on best practice in project financial management.

School Eng, Design & Built Env

Discipline Business And Management

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Restrictions

Students must be enrolled in program 3752 Master of Project Management.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Prepare and analyse a cost estimate with an appropriate cost-estimation approach
2. Conduct a risk assessment regarding project financial management using appropriate tools
3. Analyse project data and recommend approaches for financing a project

4. Apply best practices for project cost control and recommend appropriate approaches to meeting a project﷯fs financial expectations

Subject Content

Finance and Project Finance
Stakeholders and Regulatory Environment
Estimating and Budgeting
Contracts and Documentation
Cash Flow Analysis
Financial Modelling and Project Evaluation
Progress, Valuation and Payments
Risks Involved in Project Financial Management

MKTG 1003 Consumer Behaviour

Credit Points 10

Legacy Code 200084

Coordinator Daniel Townsend (https://directory.westernsydney.edu.au/search/name/Daniel Townsend/)

Description From 2022 this subject replaced by MKTG 2010 Customer Experience Fundamentals. A focus on the consumer is critical in marketing philosophy. Effective marketing strategies are necessarily formulated as a result of the understanding of basic consumer behaviour. The aim of the subject Consumer Behaviour is to introduce students to consumer behaviour as a critical component in marketing philosophy, and fundamental to the development of effective marketing strategies. This subject applies concepts, theories and models derived from disciplines such as sociology, anthropology, psychology, economics, and mass communications theory to a consumer context. Students will learn to apply such concepts, theories and models through a range of individual and collaborative means using a blended learning design that draws on current and future consumer trends in various marketplaces.

MKTG 1009 Public Relations Theory and Practice

Credit Points 10

Legacy Code 100212

Coordinator Vanessa Campbell (https://directory.westernsydney.edu.au/search/name/Vanessa Campbell/)

Description This subject introduces the student to the theory and research that serves as the foundation of the practice of public relations. The subject surveys the history of the discipline, the theories on which the discipline is based, and current models of practice. The subject focuses on understanding how to research and analyse the opinions of organisational publics in order to develop mutually beneficial relationships with those publics. The contemporary practice of public relations requires an understanding of a broad range of social science theory and research and the ability to incorporate that knowledge in the solution of public relations problems.

School Humanities & Comm Arts

MKTG 1011 Fundamentals of Marketing Analytics

Credit Points 10

Legacy Code 201085

Coordinator Francine Garlin (https://directory.westernsydney.edu.au/search/name/Francine Garlin/)

Description The subject introduces students to the core concepts associated with business analytics in general, and marketing analytics in particular. The subject aims to provide students foundational knowledge of the range of marketing problems for which business analytics can facilitate solutions. In doing so, the subject focuses on developing an understanding of the nature and tools of analytics as they may apply to key elements of marketing strategy frameworks from a largely non-mathematical/non-statistical perspective.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Co-requisite(s) -

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Distinguish the key concepts and techniques of business analytics with related fields, such as business intelligence, big data, market research, artificial intelligence and machine /deep learning.
2. Provide advice on appropriate business analytics data, tools and techniques to address specific marketing problems and insights about customers
3. Use analytic tools to perform simple analysis and data visualisation functions
4. Explain the central importance of customer value and valuing the customer to an organisational success
5. Communicate data-driven insights for marketing action to diverse others
6. Work collaboratively in teams

Subject Content

1. Overview of business analytics and marketing practice
2. The nature of data and models
3. Understanding customers through the lens of analytics
4. Tools for analytics in marketing mix decision-making
5. The question of ethics and analytics
6. Maintaining currency and monitoring trends

Assessment

MKTG 2001 Advertising: Creative

Credit Points 10

Legacy Code 100552

Coordinator John Greig (https://directory.westernsydney.edu.au/search/name/John Greig/)

Description This is a practice-oriented subject designed to teach students how to conceive and produce original and effective advertising to meet strategic goals. From interpretation of a brief, to creating and evaluating concepts, and presenting campaigns, the subject aims to mirror real processes within the advertising industry.

School Humanities & Comm Arts

Discipline Advertising

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MKTG 1001

Learning Outcomes

On successful completion of this subject, students should be able to:

1. engage meaningfully in the 'creative process' of advertising, integrating image, word, and other elements into effective advertising concepts, across a range of media
2. continually improve on their ideas. Collaboration, and critical self and peer evaluation are key to this process.
3. apply a variety of approaches to idea generation and development, in order to identify techniques and processes which maximize students' own potential.
4. explain many of the unique and differing issues involved in creating effective concepts for different media and audiences
5. create a number of advertising concepts within a common campaign theme, as the foundation for effective brand building
6. explain a range of fundamental executional terms and issues, and typical processes involved in the production of advertising concepts
7. present a portfolio which showcases, professionally and clearly, a range of advertising concepts
8. apply presentation skills which clearly communicate creative concepts

Subject Content

The brief as a tool; how to interpret/interrogate it
Different approaches to the creative process and concept development

Working with visuals and copy
Characteristics of different media - what works, what doesn't & why
Campaigns - 'characteristics and elements of big ideas' in brand-building
Evaluation and criticism
Presentation & production - overview of processes

MKTG 2002 Incubator 1: Innovation and Creativity for Entrepreneurship

Credit Points 10

Legacy Code 301165

Coordinator Anton Bogdanovych (https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/)

Description This subject explores the ways innovative ideas for a product or service can be turned into a successful start-up business. Students explore practical activities to generate creative ideas and learn about innovation, as well as follow the stages involved in developing a conceptual idea. Upon successful completion of the subject, students will possess potential startup options that could be further explored in more advanced incubator subjects.

School Computer, Data & Math Sciences

Discipline Project Management

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Examine the key drivers of creativity and innovation.
2. Determine suitable business models for a startup.
3. Apply a creative process to develop a product or service concept.
4. Outline opportunities for commercialisation from innovation.
5. Apply communication and collaboration skills to complete tasks in a timely and ethical manner.

Subject Content

1. The relationship between creativity, innovation and entrepreneurship.

2. Creative and innovation processes.
3. Understanding the market & identifying emerging opportunities.
4. Environmental, political, cultural, financial, and organisational forces behind innovation.
5. Creative principles behind new venture creation.
6. Models for entrepreneurship.
7. Innovative business models and business strategies.

MKTG 2003 Incubator 3: Product Development

Credit Points 10

Legacy Code 301168

Coordinator Anton Bogdanovych (https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/)

Description Product development is about expanding on a creative, innovative idea or concept through specific stages into a product or service. Students apply practical learning techniques in each of the stages for the product or service development. In addition, students use a human-centred design approach to explore a problem and include a 'human' or user perspective in addressing the problem. The approach includes creating a digital or physical prototype to test the product or service concept with potential customers. Students create and apply methods to collect feedback from potential customers which is used to refine their prototype. In these activities students are applying critical and creative thinking, decision making and communication skills which are essential employability skills.

School Computer, Data & Math Sciences

Discipline Project Management

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate knowledge of the approaches associated with customer experience, user experience, service and product design.
2. Develop a physical or digital prototype.
3. Test and validate a product or service with potential customers and observational analysis.
4. Collaborate in an effective and inclusive manner to achieve the required group outcomes.
5. Demonstrate professional, ethical verbal and written communication skills that appeal to a wide audience.

Subject Content

1. Customer experience, user experience, service and product design
2. Human centred design approach – Discover, Define, Develop, Deliver quantitative and qualitative research
3. Prototyping and testing
4. AI tools and systems in experience, service and product design

Special Requirements

MKTG 2004 International Marketing Research

Credit Points 10

Legacy Code 200374

Coordinator Aila Khan (https://directory.westernsydney.edu.au/search/name/Aila Khan/)

Description This subject aims to provide students with tools to undertake and critically evaluate simple international marketing research projects. It covers basic marketing research concepts and statistical techniques with emphasis on the impact of the international environment in conducting both primary and secondary data research.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MATH 1030 AND
MKTG 1006 AND
BUSM 1015

Assumed Knowledge

An understanding of the basic principles of marketing, international business and statistics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the information needs of international marketing managers;
2. Evaluate and access secondary sources of information about international trade and foreign markets;
3. Assess and apply relevant research concepts, tools and techniques;
4. Use a statistical package to analyse survey data;

5. Formulate and implement research designs that are appropriate for specific international marketing research problems;
6. Use research results to solve international marketing problems.

Subject Content

- marketing research in a global environment
- international marketing research process
- secondary data research in international marketing
- international marketing research design issues
- survey research
- scale development and questionnaire design for multi-country surveys
- sampling
- basic data analysis
- basic statistical techniques
- application of statistical techniques using SPSS
- interpretation of data analysis results
- report writing

MKTG 2005 Issues, Risk and Crisis Communication

Credit Points 10

Legacy Code 102064

Coordinator Misty Mcphail (https://directory.westernsydney.edu.au/search/name/Misty Mcphail/)

Description This subject explores the principles and practice of issues management in order to avoid crises, manage when one arises, and seek opportunities to learn and benefit from a crisis where possible, using effective communication. It investigates the development of crisis management plans, and the testing and implementing of these plans. Dealing with the media and pressure groups is covered, along with training a crisis communication team and organising a response to a crisis situation.

School Humanities & Comm Arts

Discipline Public Relations

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MKTG 1009

Equivalent Subjects LGYA 1068 - Issues in Corporate Public Relations

Assumed Knowledge

Basic knowledge of public relations theory and current public relations practice.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify issues and crisis communication management as a strategic organisational activity
2. Demonstrate an understanding and apply leadership skills needed to be an effective communicator in issues and crisis situations
3. Critically review the literature on risk, crises and issues management
4. Consider issues and crises management in communication ethics and best practice in relations with stakeholders, including government and the media.

Subject Content

1. Communication and issues management
2. Reputation, image and impression management
3. The nature of crises and preparing for a crisis
4. How governments and organisations respond to environmental challenges
5. Corporate social responsibility, also key publics and their needs
6. Media management and media training of key executives
7. Group behaviour in a crisis
8. Critical path management, and
9. Ways of preventing a crisis in the first place

MKTG 2006 Marketing Communications

Credit Points 10

Legacy Code 200086

Coordinator Michael Lwin (https://directory.westernsydney.edu.au/search/name/Michael Lwin/)

Description From 2022 this subject replaced by MKTG 3019 Marketing and Digital Communications. Developing and managing an effective integrated marketing communications (IMC) program is a vital part of successful marketing. Moreover, IMC is a highly visible and demanding aspect of marketing communication effort at brand level. This unit, grounded in marketing principles, provides students with an understanding of IMC, the marketing communication process, and coordinating major elements of the marketing communications mix - advertising, digital marketing, sales promotions, personal selling, sponsorship marketing, public relations, direct marketing.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MKTG 1006

Assumed Knowledge

Basic principles of marketing.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate the development of a brandðfs integrated marketing communications campaign, and the application of communication creativity;
2. Interpret the theoretical foundations of integrated marketing communications, the marketing communications process, and the major elements of the marketing communications mix at brand-level;
3. Analyse, through the use of appropriate theories, how integrated marketing communications is applied at brand-level;
4. Discuss marketing communications in terms of cultural, social economical and environmental issues at brand-level.

Subject Content

- theoretical foundations of IMC, Marketing Communications decision making process, and Brand equity enhancement
- The communication process
- attitude and persuasion in Marketing Communications
- Marketing segmentation and Brand positioning
- Advertising and digital Marketing Communications
- message planning and implementation
- Broadcast media, Print and support media, and media analysis
- direct Marketing, sales promotion, digital Marketing, personal selling, Marketing public relations and sponsorship Marketing
- Evaluating IMC effectiveness

Assessment

MKTG 2010 Customer Experience Fundamentals

Credit Points 10

Legacy Code 201082

Coordinator Eddy Widjaja (https://directory.westernsydney.edu.au/search/name/Eddy Widjaja/)

Description Customer experiences occur when there is interaction between a company and their customers. Increasing digitisation of this interface has resulted in a shift of buyer expectations where communication is no longer a one-way process. The result being that this exchange comprises of the customer journey where internal factors such as attitudes, learning and emotions combined with external factors such as culture, social communities, and global networks influence decisions. This subject introduces the complexity of technology driven relationships where customers become co-creators of their own personalized experiences and how companies can be part of this. Students will learn the importance of creating positive customer experiences and how this adds value to organisation strategy.

MKTG 2011 Customer Insights

Credit Points 10

Legacy Code 201084

Coordinator Aila Khan (https://directory.westernsydney.edu.au/search/name/Aila Khan/)

Description Digital technologies are generating large volumes of information (data) about customers and markets. The key is determining how to organise and analyse this data to generate useful insights about customers for marketing decisions. The focus of this subject is on data analysis and reasoning to better understand the culture of insight-driven businesses. Students will examine different sources of information and the processes needed to ensure the generation of quality output. Activities around data visualization, and the role of social media platforms which support this, will prepare students for their future business careers.

MKTG 2012 Public Relations: Strategies and Tactics

Credit Points 10

Coordinator Nicole Bridges (https://directory.westernsydney.edu.au/search/name/Nicole Bridges/)

Description Public Relations: Strategies and Tactics provides the opportunity to connect theoretical knowledge with practical planning, writing, and presenting skills while examining and analysing real-life campaigns. By exploring client concerns, opportunities, and various stakeholder needs, students will learn how to develop compelling pieces of content to convey desired brand messages effectively. This course will delve into the distinctions between Public Relations strategies and tactics through class discussions, case studies, and project-based assessments. Through these assessments, students will demonstrate their ability to develop Public Relations strategies and actionable tactics that will prepare them for a career in Public Relations.

School Humanities & Comm Arts

Discipline Political Science

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) MKTG 1009

Equivalent Subjects COMM 2011

Learning Outcomes

After successful completion of this subject, students will be able to:

1. Describe the role of and differences between strategy and tactics, and their relationship to Public Relations objectives
2. Explain the importance of Public Relations strategy in successful communication plans, and the range of approaches and methodologies used in contemporary Public Relations practice
3. Describe how contemporary Public Relations tactics support the implementation of Public Relations strategies
4. Undertake relevant research to develop and leverage appropriate strategies and tactics to achieve Public Relations objectives for specific stakeholder groups, including multicultural and Indigenous Australian peoples and communities.
5. Create a range of Public Relations tactics appropriate for a specific strategic approach.

Subject Content

Through weekly lecture pods and a tutorial, students will become familiar with the principles and concepts behind Public Relation strategies and tactics. Students will gain an understanding of:

- the role of research in strategy development and identifying insights
- the role of and differences between strategy and tactics, and their relationship to Public Relations objectives
- how to consider the needs of the organisation and their stakeholders when designing Public Relations strategies and tactics
- how to develop a strategic platform

- how to identify newsworthy content from marketing assets (research reports, survey data etc.)
- how to write Public Relations content such as media releases, key messages and narratives, website and social media content, fact sheets, backgrounders and briefing documents, organisation and spokesperson biographies, fact sheets, influencer kits, media pitches, and thought leadership content, including by lines, reactive and proactive commentary, and blog posts

MKTG 2013 Advertising: Strategy

Credit Points 10

Coordinator Jacki Montgomery (https://directory.westernsydney.edu.au/search/name/Jacki Montgomery/)

Description Advertising: Strategy is a dynamic practice-oriented subject designed to teach students how to interrogate and analyse clients, brands, products, markets, and audiences in order to develop effective advertising strategies. Through discussion topics and project-based work, students will gain an understanding of the importance of brand personality and positioning, consumer insights, unique selling propositions, and how to write an advertising brief capable of generating successful campaigns.

School Humanities & Comm Arts

Discipline Advertising

Student Contribution Band

Level Undergraduate Level 2 subject

Pre-requisite(s) MKTG 1001 OR
MKTG 1006 OR
DESN 1007

Equivalent Subjects COMM 2011

Learning Outcomes

After successful completion of this Subject, students will be able to:

1. Analyse the importance of brand positioning and strategy in successful advertising and the range of approaches undertaken to develop such strategies.
2. Explain key concepts including brand positioning, consumer insights, product benefits and propositions.
3. Conduct relevant research to reach consumer insights which then inform unique selling propositions
4. Consolidate research findings into a presentation and strategy document (creative brief) with potential to inspire successful campaigns.
5. Evaluate the benefits of integrated marketing communication plans, and how single ideas may be campaigned across different media and/or in different locations/markets.
6. Establish criteria for evaluation of campaigns.

Subject Content

- Brand positioning and differentiation
- Researching target audiences
- Developing consumer insight through the strategic process
- Types of strategies
- Developing the strategy statement (the Creative Brief)
- Relevance of strategy to integrated marketing communications
- Advertising Strategy roles and careers

MKTG 3002 Business to Business Marketing

Credit Points 10

Legacy Code 200091

Coordinator Neeru Sharma (https://directory.westernsydney.edu.au/search/name/Neeru Sharma/)

Description From 2022 this subject replaced by MKTG 3020 Omnichannel Marketing. Unlike consumer marketing where an individual makes decisions based on their own needs or those of their household, business-to-business (B2B) marketing involves individuals or companies promoting and selling products and/or services to other companies. This subject encompasses all these aspects of B2B marketing including organisational buying behaviour, B2B market research, management of the marketing mix from a B2B perspective, relationship and network marketing, supply chain management and Customer Relationship Management (CRM) strategies, and business marketing strategy.

School Business

MKTG 3003 Commercial Property Management

Credit Points 10

Legacy Code 200600

Coordinator Kamel Taoum (https://directory.westernsydney.edu.au/search/name/Kamel Taoum/)

Description This subject examines the operation of commercial property management as a discrete professional discipline of the property industry. Students examine the fundamental principles of the day-to-day management of the various classes of mainstream commercial investment property. In this subject, students acquire an understanding of the various roles, duties, obligations and legal liabilities of the Commercial Property Manager. Various legislative and statutory provisions are explored, as well as the inter-relationship of commercial property management with the professional disciplines of asset management, investment management and portfolio management, and other sectors of the property Industry. Students also gain an understanding of contemporary commercial leasing practice and the relationships which operate between the building owner, the building manager, and commercial tenants, including the interests and objectives of all concerned parties.

School Business

Discipline Real Estate

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYC 0055 - Commercial Property Management

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

It is assumed that candidates attempting this subject are already in possession of a basic understanding of the nature of commercial real estate as an investment and asset class. It is assumed that this level of understanding includes a familiarity with the fundamental characteristics of retail, industrial and office-building properties, plus the sub-markets existing within each of those use categories, and how the characteristics differ between these three prime categories of commercial property use. It is also assumed that, prior to entry into this subject, students already possess a rudimentary understanding of investment analysis, risk analysis and financial appraisal (i.e. valuation) techniques, principles and practice as they apply to commercial real estate.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Explain the wide-ranging nature of the roles, objectives, duties, instructions and obligations inherent in commercial property management, and the economic and market forces which influence them;
2. Explain the various legislative provisions, legal obligations and professional liability issues affecting commercial property management;
3. Demonstrate a sound understanding of the distinctive characteristics of each of the mainstream classes of commercial investment property (retail, industrial, & office buildings) and the manner in which those characteristics dictate the specialist property management considerations in each category;
4. Explain the professional relationships and synergies which occur between the discipline of commercial property management and those of property investment, property development, marketing, leasing, research, valuation, portfolio asset and facilities management.

Subject Content

- Roles, duties and responsibilities of The commercial property manager

- commercial property management ? legal implications
- commercial leases
- Monitor and control of Expenditure in commercial properties
- management of commercial, office, industrial and retail properties
- Facilities management concepts
- The economy and commercial property cycles
- Ecologically sustainable development and its impact on commercial property management

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

MKTG 3004 Export Strategy and Applications

Credit Points 10

Legacy Code 200589

Coordinator Shveta Sharma (https://directory.westernsydney.edu.au/search/name/Shveta Sharma/)

Description Australia's export opportunities have yet to be fully realised. In other words, of all the firms that could be considered as having an export potential, only a very small percentage of them actually do (export). This subject teaches students about the management perspectives and the operational requirements needed for a successful export initiative. Specific topics include strategic intent, capability assessment, information gathering, export entry models evaluation, market mix factors, risk management, export finance, logistics and sales management. The overriding aim of the subject is to enable students to be confident in working in an international business environment and to seek out and undertake management and operational tasks necessary to the global development of the firm.

School Business

Discipline International Business

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) BUSM 1015

Restrictions

Note that only students enrolled at Sydney City Campus may register in the Sydney City Campus subjects offered at that location.

Assumed Knowledge

Principles of international business including the dynamics of foreign business markets, international marketing and research methods, comparative global economics, international corporate finance and strategy. The basics of economics, accounting, law, statistics and business communications are also assumed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate how international trade varies between industries, and the drivers of the internationalisation of firms.
2. Appraise a firmfs international intent and operational capabilities
3. Identify and research international information relevant to that intent.
4. Design strategies used by companies to select overseas markets and to provide and promote goods and services to buyers in those markets.
5. Evaluate common export transaction activities related to trade finance, risk and logistics

Subject Content

Nature of exporting activity and strategic intent
Export entry model evaluation
Capability assessment,
Marketing Mix
Export Sales Management
Risk Management
Export finance
Logistics management

MKTG 3006 Incubator 7: Growth and Exit Strategies

Credit Points 10

Legacy Code 301172

Coordinator Anton Bogdanovych (https://directory.westernsydney.edu.au/search/name/Anton Bogdanovych/)

Description Startups must plan for both business growth and exit from the business. In this final incubator subject students will explore, analyse, evaluate and select from a range of suitable growth and exit strategies. This includes deciding whether their own or a live case study business will grow organically or will require a fast growth model and rapid expansion. Students will also need to consider possible exit strategies (such as initial public offering (IPO), trade sales or personal redundancies). At the completion of the subject, students will have developed a future growth plan with possible exit strategies.

MKTG 3007 International Marketing

Credit Points 10

Legacy Code 200094

Coordinator Nicole Stegemann (https://directory.westernsydney.edu.au/search/name/Nicole Stegemann/)

Description Marketing internationally has become a necessity for many firms that wish to survive and grow in today's dynamic and increasingly linked world economy. International Marketing is concerned with understanding and successfully managing the different international economic, cultural, political and legal environments as they affect the marketing activities of companies. International Marketing examines the role of marketing research, international finance, overseas market entry and expansion strategies and the marketing mix in international markets. On completion of this subject students will have acquired a sound theoretical basis and, particularly, a practical understanding of how companies operate in international markets.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MKTG 1006 OR
BUSM 1015

Restrictions

Note that only students enrolled at WSU Online or Sydney City Campus may register in the WSU Online or Sydney City Campus subjects offered at those locations.

Assumed Knowledge

Students should have a good understanding of marketing research, brand management and the foundations of economics.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse elements of the international environment and their inter-relationships and understand their relevance to international marketing strategies;
2. Identify international marketing opportunities and threats;
3. Demonstrate how international marketing is practised by international companies;
4. Apply sound operational knowledge of international marketing processes to international business activities.

Subject Content

- introduction to international Marketing
- The international economic and financial environment
- The international political and legal environment
- The cultural and social environment of international business
- Researching international markets
- international market entry

MKTG 3009 Marketing Planning Project

Credit Points 10

Legacy Code 200096

Coordinator Ned Doyle (https://directory.westernsydney.edu.au/search/name/Ned Doyle/)

Description Marketing planning project (MPP) assimilates and builds on the wide range of marketing units that students have previously completed. MPP assimilates students' specialist knowledge developed

in other units through the use of a 'real-life' case context in which students demonstrate their mastery of marketing in the development and presentation of a professional marketing plan.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MKTG 1006

Equivalent Subjects LGYA 9911 - Marketing Project LGYC 0196 - Marketing Planning Project

Assumed Knowledge

An understanding of marketing concepts including the elements of consumer behaviour, marketing research methods, marketing communications, channel management and distribution, brand and product management, competitive strategy and quantitative methods in marketing. The basics of economics, finance and accounting, mathematics and statistics and general communications are also assumed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Confront the reality that marketing practice is, in large part, a team activity;
2. Recognise that one’s effectiveness as a marketing professional is largely dependent on one’s ability to function and contribute as part of a team;
3. Experience the task of ‘emarketing oneself ‘f to a client, and to manage the ongoing process of working with a client in the preparation of a detailed plan;
4. Gain awar

Subject Content

The core of this subject is the development of a marketing plan for a real commercial enterprise. The creation of the marketing plan itself (which is a team effort) comprises the major component of this subject. There is also a substantial emphasis on individual effort and assessment. The individual component comprises a reflective journal exercise as well as a short final exam. Teams of 5-6 participants will be assigned to a client organisation that has already formally agreed to work with the university. The aim is to produce a detailed marketing plan that can be assessed by the client organisation for its viability, appropriateness, forecasted financial cost and payback and if so decided by the client, actually implemented. Contact with client companies will be between nominated team members and senior company executives, at times and dates to be confirmed.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Report		60	N	Individual

MKTG 3011 Marketing of Services

Credit Points 10

Legacy Code 200090

Coordinator Karina Wardle (https://directory.westernsydney.edu.au/search/name/Karina Wardle/)

Description Given the service-based nature of modern economies, business graduates will either work for firms whose central offering is service or be employed by organisations that use service as an integral supporting element in what they do and what they offer. Therefore, increasingly, knowledge and skills in the field of marketing of services are required by personnel operating across various industries and in a range of roles. The subject aims to: expose students to relevant theory and practice in the field of services marketing; develop participants into more complete marketers capable of operating in service marketing environments.

School Business

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MKTG 1006

Equivalent Subjects BUSM 2040 - The Service Enterprise

Assumed Knowledge

An advanced understanding of marketing theory and practice.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Apply the unique characteristics of services marketing with the context of modern organisations;
2. Analyse key services marketing concepts and theories to address practical service situations;
3. Demonstrate the ability to critically evaluate and use information to formulate distinctive strategies and operational plans for service based businesses;
4. Demonstrate advanced communication competencies ? including debating, team building skills and creativity in working on service related projects.

Subject Content

- introduction and Overview of services, including The extended Marketing mix for services, The characteristics of services Marketing etc.
- The gaps model of service quality
- Customer Expectations and perceptions of service
- listening to service customers
- Building Customer relationships
- service recovery
- service innovation and design
- physical evidence and The servicescape
- Employees?f Roles in service delivery
- Customers?f Roles in service delivery
- managing demand and capacity
- integrated service Marketing Communications
- pricing of services

MKTG 3013 Property Development 2

Credit Points 10

Legacy Code 200748

Coordinator Za Manaf (https://directory.westernsydney.edu.au/search/name/Za Manaf/)

Description This subject builds upon previous preliminary studies in the professional discipline of Property Development within the Bachelor of Business (Property) degree and is designed to provide a more in-depth and advanced educational exposure to the wide range of essential inherent functions, core activities, contemporary issues and associated considerations relevant to Property Development, in the context of both theory and practice.

School Business

Discipline Real Estate

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Equivalent Subjects LGYA 4693 - Property Development 2

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or Major.

Assumed Knowledge

It is assumed that students attempting this subject already possess a sound understanding of the logical sequence of phases and activities which comprise the overall Property Development Process. Moreover, before attempting this subject, students should already be in command of an appreciation of the wide range of Risk and Sensitivity Factors which arise both in financial feasibility workings and throughout the entire development process. In addition, students should be able to competently interpret and discuss all aspects of a financial feasibility appraisal, prior to entering study in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify the property development process from project conception through to the management of a newly constructed development;
2. Identify the sources and impacts of risk associated with property development in terms of physical, legal, organisational, and financial practical viability;
3. Evaluate and defend a property development project in terms of an individualðfs or organisationðfs financial and non-financial objectives;
4. Critically evaluate project prospects using Risk Management Framework and apply them to the preliminary financial feasibility study models;
5. Make reasoned recommendations regarding whether or not an organisation should commit to a development project.

Subject Content

- client?fs objectives and requirements
- legal physical organisational and commercial viability
- market research and projections
- property development process ? Marketing for development
- Preliminary feasibility Study ? conceptual and financial viability
- sustainability Issues in PD
- Risk and Risk management framework in PD
- contemporary Issues ? heritage listed property development
- development site appraisal ? DCF analysis
- NPVs and IRR

MKTG 3014 Property Development Process

Credit Points 10

Legacy Code 200874

Coordinator Za Manaf (https://directory.westernsydney.edu.au/search/name/Za Manaf/)

Description In this unit, students critically evaluate the property development process, from the initial development concept through to the end-use of completed development projects. Consideration is given to the implications of the property development process and development decisions from the viewpoints of developers, end users, financiers, public authorities and the community. Students acquire a theoretical understanding of the property development process, development appraisal techniques including financial and feasibility aspects, as well as an understanding of how to apply these techniques to a property scenario. Planning issues are also critically examined.

School Business

Discipline Real Estate

Student Contribution Band HECS Band 4 10cp

Level Undergraduate Level 3 subject

Equivalent Subjects LGYB 7468 Property Development MKTG 3012 Property Development

Restrictions External offerings for this subject are only available to students who are enrolled in a Property program or field of study.

Assumed Knowledge

It is assumed that students will have a sound knowledge of valuation practices and principles, economic theory and town planning principles.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Outline the holistic process of property development;
2. Critically evaluate the property development process and its key phases and stages ? from initial development concept through to the end-use of completed development projects;
3. Analyse the roles of all relevant industry stakeholders who, in various groups and combinations, occupy vital positions within the property development process;
4. Discuss the implications of the property development process and development decisions from the viewpoints and objectives of developers, end-users, financiers, public authorities, and the community;
5. Interpret and describe various aspects of a financial appraisal and provide advice regarding the financial feasibility, or otherwise, of a development scheme;
6. Analyse and discuss various contemporary issues relevant to the property development industry.

Subject Content

- Overview of property development objectives, input, processes and outputs
- market research, demand & Supply and participants in property development
- Timing of development Projects and economic cycles
- property development appraisal and feasibility techniques
- finance and Risk management in property development
- sustainable property development

MKTG 3016 Strategic Marketing Management

Credit Points 10

Legacy Code 200087

Coordinator Farid Ahmed (https://directory.westernsydney.edu.au/search/name/Farid Ahmed/)

Description Customer-centric marketing strategies are vital to capturing competitive advantage and sustaining business success. This subject explores the core concepts and tools of contemporary strategic marketing management. The subject focuses on the skills and framework to develop and manage an integrated marketing strategy that creates value for customers and generates growth for the firm in both online and offline environments. Using a marketing simulation, the subject provides the students the opportunity to make a series of complex, real-world marketing decisions in a competitive environment.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) MKTG 1006

Assumed Knowledge

It is assumed that students have knowledge of basic marketing concepts, theories, and frameworks in consumer behaviour, marketing communications and marketing research.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a strategic orientation for marketing decision-making;
2. Apply key marketing theories and models to analyse Australian and global corporate business strategies;
3. Integrate financial and forecasting considerations in the development of marketing strategies;
4. Formulate marketing strategies which reflect business context and utilise best practice theory and tools.

Subject Content

- The relationship between corporate, business and Marketing strategies
- Assessing Marketing opportunities
- establishing viable Target markets and positioning which align with context and business strengths
- developing Marketing strategies for new, growth and mature industry environments
- E-Marketing strategies
- Evaluating strategic Marketing outcomes

MKTG 3018 Public Relations: Campaigns

Credit Points 10

Legacy Code 102729

Coordinator Vanessa Campbell (https://directory.westernsydney.edu.au/search/name/Vanessa Campbell/)

Description In this capstone subject students will learn to professionalise key aspects of the public relations management process. The subject links and applies theoretical understanding with writing, planning and presentation skills in response to a client brief. The 'real-world' situation allows students to demonstrate their capacity for problem analysis and to develop appropriate and timely program solutions. Students are required to work within a limited budget and to realistic industry timelines to produce a public relations campaign for their portfolios. Assessment tasks enable students to demonstrate emerging professional capacity to develop a campaign and prepare for a public relations position, either in an in-house or consultancy role.

School Humanities & Comm Arts

Discipline Public Relations

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 3 subject

Pre-requisite(s) COMM 2011 AND
COMM 2015

Equivalent Subjects COMM 3029 - Public Relations Campaigns COMM 3007 - Communication Campaigns

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Critique public relations campaigns and describe best practice.
2. Develop a systematic approach to public relations campaigns, including appropriate strategies and tactics.
3. Describe measurable goals and objectives applicable to campaign preparation and delivery.
4. Develop creative and effective campaigns for internal and external publics in an environment of social change using appropriate theoretical models.
5. Present a professional public relations campaign that demonstrates capacity for problem analysis and ability to develop appropriate and timely program solutions, within a limited budget and to realistic industry timelines.

Subject Content

(1) Campaign Practice.
Components include
- Research
- Formulating objectives
- Identifying publics/audiences
- Planning strategies and tactics
- Media planning
- Budgeting
- Timely delivery
- Writing and design
- Evaluation

(2) Campaign Theory.
- Reading and research on campaigns
- Role of digitial and traditional media
- Examination of best practice
- Reviewing other work
- Self-reflection
- Developing a portfolio
- Application of digital and traditional media
- Planning public relations campaigns in a multidisciplinary, multicultural and multimodal context

MKTG 3020 Omnichannel Marketing

Credit Points 10

Legacy Code 201087

Coordinator Neeru Sharma (https://directory.westernsydney.edu.au/search/name/Neeru Sharma/)

Description Technology advances are changing customer value requirements. As a result, customers expect an efficient, insightful and tailored service which requires personalised selling processes through high performance technology and customer-centred business models. Multiple touchpoints and digitally driven processes are created to reach them in the right place at the right time. Omnichannel marketing is now central to business transactions. This subject provides students with an understanding of the dynamics and complexities in creating value across various touchpoints in the business to business space. It considers the need to develop an enterprise-wide digital strategy and align technology, organizational structure and processes to develop an omnichannel approach to provide consistent and seamless engagement with buyers.

School Business

Discipline Marketing

Level Undergraduate Level 3 subject

Pre-requisite(s) MKTG 1006

Equivalent Subjects MKTG 3002 - Business to Business Marketing

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Plan ways to align strategy, technology, organisational structure and processes to develop an omni-channel approach using omni-channel marketing concepts and frameworks in a business context.
2. Construct the business to business customer journey to identify diverse touch points.
3. Analyse customer behaviour and their needs using business marketing theories and digital technologies
4. Devise omnichannel marketing strategies for delivering value across all stages of the customer journey.
5. Use analytical, interpersonal and decision-making skills appropriate to a business marketing situation.

Subject Content

1. Introduction to Omnichannel approach of business to customer marketing.
2. Organisational buying behaviour: business buyer personas, buying journey mapping; buying centre.
3. Segmenting the business market and organisational demand analysis.
4. Customer Relationship Management (CRM) strategies and omnichannel marketing strategies
5. Strategic business marketing planning
6. Managing products for business markets and innovation.
7. Value chain management

MKTG 3021 Strategic Brand Management

Credit Points 10

Legacy Code 201083

Coordinator Nicole Stegemann (https://directory.westernsydney.edu.au/search/name/Nicole Stegemann/)

Description Consumers' brand interaction in the marketplace is shaped by a digital and technology driven marketing environment. Innovative and interactive branding strategies have become the key to a successful marketing strategy. Students learn to strategically create, develop, innovate, position and protect branding in an ever-changing environment to establish a sustainable competitive advantage. Through these industry-related activities, students create a business driven portfolio, which can be presented to potential employers. This subject uses workshop sessions and online activities to create an interactive learning environment and bring the content to life.

MKTG 7010 Customer Value Management

Credit Points 10

Legacy Code 200791

Coordinator Nicole Stegemann (https://directory.westernsydney.edu.au/search/name/Nicole Stegemann/)

Description In an economy where products, marketing campaigns and management practises are ever changing, business executives are increasingly recognising that understanding the value of their customers is vital to the survival of the business. Loyal customers are what every organisation seeks. However, increasingly complex supply/demand relationships also result in 'promiscuity' among customers. Therefore, it is crucial that managers have the skills to not only strive for excellence and consistency in product-centric perspectives, but also foster and strengthen those that are customer-centric. This subject fundamentally examines the opportunities and challenges in: a) identifying customers, b) adding value to supplier/consumer relationships, including tools that firms/organisations can use to provide value for customers while ensuring profitability over the entire life of the relationship.

School Business

Discipline Marketing

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Incompatible Subjects MKTG 7009 - Customer Relationship Marketing

Restrictions

Students must be enrolled in 2755 Master of Business Administration, 2757 Graduate Certificate in Business Administration, 2762 Executive Master of Business Administration.

Assumed Knowledge

It is expected that students will have a basic understanding of marketing prior to the commencement of this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a knowledge of key Customer Relationship and Value Management concepts and techniques;
2. Evaluate the complexity of customer and organisation interaction as part of the value process;
3. Demonstrate the importance of Customer Relationship and Value Management strategies to enhance customer relationships;

4. Develop Customer Relationship and Value Management strategies for marketing organisation including non-profit organisations.

Subject Content

1. Defining who ?ecustomers?f are:
- the differences between promiscuous vs. loyal customers;
- backward vs. forward relationships;
- characteristics of potential customer.
2. How different environments impact customer profiles, including Business to Business (B2B), Business to Consumer (B2C), Small to Medium sized Enterprise (SME), government, and not for profit organisations
3. Identifying potential customers in new/existing markets, and incorporating the global customer perspective
4. Identifying/defining the value of customers
5. Adding value via competitive offerings, including those that are not always based on profit decisions
6. How customers perceive, create and demand value
7. Understanding customer and organisational interaction as drivers of value

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

MKTG 7019 Marketing Systems

Credit Points 10

Legacy Code 200737

Coordinator Md Munir Hossain (https://directory.westernsydney.edu.au/search/name/Md Munir Hossain/)

Description This subject studies the marketing process from a holistic viewpoint, considering the intersection of the economy, the government, and the community. This perspective will help students to analyse and understand the interrelated and interdependent parts that comprise a marketing system. Specifically, this subject examines: consumer behaviour, market regulation, social responsibility and sustainability. Students will learn to consider the marketing process and its consequences at both an aggregate and micro level. This subject exposes students to the systematic and analytical approaches expected from them in postgraduate studies in marketing.

Legacy Code 200731

Coordinator Farid Ahmed (https://directory.westernsydney.edu.au/search/name/Farid Ahmed/)

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Restrictions

Students must be enrolled in a postgraduate program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise and be sensitive to differing cultural groups within a society
2. Examine issues of various Indigenous cultures within one national border
3. Identify in a given marketing setting the relevant cultural variables that have a major impact in the success of a marketing strategy and adapt accordingly.
4. Consider the process involved in building an effective transcendent team which transcends domestic/local gravities in a sales/marketing environment.

Subject Content

Overview of Cultural Orientations (Including Indigenous)
Approaches and theories to examine cultural differences
Key Ingredients for a good International Manager
Sales and Negotiation Styles
Country specific Sales Strategies and Compensation Plans
The Key to build relationships with customers and consumers
Ethical Considerations

MKTG 7022 Property Feasibility Study

Credit Points 10

Legacy Code 200893

Coordinator Za Manaf (https://directory.westernsydney.edu.au/search/name/Za Manaf/)

Description In 2019 this subject is replaced by 201014 Feasibility Modelling. This subject emphasises the evaluation and development of feasibility studies for the purposes of selecting development projects, evaluating different options and making the decision as to whether to proceed to a more detailed feasibility study. The subject provides students with the knowledge and skills to prepare a full feasibility report and analysis of a project's concept and financial feasibility. This is achieved through the application of theories and concepts to a case study. Students will have access to applications being used in the industry to complete a feasibility report. Additionally, students will develop skills to carry out both scenario and sensitivity testing on the outcomes of the proposed development project.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects LGYB 7483 - Feasibility Studies

Restrictions

Students must be enrolled in a postgraduate Business program.

Assumed Knowledge

Knowledge of property development.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Evaluate the meaning of the term feasibility study in terms of comparison of potential objectives with outcomes;
2. Design and evaluate feasibility studies for use in different property development contexts;
3. Prepare and evaluate preliminary feasibility studies used for the purposes of determining whether or not to proceed with consideration of a particular development and / or compare different development options;
4. Prepare and evaluate financial feasibility studies, calculate return and risk of projects and compare risks and returns of different projects, different project options and different financing options;
5. Prepare and evaluate the returns and risks of the different financial stakeholders in a project;
6. Critically evaluate project prospects using sensitivity, simulation and scenario analysis applied to the preliminary financial feasibility study models;
7. Proceed beyond preliminary feasibility studies towards detailed feasibility testing of projects prior to committing to the decision to proceed with the project;
8. Use feasibility testing for the purpose of evaluating and monitoring the performance of ongoing or completed projects.

Subject Content

- what feasibility studies are and The different types of feasibility studies
- components of The feasibility Study
- The Preliminary feasibility Study
- The various concepts of financial feasibility studies
- Minimising Risk in The feasibility process
- Sensitivity analysis, Simulation Scenario analysis, financial feasibility and The decision making process
- returns and risks for The various financial stakeholders in Projects
- further Sensitivity and financial analysis using alternative spreadsheet scenarios
- Monitoring The Project against The feasibility proposal
- feasibility testing, end of Project evaluation and The Reporting process

MKTG 7032 Valuation of Special Premises

Credit Points 10

Legacy Code 201017

Coordinator Mohamad Zraika (https://directory.westernsydney.edu.au/search/name/Mohamad Zraika/)

Description The value of special premises constitutes an important segment of valuation practice in Australia. A number of special valuation considerations arise in valuation of this class of premises. However, the most compelling reason for studying the valuation of special premises is the fact that such properties provide an ideal vehicle whereby valuation principles and methods of valuation can be practiced and critically evaluated by students.

School Business

Discipline Real Estate

Student Contribution Band HECS Band 4 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Postgraduate Coursework Level 7 subject

Pre-requisite(s) MKTG 7028

Restrictions

Students must be enrolled in a postgraduate Business program.

MKTG 7033 Customer Experience

Credit Points 10

Legacy Code 201022

Coordinator Lynne Freeman (https://directory.westernsydney.edu.au/search/name/Lynne Freeman/)

Description Customer experiences occur when there is interaction between a company and their customers for the duration of their relationship. It comprises the customer journey, the consumer-brand 'touchpoints' and the environment in which these experiences happen. Increasing digitisation of the organisation-customer interface has resulted in a shift of buyer expectations where it is easier to compare market offerings and where communication is no longer a one way interaction. This subject considers the complexity of the technology driven relationship where customers become co-creators of their own personalized experiences and how companies can be part of this.

MKTG 7034 Digital Marketing

Credit Points 10

Legacy Code 201026

Coordinator Michael Lwin (https://directory.westernsydney.edu.au/search/name/Michael Lwin/)

Description In the last decade or so, marketing has moved from traditional practice to the digital realm where technology now drives many decisions in marketing strategy. It is now even more important that all types of organisations are able to deliver the right message, to the right people, at the right time. Digital marketing is often closely linked to the internet as the primary channel of contact and where success is measured via mobile and social media marketing. This subject will teach students the principles of digital marketing so they understand the key frameworks of digital marketing technology and are able to apply marketing strategies to target tech savvy consumers.

Level Postgraduate Coursework Level 7 subject

Equivalent Subjects BUSM 7089 - Strategic Marketing for Managers

Restrictions

Students must be enrolled in a postgraduate program.

Assumed Knowledge

An understanding of marketing theory and relevant principles is assumed.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Analyse the digital marketing theoretical framework
2. Evaluate digital consumer behaviour within the context of marketing strategy
3. Apply discipline knowledge to create a digital marketing campaign
4. Demonstrate the ability to track and evaluate a campaign
5. Analyse digital transparency, data governance and policy

Subject Content

1. An overview of the digital marketing landscape
2. Consumer behaviour in a technology driven environment
3. Investigate digital platforms and marketing channels
4. Design a digital marketing strategy
5. Evaluate digital analytics and metrics to make business decisions

6. Digital transparency, data governance and policy

Assessment

MKTG 7035 Frontiers of Branding

Credit Points 10

Legacy Code 201024

Coordinator Nicole Stegemann (https://directory.westernsydney.edu.au/search/name/Nicole Stegemann/)

Description Technology has dramatically changed the way brands interact in the marketplace. Marketers are increasingly faced with the challenge of meeting the needs of sophisticated consumers who have multiple brands to choose from in a very competitive environment. This makes innovative branding strategies the key differentiating variable. This subject helps students understand the concept of branding and the utilization of brand assets by learning to strategically create, develop, innovate, position and protect the brand in an ever-changing environment in order to establish a sustainable competitive advantage.

MKTG 7036 MarketingMe

Credit Points 10

Legacy Code 201021

Coordinator Tendai Chikweche (https://directory.westernsydney.edu.au/search/name/Tendai Chikweche/)

Description This subject provides a unique opportunity for students to personalise their postgraduate degree and have a meaningful readily-built portfolio for future employers. It comprises a range of short learning modules designed to provide students with a selection of employment related skills such as career preparation, personal brand building, industry certification and how to use the latest technology pertinent to their field of study. Students will follow certain paths in order to travel through 150 hours of educational participation time, including a range of modules and their final portfolio. Students can pick and choose the relevant modules at any time during their course, thus allowing flexibility to manage their choices as they progress through the degree. Please note that students in the Master of Marketing, will automatically be given access to vUWS to complete their learning modules, without the need to formally enrol in this subject. However, in order to successfully complete this subject, students should enrol in it when in their final session of study. You will be required to gain approval from your Director of Academic Program to enrol in this subject by submitting an online eForm.

MKTG 7037 Multichannel Marketing

Credit Points 10

Legacy Code 201023

Coordinator Farid Ahmed (https://directory.westernsydney.edu.au/search/name/Farid Ahmed/)

Description Today's customers have far greater control over the buying process than previously, be that in business or consumer markets. Multichannel marketing is about providing your customers with every opportunity to engage with your business across a variety of offline and online platforms. This subject looks at how the messages and media deployed by an organisation create and sustain demand as a means to build network relationships. As customer expectations rise and the influences of technology becomes more prevalent, students will learn about the importance of personalized campaigns that will resonate with each customer account.

MKTG 7038 Social Marketing

Credit Points 10

Legacy Code 201025

Coordinator Susan Strmecki (https://directory.westernsydney.edu.au/search/name/Susan Strmecki/)

Description Social Marketing is the application of marketing concepts to the achievement of social ends. Usually this will involve changing attitudes and behaviours in a way that benefits both individuals and communities. This subject builds students' knowledge of how social marketing theory can be used to facilitate behaviour change and improve social outcomes within communities. It will include how to design, manage and evaluate social and behaviour change programs.

NATS 0003 Academic Skills for Science (WSTC Prep)

Credit Points 10

Legacy Code 700230

Coordinator Grant Boyd (https://directory.westernsydney.edu.au/search/name/Grant Boyd/)

Description This subject is designed to assist students to become successful independent reflective learners. It introduces students to a range of theories and concepts to facilitate the development of practical skills and personal attitudes necessary for success in tertiary study. Emphasis is placed on developing the key competencies of scientific enquiry - collecting, analysing, organising and communicating information as well as solving problems, particularly when related to using mathematical ideas and techniques.

School Western Sydney The College

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use both independent and collaborative learning strategies to advance the knowledge of the individual and that of their peers.
2. Communicate effectively through the development of critical reading, listening, speaking and writing skills in context.
3. Locate and use information technology systems and educational technologies to support learning and assessment.
4. Apply critical thinking, and use problem solving skills and research skills, to make informed decisions.
5. Apply the process of reflection to learning experiences, in order to assess their own learning styles and elearn how to learnf.
6. Describe criteria for successful posters and oral presentations and write and evaluate a scientific report.

Subject Content

Topic 1: Introduction to tertiary study
Topic 2: Blended learning
Topic 3: Advanced tertiary skills
Topic 4: Information skills
Topic 5: Research methods for science and engineering:
- Introduction to scientific methods
- Scientific report writing
- Data handling
- Critical reading
- Research and referencing (journal articles)
- Project report

Topic 1: Introduction to tertiary study

NATS 0005 Foundations of Science (WSTC)

Credit Points 10

Legacy Code 900053

Coordinator Phillip Newman (https://directory.westernsydney.edu.au/search/name/Phillip Newman/)

Description This subject aims to provide students with sufficient knowledge of scientific facts and theories to provide the basis for further studies in science, engineering and technology. Emphasis is placed on developing the key competencies of scientific inquiry - collecting, analysing, organising and communicating information as well as solving problems, particularly when related to using mathematical ideas and techniques. Major areas of science - physics, chemistry and biology are represented within the subject and presented in context within an integrated framework.

School Western Sydney The College

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled in a Western Sydney University The College Foundation Studies program.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise, recall and display an understanding of specific scientific facts, terminology, principles, concepts and practical techniques;
2. Display an understanding of the benefits and drawbacks of applications of science;
3. Represent scientific information appropriately as diagrams, graphs, tables, reports and equations;
4. Describe, explain and interpret phenomena and ideas in terms of scientific principles;
5. Carry out relevant calculations;
6. Interpret data to draw conclusions which are consistent with the evidence, recognising patterns and relationships where they exist.

Subject Content

1. The Nature of Science
Observations; Physical Quantities and Units; International System of Units and Measurement;
Graphs.
2. Force and Motion
Motion Graphs; Accelerated Motion; Free Fall Motion; Forces; Weight; Friction; Newton's Laws.
3. Elements, Compounds and Mixtures
Understanding of Chemistry; Pure and impure substances - properties; Examples of elements, mixtures and compounds; Particles in solids, liquids and gases.
4. Atomic Structure and the Periodic Table
Current atomic theory; Subatomic particles and arrangement; Atomic structure and position on periodic table; Metals and non-metals.
5. The Chemical Reaction
Physical and chemical changes - evidence; Ionic and covalent bonds; Common reactions - word equations - formula equations (balanced only); Common compounds and properties.
6. Cell Theory
Characteristics and requirements of living things; Cell Theory.
7. Body Systems
Major organ systems - organs and functions; Diseases - causes and cures.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Physics assignment-short answer	300 words	20	N	Individual
Chemistry Short Answer	1 hour	20	N	Individual
Biology Short Answer	1 hour	20	N	Individual
End-of-session Exam	2 hours and 20 minutes	40	N	Individual

NATS 0006 Fundamentals of Health Science (WSTC Prep)

Credit Points 10

Legacy Code 700190

Coordinator Ryan Sidoti (https://directory.westernsydney.edu.au/search/name/Ryan Sidoti/)

Description The depth of knowledge and practical skills required by health professionals in the 21st century is very different to that which was required in the past. Medical treatment of illness and disease has become increasingly technical and health professionals are expected to work in partnership in determining patient care. In order to achieve this, today's health professional must have a basic understanding of the fundamental scientific principles behind health and disease. Increasingly, modern health science is concerned with maintaining health as a way of preventing disease and this is achieved through a holistic approach to the human condition. This subject is an introduction to the basic concepts in human body systems, health and disease, that is required in order to commence any tertiary health science course.

School Western Sydney The College

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Equivalent Subjects NATS 0016 - Science for Health Professionals (UWSC) NATS 0018 - Science for Health Science (UWSCFS)

Incompatible Subjects BIOS 1023 - Introduction to Human Biology (WSTC) BIOS 1022 - Introduction to Human Biology

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use and interpret a wide range of biological and scientific terms describing the structure, function and location of human body systems.
2. Use and interpret information about the interdependence of human body systems and their components.
3. Interpret and implement information related to health and safety.
4. Describe factors that contribute to healthy functioning of the body.
5. Critically evaluate health-related information and evidence.

Subject Content

Topic 1:Cell structure and function
1.Prokaryotic and eukaryotic cells
2.Eukaryotic cell organelles? structure and function
Topic 2:Introduction to Body Systems
1.Overview of human body systems
2.Cardiovascular and respiratory systems
3.Musculo-skeletal system
4.Endocrine system
5.Digestive system
6.Integumentary system
7.Lymphatic system
8.Nervous system, including sensory systems (eye and ear)
9.Special senses (vision, hearing, smell, taste, equilibrium)
10.Immune system
11.Reproductive system
Topic 3:Reproduction and Genetics
1.Cell division
2.Introduction to DNA, genes and proteins
3.Simple genetics in health and disease
Topic 4:Homeostasis?Interdependence of body systems
1.Maintaining body temperature
2.Maintaining fluid and electrolyte balance
3.Maintaining blood pressure
Topic 5:Health and Disease
1.Nutrition
2.Physical and mental activity
3.Infectious disease and protection from infection
4.Vaccination and immunisation
Topic 1:Cell structure and function
1.Prokaryotic and eukaryotic cells
2.Eukaryotic cell organelles? structure and function
Topic 2:Introduction to Body Systems
1.Overview of human body systems
2.Cardiovascular and respiratory systems
3.Musculo-skeletal system
4.Endocrine system
5.Digestive system

NATS 0007 Fundamentals of Science (WSTC Prep)

Credit Points 10

Legacy Code 700231

Coordinator Grant Boyd (https://directory.westernsydney.edu.au/search/name/Grant Boyd/)

Description In its broadest sense, science is an evolving body of skills, theories and knowledge about the nature of the world, based on observation, measurement and experiment. In order to begin participating in tertiary science studies, students require a fundamental toolkit of scientific literacy that includes key concepts, language, and skills. This subject provides an overview of, and grounding in, fundamental scientific concepts including the nature of matter and energy, and the flow of energy and cycling of matter through key processes in the biosphere. Integrating these concepts within a framework of a contemporary issue, climate change, enables students to build skills in applying scientific concepts, methods and problem-solving techniques, as well as furthering an understanding of interrelationships between science and other aspects of society. The subject imparts a basic body of essential scientific knowledge, as well as facilitating skills in collecting and analysing information and writing coherent explanations within a scientific framework.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects NATS 0008 - Fundamentals of Science (WSTC)

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Solve real life problems involving mathematical concepts and construct appropriate graphs, charts and tables and interpret them.
2. Extract information from written text, graphs and tables and critically evaluate this information and evidence.
3. Describe the structure of the atom and relate this to the formation of molecules and ions.
4. Identify chemical compounds which make up organisms and classify organic molecules according to the arrangement of the chemical bonds.
5. Describe energy changes in chemical reactions and identify and explain chemical reactions important in the environment.
6. Explain the role of living systems in the cycling of matter and flow of energy.
7. Apply the principles of the Scientific Method to solving problems in science and assesses conclusions in relation to evidence and sources.

Subject Content

Topic 1: Basic Mathematical Operations and Data Handling
- Basic mathematical operations with whole numbers, decimals and fractions
- Ratio, rates and percentages
- Graphing and Data handling
- Basic Statistics
Topic 2: Simple and Complex Substances
- Atomic structure and the periodic table
- Molecules and Ions
- Solutions
Topic 3: Biologically Important Molecules
- Organic molecules and functional groups
- Carbohydrates, lipids, nucleic acids and proteins
- Acids, Bases, Salts and Buffers
Topic 4: Chemical Reactions and Energy
- Types of reactions- acid/base, redox, combustion
- Energy changes and stability
- Enthalpy, bond energy and Hess's Law
Topic 5: Biochemical Reactions and Energy
- Living systems as open systems: flow of energy and cycling of matter in the biosphere
- Uphill or downhill? Energy-consuming and energy-producing reactions

- ATP as the link between energy-consuming and energy-producing reactions
- Two great global cycles: photosynthesis and cellular respiration
Topic 6: Applying Concepts: Global Climate Change
- Regulation of average global temperature by greenhouse gases
- Planetary homeostasis: the role of living systems in global temperature regulation
- Carbon and hydrological cycle
- Evidence for and impacts of human-induced global warming
- Reconstructing the past: The Permian extinction event
Topic 1: Basic Mathematical Operations and Data Handling

- Basic mathematical operations with whole numbers, decimals and fractions
- Ratio, rates and percentages
- Graphing and Data handling
- Basic Statistics

Level Undergraduate Level 0 Preparatory subject

Equivalent Subjects LGYB 1382 - Nursing Communication (UWSC)

Restrictions

This subject is only available to College students enrolled in the Undergraduate Preparation Programs.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify verbal and non-verbal cues and how they relate to health.
2. Employ different types of questioning, speaking and listening skills and demonstrate an awareness of their benefits and limitations.
3. Reflect on own communication strengths and areas for improvement and how these impact on subjective and objective communication.
4. Examine the impact of cultural and situational context on communication when working with people from diverse backgrounds.
5. Provide evidence of written and verbal communication skills used in a range of contexts including data entry, charts, journals, reports and publicity (this includes the appropriate use of medical terminology).
6. Demonstrate effective interpersonal skills used in team work and holistic practice.
7. Demonstrate the ability to work legally and ethically within healthcare.

Subject Content

Understanding communication and its application in health and nursing: verbal, non-verbal and textual
Introduction to cultural and situational sensitivity, safety and competences.
Working ethically, legally, collaboratively and effectively in health care
The importance of reflection and self-awareness and its influence on communication, learning and the relationship to professional life
The practice of health & nursing: examining contexts for professional practice & implications for communication such as effective listening & professional documentation
Understanding communication and its application in health and nursing: verbal, non-verbal and textual
Introduction to cultural and situational sensitivity, safety and competences.

Working ethically, legally, collaboratively and effectively in health care
The importance of reflection and self-awareness and its influence on communication, learning and the relationship to professional life

NATS 0010 Interpreting Data In Science (WSTC Prep)

Credit Points 10

Legacy Code 700287

Coordinator Grant Boyd (https://directory.westernsydney.edu.au/search/name/Grant Boyd/)

Description Science is a way of knowing about the world. It is a process of discovery whose product, an evolving body of scientific knowledge and technology, is a significant determinant of modern Western societies. Engaging with the content, process, and social functions of science requires foundational scientific literacy, including the ability to access multiple textual forms, to construct meaning, and to critically evaluate new information in a scientific framework. In this subject students will develop skills in scientific literacy through undertaking case studies of contemporary relevance. Emphasis is placed on key competencies in scientific academic writing - collecting, analysing, organising, interpreting and communicating information - as well as solving problems related to mathematical ideas and techniques.

School Western Sydney The College

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

Students must be enrolled at Western Sydney University, The College.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a command of academic English, including grammar, phrasing, effective sentence structure, spelling and punctuation in a variety of written contexts.
2. Utilise appropriate reading strategies to comprehend academic texts.
3. Demonstrate an understanding of scientific concepts, terminology, principles, concepts and practical techniques.
4. Display an understanding of the benefits and drawbacks of applications of science.
5. Present data in an appropriate manner.
6. Identify and explain patterns in data including anomalies.
7. Interpret various textual forms, including written text, diagrams, graphs and numerical formulae in the context of contemporary case-studies that incorporate concepts from physics, chemistry and biology.
8. Evaluate scientific information in the context of contemporary case-studies that incorporate concepts from physics, chemistry and biology.

Subject Content

1. Interpreting texts and analysing information in relation to sustainability and the environment
2. Synthesis of scientific texts through understanding of scientific history
3. Relating experimental data to scientific concepts

4. Introduction to academic writing in scientific context
5. Interpreting texts and analysing information involving numeracy and concepts from physics, chemistry and biology
1. Interpreting texts and analysing information in relation to sustainability and the environment
2. Synthesis of scientific texts through understanding of scientific history
3. Relating experimental data to scientific concepts
4. Introduction to academic writing in scientific context
5. Interpreting texts and analysing information involving numeracy and concepts from physics, chemistry and biology

NATS 0016 Science for Health Professionals (WSTC)

Credit Points 10

Legacy Code 900090

Coordinator Anne Bertoldo (https://directory.westernsydney.edu.au/search/name/Anne Bertoldo/)

Description The depth of knowledge and practical skills required by health professionals in the 21st century is very different to that which was required in the past. Medical treatment of illness and disease has become increasingly technical and health professionals are expected to work in partnership to determine patient care. In order to achieve this, today's health professional must have a basic understanding of the fundamental scientific principles behind health and disease. Increasingly, modern health science is concerned with maintaining health as a way of preventing disease and this is achieved through a holistic approach to the human condition. This subject is an introduction to the basic concepts in human body systems, health and disease, that are required in order to commence any tertiary health science course.

Equivalent Subjects NATS 0017 - Science for Health Science (WSTC)
NATS 0018 - Science for Health Science (WSTC Prep)
LGYB 1383 - Science for Nursing (WSTC)

Restrictions

This subject is only available to College students enrolled in the Undergraduate Preparation Programs.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Interpret and apply a wide range of biological and scientific terms describing the structure, function and location of human body systems.
2. Interpret and apply information about the interdependence of human body systems and their components.
3. Interpret and apply and/or implement information related to health and safety.
4. Describe in basic terms the nature of genes and inheritance.
5. Describe factors that contribute to healthy functioning of the body.
6. Critically evaluate health-related information and evidence.

Subject Content

Topic 1: Basic Scientific Concepts for Health Professionals
1.Atoms and Molecules
2.Liquids and Solutions
3.Acids, Bases, Salts and Buffers
4.Gases?Pressure, Volume and Temperature
5.Energy, Reactions and ATP
Topic 2: Cell structure and function
1.Prokaryotic and eukaryotic cells
2.Eukaryotic cell organelles? structure and function
Topic 3: Introduction to Body Systems
1.Overview of human body systems
2.Cardiovascular and respiratory systems
3.Musculo-skeletal system
4.Endocrine system
5.Digestive system
6.Integumentary system
7.Lymphatic system
8.Nervous system, including sensory systems (eye and ear)
9.Special senses (vision, hearing, smell, taste, equilibrium)
10.Immune system
11.Reproductive system
Topic 3: Reproduction and Genetics
1.Cell division
2.Introduction to DNA, genes and proteins
3.Simple genetics in health and disease
Topic 4: Homeostasis?Interdependence of body systems
1.Maintaining body temperature
2.Maintaining fluid and electrolyte balance
3.Maintaining blood pressure
Topic 5: Health and Disease
1.Nutrition
2.Physical and mental activity
3.Infectious disease and protection from infection
4.Vaccination and immunisation
Topic 6:Tools of Diagnosis
1.Diagnostic testing.
2.X-rays, ultrasound, CT scans and MRIs, radio/chemotherapies
Topic 1: Basic Scientific Concepts for Health Professionals
1.Atoms and Molecules
2.Liquids and Solutions
3.Acids, Bases, Salts and Buffers
4.Gases?Pressure, Volume and Temperature
5.Energy, Reactions and ATP
Topic 2: Cell structure and function

NATS 0020 Skills for Health Science (WSTC)

Credit Points 5

Legacy Code 900112

Coordinator Charlise Bennett (https://directory.westernsydney.edu.au/search/name/Charlise Bennett/)

Description This subject is designed to give students skills in health science to become successful independent reflective learners in health sciences. It introduces students to a range of theories and concepts to facilitate the development of referencing conventions used in health science as well as practical skills and personal attitudes necessary for success in tertiary study and eLearning. Emphasis is placed on developing the key competencies of inquiry - analysing, organising, researching and communicating information as well as problem solving.

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 0 Preparatory subject

Restrictions

This subject is only available to College students enrolled in the Undergraduate Preparation Programs.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify and apply independent learning strategies to demonstrate knowledge on a health topic.
2. Communicate effectively using critical reading and writing skills within a health context using APA referencing.
3. Use technology, and a range of eLearning skills in assessment tasks to demonstrate understanding of health topics.
4. Apply critical thinking, and analyse information using research skills, to make informed decisions.
5. Apply the process of reflection to learning experiences.
6. Demonstrate an understanding of the requirements for successful presentations and develop a visual representation of research using appropriate language style.

NATS 1001 Concepts in Human Anatomy

Credit Points 10

Legacy Code 301126

Coordinator Hayley Green (https://directory.westernsydney.edu.au/search/name/Hayley Green/)

Description This subject provides a basic understanding of human embryological development, anatomical terminology, and a range of foundation concepts in human anatomy. Students must attend a 'wet' laboratory session where the learning of anatomy will be enhanced through the study of human cadaveric material. Wet laboratory sessions are not available on all campuses, and therefore students will need to travel to other campuses in order to attend.

School Science

Discipline Medical Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects NATS 1013 - Introduction to Anatomy
NATS 1002- Concepts in Human Anatomy (WSTC)

Restrictions Because of space and resource limitations, this subject will be restricted to students in the following programs: 3673 Bachelor of Medical Science 3682 Bachelor of Medical Science (Advanced) 3733 Bachelor of Medical Science (Forensic Mortuary Practice) 3589 Bachelor of Science (Forensic Science) 3755 Bachelor of Medical Science 3758 Bachelor of Advanced Medical Science and MT3022 Forensic Science

Assumed Knowledge

HSC Biology.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Use anatomical terminology correctly.
2. Describe the process of human development from fertilisation to organogenesis
3. Describe the major structural levels of organisation in the human body
4. Identify and describe the general features of the major tissue types and explain their relationship with major structural levels of organisation
5. Describe and apply the basic principles of the integumentary and endocrine systems
6. Describe and apply the basic principles of osteology: bone formation and repair, classifications and functions, names of major bones
7. Describe and apply the basic principles of arthrology: functional and structural joint classifications
8. Describe and apply the basic principles of myology: skeletal muscle classification and functions
9. Identify and describe the anatomy of the body cavities. Identify and describe the major organ systems that occupy these cavities and the physical and functional relationships of these systems to one another.

Subject Content

1.Anatomical terminology
2.Human development
3.Organisation of the human body
4.Overview of Human tissues
5.Osteology
6.Arthrology
7.Myology
8.Structure and function of the major organ systems

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz - 1x online worksheet	Available online for completion for 1 week. Opens in week 2	10	N	Individual
3x MCQ mini tests (progressive – assessing new material covered since last test. Equally weighted)	3 x 50 mins each (20% x 3)	60	N	Individual

End of session exam	40 minutes	30	N	Individual

NATS 1003 Digital Forensic Photography

Credit Points 10

Legacy Code 300874

Coordinator Robert Ebeyan (https://directory.westernsydney.edu.au/search/name/Robert Ebeyan/)

Description Forensic photography serves an important function within forensic science for the purpose of scene and item documentation, as well as the detection and enhancement of forensic evidence. This

subject introduces the student to the fundamental principles and practices of forensic photography. Topics include: principles of light science, digital imaging, camera and lighting operations, technical photography composition, and the maintenance of image integrity.

School Science

Discipline Forensic Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) NATS 1008

Equivalent Subjects NATS 2012 - Digital Forensic Photography 1

Restrictions

Students must be enrolled in 3589 Bachelor of Science (Forensic Science), 3562 Bachelor of Science (Advanced Science)(Forensic Science) or MT3022 Forensic Science

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Investigate the conceptual relationship between the collection of images, their optical enhancement and the production of physical evidence
2. Evaluate how the reliability of photographic evidence may be considered in the context of an Australian legal framework
3. Relate theoretical principles of the behaviour of light and image formation to photographic optics and image analysis
4. Evaluate the utility and interpretation of imaging science principles in the context of forensic evidence
5. Describe concepts of light propagation, colour temperature, wavelength and spectral distribution of light and its collection as digital images
6. Utilise digital imaging methods and theory for the extraction of forensic evidence
7. Analyse two and three dimensional images in terms of the veracity and fidelity as forensic evidence
8. Discuss the validity of photographic evidence as a means of forensic examination

Subject Content

1. Forensic photography principles and practices
2. Digital SLR camera functions and operations, photographic lenses and image perspective
3. Understanding digital imaging and image processing
4. Light and photographic science principles, exposure, white balance and colour space
5. Maintaining forensic digital image integrity
6. Lighting and technical composition for forensic photography

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	3x quizzes (30 minutes each)	30	N	Individual
Portfolio	Exercises during prac sessions	30	N	Individual
Practical Exam	4 hours	40	N	Individual

NATS 1004 Drugs on Line

Credit Points 10

Legacy Code 400961

Coordinator Robyn Moroney (https://directory.westernsydney.edu.au/search/name/Robyn Moroney/)

Description This subject deals with selected issues in drug use, misuse and abuse. An introductory section discusses mechanisms of drug action in the body and their likely effects. Some topical areas include; drugs in society (illicit drug taking and drug taking in sports), antidepressants and weight management therapeutic agents, and the exploration of complementary alternative medicines (CAMs) in Australian society.

School Nursing & Midwifery

Discipline Pharmacology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects NATS 1005 - Drugs On Line

Learning Outcomes

On successful completion of this subject, students should be able to:

1. describe the principles of pharmacokinetics, pharmacodynamics, pharmacogenetics and the placebo effect
2. describe safe practices in the administration of a range of therapeutic substances
3. explain the dynamics and potential consequences of selected compounds commonly used to promote health, e.g. anti-obesity agents, and antidepressants, identify current management practices related to obesity and depression

4. describe the common effects and misuse of performance enhancing and recreational drugs
5. explain the physiological effects of recreational drug use/abuse
6. identify the role of Complementary and Alternative Medicines (CAMs) within Australian society

Subject Content

Module 1: Foundations of Pharmacology
- orientation to clinical Pharmacology
- pharmacokinetics
- pharmacodynamics
- Pharmacogenetics
- Placebo effect
Module 2: Drugs in Society: Drugs in Sports and Illicit Drugs
- drugs in sport
- illicit recreational drugs and drug misuse
Module 3: Drugs Commonly Used To Promote Health
- Anti-obesity agents
- Antidepressants
- complementary and alternative medicines (CAMs)

Assessment

NATS 1008 Forensic Science

Credit Points 10

Legacy Code 300806

Coordinator Alicia Haines (https://directory.westernsydney.edu.au/search/name/Alicia Haines/)

Description This subject aims to give students a basic understanding of scientific methodology as it applies to the collection, analysis and interpretation of forensic evidence. Students are introduced to a range of crime scene investigation methods and analysis methods that are used with various types of forensic evidence. The concept of individualisation is introduced and the importance of this concept in forensic science is explained. Case studies are used to explain the concepts discussed in this subject. The role of human factors is discussed, together with the importance of critically evaluating forensic evidence and the means by which it was obtained.

School Science

Discipline Forensic Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects NATS 1006 - Forensic Science NATS 1007 - Forensic Science

Assumed Knowledge

Basic academic skills, including the ability to write essays in English at a level appropriate to a first-year undergraduate student.

Learning Outcomes

On successful completion of this subject, students should be able to:
1. Identify physical evidence and determine its significance and value.
2. Explain the use of basic scientific methodology as it applies to the collection, analysis and interpretation of forensic evidence.
3. Describe the basic principles of collecting and conserving forensic evidence and give examples of standard procedures for maintaining evidence integrity and continuity.
4. Apply identification concepts and methodologies to the collection, analysis and interpretation of evidence.
5. Describe the value of trace evidence to forensic investigations, and explain the ways in which it may be collected and analysed.
6. Evaluate case studies to illustrate a range of possible deficiencies in the way in which forensic evidence may be collected, analysed and interpreted.
7. Critically evaluate the role of expert witnesses in the justice system.
8. Communicate the results of forensic investigation correctly in written form, using an appropriate language style, placing the findings in context of the forensic investigation.

Subject Content

Explanation of what is considered physical evidence and the purpose of collecting and analysing physical evidence
Basic scientific methodology as it applies to the collection, analysis and interpretation of forensic evidence
Principles of collecting and conserving forensic evidence, including crime-scene protection, contemporaneous note taking, chain of custody, and quality management
Presumptive testing and its role in crime scene investigation
An introduction to spectroscopy and its incorporation in crime scene investigation
The concepts of evidence integrity and continuity
History of the concept of identification and its development
Identification concepts and methodology, including pattern matching / comparative analysis, classification, elimination of suspects and databases
Analysis of a range of forensic evidence and its interpretation within the concept of identification
The role of the expert witness within the justice system, including presentation of evidence, and an introduction to the Australian judicial system
An introduction to contemporary issues in forensic science

Quality Control and Quality Assurance in evidence handling and forensic analysis
A range of case studies, including satisfactory and unsatisfactory use of forensic evidence

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	~ 1000 words in total (written during the practicals)	20	N	Both (Individual & Group)

NATS 1009 Human Anatomy and Physiology 1

Credit Points 10

Legacy Code 400868

Coordinator Garry Niedermayer (https://directory.westernsydney.edu.au/search/name/Garry Niedermayer/)

Description This is the first of two subjects covering systematic anatomy and physiology at an introductory level. This subject is designed to provide students in medical science and applied health science programs with an overview of body systems and their functions to ensure a suitable basis for their future studies. The subject studies the basic concepts of biochemistry and histology, general anatomy and physiology of the major body systems including the central and peripheral nervous systems, integumentary system, musculoskeletal system (bones, muscles and joints), special senses and endocrine system. Emphasis will be placed on the interconnection and relationship between structure and function at every level of organisation.

Restrictions

No restrictions

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify,describe and explain the basic form and function of specific anatomical structures
2. Identify, describe and explain the physiological processes of majorbody systems
3. Describe and explain the interrelationships within and between anatomical and physiological systems of the human body
4. Describe and explain how body systems help to maintain a constant internal environment

Subject Content

-The special Senses
-The Muscular system
-The Skeletal system
- Chemical and Cellular organisation of The human body
- Welcome to HAP1
-The Nervous system
-The Integumentary system, Tissues and Histology
-The Endocrine system
-Preparing for anatomical examinations

NATS 1010 Human Anatomy and Physiology 2

Credit Points 10

Legacy Code 400869

Coordinator Cherylea Browne (https://directory.westernsydney.edu.au/search/name/Cherylea Browne/)

Description Human Anatomy and Physiology 2 systematically covers anatomy and physiology at an introductory level. This subject is designed to provide students, especially those in clinical health science programs, with an overview of body systems and their functions, to ensure a suitable basis for their future studies. The subject studies the basic structure and function of the major body systems such as cardiovascular, respiratory, digestive, urinary, reproductive and lymphatic. This subject also explores the physiological processes involved in the immune response, cell metabolism, regulation of body fluids and acid-base balance. Emphasis is placed on the interconnection and relationship between structure and function at every level of organisation.

Restrictions

None

Assumed Knowledge

Basic biological/anatomical/physiological principles, as would be acquired in 400868 Human Anatomy & Physiology 1.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify, describe and explain basic form and function of specific anatomical structures.
2. Identify, describe and explain the physiological processes of major body systems.
3. Describe and explain the interrelationships within and between anatomical and physiological systems of the human body.
4. Describe and explain how body systems help to maintain a constant internal environment.

Subject Content

1. Introductory anatomy and physiology of the following body systems:
- cardiovascular system
- Respiratory system
- Digestive system
- Urinary system
- Reproductive system
- Lymphatic system and Immunity
2. Body fluids, acid-base balance, metabolism

NATS 1019 Scientific Literacy

Credit Points 10

Legacy Code 300811

Coordinator Luke Barnes (https://directory.westernsydney.edu.au/search/name/Luke Barnes/)

Description This subject is designed to provide students with scientific literacy, personal and employability skills and attitudes required to successfully undertake science-related undergraduate studies and

to prepare for professional life. Students learn, develop and utilise academic and interpersonal methodologies and approaches within the context of applied scientific principles and take responsibility for their own learning and develop a work ethic. Students are introduced to the contestable and uncertain nature of science and the scientific method that underpins academic integrity and ethical behaviour. Activities encourage development of oral and written communication skills, self-confidence, self-efficacy, creative and critical thinking through problem solving, group process, and peer support and assessment. Academic and employability skills include scientific reading and writing, time management, researching scientific information and library skills, oral presentation, taking tests and exams, effective personal and group based learning strategies, and approaches to online learning.

NATS 1021 Concepts in Human Physiology (WSTC)

Credit Points 10

Legacy Code 700295

Coordinator Anne Bertoldo (https://directory.westernsydney.edu.au/search/name/Anne Bertoldo/)

Description This subject introduces the core concepts and terminology necessary to provide a basic understanding of the physiological responses of the human body using relevant examples. These include the processes of homeostasis, cell-cell interactions and the physical and chemical transport processes that are required to carry out integrated functions. Students will explore these key physiological concepts through practical hands-on experiments and in interactive group work in prac and tutorial classes, respectively. The subject provides the foundation to study the physiology of human organ systems.

BIOS 1026 Introduction to Physiology (WSTC)

Restrictions

Students must be enrolled at Western Sydney University, The College. Students enrolled in Extended Diplomas must pass 40 credit points from the preparatory subjects listed in the program structure prior to enrolling in this University level subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the component parts of a cell and how cell interactions occur
2. Recognise that all physiological systems are interdependent
3. Define the concept of homeostasis and explain how different mechanisms regulate its function
4. Explain physical, chemical and electrical principles of cell communication
5. Recognise structure and function relationships
6. Collect and interpret data from practical classes investigating physiological principles

Subject Content

1.Cell function, membranes, communication and their interdependence
2.Information flow:
a.Physical principles of physiology: pressure driven (flow, viscosity and resistance) and electrically driven (force, potential, and currents)
b.Chemical principles of physiology: energy, intermolecular forces, gradients and kinetics
3.Homeostasis
4.Interpretation of physiological data

NATS 1022 Functional Anatomy

Credit Points 10

Legacy Code 401410

Coordinator Sam Merlin (https://directory.westernsydney.edu.au/search/name/Sam Merlin/)

Description From 2020 this subject replaces 400881 - Functional Anatomy. This subject covers in depth the functional anatomy of the musculoskeletal system. Special attention is given to the relationship between form and function, the terminology used to describe human movement and thorough knowledge of the bony landmarks, joints, muscle attachments, innervation, blood supply along with detailed actions of specific muscles and muscle groups. Emphasis is on a practical functional context with the relevance to clinical applications such as surface and imaging anatomy, and the anatomical basis of common injuries. Learning experience intends to stimulate proactive deep approach in learning anatomy motivated by the outcomes driven from specialist work within the Health professions.

School Science

Discipline Medical Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) NATS 1009

Restrictions

Students must be enrolled in one of the following programs due to limited Wet Anatomy laboratory space: 3733 B Med Sc (ForMortPrac), 3755 B medical Science, 3758 B Advanced Medical Science, 4656 B Health Science, 4658 B Health Sc (Sport & Ex Sc), 4706 B Physiotherapy, 4708 B Podiatric Medicine, 4709 B Podiatric Medicine (Hons), 4711 B Occupational Therapy, 4712 B Occupational Therapy (Hons), 4733 B Physiotherapy (Hons), 6000 Dip Health Sc/B Health Sc, 6002 Dip Sci/B Medical Science, 6042 Dip Science/B Medical Science, 7120 Dip Sci Ext Medical Science

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe and explain bone, joint and muscle tissue types, properties and functions;
2. Identify and describe in detail the muscle attachments, innervations and blood supply of the upper limb including the pectoral girdle;
3. Identify and describe in detail the muscle attachments, innervations and blood supply of the lower limb including the pelvis, and the pelvic girdle;
4. Identify and describe in detail the muscle attachments, innervations and blood supply of the trunk, and the head and the neck;
5. Identify, describe and evaluate the role of muscular activity in these regions;
6. Describe and explain the joint structure and function in these regions;
7. Describe and analyse the range of motion of the joints of the spine and extremities to functional situations.

Subject Content

The musculoskeletal system, including both the appendicular and the axial skeleton, will be studied in accordance with the following content:
- Language of Anatomy: such as the anatomical position and body movements, anatomical planes, axes, and regions;
- Bones: classifications, features, relative positions, and muscle attachments;
- Joints: classifications, structure and function, ligaments, joint mechanics including the muscles - prime movers and stabilizers;
- Muscles: muscle types, precise attachments, actions and topography;

- Nerves: major plexuses and major branches, functionally relevant muscle-nerve relationships, dermatomes and myotomes;
- Blood supply: arterial supply and venous drainage;
- Problem-based and case-based studies relevant to health professions, including examples of Daily Activities, sport exercises, common injuries, surface Anatomy and medical imaging.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Short Answer	Up to 30 minutes	40	N	Individual
Multiple Choice	Up to 1 hour	50	N	Individual
Quiz	1-4 weeks	10	N	Individual

NATS 1023 Introduction to Physiology

Credit Points 10

Legacy Code 301353

Coordinator Sabine Piller (https://directory.westernsydney.edu.au/search/name/Sabine Piller/)

Description From 2020 this subject replaces 300818 - Introduction to Physiology. This subject introduces the concept of homeostasis and critically examines examples of how the body systems are regulated and homeostatically controlled. The subject uses a body-systems approach to examine the physiology of tissues, organs and systems in order to develop an integrated view of the regulated functioning of the human body.

School Science

Incompatible Subjects BIOS 1022 - Introduction to Human Biology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe the physiology of the discussed organ systems in detail.
2. Explain how the discussed organ systems are integrated and controlled by the endocrine and nervous system in order to maintain homeostasis.
3. Identify and list examples of negative and positive feedback loops.
4. Conduct simple measurements and record and interpret the results.
5. Interpret, present and discuss recorded data of the functioning of one organ system.
6. Analyse the complexity of the selected organ systems.
7. Communicate effectively by listening, speaking and participating in discussion of physiology.

Subject Content

1. Homeostasis
2. Physiology of the Nervous System
3. Cardiovascular Physiology
4. Respiratory physiology
5. Renal function and body fluid homeostasis
6. Physiology of the endocrine system
7. Muscle physiology and exercise
8. Nutrition, metabolism and gastrointestinal function
9. Physiology of the reproductive system

Assessment

NATS 1025 Management of Aquatic Environments (UG Cert)

Credit Points 10

Legacy Code 500051

Coordinator Jack Isherwood (https://directory.westernsydney.edu.au/search/name/Jack Isherwood/)

Description This subject introduces students to the physical, chemical and biological nature of water systems and the linkages to human activity. These linkages include a development of an appreciation of the essential services and broad uses and values of water in modern human society, and the natural environment. Students are challenged to examine the causes and effects of water pollution and environmental degradation. Students are introduced to scientific water sampling, analysis and reporting of water quality and pollution.

School Science

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Level Undergraduate Level 1 subject

Equivalent Subjects BIOS 1028 Management of Aquatic Environments BIOS 1027 Management of Aquatic Environments BIOS 1034 Management of Aquatic Environments

Restrictions

Students must be enrolled in: 7175 ? Undergraduate Certificate of Environmental Sustainability

Learning Outcomes

On successful completion of this subject, students should be able to:

1. List and compare and contrast the physical, chemical and biological components of a freshwater system;
2. Design an experiment to measure the condition of a freshwater system using physical chemical and biological indicators.
3. Assess impacts of human development on the ecological health of freshwater aquatic environments;
4. Recommend management strategies for improved freshwater environmental management.
5. Explain the concept and principles of Ecologically Sustainable Development.
6. Demonstrate competencies in written and oral communication, teamwork, experimental design, information literacy and data processing.
7. Discuss the potential risk to human health from exposure to degraded aquatic environments.

Subject Content

1.The role of water in modern society
2.Water as a renewable resource
3.Demands of human activity on waterways
4.Ecosystems and waterways
5.Disposal of waste using waterways
6.Water pollution and its causes
7.Water quality and recreation
8.Government policy and regulation of water
9.Water sample collection
10.Laboratory analysis of water chemistry and biology
11.Communication and teamwork
12.Designing and delivering an oral presentation
13.Interpretation of water quality data
14.Use of field water quality meters

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task

NATS 1026 Digital Forensic Photography (WSTC)

Credit Points 10

Legacy Code 700329

Coordinator Grant Boyd (https://directory.westernsydney.edu.au/search/name/Grant Boyd/)

Description Forensic photography serves an important function within forensic science for the purpose of scene and item documentation, as well as the detection and enhancement of forensic evidence. This subject introduces the student to the fundamental principles and practices of forensic photography. Topics include: principles of light science, digital imaging, camera and lighting operations, technical photography composition, and the maintenance of image integrity.

School Science

Discipline Forensic Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Pre-requisite(s) NATS 1027

Equivalent Subjects NATS 2012 Digital Forensic Photography 1 NATS 1003 Digital Forensic Photography

Restrictions

Students must be enrolled in The College. Students in extended programs must pass 40 CPs of preparatory subjects prior to enrolling in this unit

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Investigate the conceptual relationship between the collection of images, their optical enhancement and the production of physical evidence
2. Evaluate how the reliability of photographic evidence may be considered in the context of an Australian legal framework
3. Relate theoretical principles of the behaviour of light and image formation to photographic optics and image analysis
4. Evaluate the utility and interpretation of imaging science principles in the context of forensic evidence
5. Describe concepts of light propagation, colour temperature, wavelength and spectral distribution of light and its collection as digital images.
6. Utilise digital imaging methods and theory for the extraction of forensic evidence
7. Analyse two and three dimensional images in terms of the veracity and fidelity as forensic evidence
8. Discuss the validity of photographic evidence as a means of forensic examination.

Subject Content

1.Forensic photography principles and practices
2.Digital SLR camera functions and operations, photographic lenses and image perspective
3.Understanding digital imaging and image processing
4.Light and photographic science principles, exposure, white balance and colour space
5.Maintaining forensic digital image integrity
6.Lighting and technical composition for forensic photography

Assessment

NATS 1027 Forensic Science (WSTC)

Credit Points 10

Legacy Code 700330

Coordinator Grant Boyd (https://directory.westernsydney.edu.au/search/name/Grant Boyd/)

Description This subject aims to give students a basic understanding of scientific methodology as it applies to the collection, analysis and interpretation of forensic evidence. Students are introduced to a range of crime scene investigation methods and analysis methods that are used with various types of forensic evidence. The concept of individualisation is introduced and the importance of this concept in forensic science is explained. Case studies are used to explain the concepts discussed in this subject. The role of human factors is discussed, together with the importance of critically evaluating forensic evidence and the means by which it was obtained.

School Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Equivalent Subjects NATS 1008

Restrictions Students must be enrolled at the College. Students in extended programs must pass 40 CPs of preparatory subjects prior to enrolling in this unit

Assumed Knowledge

Students must be enrolled at the College. Extended students need to have passed 40 CPs of preparatory subjects in order to enrol in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify physical evidence and determine its significance and value.
2. Explain the use of basic scientific methodology as it applies to the collection, analysis and interpretation of forensic evidence.
3. Describe the basic principles of collecting and conserving forensic evidence and give examples of standard procedures for maintaining evidence integrity and continuity.
4. Apply identification concepts and methodologies to the collection, analysis and interpretation of evidence.
5. Describe the value of trace evidence to forensic investigations, and explain the ways in which it may be collected and analysed.
6. Evaluate case studies to illustrate a range of possible deficiencies in the way in which forensic evidence may be collected, analysed and interpreted.
7. Critically evaluate the role of expert witnesses in the justice system.
8. Communicate the results of forensic investigation correctly in written form, using an appropriate language style placing the findings in context of the forensic investigation.

Subject Content

- Explanation of what is considered physical evidence and the purpose of collecting and analysing physical evidence
- Basic scientific methodology as it applies to the collection, analysis and interpretation of forensic evidence.
- Principles of collecting and conserving forensic evidence, including crime-scene protection, contemporaneous note taking, chain of custody, and quality management.

- Presumptive testing and its role in crime scene investigation
- An introduction to spectroscopy and its incorporation in crime scene investigation
- The concepts of evidence integrity and continuity.
- History of the concept of identification and its development
- Identification concepts and methodology, including pattern matching / comparative analysis, classification, elimination of suspects and databases.
- Analysis of a range of forensic evidence and its interpretation within the concept of identification
- The role of the expert witness within the justice system, including presentation of evidence, and an introduction to the Australian judicial system.
- An introduction to contemporary issues in forensic science
- Quality Control and Quality Assurance in evidence handling and forensic analysis
- A range of case studies, including satisfactory and unsatisfactory use of forensic evidence.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

NATS 1028 Scientific Literacy (BLOCK)

Credit Points 10

Coordinator Jack Isherwood (https://directory.westernsydney.edu.au/search/name/Jack Isherwood/)

Description This Subject is designed to provide students with scientific literacy, personal and employability skills and attitudes required to successfully undertake science-related undergraduate studies and to prepare for professional life. Students learn, develop and utilise academic and interpersonal methodologies and approaches within the context of applied scientific principles and take responsibility for their own learning and develop a work ethic. Students are introduced to the contestable and uncertain nature of science and the scientific method that underpins academic integrity and ethical behaviour. Activities encourage development of oral and written communication skills, self-confidence, self-efficacy, creative and critical thinking through problem solving, group process and peer support and assessment. Academic and employability skills include scientific reading and writing, time management, researching scientific information and library skills, oral presentation, taking tests and exams, effective personal and group based learning strategies and approaches to online learning.

School Science

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Restrictions

Students must be enrolled in one of the following courses:

7175 – Undergraduate Certificate of Environmental Sustainability

Learning Outcomes

1. Communicate effectively through a written report that meets the professional standards of scientific discipline.
2. Present a structured argument confidently in front of peers, as audience, and assessors.
3. Apply the processes of thinking and writing reflectively to develop the ability of reflecting on their learning.
4. Develop an understanding of the skills and attitudes required for group work interactions.
5. Apply critical thinking to make informed decisions.

Subject Content

1. How to Succeed at University;
2. Academic Research: Finding, Assessing, and Referencing Information;
3. Writing for Scientists;
4. Public Speaking for Scientists;
5. Science is Empirical
6. Science is Inductive
7. Science is Falsifiable;
8. Science is Non-Linear;
9. Science is Quantitative I: Statistics and Probability;
10. Science is Quantitative II: Measurement and Uncertainty;
11. Science is Quantitative III: Data and Computing;
12. Academic Integrity and Ethics;
13. Science, Society and the Environment

Students must be enrolled at The College in the courses:

6042 Diploma in Science/Bachelor of Medical Science
6043 Diploma in Science/Bachelor of Science
7120 Diploma in Science Extended – Medical Science
7122 Diploma in Science Extended - Science
7084 Diploma in Science – exit

Students enrolled in Extended courses must have passed 40 CPs of preparatory units before enrolling in this unit.

Students enrolled in Integrated courses must have passed or be enrolled in the preparatory units before enrolling in this unit.

Learning Outcomes

1. Identify, describe and explain the basic form and function of specific anatomical structures
2. Identify, describe and explain the physiological processes of major body systems
3. Describe and explain the interrelationships within and between anatomical and physiological systems of the human body
4. Describe and explain how body systems help to maintain a constant internal environment

Subject Content

Introductory anatomy and physiology of the following body systems:
- Musculoskeletal system (bones, muscles and joints)
- Integumentary system
- Central and peripheral nervous system
- Autonomic nervous system
- Special senses
- Endocrine system

Basic concepts of biological chemistry
Cellular & tissue organisation of the body

Special Requirements

Essential equipment

Closed footwear and lab coats for practical sessions.

NATS 1032 Introduction to Applied Science and Technology (WSTC)

Credit Points 10

Description In this subject, you will explore the science behind ground-breaking inventions that have revolutionised contemporary society and made it what it is today. You will delve into historic innovations, such as the Haber Process, which played a pivotal role in urbanisation, as well as contemporary marvels like the lithium-ion battery, fundamental to our technology-driven lifestyle. Additionally, you will answer the "big philosophical questions" associated with these inventions. For example, 'Why did the cheap replacement lithium battery that I brought off the internet for my mobile phone or laptop explode on recharging?' and 'Why are foods and drinks, including my morning coffee, acidic?'.

School Science

Student Contribution Band

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 1 subject

Restrictions

Students must be enrolled in an existing Destination College Diploma program listed below:

- 7188 Diploma in Culture, Society and Justice
- 7189 Diploma in Health Science
- 7190 Diploma in Business
- 7191 Diploma in Information and Communication Technologies
- 7192 Diploma in Building Design and Construction
- 7193 Diploma in Engineering Studies
- 7194 Diploma in Creative Industries and Communications
- 7195 Diploma in Arts
- 7196 Diploma in Science
- 7197 Diploma in Education Studies

Learning Outcomes

1. Identify the key concepts and principles in electrochemistry, biochemistry, physical and general chemistry.
2. Apply key concepts and principles of chemistry to explain and examine real-world chemical processes.
3. Understand and apply techniques for the safe handling and disposal of chemical substances in the environment.
4. Effectively communicate chemical concepts to a range of audiences using appropriate scientific language, symbols, and diagrams.

Subject Content

- What powers my mobile phone, laptop, even e cigarettes? – Lithium-Ion batteries: the heart of my devices.
  - Electron transfer reactions, Group 1 metals and atomic structure, and the periodic table.
  - Chemical potential energy and reactivity.
  - Flat batteries, equilibrium, reversible reactions, and recharging.
- What's nitrogen got to do with it? – The Haber Process and feeding the world.
  - Biological molecules and fuelling the body, intermolecular forces.
  - Indigenous Australian peoples foods and bush medicine.
  - pH of foods and proton transfer reactions.
  - Buffers and Speciation and pharmaceuticals.
- Why does size matter? – From counting calories/energy to minimising waste.
  - Measuring in Chemistry.
  - Voltage and current in batteries.
  - Measuring Energy in food.
  - Efficiency in industry processes.

NATS 2001 Advanced Science Project A

Credit Points 10

Legacy Code 300937

Coordinator Sabine Piller (https://directory.westernsydney.edu.au/search/name/Sabine Piller/)

Description The subject is design to teach students what is required to successfully begin to answer a scientific question. It specially focuses on teaching students how to access and critically review literature on a given topic, chosen in consultation with a supervisor in the student's preferred field of study. Students will present their findings in both written and poster formats. Students also attend a one day workshop where they engage with researchers in a wide variety of fields to broaden their understanding of research.

Level Undergraduate Level 2 subject

Equivalent Subjects LGYA 6165 - Advanced Science Research Project A

Restrictions

Students must be enrolled in 3562 Bachelor of Science (Advanced Science) or 3682 Bachelor of Medical Science (Advanced) or 3683 Bachelor of Natural Science (Advanced) and must have passed 60 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Assess research activities and research presentations
2. Access, review, assess and critically evaluate relevant research literature on a topic chosen by the supervisor
3. Communicate in written and poster formats

4. Reflect on experiences and exposure to the research environment broadly

Subject Content

1. Define research and gain a wide understanding of research
2. Find and critically assess the available literature on a given topic and write a critical review of the literature on a given topic
3. Present critical review in written and poster presentation formats
4. Engage with researchers in different fields to gain knowledge of the broader research environment

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

NATS 2002 Advanced Science Project B

Credit Points 10

Legacy Code 300938

Coordinator Sabine Piller (https://directory.westernsydney.edu.au/search/name/Sabine Piller/)

Description This subject continues the students' training in thinking as a research scientist whilst developing analytical and critiquing skills in a range of science disciplines. In this subject, students gain theoretical knowledge of common methods and techniques and choose to gain hands-on experience in interdisciplinary laboratory sessions, focusing on current techniques and methods in a range of science disciplines including but not limited to cell and molecular biology, chemistry, physics, biomedical science, microbiology, anatomy and physiology, and nutrition. Students will develop a strong foundation in understanding the relationship between practical techniques and data quality and reliability, which is crucial for validating research outcomes. Training in laboratory notebook best practices will be provided, emphasising the importance of accurate record-keeping in both academic and industrial research settings. Students will prepare summaries of research findings, project proposals, and progress reports from their chosen laboratory sessions using discipline-specific formats and notation. By engaging in discussions, feedback, and data analysis, students will enhance their scientific communication, presentation, and collaborative decision-making skills.

School Science

Discipline Natural and Physical Sciences, Not Elsewhere Classified.

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 2001

Restrictions

Students must be enrolled in 3757 Bachelor of Advanced Science or 3758 Bachelor of Advanced Medical Science or 3562 Bachelor of Science (Advanced Science) or 3682 Bachelor of Medical Science (Advanced Science) or 3683 Bachelor of Natural Science (Advanced Science) and have successfully completed 60 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Articulate current practices of experimental design and methodology in a chosen discipline
2. Work safely in a laboratory setting and maintain accurate and complete records
3. Collect, analyse, interpret and present data in a discipline appropriate format
4. Apply skills in testing conflicting ideas through evidence-based discussions within a collaborative group setting
5. Reflect on the development of skills in experimental design and analysis and collaboration in the context of professional competencies

Subject Content

1. Design and execution of experimental methods in a variety of science disciplines
2. Safety protocols and procedures and accurate record keeping in a laboratory environment
3. Collection, analysis and presentation of research findings
4. Communication and skills development through collaborative, evidence-based discussion in laboratory research group settings
5. Designing experiments by applying accepted discipline-specific practice, sustainability, critical thinking, and problem-solving

Special Requirements

Essential equipment

Access to a computer and the internet. This subject involves laboratory-based learning activities in which laboratory PPE including an approved lab coat, enclosed footwear, safety goggles and hair ties for beyond-shoulder-length hair are required

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	Practical 8 weeks prac rotations and report	30	N	Group/ Individual
Presentation	Oral presentations	40	N	Individual
Portfolio	Proposal of next experimental steps and reflection	30	N	Individual

Prescribed Texts

- NULL
- There are no textbooks for this subject; students will use a variety of books and journals based on the topic chosen

NATS 2004 Anatomy of the Thorax and Abdomen

Credit Points 10

Legacy Code 300894

Coordinator Manisha Dayal (https://directory.westernsydney.edu.au/search/name/Manisha Dayal/)

Description This subject builds on the systems anatomy studied during first year, and explores the regional anatomy of the contents and walls of the human thorax and abdominopelvic cavities. Emphasis is placed on the relationship between structures, and the nexus between form and function. Cadaveric specimens are used in this subject to illustrate the array of normal anatomical variation.

School Science

Discipline Medical Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1010

Restrictions

Students must be enrolled in program code 3755 Bachelor of Medical Science, 3758 Bachelor of Advanced Medical Science , 3673 Bachelor of Medical Science, 3657 Bachelor of Medical Science/Bachelor of Information and Communications Technology, or 3682 Bachelor of Medical Science (Advanced), 3733 Bachelor of Medical Science (Forensic Mortuary Practice) or 6002 Diploma in Science/Bachelor of Medical Science and have successfully completed 60 credit points

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify structures within and associated with the thoracic, abdominal and pelvic cavities on cadaveric specimens in addition to models and graphic material.
2. Explain the functional anatomy of the thoracic, abdominal and pelvic regions.
3. Analyse and explain functional and spatial relationships between structures in the thoracic, abdominal and pelvic regions.
4. Discuss the embryological development of the intraembryonic coelom, the subsequent major cavities and associated major intraperitoneal and retroperitoneal viscera.
5. Identify and discuss normal anatomical variations of the thoracic, abdominal and pelvic regions.
6. Describe common abnormalities in the thoracic, abdominal and pelvic regions, and explain their anatomical basis and functional consequences.

Subject Content

1. thoracic wall
2. thoracic cavity and viscera
3. abdominal wall
4. abdominal cavity and viscera
5. pelvic wall and floor
6. pelvic cavity and viscera
7. vasculature of thoracic, abdominal and pelvic cavities

8. innervation of thoracic, abdominal and pelvic cavities
9. muscles of the back
10. vertebral column
11. embryological development of major thoracic, abdominal and pelvic viscera

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Literature Review	Up to 1000 words, 10mins	20	N	Individual

NATS 2005 Appendicular Skeleton

Credit Points 10

Legacy Code 300898

Coordinator Manisha Dayal (https://directory.westernsydney.edu.au/search/name/Manisha Dayal/)

Description This musculoskeletal subject builds on the basic anatomy taught during the first year, offering a regional study of the human upper and lower limbs, including their respective girdles. Emphasis is placed on the identification and description of the structures, including the correlation of structure and function. Cadaveric specimens are used to aid the learning of these regions and their three-dimensional aspect, including the anatomical variation found in these regions.

School Science

Discipline Medical Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1013 OR
NATS 1001

Equivalent Subjects NATS 2029 - The Appendicular Skeleton LGYA 5937 - The Appendicular Skeleton

Incompatible Subjects BIOS 1015 - Functional Anatomy

Restrictions

Students must be enrolled in 3673 Bachelor of Medical Science, 3682 Bachelor of Medical Science (Advanced), 3733 Bachelor of Medical Science (Forensic Mortuary Practice) or 6002 Diploma in Science/ Bachelor of Medical Science. Students must also have a laboratory coat in this subject.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Recognise anatomical structures on cadaveric material, models and other graphic resources to understand the structure of the upper and lower limbs.
2. Explain the functional anatomy of the upper & lower limbs, including their girdles.
3. Discuss the embryological development of the early & final stages of the upper & lower limbs, the process of rotation and the consequences there of.
4. Describe and identify common abnormalities in both the upper & lower limbs as a result of developmental anomalies.
5. Recognize the range of normal anatomical variation within the upper & lower limbs including identification on cadaveric material.

Subject Content

1. Bones of the upper & lower limbs
2. Brachial, lumbar & sacral plexuses
3. Muscles of the shoulder region, arm, forearm & hand
4. Muscles of the gluteal region, thigh, leg & foot
5. Innervations of the upper & lower limbs
6. Vasculature of the upper & lower limbs
7. Embryological development of the upper & lower limbs
8. Surface anatomy of the upper & lower limbs

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

NATS 2006 Approved Industrial Experience

Credit Points 0

Legacy Code 300655

Coordinator Vijay Jayasena (https://directory.westernsydney.edu.au/search/name/Vijay Jayasena/)

Description This is a "Work Experience" subject, for which no student contribution fee is charged, nor will it consume Student Learning Entitlement (SLE). Students are required to obtain at least ten weeks, vocationally relevant, industrial experience during their course of study. The aim of this is to provide students with opportunities to apply theoretical concepts to real world situations, assisting their personal and professional development. Approved industrial experience aims to provide flexibility for students to pursue areas of interest and to assist in their selection of appropriate elective subjects in their program and to met the professional accreditation requirements as maybe required in your key program. Students are required to organise, formalise and validate at least ten weeks of university approved industry experience within an industrial, commercial or government situation during the course of their study.

Special Requirements

Legislative pre-requisites

Special Requirements - NSW Health Legislative Prerequisites ~~Pre-requisites~~

Student Compliance Information for all Health-Related Placements

Prior to enrolling in this subject, students must have submitted a Student Undertaking Form and undertake to apply for a National Police Check, which is required to be submitted before placement, and a Working with Children Check Student Declaration. Use the link to the Special Requirements webpage below for more information.

To be eligible to enrol in this subject and complete any required health-related placements or experiences, students must meet Western Sydney University program requirements as well as any special, legislated, or policy-mandated requirements.

Western Program Requirements

Visit the Special Requirements webpage for details about your program.

Special Requirements (https://www.westernsydney.edu.au/currentstudents/current_students/enrolment/special_requirements/)

Mandatory NSW Health student placement policy requirements

To be able to undertake placement in any NSW Health facility you must be assessed as compliant with NSW Health student placement policy in the first year of your program, regardless of when you expect to go on your first placement. Access and read the NSW Student Compliance Information Booklet.

NSW Student Compliance Information Booklet (https://issuu.com/uwspublications/docs/wsu_student_compliance_booklet_2020_v6/)

Please ensure that you

1. Find your existing National Police Check or apply for one
2. Gather documentary evidence of your vaccination history
3. Print and compete all relevant NSW Health forms relevant to the campus you are enrolled at or online enrolment requirements
4. Follow booklet instructions on how to have your compliance documents assessed by NSW health staff.

International students have additional requirements; the link to the booklet will inform you of these requirements.

School Requirements

Contact your School for further details regarding your School's requirements, if any, such as

- If you live outside of NSW or Australia and need to meet your state, territory or country's compliance requirements
- If you need to meet different state, territory or country compliance requirements.
- NSW Working with Children Check (WWCC) or other state equivalent, valid for your entire program.
- Current approved first aid certificate valid for your entire program - approved program providers can be found at the Government Training website
- http://training.gov.au (http://training.gov.au/)
- Other non-health related requirements.

Student Compliance Resources are also available on the Placements Hub web page (NSW students only)

https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance (https://www.westernsydney.edu.au/learning_futures/home/placements_hub/placements_hub/student_compliance/)

NATS 2008 Clinical Pharmacology

Credit Points 10

Legacy Code 400981

Coordinator Srinivas Nammi (https://directory.westernsydney.edu.au/search/name/Srinivas Nammi/)

Description This subject explores in depth clinical pharmacology fundamental to the practice of allied health (Physiotherapy, Podiatric Medicine and Paramedicine) and complementary medicine (Traditional Chinese Medicine). General principles of pharmacology will be briefly discussed. This subject imparts detailed knowledge on the classification, mechanism of action, therapeutic effects, clinical applications and side effects of major drug classes acting on musculo-skeletal, nervous, cardiovascular, respiratory, gastrointestinal, endocrine, urinary and reproductive system diseases. In the context of antimicrobial pharmacology, general concepts of microbiology will be introduced offering students an understanding of the causative microorganisms, the complex relationship between host and pathogen, the pharmacological actions, mechanism of action, and clinical uses of antimicrobial drugs and the principles of infection control.

School Science

Discipline Pharmacology

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 2038 or NATS 2045

Equivalent Subjects LGYA 7037 - Clinical Pharmacology and Microbiology

Incompatible Subjects NATS 2026 - Pharmacology

Learning Outcomes

On successful completion of this subject, students should be able to:

1. discuss basic pharmacological concepts and ethical and legal requirements of pharmacotherapy in health settings
2. explain the principles of pharmacokinetics and pharmacodynamics
3. describe major types of drugs in each drug category
4. explain the mechanism of actions, adverse reactions and clinical applications of each drug category
5. describe the structure, function, classification, growth of microorganisms and their roles in health and disease
6. explain the principles of immunological response to infections and apply microbiology theory to the infection control
7. explain the principles of drug interactions and toxicity
8. discuss the clinical implications of drug usage and its impact on clinical practice

Subject Content

1. Introduction to pharmacology
- drug nomenclature and Classification
- drug formulations and administration
- drug development, evaluation and safety
- legal and Ethical Issues relating to pharmacotherapy
2. Pharmacokinetics
- drug absorption, Distribution, metabolism and Excretion
3. Pharmacodynamics
- mechanisms of drug action
4. Drug affecting central nervous system
- drugs used for anxiety and Depression
- Drugs used for Parkinson's disease
- Anticonvulsants, antispasmotics and muscle relaxants
- drugs used for multiple Sclerosis
5. Drugs affecting peripheral nervous system
- drugs affecting adrenergic transmission
- drugs affecting cholinergic transmission
- drugs affecting Neuromuscular transmission
6. Drugs affecting cardiovascular system
- Thrombolytic and anticoagulant drugs
- Lipid lowering drugs
- drugs used in angina
- Antiarrhythmic drugs
- Antihypertensive drugs
7. Drugs affecting respiratory system
- drugs used for Asthma
- drugs used for COPD and emphysema
- drug used for Cough
8. Drugs used for diabetes
- Hypoglycaemic drugs
- insulin
- treatment of diabetic neuropathy
9. Drugs affecting gastrointestinal system
- drugs used for peptic ulcer disease
- drugs used for Constipation and Diarrhoea
- drugs used for nausea and Vomiting
10. Drugs affecting urinary system
- Diuretics
- drugs for Urinary incontinence
11. Drugs for pain and inflammation
- Opioids
- Nonsteroidal Anti-Inflammatory drugs
- Corticosteroids and antirheumatic drugs
12. Antimicrobial drugs and infection control
- introduction to microbiology
- Bacteriology
- Mycology
- Virology
- infection, spread of infection and infection control
- mechanism of action of antimicrobial chemotherapy
- antibiotics and synthetic antibacterial drugs
- Antiviral drugs
13. Drug interactions and toxicity
- mechanisms of drug toxicity
- principles of drug interactions
14. Clinical implications of drug usage (including children and the elderly) on clinical practice of physiotherapy, podiatry and TCM

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

NATS 2010 Crime Scene Investigation

Credit Points 10

Legacy Code 300873

Coordinator Brenden Riley (https://directory.westernsydney.edu.au/search/name/Brenden Riley/)

Description A substantial amount of forensic evidence used in the prosecution of criminal cases is initially established at the crime scene. Recognising, detecting, recovering, preserving and recording this evidence forms a critical function within forensic science and criminal investigation. This subject introduces the student to a range of crime scene practices that provides the knowledge and skill to interpret a complex scene with voluminous detail, into a more specifically targeted range of forensic evidence items. This subject will explore aspects of crime scene investigation including; crime scene processes, recognition of evidence, documentation of crime scenes, evidence detection and enhancement, and maintaining evidence integrity. It also introduces professional practices associated with maintaining evidence integrity and continuity.

School Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) NATS 1003

Restrictions

Students must be enrolled in 3589 Bachelor of Science (Forensic Science), 3562 Bachelor of Science (Advanced Science) (Forensic Science) or MT3022 Forensic Science and successfully completed 60 credit points.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Describe what constitutes the determination of a crime scene.
2. Articulate the concepts of the CSI Effect within the criminal justice system.
3. Apply a range of evidence enhancement and preservation methods.
4. Apply professional practices associated with maintaining evidence integrity and continuity.
5. Conduct a complete forensic examination of a crime scene.
6. Apply a range of field-portable equipment and interpret information provided by these techniques in relation to the crime scene.
7. Report evidence and conclusions from crime scene investigations accurately and correctly in an appropriate format.

Subject Content

1. Crime scene investigation (CSI) principles
2. Scene documentation paradigm involving contemporaneous note taking, sketching and photography
3. Detection, collection and preservation of evidence
4. Documenting identification features in post mortem examinations
5. Application of CSI principles to outdoor scenes
6. Problems that arise from media portrayals of forensic procedures (?eCSI effect?f) within the criminal judicial system
7. Biological evidence
8. Blood reagents and evidence enhancement
9. Presumptive testing of scene evidence, including the use of field-portable equipment

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	Ca. 300 words, written during a 3-hour practical	20	N	Both (Individual & Group)
Quiz	30 questions, 2 minutes per question (1 hour in total)	30	N	Individual
Simulation	4 hours	50	Y	Individual

NATS 2015 Evidence and Crime Scene Management

Credit Points 10

Legacy Code 300935

Coordinator Alicia Haines (https://directory.westernsydney.edu.au/search/name/Alicia Haines/)

Description Evidence and Crime Scene Management is a subject designed to provide students with an understanding and knowledge of critical principles associated with the management of evidence and sites considered as crime scenes. The subject is particularly designed for students wishing to enter professional domains involving; policing, nursing, animal welfare, workplace investigators, health inspectors, WHS officers, fire investigation, council and park rangers, social welfare,

environmental protection, fraud and insurance investigation and others where the collection of evidence is a component of professional practice within the discipline. The subject covers topics such as; recognition of various evidence, the recording and documentation of evidence, crime scene or site photography, managing scenes, maintaining evidence integrity, sexual assault evidence, the reporting and presentation of evidence in court and others.

School Science

Discipline Forensic Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Equivalent Subjects NATS 2014 - Evidence and Crime Scene Management

Incompatible Subjects NATS 2010 - Crime Scene Investigation

Restrictions

Successful completion of 60 credit points. Students enrolled in 3589 Bachelor of Science (Forensic Science) or in MT3022 Forensic Science are not eligible to take this subject as an elective.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Identify various types of evidence and explain the relevance of each evidence type to forensic investigations.
2. Differentiate identification and elimination evidence.
3. Explain the methods for preservation, documentation and collection of evidence that are utilised by crime scene investigators.
4. Describe how evidence is handled to ensure that evidence integrity and continuity are maintained from the scene to presentation in court.
5. Understand the impact of individual photographic principles on image quality and effectively document a crime scene by implementing this knowledge.
6. Carry out specific techniques in order to enhance latent evidence.
7. Demonstrate a range of communication skills necessary for preparing and presenting evidence in a court environment.
8. Describe the value of ethical conduct in relation to providing evidence to a legal landscape (criminal and civil).

Subject Content

1. What is forensic evidence?
2. Understanding identification and elimination evidence.
3. Defining and establishing a crime scene or accident site.
4. Management of evidence integrity and continuity.
5. Maintaining the integrity of crime scenes and minimising contamination.
6. Methods of preserving, documenting and collecting physical evidence.
7. Photographing crime scenes and other sites.
8. Photographic interpretation and evidence (including the detection of forgeries).
9. Physical evidence found at crime scenes (footwear impressions, tyre impressions, fingerprinting, tool marks etc.).
10. Sexual assault evidence.

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Quiz	1 hour	20	N	Individual
Practical	1,000 Words	10	N	Individual
Quiz	30 minutes	10	N	Individual
Case Study	2 hours	20	N	Individual
Final Exam	2 hours	40	N	Individual
Practical	15 hours (5 x 3hrs over 3 days)	S/U	Y	Individual

NATS 2019 Forensic and Environmental Analysis

Credit Points 10

Legacy Code 300843

Coordinator Andrew Shalliker (https://directory.westernsydney.edu.au/search/name/Andrew Shalliker/)

Description This subject extends the student's knowledge and experience of analytical techniques by applying them to forensic investigations and analysis in the environmental and food sciences. It will provide an understanding of the chemical and physical principles underlying the use of instrumentation in chemical analysis. Topics include principles of spectroscopic techniques, separation methods; sample collection and storage; presumptive testing; modern chemical instrumentation for gas and liquid chromatography; atomic spectroscopy; mass spectroscopy; x-ray methods and spectroscopic methods.

School Science

Discipline Forensic Science

Student Contribution Band HECS Band 2 10cp

Check your fees via the Fees (https://www.westernsydney.edu.au/currentstudents/current_students/fees/) page.

Level Undergraduate Level 2 subject

Pre-requisite(s) CHEM 1008 - Introductory Chemistry

Restrictions

Successful completion of 60 credit points

Assumed Knowledge

An understanding and competence with basic chemical principles including SI units, chemical symbols, formulas and equations, stoichiometry, the mole concept, equilibria, acids and bases, pH and electrochemistry. Introductory statistics – mean, standard deviation, distributions, linear regression.

Learning Outcomes

On successful completion of this subject, students should be able to:

1. Demonstrate a familiarity with a range of instrumental analytical techniques that are relevant to forensic and environmental investigations.
2. Describe the underlying chemical principles of chromatography including the basic theory and practical applications.
3. Show an understanding of instrumental analysis, the factors which govern its application in real-world situations and the limitations and interferences of specific techniques.
4. Explain how presumptive tests are used in forensic and environmental analyses.
5. Discuss the concepts in designing experiments for analysing forensic, environmental and food samples including principles of sampling and sample preparation.
6. Conduct instrumental investigations to determine concentrations of specific analytes relevant to either a forensic or environmental analysis.
7. Perform result analysis of experimental data including error calculation by applying relevant statistics. analyse and graph data and draw appropriate conclusions from data.
8. Record and communicate the results of their investigations demonstrating awareness of the conventions of scientific writing and graphical presentations.

Subject Content

1. Introduction to instrumental analysis - comparison with wet chemical methods
2. Basic principles of chromatography - high performance liquid chromatography, gas chromatography
3. Experimental design, sampling, sampling techniques, sample preparation
4. Atomic spectroscopy - atomic absorption, atomic emission, ICP
5. Spectroscopic techniques - UV/visible, IR spectroscopy
6. Mass spectrometry
7. Statistical methods relevant to linear regression based analytical methods
8. Presumptive testing

Assessment

The following table summarises the standard assessment tasks for this subject. Please note this is a guide only. Assessment tasks are regularly updated, where there is a difference your Learning Guide takes precedence.

Type	Length	Percent	Threshold	Individual/ Group Task
Practical	6 practicals (4 hours in duration), 3 workshops (2 hours in duration)	30	N	Individual
Essay	2,000 words	20	N	Individual
Participation	Weekly	10	N	Individual
Final Exam	2 hours	40	N	Individual
